
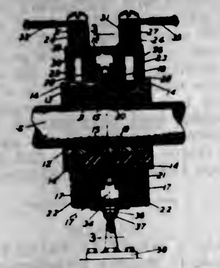
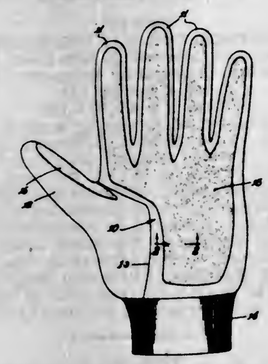
1. An awning including a plurality of alternately underlying and overlying channels in overlapping relationship having aligned apertures in their flanges, a tube coextensive with the channel assembly having slots in opposite sides thereof receiving the flanges of said underlying and overlying channels, the bore of said tube being concentric with the apertures of said flanges, a tie rod extending through said tube and said apertures to secure said channels in spaced relationship and means for holding said rod against longitudinal displacement.

2,459,984
CENTRIFUGAL FORCE OPERATED SWITCH
Willis Zeb West, Jr., and Morgan F. Gamble, Winston-Salem, N. C.
Application February 13, 1947, Serial No. 728,350
7 Claims. (Cl. 200—80)



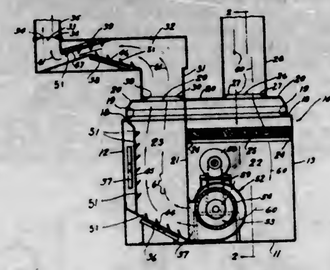
1. A centrifugal force actuated switch, comprising axially spaced slip rings to be mounted upon the armature shaft of a motor, means to insulate the slip rings from such armature shaft, an annular insulating housing mounted upon the slip rings to rotate therewith and to bridge the space between the same and providing an annular recess, conducting segments arranged within the annular recess and adapted to move radially therein, an annular spring arranged within the annular recess and engaging upon the conducting segments to hold the same in electrical contact with the spaced slip rings, brush holder rings slidably mounted upon the slip rings axially outwardly of the annular housing, brush holders carried by the brush holder rings, and brushes arranged within the brush holders for engagement against the slip rings.

2,459,985
HAND COVERING
Charles Hugh Woodbury and Gaius Fabius Brooks, Los Angeles, Calif.
Application July 16, 1946, Serial No. 683,922
3 Claims. (Cl. 2—161)



1. A glove of the character described having a palm, a thumb and finger parts with work engaging faces, a continuous surfacing on said faces of the palm and finger parts, a separate surface on the thumb part, each surfacing including an outer layer of coarse sharp gripping particles and an adhesive bonding said particles directly to said faces.

2,459,986
ELECTRIC HOUSE FURNACE
Willard H. Worden, Seattle, Wash.
Application January 13, 1947, Serial No. 721,855
3 Claims. (Cl. 219—39)



1. An electric house furnace, comprising a body providing a relative wide air admitting chamber and a narrower heated air outlet chamber, the air admitting chamber having an air inlet at one end of the chamber and having a single opening for air passage from the air admitting chamber to the heat outlet chamber, a fan mounted in the air admitting chamber to receive air delivered to the air admitting chamber and force such air through the heated air outlet chamber, electrical heating elements arranged in the heated air outlet chamber, baffle plates arranged to overlie each heating element to prevent the incoming air under the influence of the fan to directly contact with such heating element, each baffle plate being formed with openings overlying the heating elements and formed with deflecting wings arranged in advance of the openings in direction of air flow and inclined in the direction of air flow to cause the moving air passing over the wings to create a suction influence on the heating element to increase the heat withdrawal from the heating element and direct the same in the direction of air flow in the air outlet chamber.

2,459,987
MIXED SILICA-ALUMINA, SILICA-MAGNESIA CATALYST
Julius P. Bilisoly, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application May 7, 1946, Serial No. 668,007
1 Claim. (Cl. 252—455)

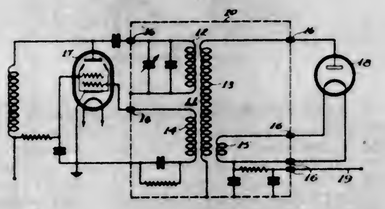
Improved cracking catalysts consisting essentially of a mixture of 80–85% silica-magnesia and 20–15% of a separately prepared silica-alumina, said silica-magnesia containing 30–35° magnesia and 70–65% silica, and said silica-alumina containing 50–65% alumina and 50–35% silica.

2,459,988
RADIO-FREQUENCY OSCILLATOR POWER SUPPLY CIRCUITS
Ronald Dean Boadle, Sydney, New South Wales, Australia, assignor to Amalgamated Wireless (Australasia) Limited, Sydney, New South Wales, Australia, a company of New South Wales
Application June 12, 1945, Serial No. 598,999
In Australia August 22, 1944
6 Claims. (Cl. 175—363)

1. A radio frequency high voltage power supply device comprising an input and an output circuit.

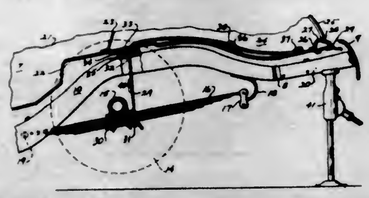
2,459,994

a metallic oil filled container located between said input and output circuits, a plurality of insulated connection terminals passing through some of the walls of said container, a high voltage radio frequency step-up transformer located within said container, said step-up transformer having a primary winding, a secondary winding, a filament winding, and a feedback winding; a plurality of resistance elements located within said container, one of said resistance elements having electrical connections made to one side of the filament winding of said transformer, a plurality of condenser elements located within said container, some of said condenser elements being electrically connected in shunt with the primary winding of



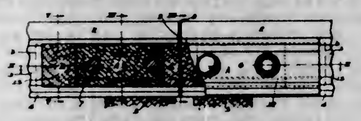
said transformer, the primary winding of said transformer being electrically connected to said input circuit through one of said insulated connection terminals, others of said condensers and resistance elements being connected to one side of the feedback winding of said transformer, and others of said condensers being connected to the same side of the filament winding of said transformer as the one to which said resistance element is connected, the output circuit from said secondary winding of said transformer being electrically connected to an external rectifier to form the output portion of the high voltage supply source.

2,459,989
SPRING HOLDING ATTACHMENT FOR AUTOMOBILES
William J. Bobek and Frederick W. Wohlfield, Detroit, Mich., assignors to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application August 1, 1946, Serial No. 687,648
3 Claims. (Cl. 280—150)



1. In a motor vehicle, a frame, an axle structure including a wheel, a vehicle body secured to said frame and including an enclosed portion, spring means mounting said frame on said axle structure and normally permitting substantial relative vertical movement therebetween, a flexible cable having its lower end secured to said axle structure and extending upwardly therefrom through an opening in said frame and said body and terminating within said body enclosure, coiled spring means engaging at least a part of the extent of said cable and normally urging said cable through said port to assume a retracted position intermediate said axle structure and said frame, a locking element on the upper portion of said cable within said enclosure and larger than said opening through said frame and body and normally held adjacent said opening in response to the urging of said coiled spring means, a locking detent on said body within said enclosure spaced from said opening, said coiled spring means being extensible when said cable is drawn through said opening to permit the engagement of said locking element with said locking detent to restrict the downward movement of said wheel relative to said frame to facilitate the raising of said axle structure through jacking means applied to said frame.

2,459,990
TRACK JOINT LUBRICATION
Frank W. Brooke, Pittsburgh, Pa.
Application November 19, 1947, Serial No. 786,961
4 Claims. (Cl. 238—161.5)



4. The combination with a conventional railway track joint wherein adjacent rail end portions are embraced at each side beyond their end junction zone and an intervening open joint space by connecting fish plates, midway sealing units extending across such space at each opposite side between the rail end portions and the fish plates, endmost sealing units between the terminal ends of the fish plates and the rails, lubricating pads between the midway sealing units and the endmost sealing units, and means connecting the fish plates and rails exerting pressure on the lubricating pads.

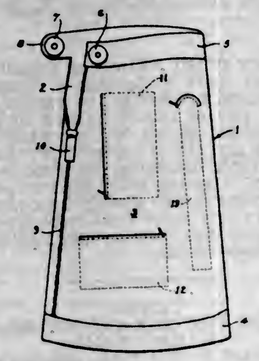
2,459,991
METHOD FOR MAKING SIRUP
Clarence C. Capdevielle, New York, N. Y.
No Drawing. Application December 13, 1944, Serial No. 568,071
2 Claims. (Cl. 99—142)

1. The method of producing a syrup for use in making confections which comprises diluting a quantity of cane molasses to a density of approximately fifteen to twenty per cent of sugar and non-sugar solids, bleaching the diluted molasses, filtering the same, increasing the density of the filtered molasses to approximately fifty per cent of sugar and non-sugar solids by dissolving sucrose therein, inverting the sucrose sugar, and thereafter increasing the density of the syrup to seventy-five per cent of sugar and non-sugar solids by adding sucrose sugar thereto.

2,459,992
SLEEVELET PURSE
Thomas D. Cimino, New Kensington, Pa.
Application June 6, 1946, Serial No. 674,866
1 Claim. (Cl. 224—28)

A sleevelet-purse for the forearm comprising a sleevelet with one end larger than the other, said sleevelet being proportioned along its length to fit the forearm and provided with a plurality of

pockets in said sleevelet for keys, coins, cosmetics and the like, the larger end of said sleevelet being a closed band, the smaller end of said sleevelet being longitudinally split over substantially its entire length, means for first fastening together the split portions of said sleevelet at the smaller end thereof, and means for thereafter fastening together the split portions of said sleevelet along



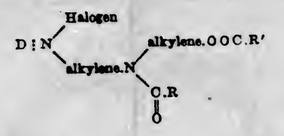
the length thereof and thereby closing the opening therebetween, whereby the sleevelet-purse may be passed over the hand when both fastening means are not engaged, secured at the wrist when the first fastening means are engaged, and finally secured on the forearm with the split opening closed when the last-mentioned fastening means are engaged.

2,459,993
FOUNTAIN PEN
Darrell C. Crain, Washington, D. C.
Application March 8, 1945, Serial No. 581,602
8 Claims. (Cl. 120—42)

1. A fountain pen including a barrel having one end circular and the other end of enlarged flat oval shape providing increased writing fluid capacity, said oval portion having its side wall structure flexible for varying the pressure on the inside of the barrel, a cap for said pen and a cap receiving recess in the enlarged oval end of the barrel, and means in said recess for receiving and holding the cap.

2,459,994
QUATERNARY AMMONIUM COMPOUNDS
Melvin De Groote, University City, and Bernhard Keiser, Webster Groves, Mo., assignors to Petrolite Corporation, Ltd., Wilmington, Del., a corporation of Delaware
No Drawing. Original application November 14, 1941, Serial No. 419,082. Divided and this application June 26, 1943, Serial No. 492,649
7 Claims. (Cl. 260—286)

1. A new chemical compound of the following formula:



in which RCO is the acyl radical of a low molal monocarboxy acid having 5 carbon atoms or less, and R'CO is the acyl radical of a detergent-forming monocarboxy acid having at least 8 and not more than 32 carbon atoms; and D⋮N represents a radical of a heterocyclic compound of the pyridine series selected from the group consisting of pyridine, quinoline, isoquinoline, and C-linked methyl homologues thereof.

2,459,995
PROCESS OF PRODUCING HYDROCARBON OIL CONCENTRATES OF METAL SULFONATES
Gordon W. Duncan, Westfield, and John C. Zimmer, Union, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application February 5, 1946, Serial No. 645,715
12 Claims. (Cl. 260—504)

1. An improved method for producing concentrates of oil-soluble polyvalent metal sulfonates in liquid hydrocarbons which comprises contacting a petroleum oil solution of a material selected from the group consisting of preferentially oil-soluble sulfonic acids and metal salts thereof with an aqueous solution of a material selected from the group consisting of lead acetate, barium acetate, barium propionate and calcium propionate, heating the mixture to a temperature of 275–350° F. to effect dehydration of the mixture and precipitation of an oil-insoluble sulfonate complex; separating oil from the precipitated complex, reacting the separated complex with a dilute aqueous solution selected from the group consisting of hydrochloric acid and sulfuric acid, the polyvalent metal salts of which do not form oil-insoluble sulfonate complexes, to reconvert the oil-insoluble sulfonate complex to an oil-soluble sulfonate or sulfonate complex, and heating to dehydrate and remove volatile acids.

2,459,996
GOLF CLUB GRIP
Thomas P. Duncan, Jr., Newport News, Va.
Application July 30, 1946, Serial No. 687,081
3 Claims. (Cl. 273—81)

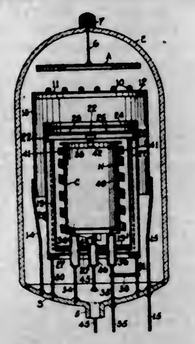
1. In an athletic implement of the character stated having a handle shaft, a hand grip for the shaft comprising a sleeve enclosing the butt end of the shaft, and a cap of like material as the sleeve and hingedly joined by such material to the sleeve at one side thereof to facilitate the exten-

sisting of pyridine monocarboxylic acids and their

sion of the shaft through the sleeve, the cap being closed over the adjacent end of the sleeve and

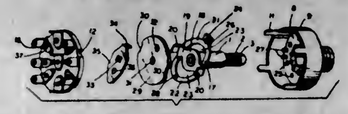
sealed thereto to close the end of the sleeve and cover the adjacent end of the shaft.

2,459,997
PARTIALLY INDIRECTLY HEATED CATHODE STRUCTURE FOR GAS TUBES
Donald V. Edwards, Montclair, and Earl K. Smith, West Orange, N. J., assignors to Electrons, Incorporated, Newark, N. J., a corporation of Delaware
Application May 24, 1947, Serial No. 750,282
11 Claims. (Cl. 250—27.5)



1. A thermionic emissive cathode structure for gas tubes comprising in combination, a hollow cathode element having an emissive coating on its inner surface, a heating element around said cathode element, and a heating circuit including said heating element and said cathode element in series, said cathode element being directly heated in part by the flow of current in said heating circuit through it and also being indirectly heated by said heating element, the resistance of said hollow cathode element being a relatively small part of the total resistance in the heating circuit, whereby the heating effect of load current flowing through the resistance of the cathode element is small.

2,459,998
ROTARY ELECTRIC SWITCH
Gilbert S. Ellitherpe, Chicago, Ill.
Application December 28, 1945, Serial No. 637,655
5 Claims. (Cl. 200—6)

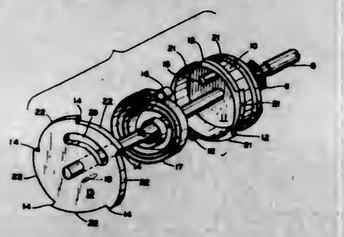


2. A rotary switch, comprising a shaft, a bearing for said shaft, a cup-shaped housing fixed on said bearing, a dielectric disc mounted on said housing, a pair of radially spaced contact terminals mounted on said disc, a contact arm rotatable into and out of contact with said terminals, a movable insulating disc supporting said contact arm, a spring plate fixed on said shaft and comprising arms tiltably supporting said movable dics and other arms respectively bearing in opposite directions on said insulating disc and cup-shaped housing.

2,459,999
PLOW OR THE LIKE AND METHOD OF MAKING SAME
Reuel H. Figard, Detroit, Mich., assignor to Harry Ferguson, Inc., Dearborn, Mich., a corporation of Delaware
No Drawing. Application January 20, 1945, Serial No. 573,815
2 Claims. (Cl. 51—282)

1. The method of manufacturing a plow which includes the steps of forming the earth-engaging surface of a curvature suitable for turning a particular kind of earth, treating the surface by a blast of abrasive particles to eliminate scratches or wheel marks and to produce a uniform surface of dull appearance comprised of extremely minute projections, and then polishing said surface by causing a polishing agent to move across the surface along lines which extend in the same direction that the earth will move past the surface during normal use, thereby producing a surface which scours cleanly without the necessity of breaking in.

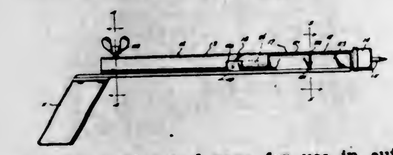
2,460,000
ESCAPEMENT MECHANISM
Robert Michael Flanagan, Morris Plains, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Original application January 9, 1945, Serial No. 572,017. Divided and this application December 23, 1946, Serial No. 717,838
2 Claims. (Cl. 171—97)



2. An escapement mechanism comprising, a first rotatable toothed member, a second rotatable toothed member, a shaft, said first member freely

mounted on said shaft and said second member affixed to said shaft, one of said members being of a cup shape and the other of said members positioned at the open end of said cup shaped member, a spiral spring positioned within said cup shaped member and about said shaft, said spring drivingly connecting said first and second members, electric motor means for driving one of said members through the other member, the teeth of the first of said toothed members positioned in spaced relation to the teeth of the second of said toothed members, a pawl, means biasing one end of said pawl into the interdental space between a tooth of the first toothed member and a tooth of the second toothed member for holding one of said toothed members from rotation relative to the other of said toothed members, a cam surface carried by said other toothed member for urging said pawl in a direction for releasing the tooth of said one toothed member for rotation under tension of said spring of said one toothed member relative to said other toothed member, a pin projecting from one of said toothed members, the other of said toothed members having a slot formed therein, and said pin disposed in said slot for limiting the rotary movement of the toothed member under tension of said spring, a circuit for energizing said motor means, switch means for controlling said circuit, and cam means operated by one of said members for opening said switch means and circuit at a predetermined position of said last mentioned member and said pin effecting a direct driving connection between said first and second members upon breakage of the spiral spring and until said cam means opens said switch means.

2,460,001
CABLE HOLDER AND GAUGE
Monte Frank, Chicago, Ill.
Application May 25, 1946, Serial No. 672,315
1 Claim. (Cl. 29—67)

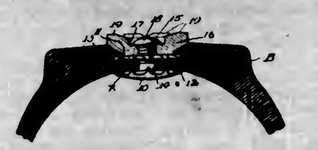


A cable holder and gage for use in cutting armored electrical cable comprising a base, a tubular cable support on said base and said cable support having a diagonal slot therein through which a cutting tool is adapted to be introduced for cutting through the cable armor, and said cable support having longitudinally spaced sight openings spaced known distances from the slot whereby the armor of an armored electrical cable may be severed a known distance from its end, a clamp near one end of the cable support temporarily to clamp a cable in the holder, a pistol grip fixed to the base beneath the clamp, a cap closing the end of the cable support remote from the pistol grip and a spike projecting from the cap in axial alignment with the cable support.

2,460,002
CATALYTIC AMIDIZATION PROCESS
Paul W. Garbo, Freeport, N. Y.
No Drawing. Application November 14, 1946, Serial No. 709,790
10 Claims. (Cl. 260—295.5)

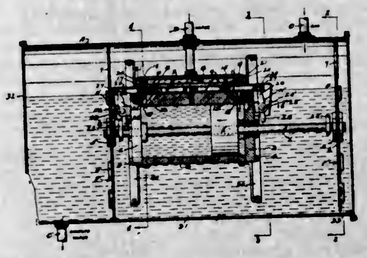
1. The process for the amidination of pyridine monocarboxylic acid compounds of the class consisting of pyridine monocarboxylic acids and their ammonium salts, which comprises reacting a said compound with urea in the proportions of about 2 mols of urea for each mol of said compound in the presence of a boron catalyst, and recovering thus produced amide from the resulting reaction mass.

2,460,003
ANTISKID DEVICE
Blaine B. Gemeny, Chicago, Ill.
Application April 8, 1946, Serial No. 660,435
6 Claims. (Cl. 152—210)



1. An anti-skid device for tires, embodying two co-operating members for clamping a portion of a tire therebetween, means for holding said members in assembled relation and embodying a projection on one member and upon which the other member is adjustable, and a clamping member co-operating with said projection and operating to force said members into clamping relation, the end of said projection extending beyond said clamping member and being deformed in order to secure the members against separation, the deformed end of the projection being recessed into the said clamping member.

2,460,004
CARBONATING APPARATUS
Samuel S. Green and Donald Keene, Los Angeles, Calif.
Application April 27, 1945, Serial No. 590,580
7 Claims. (Cl. 261—82)

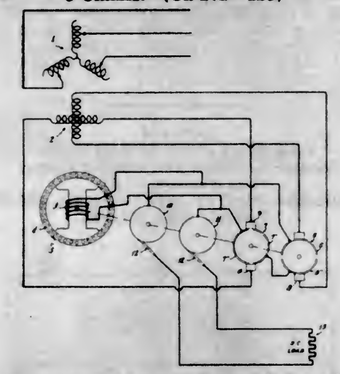


1. In carbonating apparatus having a tank for holding water and gas under pressure and having a gas inlet and an outlet, and operating mechanism positioned in the tank; a cylinder fixedly supported therein formed with a water receiving passage, a valve slidable in the cylinder body and having parts adapted for registration at times with inlet and exhaust parts of the cylinder body so as to direct a flow of water under pressure from an external source to opposite ends of the cylinder and to exhaust water from the cylinder to the tank, a piston slidable in the cylinder under the influence of water pressure, and means for operatively connecting the piston with said valve for automatically regulating the flow of water to and from the cylinder during the alternate strokes of the piston.

2,460,005
PLUMBING FIXTURE
Henry Gruen, New York, N. Y.
Application March 11, 1947, Serial No. 733,968
3 Claims. (Cl. 4—191)

1. A plumbing fixture for a bathroom comprising a recessed unit adapted to be set into a wall recess of a room above a tub to provide an open front housing for an inset handle assembly of the water supply pipes, said unit including an escutcheon member adapted to be secured within said wall recess in substantially flush relation to said wall, and a removable rear wall portion inset rearwardly from the plane of the escutcheon member and carrying a valve handle assembly including means for removably securing said rear wall portion within said escutcheon member to give access to the rear of the unit.

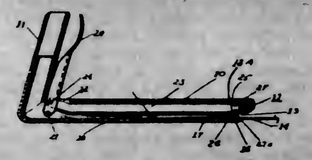
2,460,006
RECTIFIER AND TRANSFORMER UNIT
Klaus L. Hansen, Milwaukee, Wis.
Application January 10, 1944, Serial No. 517,673
3 Claims. (Cl. 171—123)



1. A synchronous rectifier and transformer unit comprising a stator constituting a transformer element and having a polyphase primary and a polyphase secondary winding, a rotor having a short-circuited winding and a direct current winding, a direct current load circuit, a plurality of commutators driven from said rotor, brushes connected to said secondary winding and bearing on said commutators, said commutators and said direct current winding being all connected in series, slip rings driven from said rotor and connected to said commutators, and brushes connected to said load circuit and bearing on said slip rings, said commutators, slip rings and load circuit being all connected in series.

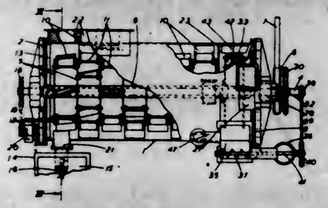
2,460,007
SHEET GRIPPING AND PULLING TOOL
Victor H. Hasselquist, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application October 19, 1944, Serial No. 559,393
2 Claims. (Cl. 81—44)

1. A gripping and pulling tool for applying a covering of sheet material to a surface, said tool comprising a tubular body having a longitudinal open notch at an end thereof to receive a margin of a covering, a wall of said body adjacent the notch having a stationary jaw, a moveable jaw mounted in said tubular body, toggle means between said moveable jaw and a wall of said body opposite said fixed jaw, a handle at the end of said body opposite said notch for manipulating



said body, and means comprising an element extending through said tubular body from a region adjacent said handle for moving said toggle means to clamp said jaws upon a margin of the covering, said toggle means comprising a pair of moving struts engaging said moveable jaw and said tubular body respectively at opposite sides of said element of the toggle adjusting means.

2,460,008
CONCURRENT FLOW DRIER WITH ROTOR, STATIONARY CASING, AND TERMINAL SEPARATION MEANS FOR DRYING MATERIALS AND DRYING FLUID
Oswald Heller, London, England, assignor to Bamag, Limited, London, England, a company of Great Britain and Northern Ireland
Application November 13, 1944, Serial No. 563,169
In Great Britain October 23, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires October 23, 1963
15 Claims. (Cl. 241—88)



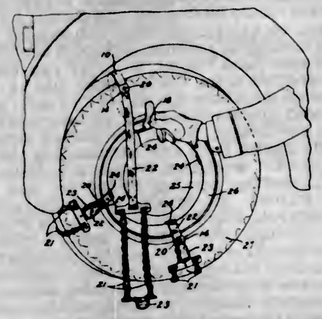
15. A concurrent flow dryer for drying material by means of hot gases, comprising a stationary casing of substantially circular cross-section, means for feeding material to be dried into one end of said casing, means for introducing hot drying gases in the vicinity of that end, a bladed rotor within said casing adapted to be rotated rapidly for applying rapid rotational impulsion to the material and gases to effect gyration thereof adjacent the inner surface of said casing, gas transporting means imparting to the gyrating material and gases an endwise propulsion along said inner surface with resultant helical motion, an annular weir projecting radially inwards from the inner surface of said casing adjacent the rotor end opposite to that at which the material and gases are introduced, a plurality of cutters located adjacent said weir, said cutters

projecting radially inward from the inner surface of said casing and being received in correspondingly positioned slots in the rotor blades, and centrifugal separating means for the dried material and gases disposed inside of said casing at the side of said weir opposite to that on which said cutters are located, said separating means including a material discharge aperture in the periphery of said casing, a gas withdrawal aperture disposed adjacent the axis of said casing, and rotary separator means for applying centrifugal impulsion to said dried material.

2,460,009
VITAMIN COMPOSITIONS
Wolfgang Huber, Hillbrow, Castleton on Hudson, and Werner Richard Boehme, Albany, N. Y., assignors, by mesne assignments, to Winthrop-Stearns Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application March 20, 1944, Serial No. 527,343
1 Claim. (Cl. 260—251)

Thiamine-methylene-bis-2-hydroxy - 3 - naphthoate.

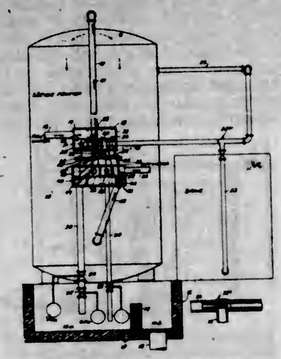
2,460,010
FLEXIBLE TOOL FOR THE APPLICATION OF EMERGENCY TIRE CHAINS
Arthur E. Humboldt, Milwaukee, Wis.
Application February 14, 1947, Serial No. 728,692
1 Claim. (Cl. 81—15.8)



A tool for facilitating the application of emergency tire chains having end straps provided with engagement means complementary to that on the tool, said tool comprising, an elongated relatively flexible and normally circular band having one end thereof cut diagonally and bent twice upon itself to form an end hook having a transverse wedge disposed therein.

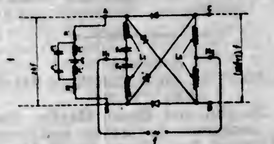
2,460,011
BASE EXCHANGE WATER TREATING EQUIPMENT
Churchill Hungerford, Jr., Wenonah, and John G. Reutter, Clayton, N. J., assignors to Hungerford & Terry, Inc., Clayton, N. J., a corporation of Delaware
Application April 14, 1945, Serial No. 588,266
16 Claims. (Cl. 210—24)

1. In base exchange water treating equipment, flow control mechanism comprising a raw water receiving unit; a water disposal unit adjacent to but separated from the raw water receiving unit; a series of poppet controlling valves in each of said water units with the valve operating stems of the two series arranged in opposed relationship; and a cam shaft lying between and



adapted to open all of said valves in the required combinations and sequence.

2,460,012
SYSTEM OF PRODUCING HARMONICS
Jean Louis Hurault, Paris, France, assignor to Compagnie Generale D'Electricite, Paris, France, a corporation of France
Application October 25, 1945, Serial No. 624,352
In France October 27, 1944
4 Claims. (Cl. 172—281)

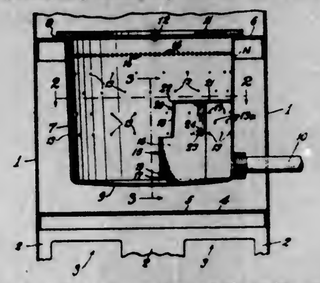


3. In a system for obtaining separately even harmonics and odd harmonics of a fundamental frequency, a transducer unit having four arms, two opposite ones of said arms consisting of impedances each having a mid-tap about which each said impedance arm is symmetrical, a source of alternating current of fundamental frequency connected to said two mid-taps, each of the other two opposite arms of said unit comprising a unilateral contact element and said elements being poled to oppose each other ring-wise around the arms of said unit, a source of direct current connected across one of said impedance arms, two diagonal connections in said transducer unit between opposite common points of a unilateral element arm and an impedance arm, and an auxiliary unilateral conducting element in each of said diagonal connections, output terminals having even harmonics connected to the ends of said impedance arm to which direct current is applied, and output terminals having odd harmonics connected to the ends of the other said impedance arm.

2,460,013
QUADRANT PILOT FOR POT TYPE OIL BURNERS
Milton D. Huston, Chicago, Ill., assignor, by mesne assignments, to Breese Burners, Inc., Santa Fe, N. Mex., a corporation of Delaware
Application May 11, 1942, Serial No. 442,425
2 Claims. (Cl. 158—91)

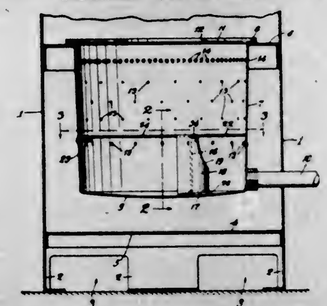
1. In combination, an open topped burner pot having a circumferential wall provided with a

plurality of primary air inlet apertures located at various levels in the wall, means for delivering secondary air to the mixture of primary air and vaporized fuel moving upwardly through the pot and a pilot housing surrounding the area of admission of the fuel to the pot and defining a space in communication with a plurality of the lower primary air inlet apertures of the pot, said housing including a pair of generally upright side walls, extending inwardly from the circumfer-



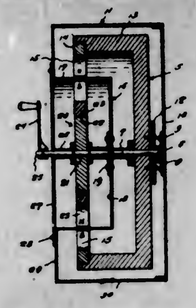
ential pot wall and meeting at their inner edges, and a cover portion located below the level of the highest of the primary air inlet apertures and below the level of admission of secondary air to the mixture, the edges of the side walls adjacent their juncture and adjacent the bottom of the pot, defining a flame aperture in communication with the interior of the pot, and means for delivering liquid fuel to the pot at a point enclosed by said pilot housing.

2,460,014
LIQUID FUEL BURNER AND PILOT STRUCTURE
Milton D. Huston and Bruce Hayter, Santa Fe, N. Mex., assignors, by mesne assignments, to Breese Burners, Inc., Santa Fe, N. Mex., a corporation of Delaware
Application September 28, 1944, Serial No. 556,176
6 Claims. (Cl. 158—91)



1. In combination, an open topped burner pot having a closed bottom, a circumferential wall provided with a plurality of primary air inlet apertures located at various levels in the wall, means for delivering secondary air to the mixture of primary air and vaporized fuel formed in the pot, and a pilot housing defining and surrounding a space in communication with a plurality of the lower primary air inlet apertures of the pot, said housing including generally upright side walls extending inwardly from the pot wall, a top wall, and a front wall, means for delivering liquid fuel to the pot at a point enclosed by said pilot housing, said front wall having an aperture adjacent its upper edge, said front wall terminating above the closed pot bottom to provide a leakage space between the lower edge of the wall and the pot bottom, adapted to permit the flow of flame and liquid fuel respectively from the interior of the pilot housing to the interior of the pot.

2,460,015
MOTION TRANSMITTING MECHANISM
Neven J. Jones, Natrona Heights, Pa.
Application July 13, 1945, Serial No. 604,842
1 Claim. (Cl. 172—284)

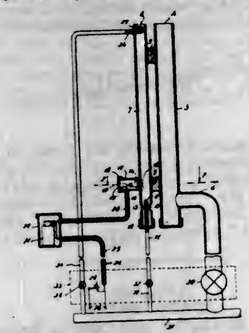


A magnetic clutch comprising a closed cylindrical main casing having one end thereof formed to provide an axial cylindrical indentation constituting a secondary casing, isolated from the interior of said main casing, an outer cup-shaped rotor supported from the opposite end of said main casing to rotate axially within said main casing, said outer rotor being of non-magnetic material and comprising a rim portion circumferentially spaced from and surrounding the periphery of said secondary casing, a radially inwardly projecting annular flange on said rim portion formed at equally circumferentially spaced intervals with horse-shoe shaped recesses opening through the radially inward edge of said annular flange close to the periphery of said secondary casing, an inner rotor comprising a non-magnetic disk supported from an end of said secondary casing to rotate axially within said secondary casing in axial alignment with said outer rotor, the periphery of said disk running close to the inner surface of the periphery of said secondary casing in the same plane as said annular flange of the outer rotor, the periphery of said disk being formed with equally circumferentially spaced horse-shoe shaped recesses opening therethrough and horse-shoe magnets positioned in the recesses of the outer and inner rotors with the poles of the outer rotor magnets facing the poles of the inner rotor magnets and being of opposite polarity.

2,460,016
FLARE IGNITION APPARATUS
George F. Kuhn, Sinclair, Wyo., assignor to Sinclair Refining Company, New York, N. Y., a corporation of Maine
Application June 26, 1947, Serial No. 757,285
5 Claims. (Cl. 158—115)

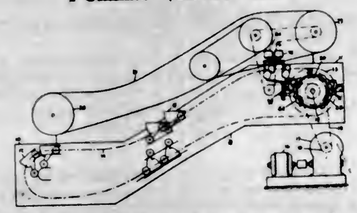
1. Flare ignition apparatus comprising a vertically extending tube having an open upper end and an opening for the admission of air adjacent its lower end, two gas jets within and spaced from the wall of said tube, one of said jets

disposed adjacent the upper end and acting both to supply an ignition flame extending from the upper tube end and to induce a flow of cooling air through the tube, and the other of said jets dis-



posed adjacent the lower air opening and acting when lighted to ignite said first mentioned jet, and a spark ignition device in said tube adjacent and above said second mentioned jet.

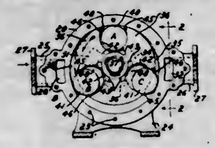
2,460,017
MOVING STAIRWAY BRAKE
George William Lautrup, Yonkers, N. Y., and John Norman Anderson, Hoboken, N. J., assignors to Otis Elevator Company, New York, N. Y., a corporation of New Jersey
Application June 6, 1946, Serial No. 674,738
4 Claims. (Cl. 188—69)



1. Braking apparatus comprising; a plurality of rotatable members; a plurality of brake members alternately positioned between said rotatable members and in frictional engagement therewith to be rotated thereby; stopping means for each of said brake members for engaging the same to stop rotation thereof; an electromagnet for each stopping means for disengaging it from the brake member for which it is provided; and means for causing said stopping means to engage said brake members in timed sequence.

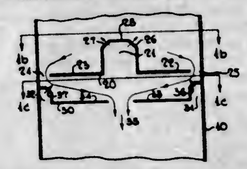
2,460,018
ROLLER VANE ROTARY PUMP
Harry Hansen Looke, Caulfield, Victoria, Australia
Application May 1, 1946, Serial No. 666,416
In Australia May 3, 1945
8 Claims. (Cl. 103—136)

1. A rotary pump comprising a casing, a circular rotor chamber in the casing, inlet and outlet ports in the casing communicating with the rotor chamber, a rotor eccentrically and rotatably mounted in the rotor chamber, radial recesses in the rotor, each of said radial recesses having a leading edge and a following edge, rollers fitted in the radial recesses and capable of radial movement therein, an arcuate recess in the periphery of the rotor chamber adjacent to the point of closest approach at which the rotor is closest to the periphery of the rotor chamber, the curvature of said arcuate recess being substantially equal to that of the periphery of the rotor and the said rotor being in fluid-tight running contact with the peripheral wall of said arcuate recess, the width of the arcuate recess being substantially equal to that of the rotor chamber and



the centres of curvature of the arcuate recess and the rotor being coincidental, the length of the arcuate recess being greater than the distance between the leading and the following edges of a radial recess, and the outlet port being in communication with the inner end of each radial recess as it approaches the said point of closest approach and remaining in communication with said radial recess until shortly before the leading edge of said radial recess leaves the said arcuate recess.

2,460,019
METHOD AND APPARATUS FOR COUNTERCURRENT CONTACTING OF LIQUIDS
John D. Long, Westfield, and Cyril O. Rhys, Jr., Cranford, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application August 23, 1944, Serial No. 550,798
8 Claims. (Cl. 23—270.5)



1. A process for countercurrently contacting relatively immiscible fluids of different gravities, comprising passing a continuous stream of one fluid through a system containing a series of contact zones, each of said zones containing a plurality of alternate regions of high and low velocity, the said change of velocity being obtained by alternately constricting and enlarging the stream as it flows through the system passing the other fluid as a discontinuous phase in the opposite direction, injecting the said other fluid in a finely divided state into the high velocity regions of the stream of the said first fluid, allowing the mixed fluids to separate by gravity in the low velocity regions, passing the thus separated fluids in opposite directions for further contact in the successive contact zones, and withdrawing the separated fluids respectively from opposite sides of said system.

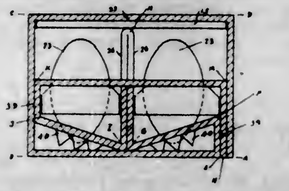
6. An apparatus for the countercurrent treatment of relatively immiscible fluids of different gravity, comprising an upright shell fitted with a plurality of transverse plate assemblies which subdivide the interior of said shell into a series of settling chambers, each assembly comprising at least one narrow inverted trough, adapted to collect an ascending fluid of relatively light gravity, the trough having its open end edges flanged

and a front wall, means for delivering liquid fuel

spaced from the wall of said tube, one of said jets

by horizontally disposed base portions extending outwardly from the trough edges, each said base portion having at least one constricted opening for permitting the downward flow of a fluid of relatively heavy gravity, the trough being fitted in its upper solid portion with small perforations adapted to disperse the ascending fluid, alternate assemblies having said troughs and said constricted openings alternately disposed, said troughs of one assembly terminating in spaced relation to said constricted openings of the next higher assembly to cause the ascending fluid to intercept the descending fluid at a point of substantially most rapid flow of said descending fluid as it passes through said constricted opening, and an inlet and an outlet in both the uppermost and the lowermost settling chamber.

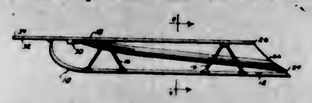
2,460,020
EGG CRATE
Elmer H. Lupton, Ilchester, Md., assignor to The Bartgis Bros. Company, a corporation of Maryland
Application January 8, 1945, Serial No. 571,790
3 Claims. (Cl. 229—29)



1. A crate of the class described comprising a single blank of flexible material of quasi-rectangular form having twelve panels arranged longitudinally therein between bend lines and the end edges, with its first panel having extensions provided at each end for forming the ends of a crate, said first panel being bent to form an outer side wall, the second panel being bent on said first panel to provide a top cover, the third panel being similar in shape to the first panel and bent downwardly to form an opposite side panel, the fourth panel having extensions provided at each end for forming ends and locking means therefor, said fourth panel being bent at right angles to the side panel to form the bottom therefor, the fifth panel being bent upwardly at right angles to the bottom to form a short inner panel aligned parallel with said first side panel, the sixth panel being bent downwardly and outwardly to contact the floor and rest thereon, the seventh panel being bent vertically upwardly to contact and pass through said top panel, then bent downwardly to form panel eight until it contacts and rests on the floor thence being bent upwardly and outwardly forming panel nine, thence bent upwardly forming panel ten which is parallel with the side panel three for approximately one-half its distance, thence bent horizontally to form panel eleven and continue across the entire crate until it contacts side panel one, thence projecting downwardly between said side panel one and short inner panel five.

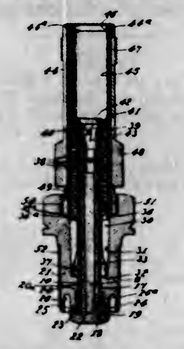
2,460,021
LOW CENTER OF GRAVITY SLED
Victor William Manthey, Mauston, Wis.
Application September 19, 1946, Serial No. 698,010
1 Claim. (Cl. 280—12)

A sled of the character described, comprising a pair of runners, bracing members for said runners, a top board on said runners secured to said bracing members, the forward end of said top board extending beyond the front ends of said runners to form a bumper portion, a concave recess in said top board which is curved transversely of the top board and increases in curva-



ture from a point adjacent the front of the top to the rear thereof and the rear end of the board having a reduced portion centrally thereof and the sides of the reduced portion being curved upwardly at the same inclination of the recess to conform to the legs of a rider of said sled.

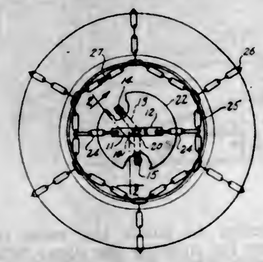
2,460,022
SPARK PLUG
Frederick I. McCarthy and Charles Schandler, New York, N. Y.
Application October 23, 1944, Serial No. 559,880
4 Claims. (Cl. 123—169)



1. In a spark plug, the combination of an exterior heat dissipating shell having a central bore and a larger diametered bore concentric thereto, and having an electrode for one polarity, a spindle extending through the central bore of the shell having an electrode for another polarity at one end, and having a hollow bore extending from the electrode to its other end, and an insulator between the spindle and the central bore, insulating the opposite polarities, said electrodes being disposed at spark gap distance from each other, said larger bore of the shell being filled with compacted and compressed powder containing silver forming a solid without air spaces and free from air spaces between the solid and the larger bore and between the solid and the insulator, and a compact of compressed silver powder in the bore of the spindle, extending from its electrode to beyond the compact of the shell bore, whereby a heat exchange action takes place through both compacts from the spindle electrode to the shell.

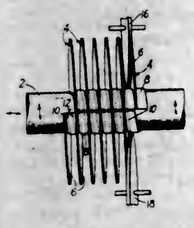
2,460,023
ANTISKID TIRE CHAIN ANCHORING DEVICE
Michael F. McGuiness, Scranton, Pa., assignor of one-half to Allen J. Brandt, Scranton, Pa.
Application May 6, 1947, Serial No. 746,404
2 Claims. (Cl. 152—241)

2. The combination with a hub of a motor vehicle wheel, studs projecting from said hub, and a hub cap provided with a centrally-disposed opening for enclosing said hub, of a device for anchoring anti-skid chains including side chain members in position on said wheel, said device comprising a bracket provided with a threaded opening extending therethrough, adapted to be secured to said studs, said bracket embodying a pair of arms arranged at an obtuse angle with respect to each other, each of said arms being provided at its outer end with an opening, the



openings in said arms being in engagement with said studs, an anchoring stud projecting through the opening in said hub cap and engaging the threaded opening in said bracket, said anchoring stud being provided at its outer end with a threaded socket, a cap screw in threaded engagement with said socket, and chain-holding elements carried by said anchoring stud and having their ends secured to said side chain members.

2,460,024
METHOD OF MAKING HEAT-EXCHANGE UNIT
Neal T. McKee, Bronxville, N. Y., assignor to The Superheater Company, New York, N. Y., a corporation of Delaware
Application May 19, 1945, Serial No. 594,740
1 Claim. (Cl. 219—10)



In the art of making a heat exchanger by attaching to a metal tube a series of helical metal fins each of which is formed from a disc with a central opening and a collar therearound, said fins being mounted around said tube with their collars in engagement with said tube and in abutment with the collars of the adjacent fins, and each of which fins is slitted radially with its radial edges offset into abutment with the edges of the adjacent fins to form a substantially continuous helical fin assembly, the method of securing said fins to said tube which comprises placing a pair of welding electrodes in engagement with said collars at opposite points in the same axial plane and in the same transverse plane, feeding said tube and fins past said electrodes in a helical movement of the same pitch as that of said helical fin assembly, and passing an electrical current through said electrodes, said collars and said tube to weld each of said collars to said tube along two parallel lines displaced from each other a distance equal to one-half of said pitch.

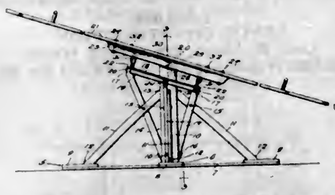
2,460,025
LUBRICATING OIL COMPOSITION
John G. McNab, Cranford, and Jeffrey H. Bartlett, Westfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application October 24, 1944, Serial No. 560,191
10 Claims. (Cl. 252—42.7)

1. A hydrocarbon material susceptible to deterioration by oxidation containing dissolved therein a small quantity, sufficient to stabilize said material against such oxidation, of a compound of the formula

$$RAr(XM)S_x(MX)ArR$$

in which Ar is an aromatic hydrocarbon nucleus, R is a branched chain aliphatic hydrocarbon radical containing 14 to 24 carbon atoms, X is a nonmetallic element of group VI of the periodic table, M is the hydrogen equivalent of a metal, S is sulfur, and x is an integer from 1 to 4.

2,460,026
AMUSEMENT DEVICE
Jethro Mitchell, Cincinnati, Ohio
Application March 12, 1945, Serial No. 582,365
1 Claim. (Cl. 272—30)



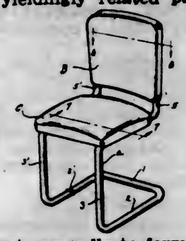
An amusement device comprising a base, a central post secured to said base, a vertical lag screw in the top of said post, a cross bar on top of said post having cylindrical ends and a central opening to receive said lag screw, whereby said cross bar is pivotally mounted on the post, a seesaw disposed above said post, two laterally spaced cleats secured to the lower side of said seesaw and having at their central portions transversely alined bearing sockets opening only through their inner sides, said sockets rotatably receiving said cylindrical ends of the cross bar whereby the seesaw is pivotally mounted on said cross bar, two transverse bars secured to the lower side of said seesaw and spaced in opposite directions from said cross bar, the ends of said transverse bar abutting the inner sides of said cleats to brace the same, rollers mounted on said transverse bars on axes extending longitudinally of said see-saw, and a circular track supported from said post beneath the seesaw and on which said rollers rest.

2,460,027
METAL CHAIR
John J. Nash, St. Louis, Mo., assignor to American Fixture & Manufacturing Co., St. Louis, Mo., a corporation of Missouri
Application August 2, 1945, Serial No. 608,643
4 Claims. (Cl. 155—194)

1. An article of furniture or the like comprising a frame and rigid seat and back-members, the

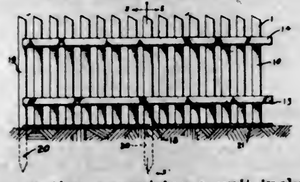
a pair of runners, bracing members for said runvehicle wheel, studs projecting from said hub,

latter being provided with projecting studs on their respective under and back faces, said studs being spaced along either side thereof and the frame being constructed of metallic tubing comprising a U-shaped member terminating in two parallel forwardly extending ground-engaging members bent upwardly at the front to form front legs, then bent rearwardly to include an intermediate yieldingly related pair of seat-bars



and then bent upwardly to form a yieldingly related pair of back-bars, both seat-bars and back-bars being provided with keyhole-shaped slots, the longitudinal axes of which extend transversely of the chair seat, the slots of the seat-bars being oppositely disposed to the slots of the back-bars and said bars at said slots being springwise engaged with the studs of the seat and back-members for securing the seat and back-members to and upon the frame.

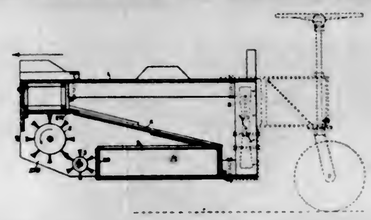
2,460,028
FENCE CONSTRUCTION
Leon D. Obert, Bremerton, Wash.
Application November 16, 1945, Serial No. 629,104
1 Claim. (Cl. 256—24)



A fence section comprising a unit including a plurality of vertically disposed parallel pickets, double top and bottom horizontally disposed rails fixed to opposite sides of said pickets, extensions on said rails extending beyond the section at one end thereof and terminating short of the section at the other end for interlocking fitting engagement with a complementary end of an adjacent fence section, a ground sill underlying and secured to the bottom of each picket of said section, said ground sill being coextensive with said rails and anchoring means for securing said section in erected position comprising portions depending from certain of said pickets and extending through said ground sill for insertion in the ground.

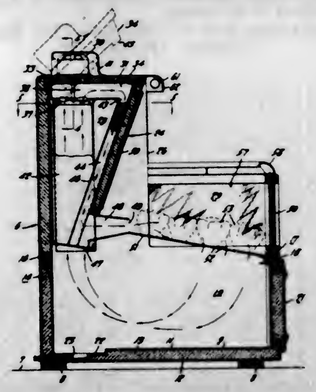
2,460,029
RUSSIAN DANDELION SEED HARVESTER
Russell M. Ramp, Houma, La., assignor to the United States of America as represented by the Secretary of Agriculture
Application August 2, 1946, Serial No. 687,861
2 Claims. (Cl. 56—19)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A mobile seed harvester comprising a housing mobily supported for movement over the ground, the housing having an inlet opening in the bottom, the opening extending up the front of the housing; a rotary brush mounted in the housing adjacent the opening; a second rotary brush mounted parallel to the first brush and rearwardly of the latter, both brushes being positioned adjacent the opening in the bottom, a part of the second brush extending below the first brush, the periphery of the two brushes substan-



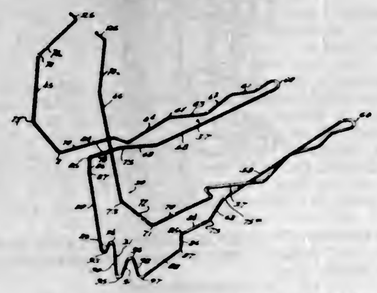
tially contacting to whisk the seeds therebetween; means for rotating the upper brush and the lower brush in opposite directions about their axes, the front of the upper brush moving downwardly at the inlet opening; means for drawing air into said inlet opening and removing it from said housing, to draw the seeds into the housing; and means in the housing for separating the seeds from the air stream.

2,460,030
OPEN-TOP REFRIGERATED DISPLAY CASE
James C. Rear, Berkeley, Calif., assignor to The Union Ice Company, San Francisco, Calif., a corporation of California
Application October 7, 1946, Serial No. 701,795
5 Claims. (Cl. 62—89.5)



1. A refrigerated display case comprising a cabinet having an open-top display portion, an inclined wall forming the back of said display portion, means on said wall for supporting ice spaced from said wall to define a channel, a perforate produce shelf in said display portion, means for establishing communication between said channel and the upper side of said shelf, means defining a duct extending from the lower side of said shelf to said channel, and means for circulating air through said duct and then through said channel.

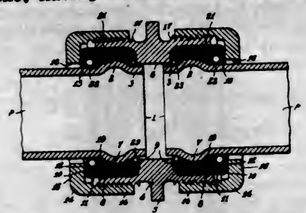
2,460,031
PACKING RETAINER
Charles T. Ripley, Chicago, Ill., assignor to Spring Packing Corporation, Chicago, Ill., a corporation of Illinois
Application April 26, 1944, Serial No. 532,716
4 Claims. (Cl. 308—89)



1. A waste retainer, for a waste-packed journal box provided in the upper front portion thereof with abutment means cooperable with the hereinafter-mentioned wire extremities and having side walls substantially paralleling the vertical plane of the axis of the journal occupying the box and having an arcuate bottom connecting said side walls, comprising: a pair of horizontally elongated waste depressors adapted to overlie waste in the spaces between the journal and the side walls of the box, each of said depressors consisting of a substantially straight length of spring wire and a horizontally zigzagged length of spring wire, the rear ends of the straight and zigzagged lengths of wire constituting each depressor being integrally connected by a hairpin bend, the substantially straight wire portion of each depressor being adapted to lie closely adjacent to but out of contact with the cylindrical surface of the journal, the zigzagged wire portion of each depressor being adapted to lie between its associated straight portion and one of the side walls of the box and to bear against said side wall at a plurality of spaced-apart points, the forward ends of the zigzagged portions of the depressors having integral extensions which project forwardly from the depressors and then upwardly and then rearwardly to present wire extremities engageable with the aforementioned abutment means, the forward ends of the straight wire portions of the depressors having integral extensions which merge as one wire portion vertically zigzagged to press rearwardly against waste underlying the journal, said vertically zigzagged wire portion presenting at least one point engageable with the arcuate bottom of the box, the forward ends of the straight and zigzagged portions of each depressor being so related that downward pressure exerted upon the forward ends of the zigzagged portions of the depressors is imparted to the forward ends of the substantially straight wire portions of the depressors.

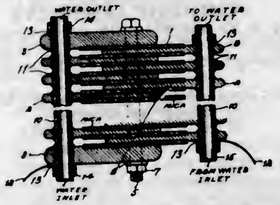
2,460,032
COUPLING FOR BEADED PIPES OR TUBINGS
Roger E. Risley, Bradford, Pa., assignor to Dresser Industries, Inc., Cleveland, Ohio, a corporation of Pennsylvania
Application July 4, 1945, Serial No. 603,169
8 Claims. (Cl. 285—90)

1. In a semi-flexible pipe joint, the combination with a pipe having an external circumferential bead of a larger diameter than the pipe and spaced from the end thereof, of a fitting comprising a body portion having an aperture to receive the end of said pipe and an annular gasket recess adjacent said aperture, an annular gasket received in said recess and fitting over said bead the gasket having an axial length greater than



the axial length of the beaded portion of the pipe, an expansible ring at the outer end of said gasket, said ring being sufficiently expansible to pass over said bead, an annular gasket follower, and means for moving said follower toward said body portion to apply sealing pressure to said gasket and to lock said expansible ring against expansion.

2,460,033
ELECTRICAL CONDENSER
Wesley M. Roberds, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 15, 1943, Serial No. 490,851
5 Claims. (Cl. 175—41)

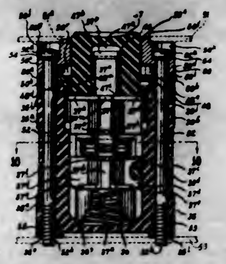


1. An electric condenser comprising a plurality of solid dielectric mica sheets, a plurality of copper electrodes of greater area than said dielectric mica sheets positioned on each side thereof, said electrodes having a depressed portion of sufficient area to retain said solid dielectric mica sheets in a desired position, said electrodes being alternately arranged to extend beyond three edges of said solid dielectric mica sheets to provide cooling radiation therefor, a plurality of tubes passing through apertures in said copper electrodes and at right angles thereto, means for passing a cooling fluid through said tubes, and means to bind all of said solid dielectric mica sheets and said electrodes together to form a unitary condenser structure.

2,460,034
ELECTRIC SWITCH
Clyde F. Robbins, Milwaukee, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application July 4, 1942, Serial No. 449,756
27 Claims. (Cl. 200—16)

1. In an electric switch, the combination with a molded contact-carrying insulating base of one-piece construction having a central recess open at one end and also having side recesses for accommodation of two pairs of contacts on each side of a plane coincident with

the longitudinal axis of said central recess, said side recesses permitting the contacts to be inserted from outside the base and to be projected into said central recess and each side recess providing for a plurality of contacts opposed seats spaced one from another longitudinally of said base, of a molded contactor-carrying insulating plunger of one-piece construction fit-



ting into the central recess of said base for reciprocation therein and prevention of relative rotation, said plunger having seats for contactors to cooperate with all of said base contacts, and the central recess of said base having clearance for said plunger contactors to permit said plunger together with its contactors to be freely inserted into said base and to be reciprocated in the latter.

2,460,035

SYNTHETIC LUBRICANT

Dilworth T. Rogers, Summit, and Jeffrey H. Bartlett, Westfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application January 25, 1946, Serial No. 643,464

16 Claims. (Cl. 260—485)

1. A normally liquid composition having lubricating properties, consisting essentially of a product of the polymerization of material having the structure—

ROOC—CH=CH—COOR'

where R and R' are straight chain alkyl groups, having not more than 10 carbon atoms each, and where the average chain length of the said groups in the unpolymerized material is from 3 to 10 carbon atoms.

2,460,036

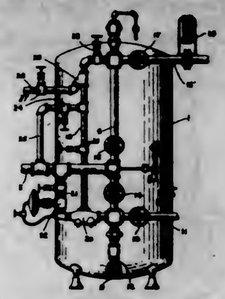
WATER TREATING APPARATUS

Joseph F. Sebald, Bloomfield, N. J., assignor to Worthington Pump and Machinery Corporation, Harrison, N. J., a corporation of Delaware

Application August 3, 1946, Serial No. 688,249

7 Claims. (Cl. 210—24)

1. In a water treating apparatus, a receptacle having a zeolite filtering bed therein, an inlet pipe on one side of said said zeolite bed for delivering water to be treated to said receptacle, an outlet pipe for treated water on the other side of said zeolite bed, a connecting pipe connecting said inlet and outlet pipes, a valve in said connecting pipe, a valve in said outlet pipe, said valves operable to direct water from said inlet pipe through said outlet pipe and into and through said zeolite bed in a reverse directional flow to the water treating flow of water through the receptacle to hydraulically expand said zeolite filtering bed, and outlet means connected to said receptacle for outlet of the water directed through the said receptacle in the reverse direction, a recirculating pipe connected to said inlet pipe and to said outlet pipe and means for recirculat-



ing through the recirculating pipe and the zeolite bed fluid passed in the reverse direction and from the outlet pipe.

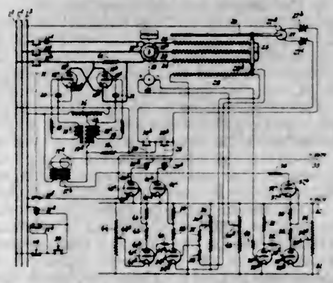
2,460,037

COMBINED PRIMARY AND SECONDARY CONTROL OF POLYPHASE MOTORS

Edwin W. Seeger, Wauwatosa, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware

Application October 8, 1945, Serial No. 626,904

6 Claims. (Cl. 318—215)



2. In a printing press control system or the like, in combination, a source of polyphase current, a polyphase motor having its primary supplied from said source, means to vary the impedance of the secondary circuit of said motor, means for supplying a voltage varying in accordance with said impedance, manual speed selecting means presettable for a given speed of said motor under given load conditions, means sensitive to said voltage and the setting of said speed selecting means for controlling said impedance varying means to afford motor speed control under balanced polyphase conditions of the primary of said motor, regulable space discharge means interposed between said source and one of the primary terminals of said motor, and means sensitive to the setting of said speed selecting means and effecting varying regulation of said space discharge means according to tendency of said motor to depart from said given speed upon reduction of said load, thereby through potential regulation of a single terminal of the motor primary winding affording a range of supplemental control which may extend from substantially balanced conditions to a single phase condition of the primary of said motor, to maintain said given speed of said motor.

2,460,038

EMULSION POLYMERIZATION PROCESS

George E. Serniuk, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application July 17, 1943, Serial No. 495,213

8 Claims. (Cl. 260—23.7)

1. The process of producing synthetic rubber-like polymerizates of good processability which comprises polymerizing in aqueous emulsion a mixture of a major proportion of a butadiene-1,3 hydrocarbon and a minor proportion of another unsaturated organic compound copolymerizable therewith in aqueous emulsion, using a water soluble soap emulsifier, from 0.001 to 1.0 weight percent of a hydrocarbon soluble peroxide, from 0.05 to 0.50 weight percent of an alkali persulfate, from 0.1 to 1.0 weight percent based on the reactants of a mercapto polymerization modifier having 8 to 18 carbon atoms per molecule, from 0.7 to 5.0 weight percent based on the water phase of a polyolefinic, higher fatty acid in the free state.

2,460,039

HYPODERMIC SYRINGE

Robert P. Scherer and John Otto Scherer, Detroit, Mich., assignors, by mesne assignments, to R. P. Scherer Corporation, a corporation of Michigan

Application April 14, 1944, Serial No. 531,044

5 Claims. (Cl. 128—218)

1. In a hypodermic syringe, a tubular device having a liquid containing rear end portion and needle containing forward end portion, a puncturable seal normally closing the forward end thereof, a piston element slidably mounted therein sealing the forward end portion from the rear end portion, a double ended hollow needle element supported within the forward end portion ahead of the piston, spring means responsive to the initial limited forward movement of the piston element to project the needle element through the puncturable seal, said spring means adapted following said limited forward movement of said elements to release one element to permit the needle to puncture the piston, and means cooperating with said spring means restraining the forward advance of the needle beyond a limited distance.

2,460,040

PREPARATION OF AMINO ACIDS

Robert H. Sifferd, Clarendon Hills, Ill., assignor to Armour and Company, Chicago, Ill., a corporation of Illinois

No Drawing. Application September 13, 1947, Serial No. 773,941

10 Claims. (Cl. 260—529)

1. In the acid digestion of proteins to form amino acids, the step of carrying on such digestion in the presence of a water-immiscible aliphatic alcohol solvent for tryptophane of from 4 to 6 carbon atoms.

2,460,041

LUBRICATING COMPOSITION

William J. Sparks, Westfield, and David W. Young, Roselle, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application December 21, 1945, Serial No. 636,499

4 Claims. (Cl. 252—46.6)

1. A lubricant material having improved viscosity index and superior extreme pressure properties comprising a mineral oil base lubricating material having in solution therein a copolymer of approximately equal parts of butadiene and diisobutylene; the said copolymer being treated with a phosphorus sulfide to incorporate therein phosphorus and sulfur, said treated copolymer being per se a solid resin having a melting point by the ball and ring method in the general neighborhood of 83° C. and a Staudinger molecular weight in the general neighborhood of 3000 to 5000, an iodine number of about 100 to 122; and containing, combined thereinto, about 0.19% to about 0.41% of phosphorus and about 0.45% to 0.88% of sulfur by weight, based on the weight of the total composition sufficient to yield a viscosity index ceiling of approximately 145, and extreme pressure properties sufficiently good to carry all the weights on the Almen machine under shock loading.

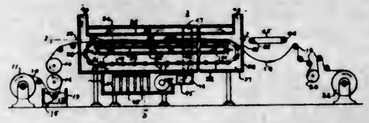
2,460,042

METHOD OF MAKING COCKLE PAPER

Stephen B. Stafford, Oxford, Mass., assignor to Rice Barton Corporation, Worcester, Mass., a corporation of Massachusetts

Application January 13, 1945, Serial No. 572,711

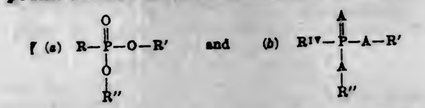
2 Claims. (Cl. 117—11)



2. The method of making cockled paper comprising the steps of providing a wet strip of paper impregnated with water and a cockle stabilizing sizing, progressively feeding the paper strip forward into, through and out of a drying zone in a substantially horizontal and flat condition with the aid of traveling cross sticks there beneath moving longitudinally forward faster than the strip and which frictionally engage and slip relative to the under side of the paper strip, while supporting a part of the wet weight of the strip on a buoyant current of heated air projected upwardly between the sticks and against the under side of the strip and subjecting the strip to only that light surface frictional contact with the sticks and a longitudinal tension which is sufficient to move the partially floated paper horizontally without destroying the cockled effect, and evaporating the water and shrinking the paper and thus causing stabilization of the cockle by the sizing remaining therein.

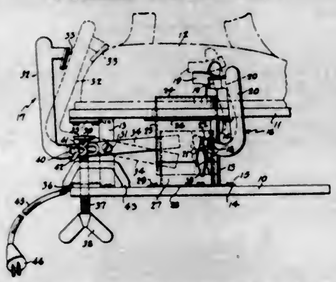
2,460,043
PHOSPHONIC ACID ESTERS
Wilber O. Teeters, River Edge, N. J., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York
No Drawing. Application August 29, 1945, Serial No. 613,428
9 Claims. (Cl. 260—461)

1. As a new composition of matter a compound selected from the group consisting of:



wherein R is a radical selected from the class consisting of ac-indenyl radicals and hydrogenated ac-indenyl radicals and their homologs; R′ and R″ are radicals selected from the class consisting of hydrocarbon radicals and chlorinated hydrocarbon radicals; R^{IV} represents a radical selected from the group consisting of ac-indenyl radicals and their homologs; and A represents a bivalent radical selected from the class consisting of —O— and —S—.

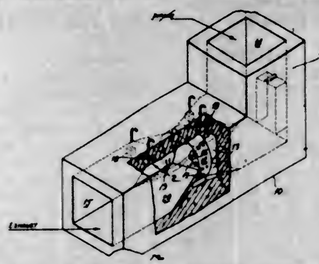
2,460,044
AUTOMATIC SAFETY FLATIRON HOLDER
Michael B. Tomey, South Norwalk, Conn.
Application December 12, 1946, Serial No. 715,775
8 Claims. (Cl. 248—117.2)



3. A flatiron support comprising a platform to receive the iron, supports for the platform, a plurality of levers pivoted to the supports, said levers each including an upright arm provided with a grip to engage the iron to hold it on the platform and a lower arm extending under the platform, and a vertically movable plunger so mounted in the platform as to project above it to be engaged by the iron when on the platform and resting on said lower arms to swing the grips inwardly to engage the iron when the plunger is depressed by the weight of the iron.

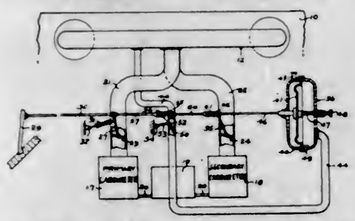
2,460,045
AIRPLANE ENGINE TEST CELL AND LIGHTING THEREFOR
Davis H. Tuck, Redding Ridge, Conn., assignor to Holophane Company, Inc., New York, N. Y., a corporation of Delaware
Application February 1, 1944, Serial No. 520,626
4 Claims. (Cl. 73—116)

1. A test cell for airplane engines comprising a monolithic concrete structure with horizontally extending inlet and exhaust ducts and an intermediate throat portion of circular cross section, the top of the inlet and outlet ducts and the periphery of the throat portion having inwardly opening recesses each provided with a reinforcing ring-like frame partly embedded in the concrete to be flush with the surface thereof, a flat cover frame carrying a light transmitting plate



clamped against the reinforcing frame to form a closure for the recess, a bracket member anchored in the concrete in each recess independently of the ring-like member, and a light source secured on each bracket.

2,460,046
INTERNAL-COMBUSTION ENGINE
Charles H. Vincent, Avoca, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application October 31, 1944, Serial No. 561,181
4 Claims. (Cl. 123—127)

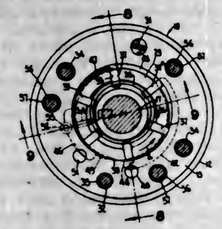


1. In an internal combustion engine having fuel inlet passages, a manifold having a pair of parallel galleries each of which is connected with all of the engine inlet passages, a primary carburetor connected with one gallery, a secondary carburetor connected with the other gallery, throttle control valves for the carburetors, actuator means for the throttle valve of the primary carburetor, pressure responsive means for actuating the throttle valve of the secondary carburetor, a connection from one of the manifold galleries to the pressure responsive device, a valve in the connection, and means operated by the actuator means for the throttle valve of the primary carburetor for controlling the valve in said connection, said valve controlling means being operated to open the valve in the pressure connection only after the throttle valve of the primary carburetor is partly open.

2,460,047
VANE PUMP AND PRESSURE CONTROL MEANS
Adolf von Wangenheim, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a corporation of Michigan
Application November 19, 1942, Serial No. 466,116
6 Claims. (Cl. 103—136)

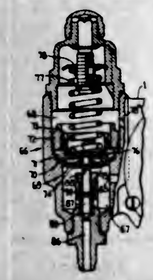
1. A pump comprising a casing having internal opposed side walls joined by an internally

cylindrical imperforate surface, a drive shaft journaled in said casing eccentric to said surface, a cylindrical rotor on and concentric with said shaft and having tangential contact with said surface, radially movable equi-spaced vane members carried by said rotor and contacting said surface, said casing having in at least one of its side walls an inlet port extending circumferentially of said rotor and opening transversely to the plane of the rotor into the space between said rotor and said surface and beginning adjacent the line of said tangential contact, said casing having in at least one of its side walls an exhaust port extending circumferentially of said



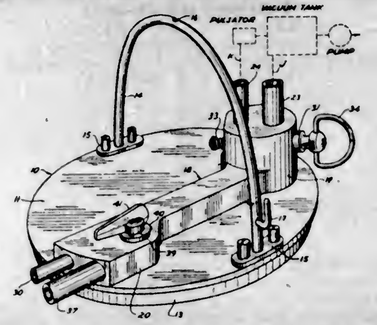
rotor and opening transversely to the plane of the rotor into the space between said rotor and said surface and ending substantially at the line of said tangential contact such that said inlet port and said exhaust port are spaced at said line of contact a distance less than the space between adjacent vane members, and said inlet port terminating and said exhaust port beginning at points spaced substantially equi-distant to the spacing between said vane members at said surface, said exhaust port having a leading portion of reduced cross-sectional area relative to the remainder of said exhaust port and extending circumferentially of said rotor in a direction opposite to the rotation of said rotor.

2,460,048
PRESSURE REGULATING MEANS
Adolf .von Wangenheim, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a corporation of Michigan
Application March 25, 1944, Serial No. 528,073
10 Claims. (Cl. 137—153)



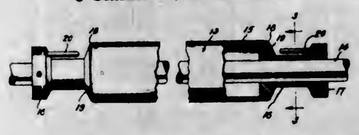
1. In a device of the character described, a housing member having a pressure chamber with an inlet and having an outlet chamber, a diaphragm member of flexible stretchable resilient material separating said chambers, a backing member in said outlet chamber and seating on and clamped to said diaphragm member, said backing member and said diaphragm member having an opening therethrough, valve means in said pressure chamber and cooperable with and controlling flow through said opening and having a constantly open bleed, a flexible stretchable resilient member in said outlet chamber and seating on said backing member to close said opening and having a constantly open small opening therethrough for free flow of fluid passing through said bleed, said stretchable member automatically stretching and contracting to regulate the size of said small opening in accordance with the flow permitted by said valve means.

2,460,049
MILK PAIL COVER
Alfred C. Welby, Minneapolis, Minn., assignor to Solar Corporation, Milwaukee, Wis.
Application January 9, 1946, Serial No. 639,917
8 Claims. (Cl. 31—61)



4. In a milking machine having a conventional milk pail, a pulsator, a suction source, a teat cup group and a milk tube and a pulsing tube leading toward the pail from the teat cup group and a suction tube and a pulsing tube leading toward the pail from the suction source and pulsator, the improvement which consists in a cover for the milk pail having two nipples at one side for connection to the milk tube and first mentioned pulsing tube and another pair of nipples for connection to the suction tube and second mentioned pulsing tube, the cover having a channel connecting the two nipples for the pulsing tubes, the cover also having an opening connecting the interior of the pail to the nipple for the suction tube, and another opening connecting the interior of the milk pail to the nipple for the milk tube, a manually operative valve in the last mentioned opening, and a second valve operative in both the said channel and the opening to the suction tube nipple for simultaneously closing the channel and this opening.

2,460,050
KNITTING MACHINE ATTACHMENT
Frank George Weisbecker, Glenside, Pa.
Application January 14, 1948, Serial No. 2,297
6 Claims. (Cl. 66—149)



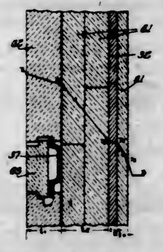
1. A work take-up reel for a straight knitting machine comprising; a cylindrical structure hav-

ing an annular groove intermediate the ends thereof, the width of said groove being somewhat greater than the width of a work take-up strap to be wound therein, and a pin secured to one side wall of said groove and extending transversely thereof into proximity to the other side wall, said pin being spaced from the bottom of said groove, whereby an end loop of the work take-up strap may be detachably connected to said pin, over the free end thereof.

2,460,051
THERMOMETER HAVING A CASING WITH A MAGNIFYING ELEMENT
William E. Welch, Springfield, Ohio, assignor to The Chaney Manufacturing Company, Springfield, Ohio, a corporation of Ohio
Application August 2, 1944, Serial No. 547,769
3 Claims. (Cl. 73—372)

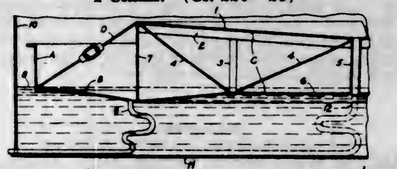
1. In a thermometer, a casing comprising an elongate relatively narrow body of transparent solidified plastic material having in its rear side a cavity extending for the major portion of the length thereof, a card supported in said cavity and bearing a longitudinal series of temperature indications, a thermometer tube and bulb supported in fixed relation to said indications, said body having a front portion shaped to form a magnifying element of a length approximately equal to the length of said series of indications, and also having a light diffusing wall in front of and extending above said bulb.

2,460,052
LINED CONTAINER
Nels E. Werner, Detroit, Mich., assignor to Bigelow-Liptak Corporation, Detroit, Mich., a corporation of Michigan
Application January 1, 1943, Serial No. 470,992
7 Claims. (Cl. 23—252)



1. In a container adapted to accommodate a heated fluid medium under pressure when in operation having an outer pressure-sustaining metal-shell, a lining of refractory-tiles forming the inner surface of the container, a lining of heat-insulation between said tile-lining and said metal-shell, and metallic means, carried by, and on the inner surface of, said metal shell mounting said tile-lining in place with provision for expansion and contraction, the novel combination of improvements being, (a) that at least some of the tiles of said refractory-tile lining outwardly overlap said metallic mounting-means determining the innermost position of such lining and all of the tiles of said refractory-tile lining are otherwise shaped to allow slight outward play of said lining on said mounting-means, and (b) that said insulation-lining is composed of blocks shaped to accommodate the parts of said tile-mounting means extending through the insulation-lining, supplemented with insulating-cement, such blocks and cement completely filling the entire volumetric-space between the inner surface of said metal-shell and said tile-lining unoccupied by said tile-mounting means, whereby the outward pressure of said fluid-medium in said container when in operation acting through said refractory-tile lining maintains said insulation-lining under pressure against the inner surface of said metal-shell, thereby tending to prevent the development of local hot spots thereon due to laning of convection-currents of said fluid-medium.

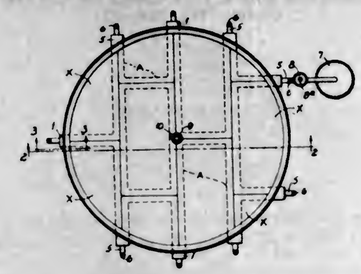
2,460,053
FLOATING ROOF FOR LIQUID STORAGE TANKS
John H. Wiggins, Chicago, Ill.
Application October 12, 1944, Serial No. 558,393
1 Claim. (Cl. 220—26)



A floating tank roof, comprising a center pontoon of stiff construction, having a top and bottom and a vertical rim between said top and bottom, a flexible deck portion surrounding said center pontoon and attached at its inner edge to the bottom edge portion of the rim on said center pontoon, a stiff, annular girder attached to the outer edge of said deck portion and projecting upwardly therefrom, and tension members attached at their outer ends to said annular girder adjacent the bottom edge of same and attached at their inner ends to said center pontoon adjacent the top edge portion of same, for transferring part of the load of said annular girder to the rim of the center pontoon, to maintain said deck portion in an inclined position, sloping downwardly towards the rim of the center pontoon.

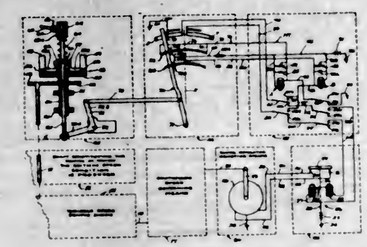
2,460,054
TANK BOTTOMS EQUIPPED WITH IMPROVED MEANS FOR TESTING SEAMS AND RECOVERING LEAKAGE FROM SAME
John H. Wiggins, Chicago, Ill.
Continuation of application Serial No. 490,119, June 7, 1943. This application November 26, 1945, Serial No. 630,933
1 Claim. (Cl. 220—75)

A tank provided with an upright side wall, a bottom composed of metal plates joined together, interconnected troughs laid on the ground under said bottom in alignment with the seams of the bottom and having side walls that comprise resilient portions which bear against the underside of the bottom, said troughs leading



to inspection stations located adjacent the lower end of the tank side wall on the exterior of the tank, and means accessible from the top side of the tank bottom for attaching the troughs to said bottom.

2,460,055
CONTROL APPARATUS
Bosser L. Wilson, Mahwah, and Erwin R. Knauer, Westwood, N. J., assignors to American Brake Shoe Company, New York, N. Y., a corporation of Delaware
Application October 24, 1945, Serial No. 624,184
21 Claims. (Cl. 175—320)

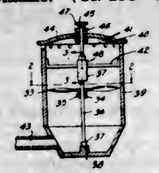


1. In a regulator apparatus, a shiftable control member adapted to be shifted into and out of a neutral position in response to variations in a condition that is to be regulated, a control circuit, switch means for said control circuit operated by said control member to close said control circuit when such control member moves out of said neutral position in one direction and to open said control circuit when said control member is in said neutral position, a first slow-to-release relay having normally closed relay contacts included in said control circuit and effective when said first relay is operated to break said control circuit, a second slow-to-release relay having normally open contacts included in said control circuit and effective when said second relay is released to break said control circuit, and circuit means governed by said control member so as to be closed by said control member when said control member is displaced from said neutral position for causing repeated cycles of alternate energization of said first and second relays whenever and so long as said control member is displaced from said neutral position.

2,460,056
PURIFICATION OF UNSATURATED HYDROCARBON MIXTURES
Howard L. Yowell, Elizabeth, and Miller W. Swaney, Cranford, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application April 24, 1945
Serial No. 590,118
12 Claims. (Cl. 260—681.5)

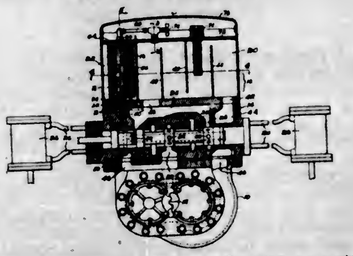
2. A process of purifying aldehyde contaminated hydrocarbons which comprises bringing the contaminated hydrocarbons into contact with a dilute aqueous solution of a compound selected from the class consisting of ammonia and water-soluble amines and thereafter separating the hydrocarbons from said aqueous solution.

2,460,057
MIXER FOR GAS BURNERS
Constantinos Bellios, Brooklyn, N. Y.
Application May 17, 1944, Serial No. 535,926
2 Claims. (Cl. 158—118)



1. A gas burner, comprising a cylindrical housing having an open top formed with a serrated top edge through which a gas air mixture may pass to form the gas flames and having at its bottom an inlet for said gas air mixture, a cover mounted across said open top, and one or more baffle blades mounted within and across said housing for further mixing said gas air mixture, said baffle blades being mounted on a spindle having conical ends, a bearing supporting the bottom conical end of said spindle, a strip mounted across said housing and forming a bearing support for the top conical end, a yoke loosely engaging around said strip and having a serrated portion engageable with a serrated portion of said top conical end, a stem supporting said yoke and movable to engage and disengage said serrated portions, and said stem extending through said cover.

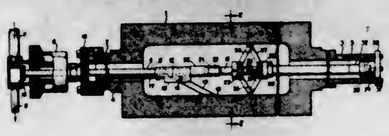
2,460,058
HYDRAULIC POWER APPARATUS
Robert M. Brodeur, Worcester, Mass., assignor to Parker Manufacturing Company, Worcester, Mass., a corporation of Massachusetts
Application April 26, 1946, Serial No. 665,129
5 Claims. (Cl. 60—52)



1. In a hydraulic system wherein a continuously running pump forces fluid through the

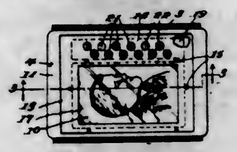
system and valve mechanism provides for selectively exhausting the discharge to the intake of the pump or operatively connecting the pump to a fluid operated apparatus, in combination with said parts a by-pass from the delivery side of the pump around the valve mechanism having a filter therein, a metering port at the inlet side of the by-pass to pass a fractional portion only of the discharge of the pump, and means at the discharge side of the by-pass for creating a back pressure supporting the filter.

2,460,059
SIPHON APPARATUS FOR HEATED ROLLS
Hobart W. Bruker, Bordentown, N. J., assignor to George W. Swift, Jr. Inc., Bordentown, N. J., a corporation of New Jersey
Application September 11, 1946, Serial No. 696,295
4 Claims. (Cl. 34—125)



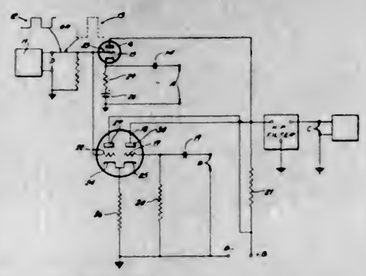
1. Siphon apparatus for heated rolls, including an exhaust conduit member positioned centrally within the roll and extending out through one end of the roll, said conduit member having a bearing portion located in the midsection of the roll, said midsection having an internal bore of enlarged size as compared to the bore of the end sections of the roll, a supporting structure located in said midsection and having rotary bearing means engaging said bearing portion, said supporting structure also having outwardly extending arms engageable with the inner wall of the roll to hold the supporting structure in position, means being provided to afford movement of said arms from their aforesaid wall engaging positions into positions near the axial zone of the roll.

2,460,060
NEGATIVE CARRIER WITH DENSITY COMPARISON SCALE
Donald L. Butler, Saint John's, Newfoundland
Application November 5, 1945, Serial No. 626,717
3 Claims. (Cl. 88—24)



1. A density indicator for a photographic enlarger having a base plate, light housing, and a negative carrier, said negative carrier comprising a frame with a series of openings therethrough, a strip of transparent material in the carrier having a plurality of graduated shaded areas thereon with the density of the shaded areas varying from substantially clear to comparatively opaque corresponding to the density of areas of a negative, and means mounting said transparent strip in one side of the negative carrier with each of said shaded areas registering with one of the openings in the series of openings through the said carrier.

2,460,061
KEYING CONTROL SYSTEM
Reynold S. Chapin, Flushing, N. Y., assignor to Press Wireless, Inc., New York, N. Y., a corporation of Delaware
Application July 8, 1946, Serial No. 681,820
1 Claim. (Cl. 250—27)

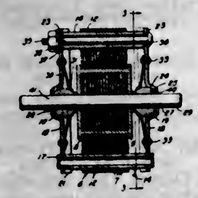


An arrangement of the character described, comprising a first triode, a first source of input signals coupled to the cathode of said first triode, a second triode, a second source of input signals connected to the control grid of said second triode, a third triode having its control grid connected in parallel with the control grid of the first triode, a common load resistor connected between the cathodes of the second and third triodes and ground, means normally biasing the cathode of the first triode to plate current cutoff while the second triode is plate conductive, means to apply a control signal of a certain magnitude to the control grids of the said first and third triodes without disturbing the plate current cutoff of the first triode and the plate current conductivity of the second triode, and for applying a control signal of a different magnitude to the control grids of the first and third triodes to render the first triode plate conductive while simultaneously rendering the second triode non plate conductive through the intermediary of the voltages developed across said common cathode resistor, and a common plate load circuit connected to the plates of the first and second triodes.

2,460,062
GRID CONTROLLED ELECTRON TUBE
Paul W. Charton, Montclair, N. J., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application November 23, 1945, Serial No. 630,320
18 Claims. (Cl. 250—27.5)

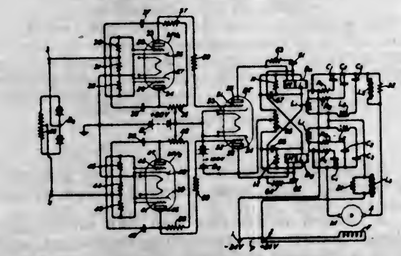
1. An electron-discharge device, comprising an electron-emitting cathode, an anode, and a grid located in the path of electron emission from said cathode, said grid having a substantial part of its control periphery in the configuration of a logarithmic curve.

2,460,063
ELECTRIC MOTOR
James D. Cole, Park Ridge, Ill.
Application March 15, 1946, Serial No. 654,573
7 Claims. (Cl. 172—36)



2. In an electric motor, the combination with a stator lamination stack having a bore for the reception of an armature, of at least two longitudinally slit tubular bushings mounted in holes extending through said stator lamination stack, said holes extending parallel to the axis of said bore and are arranged at diametrically opposed points of the latter, said tubular bushings owing to their inherent diametric resiliency engaging the wall of the holes with a snug fit and projecting with their ends from the end faces of said stator lamination stack and being provided at their outer extremities with a reduced diameter forming annular shoulders which are arranged a predetermined distance away from the end faces of said stack, bearing brackets provided with a bearing for the armature shaft and having apertures into which extend the outer reduced diameter portions of said tubular bushings, tie bolts extending loosely through said tubular bushings, and means at the ends of said tie bolts and engaging said brackets for clamping the same against said annular shoulders on said tubular bushings, whereby the bearing brackets are supported by said tubular bushings in a position in which the bearings are in axial alinement with the axis of the bore for the armature in said stator lamination stack.

2,460,064
MOTOR CONTROL CIRCUIT
Austen M. Curtis, South Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 16, 1945, Serial No. 594,063
16 Claims. (Cl. 318—257)



1. In a motor control circuit, two control tubes, a relay associated with each of said tubes each relay having a high resistance and a low resistance winding connected in opposition, an energizing circuit for each relay including the cathode-plate path of the associated tube, the high resistance winding of such relay and the low resistance winding of the other relay, means for transmitting impulses of current over said circuits, a source of power, a reversible motor, means controlled by said relays for applying power from said source to said motor, and an input circuit for selectively controlling said tubes to apply current to one of the other of said first circuits, whereby one of said tubes is effective to render the associated relay operable and is effective to energize the low resistance winding of the relay associated with the other tube to render the latter relay unresponsive.

2,460,065
COBALT SULFATE RELATIVE HUMIDITY INDICATORS
Paul Bell Davis, Baltimore, Md., assignor to The Davison Chemical Corporation, Baltimore, Md.
No Drawing. Application February 7, 1945, Serial No. 576,716
8 Claims. (Cl. 252—408)

1. A method of preparing a quantitative relative humidity indicator comprising impregnating adsorbent silica selected from the group consisting of silica gel and porous glass with about ½ to 3%, on a dry basis, of cobalt sulphate, said cobalt sulphate having one color in a hydrated state and a different color in a less hydrated state, and heat treating the so impregnated silica at 250–1000° F., said indicator changing color when exposed to an atmosphere having a relative humidity of 0–10%.

2,460,066
COBALT SULFATE RELATIVE HUMIDITY INDICATORS
Paul Bell Davis, Baltimore, Md., assignor to The Davison Chemical Corporation, Baltimore, Md.
No Drawing. Application February 7, 1945, Serial No. 576,717
8 Claims. (Cl. 252—408)

1. A method of preparing a quantitative relative humidity indicator comprising impregnating activated adsorbent silica gel with about 2% of cobalt sulphate, and heat treating the impregnated gel at about 300–850° F., said indicator changing color when exposed to an atmosphere having a relative humidity of 0–5%.

2,460,067
COPPER BROMIDE RELATIVE HUMIDITY INDICATORS
Paul Bell Davis, Baltimore, Md., assignor to The Davison Chemical Corporation, Baltimore, Md.
No Drawing. Application February 7, 1945, Serial No. 576,718
6 Claims. (Cl. 252—408)

1. A method of preparing a quantitative relative humidity indicator comprising impregnating activated adsorbent silica gel with about 4%, on a dry basis, of copper bromide, and heat treating the impregnated gel, at 250 to 600° F., said indicator changing color when exposed to an atmosphere having a relative humidity of 0–30%.

2,460,068
COBALT BROMIDE RELATIVE HUMIDITY INDICATORS
Paul Bell Davis, Baltimore, Md., assignor to The Davison Chemical Corporation, Baltimore, Md.
No Drawing. Application February 7, 1945, Serial No. 576,719
8 Claims. (Cl. 252—408)

1. A method of preparing a quantitative relative humidity indicator comprising impregnating

activated adsorbent silica gel with about 2–3% of cobalt bromide, and heat treating the impregnated gel, at a temperature of 200–250° F., said indicator changing color when exposed to an atmosphere having a relative humidity of 0–40%.

2,460,069
COBALT BROMIDE RELATIVE HUMIDITY INDICATORS
Paul Bell Davis, Baltimore, Md., assignor to The Davison Chemical Corporation, Baltimore, Md.
No Drawing. Application February 7, 1945, Serial No. 576,720
2 Claims. (Cl. 252—408)

1. A method of preparing a quantitative relative humidity indicator comprising impregnating activated silica gel with about ¾%, on a dry basis, of cobalt bromide, drying the impregnated silica gel at a temperature of about 275° F., and activating the impregnated silica gel at a temperature of about 400° F., said indicators changing color when exposed to an atmosphere having a relative humidity of 5–10%.

2,460,070
COBALT PHOSPHATE RELATIVE HUMIDITY INDICATORS
Paul Bell Davis, Baltimore, Md., assignor to The Davison Chemical Corporation, Baltimore, Md.
No Drawing. Application February 7, 1945, Serial No. 576,721
2 Claims. (Cl. 252—408)

1. A method of preparing a quantitative relative humidity indicator comprising impregnating activated silica gel with about ½%, on a dry basis, of cobalt phosphate, drying the impregnated silica gel at a temperature of about 250° F., and activating the impregnated silica gel at a temperature of about 400° F., said indicator changing color when exposed to an atmosphere having a relative humidity of 0–10%.

2,460,071
COBALT CHLORIDE RELATIVE HUMIDITY INDICATORS
Paul Bell Davis, Baltimore, Md., assignor to The Davison Chemical Corporation, Baltimore, Md.
No Drawing. Application February 7, 1945, Serial No. 576,722
8 Claims. (Cl. 252—408)

1. A method of preparing a quantitative relative humidity indicator comprising impregnating activated adsorbent silica gel with ½–5% of cobalt chloride, and heat treating the impregnated gel, said indicator changing color when exposed to an atmosphere having a relative humidity ranging from 0–60%.

2,460,072
COPPER CHLORIDE RELATIVE HUMIDITY INDICATORS
Paul Bell Davis, Baltimore, Md., assignor to The Davison Chemical Corporation, Baltimore, Md.
No Drawing. Application February 7, 1945, Serial No. 576,723
2 Claims. (Cl. 252—408)

1. A method of preparing a quantitative relative humidity indicator comprising impregnating activated silica gel with about 2%, on a dry basis, of copper chloride, drying the impregnated silica gel at a temperature of about 300° F., and activating the impregnated silica gel at a temperature of about 600° F., said indicator changing color when exposed to an atmosphere having a relative humidity of 0–10%.

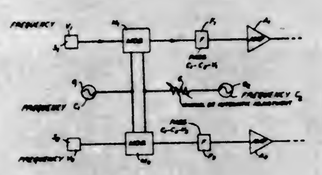
2,460,073
COBALT IODIDE RELATIVE HUMIDITY INDICATORS
Paul Bell Davis, Baltimore, Md., assignor to The Davison Chemical Corporation, Baltimore, Md.
No Drawing. Application February 7, 1945, Serial No. 576,724
6 Claims. (Cl. 252—408)

1. A method of preparing a quantitative relative humidity indicator comprising impregnating activated adsorbent silica gel with about 2% of cobalt iodide, and heat treating the impregnated gel, at 250 to 400% F., said indicator changing color when exposed to an atmosphere having a relative humidity of 20–60%.

2,460,074
COBALT THIOCYANATE RELATIVE HUMIDITY INDICATORS
Paul Bell Davis, Baltimore, Md., assignor to The Davison Chemical Corporation, Baltimore, Md.
No Drawing. Application February 7, 1945, Serial No. 576,725
2 Claims. (Cl. 252—408)

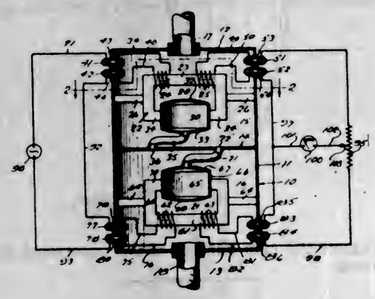
1. A method of preparing a quantitative relative humidity indicator comprising impregnating activated silica gel with about ¾%, on a dry basis, of cobalt thiocyanate, and drying the impregnated silica gel at a temperature of about 250° F., said indicator changing color when exposed to an atmosphere having a relative humidity of 20–40%.

2,460,075
TRANSMISSION CONTROL SYSTEM
Alton C. Dickieson, Mountain Lakes, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 1, 1946, Serial No. 673,874
6 Claims. (Cl. 179—171.5)



3. A system comprising two like modulating devices, circuits for supplying to one of said devices a variable amplitude carrier wave and a first signal wave for modulating said carrier wave in said one device, and circuits for supplying to said other device, said carrier wave and a second signal wave for modulating said carrier wave in said other device, each of said devices being adapted to vary its modulator gain linearly by the same factor with variation of the amplitude of said carrier wave.

2,460,076
ELECTROMAGNETIC PRESSURE GAUGE
John F. Emerson, Hasbrouck Heights, N. J., assignor to Kearfott Company, Inc., New York, N. Y., a corporation of New York
Application February 24, 1947, Serial No. 730,484
4 Claims. (Cl. 73—398)



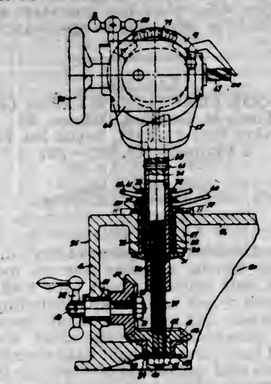
1. An electromagnetic pressure gauge for measuring fluid pressures, comprising a closed container having a cylindrical wall of a magnetic material the permeability of which varies as a function of the mechanical stress to which it is subjected, magnetic members attached to said wall at diametrically opposite points and with said walls forming a closed core in which the flux passes circumferentially around said walls, primary and secondary windings carried by said magnetic members, means supplying the fluid pressure to be measured to said container to stress the walls thereof and thereby vary the reluctance of said core, a current source connected to energize said primary winding and a voltage responsive device connected to said secondary winding.

2,460,077
METHOD OF PROCESSING CASINGS
Thomas R. Ernest, Chicago, Ill., assignor to Thompson Manufacturing Co., Chicago, Ill., a corporation of Delaware
No Drawing. Application May 21, 1945, Serial No. 595,055
11 Claims. (Cl. 99—175)

1. A new and improved method of processing gut casings which comprises immersing the casings and keeping them in contact with water and agitating the casings and the water with oxygen bubbled therethrough.

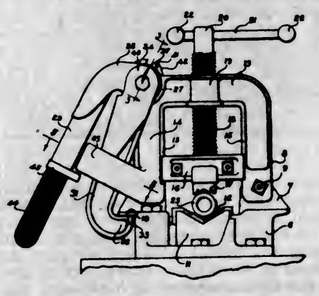
2,460,078
WORK HOLDER FOR TOOL GRINDERS
John D. Faudree, South Bend, Ind., assignor of one-half to Raymond L. Kuns, New Carlisle, Ind.
Application September 19, 1946, Serial No. 698,015
14 Claims. (Cl. 51—219)

1. The combination with a grinder having a base frame, a cross feed carriage, and a grinding wheel journaled on said carriage, of a work holder comprising an elongated upright journaled in and axially shiftable relative to said base frame and terminating in a yoke, means for axially shifting said upright, a work holding chuck pivoted to said yoke about a horizontal axis, means for locking said upright in selected rotative adjustment relative to said base frame and means



for angularly adjusting said chuck relative to said upright.

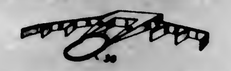
2,460,079
QUICK-ACTING LEVER ACTUATED PIPE VISE
Leon J. Ferree, Coffeyville, Kans., assignor of one-half to Melvin J. Huxtable, Kansas City, Mo.
Application February 21, 1944, Serial No. 523,274
3 Claims. (Cl. 81—19)



1. In a vise of the character described, a base member having a fixed jaw thereon, a yoke-like member mounted pivotally on said base member, a rigid jaw slidably mounted for adjustment on said yoke-like member, screw-threaded means for adjusting the position of said slidably mounted jaw on said yoke-like member, an abutment on said base member, a hook-like member adapted to engage said abutment, and means for pivotally mounting said hook-like member on said yoke-like member comprising an eccentric mounted on said yoke-like member to rotate about an axis fixed relative to said yoke-like member, means pivotally connecting said hook-like member with said eccentric eccentrically to the axis of rotation of said eccentric, and a lever fixed to said eccentric to rotate the same to clamp said hook against said abutment and a work piece between said jaws, said lever being provided with means for successively releasing said hook-like member from said abutment to release said clamped work piece from said jaws, and swinging said hook-like member away from said abutment by a continuous movement thereof in one direction, said

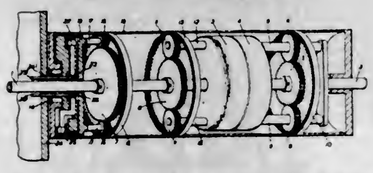
yoke-like member having a U-shaped strap thereon receiving and engaged by said hook-like member to swing said yoke-like member about its pivot by means of said lever to open said vise.

2,460,080
INDOOR PRACTICE PUTTING CUP
Louis H. Gerding, Ottawa, Ill.
Application May 27, 1947, Serial No. 750,831
2 Claims. (Cl. 273—36)



1. A simulated putting green comprising a carpet member having a recess therein, means for receiving a ball seated in part over and in part adjacent said recess, said means including a base member, arms detachably secured thereto and extending outwardly from the sides thereof, a slot in said base member, said base member positioned above said recess and a relatively flat band extending from said base member and partially extending in said slot and an inclined floor in said recess to allow golf balls to roll by gravity to one end of said recess.

2,460,081
EPICYCLIC CHANGE-SPEED GEAR
David Cecil Goodchild, London, England
Application September 3, 1943, Serial No. 501,167
In Great Britain September 3, 1942
16 Claims. (Cl. 74—688)



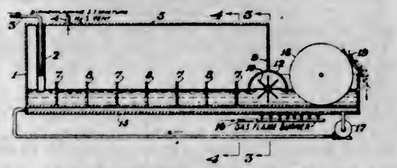
1. Epicyclic gearing including a fluid coupling, a driving shaft and a driven shaft, wherein the shafts of the orbital wheels of one set of epicyclic gearing comprising a sun wheel, orbital wheels and a series of annulus unit teeth are connected to the driven shaft and to one member of the fluid coupling, and wherein the shafts of the orbital wheels of another set of epicyclic gearing also comprising a sun wheel, orbital wheels and a series of annulus unit teeth, are connected to the other member of the fluid coupling, the sun wheels of both sets of epicyclic gearing being fixed to the driving shaft, and the series of annulus unit teeth of the two sets of epicyclic gearing being connected together to form an annulus unit, and means for controlling the rotation of the annulus unit.

2,460,082
ELECTRIC CORD REEL
Norman A. Gray, Stamford, Conn., assignor to Schick Incorporated, Stamford, Conn., a corporation of Delaware
Application October 5, 1946, Serial No. 701,479
2 Claims. (Cl. 242—107)

1. In a device of the character described, the combination of an electric cord reel, including a hub to receive a cord wrapped thereon, the hub incorporating means adapted to form a radially projecting hump in the form of a fast-rising cam portion in each wrap of a cord applied thereto, and stop means carried by the device in position

to engage the cam portion of the outermost wrap of cord.

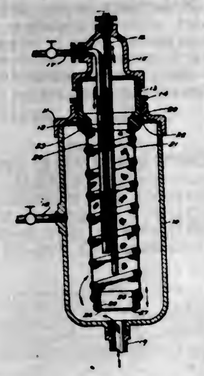
2,460,083
REACTION TANK WITH FLAKER
Max L. Harbaugh, Cleveland, Ohio, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application October 14, 1944, Serial No. 558,710
2 Claims. (Cl. 23—285)



1. An apparatus, useful for the production of thiodiphenylamine by a liquid phase reaction of diphenylamine and sulfur, which comprises a horizontal receptacle for a fluid reaction mixture, an inlet means for reactants at one end of the receptacle, baffles disposed transversely of said receptacle for a major portion of the length of said receptacle and dividing said major portion of said receptacle into compartments to require said fluid reaction mixture to follow a circuitous path, a cover for said receptacle extending for a major portion of its length and enclosing the portion of said receptacle containing said baffles, a gas vent in said cover, a flaking drum disposed in the uncovered portion of said receptacle to dip into said fluid reaction mixture, an agitator positioned adjacent the uncovered end of the receptacle for circulating said fluid reaction mixture between the uncovered portion of said receptacle and the compartment in the covered portion of said receptacle adjacent the uncovered portion of said receptacle, and a means for heating said receptacle.

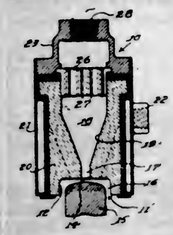
2,460,084
FILTER
Haldan Hebo, New York, N. Y.
Application September 13, 1944, Serial No. 553,911
4 Claims. (Cl. 210—167)

1. In a self-cleaning filter construction, an elongated vessel adapted for use in vertical position and having a central opening at its bottom, a removable, airtight closure for the top of the vessel, a mounting for a filter unit extending concentrically from the closure into the vessel and having interior and exterior groove-like seating means, a filter unit depending from said mounting into the vessel and comprising a helical spring element resting with its upper, relatively fixed end against said interior seating means, a pliable, substantially tubular filter member supported by and exteriorly covering said spring element, the upper, relatively fixed end of the filter member being secured in said exterior seating means of



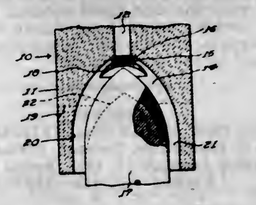
said closure mounting, a closing member at the lower end of the spring element and having upper and lower seating means, the lower, relatively movable end of said spring element engaging the upper seating means, the relatively movable lower end of the filter member being fixedly secured in said lower seating means of the closing member, an outlet conduit extending through the vessel closure into the filter unit and terminating in near proximity to said closing member, said filter member slightly compressing said spring element.

2,460,085
METHOD OF AND APPARATUS FOR HEAT-TREATING
Frederic O. Hess, Philadelphia, Pa., assignor to Selas Corporation of America, Philadelphia, Pa., a corporation of Pennsylvania
Application December 14, 1944, Serial No. 568,145
4 Claims. (Cl. 263—2)



1. In the art of heat treating surface portions of workpieces in an open arrangement with the aid of an open sided chamber having refractory walls that are provided with an inlet opening and opposite the inlet opening are provided with an opening having contours which receive the surface portions to be heat treated which includes the steps of moving the said surface portions into proximity to the contours to form therewith a narrow gap or passage surrounding the surface portions, introducing hot products of combustion at high velocity through said inlet into the passage to heat the side walls of the chamber to incandescence, maintaining the flow of the hot products of combustion to maintain the incandescence, and heating the surface portions by radiation from the incandescent walls of the chamber and the hot products of combustion.

2,460,086
HEAT-TREATING
Frederic O. Hess, Philadelphia, Pa., assignor to Selas Corporation of America, Philadelphia, Pa., a corporation of Pennsylvania
Application December 14, 1944, Serial No. 568,147
4 Claims. (Cl. 263—2)



1. A heating unit for heating a number of duplicate work pieces in succession in an open arrangement comprising structure providing a refractory lined chamber closed at one end and open at the other end, means including a member at the closed end of the space having passage means therein to supply a combustible gas mixture under pressure to the space and cause the mixture to spread out for combustion adjacent to and alongside a region of the refractory lining which is at the closed end to heat such region to a highly radiant condition, the work pieces in succession being adapted to be positioned in the space through the open end thereof and then withdrawn after the desired heating of each work piece is accomplished, the chamber being of such size with respect to the work pieces that, when one of the work pieces is positioned therein, a narrow gap is formed between the work pieces and lining to cause the heated gases developed by combustion in the chamber to flow at a relatively high velocity through the gap and effect heating of the work piece by heat including heat radiated from the lining at the gap which is heated to a highly radiant condition by the heated gases flowing in contact therewith and by heat liberated from the heated gases which spread out in the gap and also pass over and in intimate contact with the work piece, and high temperature refractory shielding means associated with said member which projects beyond the latter and is spaced from and overlies the region of the lining into which the mixture is discharged from the member to prevent excessive heating of the part of each work piece adjacent to the closed end of the space.

2,460,087
SNAP-ACTION ELECTRIC SWITCH
Gilbert Hollis, London, England, assignor to Sidney Geoffrey Young, London, England
Application June 13, 1946, Serial No. 676,403
In Great Britain June 26, 1945
7 Claims. (Cl. 200—67)

1. In a snap-action electric switch having a fixed and a movable contact mounted on an insulating base, the improvement which comprises

constructing the said movable contact in the form of a snapper from a single piece of spring metal, the said snapper being in the form of a frame having a pair of flexible and extensible side members linked at their ends by cross-members, comparatively rigid tongues extending inwardly from the cross-members to points intermediate of the

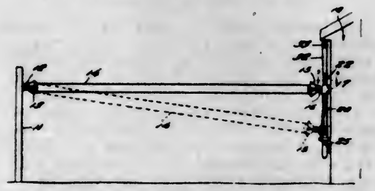
flexible and extensible side members, one of the said cross-members being anchored to the insulating base and the other being adapted to make contact with the said fixed contact, and an operating member adapted to engage with the opposed edges of the tongues being freely held between and by the said tongues.

2,460,088

MEANS FOR ADJUSTING CLOTHESLINES

Donald E. Hutchings, Toronto, Ontario, Canada

Application January 30, 1945, Serial No. 575,241
1 Claim. (Cl. 211—119.02)



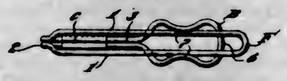
In combination, a clothesline having one end fixedly supported, an adjustable support for the other end thereof, said adjustable support including a vertically inclined tubular guide and a block freely slidable on said guide, said block having legs embracing said guide, a plurality of pins extending between said legs, a pair of roller means on each pin for engaging said guide, said roller means consisting of a pair of tapered rolls with their smaller diameters adjacent each other for maintaining bearing at two arcuately spaced points on the circumferences of said guide, means for raising and lowering said block on said guide comprising a pulley mounted above said guide, a cable attached to said block and entrained over said pulley and a bracket for supporting the lower end of said guide and for detachably securing said cable to maintain said block in vertically adjusted portions.

2,460,089

NECKTIE HOLDER

Sylvester A. Johnson, Providence, R. I., assignor to The Hadley Company, Inc., Providence, R. I., a corporation of Rhode Island

Application January 15, 1947, Serial No. 722,207
2 Claims. (Cl. 24—49)



2. A tie holder comprising elongate front and back parts fast together at one end and unconnected at the other end to receive a necktie and shirt band therebetween, said front part being narrow and the back part comprising an elongate wire loop which is wider than the front part, each side of the loop being bent forwardly to form a channel having resilient wings which straddle said front part for receiving a portion of the necktie, shirt band and said front part, and the wings being bent inwardly intermediate their ends to form locking tips, the locking tips extending along a plane substantially parallel to the plane of the back part and the distance between the locking tips being slightly less than the width of said front part, whereby a portion of the necktie and shirt band are resiliently locked between the front and rear parts within the elongate wire loop of said back part for a substantial distance extending cross-wise of the necktie.

2,460,090

FREQUENCY SELECTIVE APPARATUS

Walter F. Kannenberg, Lyndhurst, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application November 26, 1945, Serial No. 630,927
3 Claims. (Cl. 178—44)

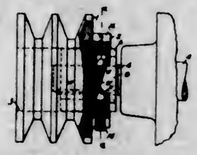
1. A cavity resonator comprising a conducting surface in the form of a tube having varying internal cross-sectional area, parallel end walls defining the boundaries of an electromagnetic field within the tube, means for moving one of the end walls with reference to the other to vary the tuning of the resonator over a band of frequencies and means for moving the tubular conducting surface longitudinally relatively to the position of the end walls.

2,460,091

MEANS FOR SECURING MECHANICAL MEMBERS TO SHAFTS OR THE LIKE

Erwin W. Krause, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware

Application February 24, 1947, Serial No. 730,601
6 Claims. (Cl. 287—53)



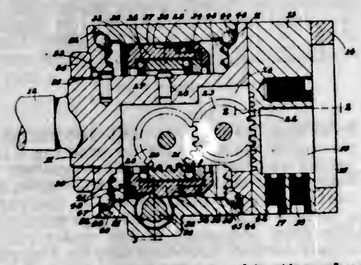
1. A mechanism comprising a member having a tapered bore, a contractible sleeve externally formed to operably fit said bore and mounted in operable relation in said bore, an oblique groove in the external surface of said contractible sleeve forming an oblique camming surface thereon within said bore, a guideway in said member entering said bore in a generally tangential direction in a plane substantially perpendicular to said bore, axially slidably interengageable means on said sleeve and member to assure registry of said groove and guideway in assembly, and actuating means movable in said guideway and having a portion penetrating said bore when in operating position, said portion being operatively engageable with said oblique camming surface to force said member to move axially relative to said contractible sleeve.

2,460,092

BORING HEAD FOR MACHINE TOOLS

Charles William George Lacey and Geoffrey Laird Binns, Slough, England, assignors to Optical Measuring Tools Limited, Slough, England, a British company

Application April 26, 1946, Serial No. 665,252
In Great Britain January 3, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires January 3, 1965
6 Claims. (Cl. 77—58)



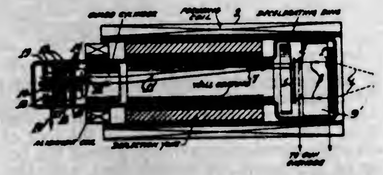
1. In a boring head the combination of a body, a tool-carrying cross slide thereon, a longitudinally movable collar on the body, gearing connecting the cross slide with the longitudinally movable collar, an adjustment ring concentric with and rotatable relatively to the collar but connected thereto so as to move longitudinally therewith, a casing surrounding the adjustment ring and rotatably mounted relatively to the said body, a screw-threaded connection between the adjustment ring and the casing to cause the adjustment ring to be movable longitudinally relatively to the casing when rotated relatively thereto, a gear member carried by the casing and gear teeth on the adjustment ring, said gear teeth meshing with said gear member.

2,460,093

CATHODE BEAM TRANSMITTER TUBE

Harold B. Law, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application April 19, 1945, Serial No. 589,241
4 Claims. (Cl. 250—164)



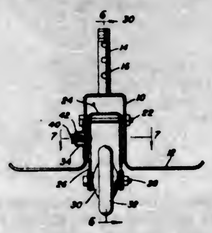
4. A television transmitting tube comprising an evacuated envelope containing a cathode ray beam gun, a photocathode, a target consisting of a thin sheet of semiconducting material, field producing means for focusing electrons from said gun on one surface of said target and electrons from said photocathode on the other surface thereof, said target being positioned in a focal plane of said electrons, a screen positioned outside said focal plane between the photocathode and the target and a signal electrode spaced widely from said target having negligible capacitance therewith.

2,460,094

ROLLER ATTACHMENT

Edward W. Little, Naches, Wash.

Application August 25, 1947, Serial No. 770,375
4 Claims. (Cl. 16—34)



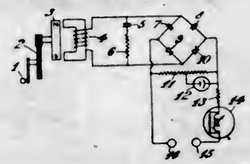
1. A roller attachment comprising a frame, feet carried by said frame, a wheel support pivotally and detachably mounted on said frame, a wheel removably carried by said support, and means locking said support against pivotal movement relative to said frame, said locking means including a bracket secured to said frame, aligned apertures in said frame and bracket, pin means extending through said apertures, means engaging said bracket and pin means for resiliently biasing said pin means through said frame aperture and into the path of pivotal movement of said wheel support.

2,460,095

INSTRUMENT FOR MEASURING RESISTANCES

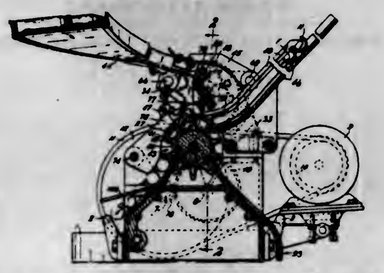
Angus Love, Cumnor, England

Application November 22, 1944, Serial No. 564,664
In Great Britain May 22, 1944
2 Claims. (Cl. 175—183)



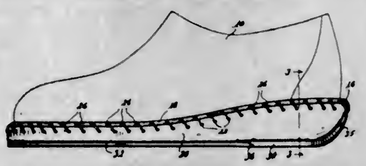
1. An instrument for the measurement of a direct current resistance comprising in combination a hand-driven rotating-magnet generator giving an alternating current of a frequency proportional to the speed of rotation, a frequency dependent circuit including the stator winding of the generator as an inductance, with resistance and capacity in parallel connection therewith, a static voltage doubler rectifier energized from the output of said frequency dependent circuit supplying a direct current to a pair of terminals for a test piece, a high resistance shunted across the output of said rectifier with a gas discharge lamp connected in parallel with part of said resistance and a current measuring device connected in series between one of said terminals and said rectifier.

2,460,096
LINKING AND DELINKING MACHINE FOR AMMUNITION BELTS
Norman W. Lyon, Springfield, Mass., assignor to Package Machinery Company, Springfield, Mass., a corporation of Massachusetts
Application January 17, 1947, Serial No. 722,714
1 Claim. (Cl. 86—48)



In a machine of the class described, a cartridge loading wheel, cartridge feed means to direct cartridges into said loading wheel, a link assembly wheel formed with link holding pockets around its periphery and having a step by step rotating movement, link feed means to direct links into said assembly wheel, a reciprocating plunger carriage having a fixed stroke, a pair of plungers mounted in said carriage in spaced circumferential positions with respect to the axis of said link assembly wheel, one of said plungers being longer than the other and said two plungers having their reciprocatory paths respectively in line with successive pockets on the periphery of said link assembly wheel, whereby said plunger carriage with its plungers may perform an operational action on the cartridges with respect to links in said assembly wheel in two successive stages during the step by step rotation of said wheel.

2,460,097
PLATFORM TYPE WELT SHOE
Roy Maling, Chestnut Hill, Mass.
Application March 6, 1948, Serial No. 13,482
6 Claims. (Cl. 36—17)

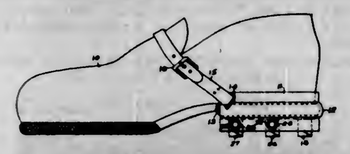


1. In a shoe having an upper, a platform base structure secured to the upper, comprising a sole and heel platform unit having the rear end of its heel portion formed with convex curvature which provides a rear surface curving upwardly and rearwardly from the plane of the under surface of the heel portion substantially to the plane of the upper surface of the heel portion, a flexible sheet element covering the side edges of said unit all around the unit and extending under at least the marginal portions of the under surface of the unit all around the unit, said element at its rear portion having oppositely disposed wings butted edgewise together in covering relation to said rear curving surface of the unit, means securing said wings in their butted relationship, a tread element secured to the flexible sheet element around the forepart and in the shank and heel regions, said tread element having a rearwardly projecting tongue curving upwardly and rearwardly over said butted wings and secured along its opposite edges to said wings, a welt strip secured to the upper all around the lower edge portion thereof, and means securing said flexible sheet element to said welt strip all around the shoe.

2,460,098
PLATFORM TYPE SHOE
Roy Maling, Chestnut Hill, Mass.
Application May 13, 1948, Serial No. 26,761
6 Claims. (Cl. 36—19.5)

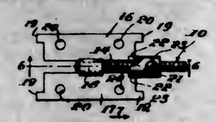
1. In a shoe, an upper, a unit underlying the rear portion of the upper for constituting a heel, and having gradually diminishing tapering extent under the shank portion of the upper, said heel portion of the unit having a rearwardly facing surface curving gradually rearwardly and upwardly from the plane of the under surface of the heel portion approximately to the plane of the upper surface of the heel portion, flexible material covering the sides of said heel and shank portions of the unit, and a tread element covering the bottom of said heel and shank portions of the unit and having extent rearwardly and upwardly in covering relation to said rearwardly facing gradually curving surface of the unit, said flexible covering material extending rearwardly at least to said rearwardly and upwardly extending portion of the tread element whereby the latter said portion of the tread element and said flexible covering material together cover all rear surfaces of the said unit.

2,460,099
SLEET CUTTER
Rudolph Malpert, Fargo, N. Dak.
Application May 16, 1947, Serial No. 748,408
2 Claims. (Cl. 36—62)



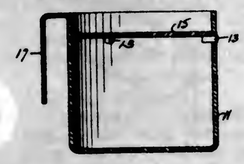
1. An ice creeper comprising a band adapted to fit about the heel of an overshoe or rubber and to extend downwardly from the bottom thereof, cutting elements secured between the legs of the band and extending downwardly from the bottom edge of the band for engagament with the ice, and a strap adapted to extend from the leg portions over the front of the shoe, and said cutting elements having threaded portions on the opposite ends of the same adapted to extend through the leg portions of the band, and lock nuts for fixing the band at its adjusted position to the threaded portion of the cutting elements whereby the band can be adjusted to different width shoes.

2,460,100
ADJUSTABLE TRUSS
Frank G. McCord, Atlanta, Ga.
Application December 2, 1946, Serial No. 713,399
2 Claims. (Cl. 128—95)



1. In a truss, the combination which comprises a substantially U-shaped spring truss wire having threaded ends, a plate threaded on each of the ends of said wire for rocking movement thereon, each of said plates being adapted to hold a truss pad, and means also threaded on each of said threaded ends of the wire and having a slot therein to receive its complementary plate for limiting the rocking movement of the plate on the wire.

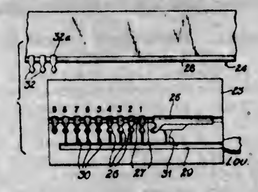
2,460,101
OPTICAL METHOD OF TESTING MILK FOR RELATIVE UNIFORMITY
Arthur A. McMurray, Nashville, Tenn.
Application April 15, 1946, Serial No. 662,170
2 Claims. (Cl. 88—14)



1. The method of testing the milk product of the teats of an animal udder for relative uniformity which includes the steps of disposing a relatively dark surface in a level position, drawing a sample of milk from one of said teats and spreading the milk from said teat uniformly over said surface to establish a coating masking said surface, the portions of said sample in excess of said coating overflowing from the surface, drawing a sample of milk of less quantity from a second said teat, discharging said second sample onto said coating to mingle therewith and overflow portions thereof beyond said surface to establish a second masking consisting of milk from both said samples, the quantity of milk in said second masking being substantially equal to the quantity of milk in the first said masking, repeating said overflowing operation for the others of said teats, while maintaining masking of said surface by a substantially uniform quantity of milk, unless and until said masking is disrupted by milk from a teat, which milk is not uniform in quality to said masking milk, whereby to successively establish comparisons of relative uniformity between the milks from the respective said teats with the preceding coating maskings.

2,460,102
METHOD OF CONTROLLING THE LENGTHS OF SEPARABLE FASTENERS
Louis H. Morin, Bronx, N. Y.
Application October 25, 1944, Serial No. 560,289
7 Claims. (Cl. 18—59)

1. The method of controlling the length of castings on an elongated mounting member on which part of the castings have been pre-formed, which comprises arranging said member in a die having a plurality of cavities conforming to the contour of said pre-formed castings and with one or more of the pre-formed castings in one or more of the cavities of said die, then forming on said member a single cast unit comprising a number

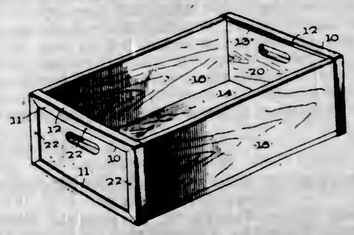


of castings defined by the unfilled cavities of the die and an added casting, said added casting being spaced from the end casting of the unit and being of a contour contrasting to that of the pre-formed castings on said member.

2,460,103
MOISTURE-RESISTANT LACQUER FOR THE PROTECTION OF ELECTRICAL COMPONENTS
Charles Rossall Pye, London, England, assignor to The Hartford National Bank & Trust Company, Hartford, Conn., as trustee
No Drawing. Application March 20, 1945, Serial No. 583,854. In Great Britain August 30, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires August 30, 1963
4 Claims. (Cl. 260—25)

1. A lacquer to protect electrical components comprising an intimate chemical combination of approximately 5 parts by weight of shellac, approximately 3 parts by weight of xylenol-formaldehyde resin, a glyceride of pimaryl ricinoleic acid in the proportion of approximately between 140% and 220% by weight of said xylenol-formaldehyde resin, and a lacquer solvent.

2,460,104
KNOCKDOWN BOX OR CRATE
Leon R. Rapp, Carpenterville, N. J.
Application October 25, 1945, Serial No. 624,411
5 Claims. (Cl. 217—12)

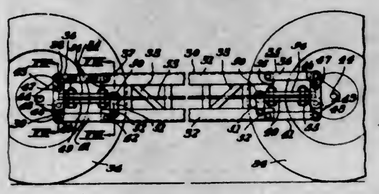


1. A box or crate comprising bottom, side and end walls, and one-piece metal end frames, ribs extending inwardly from the walls of said end frames, said bottom and sides being provided with slots along one surface and adjacent the ends thereof, said bottom and sides having the ends thereof received in said end frames and said ribs of said end frames received in said slots for connecting the bottom and sides to said end frames, said end walls disposed between said sides and upon said bottom and forced into said end frames in rear of said rib for securing said bottom and side walls to said end frames.

2,460,105
PHOTOPOLYMERIZATION OF VINYLIDENE COMPOUNDS WITH ORGANIC DISULFIDES
Lawrence Marion Richards, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 21, 1943, Serial No. 499,555
10 Claims. (Cl. 204—162)

1. A process for preparing polymers which comprises irradiating, with light of wave length in the range of from 2500 to 5000 Angstroms, a composition comprising a photopolymerizable vinylidene compound having one $CH_2=C<$ group and that activated by direct attachment to a different negative group, said group being selected from the class consisting of halogen, >C=O, —C≡N, —C≡C—, —O—, and aryl, and from 0.01 to 5%, based on the photopolymerizable compound, of an organic disulfide free from nitro, hydroxyl and primary amino groups on aromatic carbon, the irradiation being of sufficient intensity and employed for a time sufficient to produce substantial polymerization.

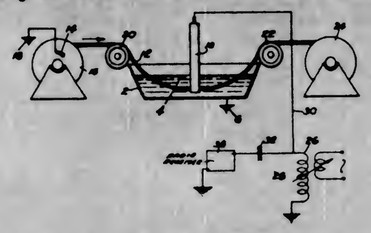
2,460,106
SPRING SUSPENSION FOR VEHICLES
Frederick T. Rowland, Grosse Pointe, Mich., assignor to Standard Steel Spring Company, Coraopolis, Pa., a corporation of Pennsylvania
Application May 4, 1944, Serial No. 534,625
3 Claims. (Cl. 267—19)



1. A spring suspension for vehicles, comprising a vehicle frame member, a linkage adjacent each end of the frame member connecting the frame member to a road wheel, two links each pivoted to the frame member adjacent one end of the frame member, two bending arms each having its outer end pivotally supported by one of the linkages and its inner end pivoted to one of said links, and a single-plate spring operatively connected adjacent its ends to said bending arms but unsupported between said bending arms.

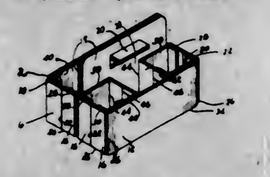
2,460,107
APPARATUS FOR TESTING INSULATED WIRE AND CABLE
Harry B. Slade, Passaic, N. J., assignor to The Okonite Company, Passaic, N. J., a corporation of New Jersey
Application December 29, 1945, Serial No. 637,890
3 Claims. (Cl. 175—183)

1. Apparatus for testing the insulation of insulated cable, said apparatus comprising in combination a container of liquid dielectric, a tubular electrode submerged in said dielectric, the inside diameter of the tubular electrode being such that it will fit snugly about the surface of the insulation of an insulated cable under test passing through the electrode, means for maintaining a potential difference between the electrode and the conductor of the cable under test, and an indicating device for detecting the presence of radio frequency currents caused by ionization discharge



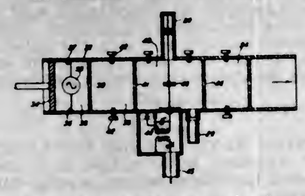
between the electrode and cable conductor as the cable is passing through the electrode.

2,460,108
COLLAPSIBLE CARRIER
Richard E. Smith, Rydall, Pa., and Paul A. Musso, Riverton, N. J., assignors to C. Schmidt & Sons, Inc., Philadelphia, Pa., a corporation of Pennsylvania, and Kieckhefer Container Company, Camden, N. J., a corporation of Delaware
Application August 21, 1946, Serial No. 694,322
1 Claim. (Cl. 229—28)



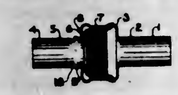
A single blank for forming a collapsible carrier, said blank being scored to form a first portion adapted to form a first side wall of the finished carrier, a second portion adapted to form a second side wall of said carrier, and a third portion intermediate of, and hinged to, said side walls and adapted to constitute a bottom wall for said carrier, said side walls being also scored along lines normal to their hinged connection with said bottom wall to form opposite marginal tabs which are movable to a first position in which they are substantially normal to the plane of said side and bottom walls and to a second position in which they lie in the plane of said side walls, end wall portions extending from opposite ends of said bottom wall and hinged thereto along scores which are continuations, respectively, of the scores hinging said marginal tabs to said side walls, said end walls being movable to a first position in which they constitute extensions of said bottom wall and lie in the plane of said bottom and side walls, and to a second position in which they are substantially normal to said side and bottom walls, means for securing said end walls to said marginal tabs, said end and bottom walls being provided with a central score which is parallel to the scores between said side walls and said bottom wall, and the portions of said bottom wall adjacent said end walls being scored along inwardly converging lines which end at their intersection with said central score, and a pair of U-shaped members each having the limbs thereof secured, respectively, to said first and second side walls, with the bight portions of said U-shaped members being disposed inwardly of the edges of said first and second side walls and being scored so as to be foldable flat against, or between said first and second side walls, the marginal portions of the limbs of each of said U-shaped members being deflected toward each other and being secured, respectively, to the adjacent portions of said end walls.

2,460,109
ELECTRICAL TRANSLATING DEVICE
George C. Southworth, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 25, 1941, Serial No. 385,054
13 Claims. (Cl. 179—171.5)



1. A non-linear translating device for alternating electric currents comprising an electret consisting of two separated conducting members, a fixed dielectric located between the members permanently prepolarized to electric saturation and a source of biasing potential connected between the conducting elements by a path of high impedance to alternating currents of the frequency of the alternating electromotive force to which the device is to be subjected.

2,460,110
COUPLING MEANS
Loid M. Stinchcomb and Raymond S. Doerr, Battle Creek, Mich., assignors to H. B. Sherman Manufacturing Company, Battle Creek, Mich., a corporation of Michigan
Application October 30, 1947, Serial No. 783,015
2 Claims. (Cl. 285—120)



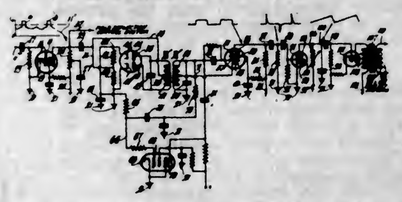
1. A new article of manufacture in the finished form of the female part of a thin metal type separable hose coupling comprising a nipple and a nut adapted to be anchored in place on the end of a hose section by expansion of the nipple after the nipple has been entered into the end of said hose section, said coupling part having a nut with an inwardly flanged end, said nipple having an outwardly flanged end, the flange of said nut engaging said nipple behind the flange thereof, outwardly extending means on said nipple close to the flange thereof but spaced sufficiently therefrom to provide for free rotation and substantial endwise movement of the flange of said nut therebetween, said means forming an abutment to limit the introduction of the nipple into the hose end and said nipple extending from said outwardly extending means to the free end thereof in substantially straight cylindrical form to facilitate reception in the end of a hose.

2,460,111
LAWN MOWER FLY KNIFE
Edward H. Worthington, East Stroudsburg, Pa.
Application January 18, 1946, Serial No. 641,925
7 Claims. (Cl. 56—294)

1. A fly knife comprising helical cutting blades and spaced apart preformed spiders, each of which is formed with a plurality of circumferential distributed blade receiving slots and with a rigidly attached portion adjacent each slot which extends alongside of the blade received in said

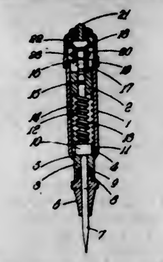
slot, said blade having a portion of one side surface abutting against one side wall of said slot and having a portion of its opposite side surface abutting against and welded to a side of said rigidly attached portion.

2,460,112
BEAM DEFLECTION CONTROL FOR CATHODE-RAY DEVICES
Antony Wright, Drexel Hill, Pa., and Edwin L. Clark, Collingswood, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application September 26, 1946, Serial No. 699,536
16 Claims. (Cl. 315—22)



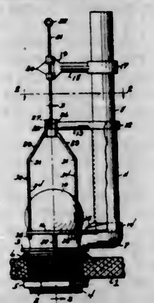
1. In electronic apparatus wherein deflection voltages are to be developed to control the deflection of a cathode ray beam in synchronism with a remote control operation, means to derive control pulse energy subject to slight frequency and phase changes in accordance with a remote operation, a substantially normally stable local oscillator means for developing sinusoidal shaped oscillations at a frequency substantially coinciding with the average repetition frequency of the derived control pulses, a detector unit including a pair of unilaterally conducting devices, means simultaneously to apply the sinusoidal oscillations and the derived control pulses additively to the two unilaterally conducting devices with either the oscillations or the pulses being applied in push-pull manner and the other in push-push manner, means operative so that for a predetermined phase relationship existing between the control pulse repetition and the sine wave oscillations a predetermined output is derived from the detector unit and with phase shifts of the control pulse between a faster and a slower frequency of recurrence relative to the normal frequency of the said sine wave oscillator greater output voltages are developed by one or the other of the unilaterally conducting devices, reactance means to control the local oscillator frequency, means to modify the effective reactance of the said reactance means to cause an increase or a decrease in the local oscillator frequency in accordance with output variances of the unilaterally conductive devices due to frequency or phase increases or decreases in the control pulses as compared to the local oscillator frequency and phase, and means to control the deflection of a cathode ray beam under the influence of the developed sine wave energy and at a frequency coinciding therewith.

2,460,113
CENTERING OR LIKE PUNCH
Sidney Geoffrey Young, London, England
Application December 6, 1946, Serial No. 714,564
In Great Britain November 26, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires November 26, 1965
2 Claims. (Cl. 164—123.5)



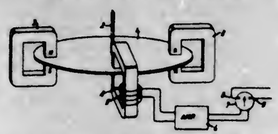
1. A centering punch comprising a tubular casing, a bushing slidably mounted in one end of such casing, a punch member mounted so as to be slidably movable within limits within such bushing, abutments to limit the slidable movement of such bushing, a striker member, slidably mounted within the casing, a compression spring within the casing in association with the said striker member, detent means for holding the striker member in a position in which its associated compression spring is stressed, and trigger means whereby the detent means may be moved to release the striking member for movement by its associated spring to impart a blow to the punch member.

2,460,114
TANK FLUSH BALL AND GUIDE SUPPORT
Warren B. Zern, Pottstown, Pa.
Application March 29, 1945, Serial No. 585,556
4 Claims. (Cl. 4—57)



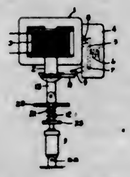
1. In a flush tank having an upstanding liquid drain outlet provided with a valve seat and a vertical overflow pipe adjacent thereto, the combination therewith of a guide arm extending transversely from and fixed to the overflow pipe, a rod adapted to be lifted being slidably supported in said guide arm, a sleeve underneath said guide arm and reciprocably mounted on the overflow pipe, a supporting means fixed to and extending transversely from said sleeve and over the drain outlet, said supporting means at the free end thereof having an end portion provided with a threaded opening, a block having an aperture receiving said supporting means end portion and being provided with a bore in alignment with said threaded opening, said rod extending through said block bore and threadedly engaging in said threaded opening whereby said rod, block and supporting means are rigidly joined together, a ring-like member attached to said sleeve below said supporting means, a wire cage depending from said block and anchored to said ring-like member, a buoyant ball valve loosely mounted in said wire cage and adapted to seat on the outlet valve seat to close the outlet, whereby lifting of the sleeve will free said ball valve for buoyant movement above the outlet valve seat and within the cage to open the discharge outlet, and whereby said ring-like member may drop back into superimposed engagement with the outlet independently of said ball valve causing the same to follow the receding water level in the flush tank.

2,460,115
ROTATION RATE CHANGE GENERATOR
Arthur P. Adamson, Ballston Spa, N. Y., assignor to General Electric Company, a corporation of New York
Application June 18, 1946, Serial No. 677,456
4 Claims. (Cl. 171—209)



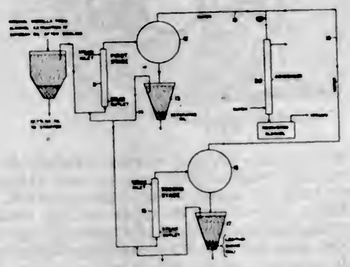
1. An accelerometer comprising a current conductor, means for producing a unidirectional flux in said conductor, means for producing relative movement between said conductor and flux producing means in accordance with the acceleration movement to be investigated such that currents are produced in the conductor in proportion to such relative movement, a magnetic circuit embracing such conductor and sufficiently removed from the flux producing means so as to be threaded only by flux caused by current in the conductor and a pickup winding on the magnetic circuit in which voltages are induced by changes in the flux threading said magnetic circuit.

2,460,116
CONTROL DEVICE
Carl E. Basley, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application August 24, 1945, Serial No. 612,493
6 Claims. (Cl. 267—1)



1. In combination, a container, a quantity of cold flowing solid plastic material having a high degree of bounce in said container, a member mounted for movement into said plastic material whereby said material is deformed and the movement of said member is delayed by reason of the viscosity of said material, and means for applying a pressure to said material to re-form it after said member is moved out of said material.

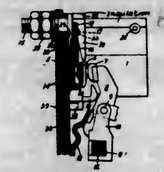
2,460,117
STILL AND DECANTER FOR THE RECOVERY OF PRODUCTS FROM ALCOHOLIC SOLUTIONS OF OLEAGINOUS MATERIALS
Arthur C. Beckel, Peoria, and Paul A. Belter, Pekin, Ill., assignors to the United States of America as represented by the Secretary of Agriculture
Original application April 18, 1945, Serial No. 589,006. Divided and this application August 26, 1946, Serial No. 692,942.
3 Claims. (Cl. 202—176)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In an apparatus for continuously concentrating a liquid extract to remove volatile solvent therefrom, and cause separation of non-volatiles, first and second circulatory systems, the first system comprising an elongated evaporator tube, a vapor disengaging chamber of greater cross-section than the evaporator tube, a liquids separator, conduit means for feeding a liquid extract into the evaporator tube adjacent an inlet end thereof, means for withdrawing liquid and vapor from adjacent the opposite outlet end of the evaporator tube and for introducing the liquid and vapor into the vapor disengaging chamber, conduit means for withdrawing vapor from the upper part of the vapor disengaging chamber, conduit means connected between the disengaging chamber and the liquids separator for withdrawing liquid from the disengaging chamber and for introducing it into the liquids separator, conduit means for withdrawing liquid extract from the separator and returning it to the inlet end of the evaporator tube; the second system also comprising an elongated evaporator tube, vapor disengaging chamber of greater cross-section than the latter tube, and a liquids separator, connected to each other as recited for the first system; and a conduit connected between the first system and the second system for removing liquid extract separated in the liquids separator of the first system and for introducing the liquid extract into the inlet end of the evaporator tube of the second system.

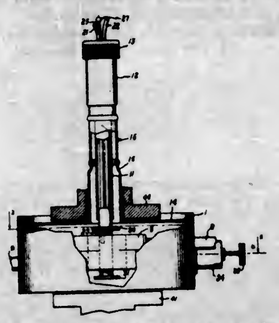
2,460,118
CIRCUIT INTERRUPTER
Robert M. Bennett, Birmingham Township, Chester County, Pa., assignor to General Electric Company, a corporation of New York
Application July 21, 1945, Serial No. 606,374
3 Claims. (Cl. 200—147)

1. In an electric switch, an arc chute open at the top, front and bottom edges thereof comprising two oppositely spaced rectangular plates of electrically insulating material having an insulating barrier therebetween for closing substantially the upper half of the gap between the plates at the rear edge thereof, approximately the lower half of said plates being of uniform thickness and approximately the upper half of said plates increasing substantially uniformly in thickness at their adjacent faces to provide a converging arc discharging channel at the top thereof, a U-shaped magnetic member of uniform thickness having relatively wide upwardly offset perforated flange portions contiguous to the outer faces of said plates and a relatively narrow web portion of substantially the same magnetic cross section as each perforate flange across approximately the lower half of the gap between the plates at the rear edge thereof and provided with a non-magnetic mounting member inter-



connecting said flanges behind said barrier, a stud terminal head engaging said plates behind said barrier for clamping said non-magnetic member in mounting position, a contact, means resiliently mounting said contact between said plates in front of and adjacent the web portion of said U-shaped member, an electric current conductor looped around said web portion from the rear to the front thereof and connected between said relatively stationary contact and said terminal head, and a cooperating contact mounted for movement between said plates near the lower edge thereof to engage said relatively stationary contact and separable therefrom to interrupt a circuit within the chute.

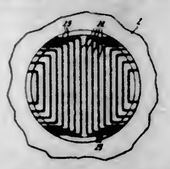
2,460,119
MAGNETRON
John P. Blewett and Robert V. Langmuir, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application September 23, 1944, Serial No. 555,496
1 Claim. (Cl. 250—27.5)



A magnetron discharge device including a cylindrical cathode structure and an annular anode structure coaxially surrounding the cathode structure and comprising spaced anodes defining interaction gaps on diametrically opposite sides of said cathode structure, said cathode structure comprising a cylindrical body having a cylindrical surface of material which is a good secondary emitter, said body having an axially extending recess directed inwardly from the sur-

face thereof and a thermionic cathode supported in said recess so that said thermionic cathode is shielded from electrons returning to said body from the space charge between said anode and said cathode structures, said recess being located in advance of one of said gaps as measured by the direction of rotation of electrons in the space between said anode and cathode structures by an angular distance less than half the angular distance between said gap.

2,460,120
ELECTRODE STRUCTURE FOR ELECTRIC DISCHARGE DEVICES
Ralph J. Bondley, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application December 9, 1944, Serial No. 567,367
8 Claims. (Cl. 250—27.5)



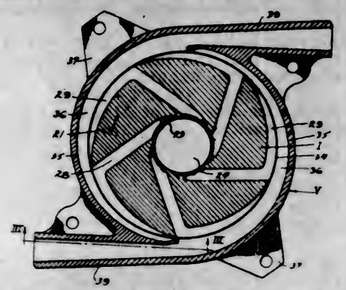
1. An electrode structure for an electric discharge device comprising a supporting member having an aperture therethrough, a plurality of conductors secured to said supporting member at their ends and overlying the aperture, each of said conductors having an intermediate U-shaped portion including an elongated linear central part and arms extending from the ends of said linear part at an angle thereto, said U-shaped portions being of varying sizes and said conductors being attached to said support with the conductors in a plurality of nested groups with the linear parts substantially parallel and the U-shaped portions of all said conductors substantially coplanar.

2,460,121
WATER-HAMMER ARRESTER
Aloysius J. Briehmaier, Milwaukee, Wis., assignor to Water Hammer Arrester Corp., Milwaukee, Wis., a corporation of Wisconsin
Application July 10, 1944, Serial No. 544,322
14 Claims. (Cl. 138—30)

1. A fluid-hammer arrester having a casing including an inlet portion for connecting the arrester to a fluid conduit for flow of fluid thereinto, the remainder of said casing being imperforate, said casing being adapted to receive an expansible and compressible bellows therewithin for absorbing fluid-hammer pressure, and means within said casing to maintain one end of said bellows longitudinally immovable when fluid-hammer pressure is applied to said bellows.

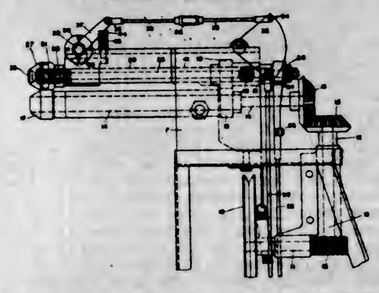
2,460,122
PUMP
Arthur W. Burks, Decatur, Ill.
Application November 22, 1944, Serial No. 564,006
5 Claims. (Cl. 103—103)

1. In a centrifugal pump, an impeller in the form of a disk having an axially located inlet chamber, centrifugal flow passageways of substantially constant cross section in said disk extending in straight lines therethrough from said inlet chamber to the disk periphery, and discharge channels in the periphery of said disk extending from the outer ends of said passage-



ways in the wake thereof during rotation of the impeller, the cross section area of said channels at their ends adjacent to said passageways being slightly less than the cross section area of the passageways and being of gradually decreasing cross area toward their trailing ends.

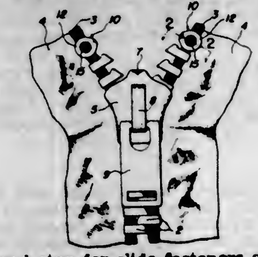
2,460,123
PEENING MACHINE
William J. Cahill, Merion, Pa., assignor to Carrier Corporation, Syracuse, N. Y., a corporation of Delaware
Application June 21, 1944, Serial No. 541,359
3 Claims. (Cl. 113—58)



1. In apparatus for forming a peened joint, the combination of a base roll assembly including a rotatable roll, a continuous drive for driving said roll, a cooperative roll assembly including a first roll and a second roll coaxially arranged with respect to the first roll, the cooperative assembly being pivotally mounted in the frame of the apparatus, said second roll being movable in an axial direction toward and from the first roll, means yieldably urging the second roll from the first roll, means for moving the second roll toward the first roll, means for connecting the cooperative roll assembly to the drive, and means for moving the cooperative roll assembly toward and from the base roll assembly including a rod, a rocker element connected to the rod, the rocker element being pivotally mounted on the frame of the device, a lever, a shaft, said lever being mounted on said shaft, a link connecting the lever to the rocker element, a cam mounted on said shaft, an element secured to the cooperative roll assembly adapted to coact with said cam, rotation of said cam

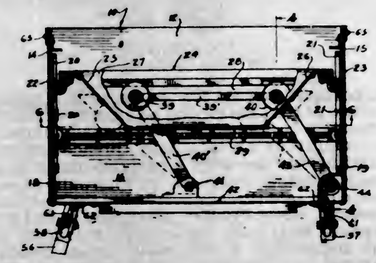
moving the cooperative roll assembly toward the base roll assembly, and yieldable means resisting the movement of the cooperative roll assembly toward the base roll assembly.

2,460,124
END STOP FOR SLIDE FASTENERS
Alfred E. Carille, Great Neck, N. Y., assignor to Talon, Inc., a corporation of Pennsylvania
Application December 18, 1944, Serial No. 568,656
4 Claims. (Cl. 24—205.11)



1. An end stop for slide fasteners of the class described comprising a body member having a pair of spaced apart oppositely disposed portions for engagement with the edge portion of the stringer tape on which it is adapted to be mounted, each of said portions having an aperture arranged therein into which the edge portion of the stringer tape is adapted to expand so as to aid in preventing displacement of the stop from the stringer tapes.

2,460,125
FOLDING CHARCOAL COOKING GRILL
Frank Lawrence Carroll, North Hollywood, Calif.
Application October 23, 1945, Serial No. 624,040
8 Claims. (Cl. 126—9)



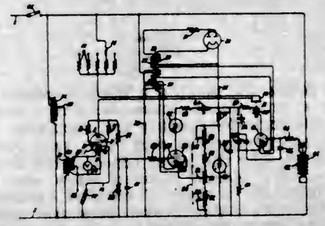
1. A cooking grill comprising a box-like base having fixed vertical walls, an upper wall member hingedly connected to the upper end of each of said fixed walls and thereby adapted to be swung to vertical position or inwardly relative to said lower fixed walls, a fire box frame within, and slidingly engaging opposite pairs of said lower and upper walls, rails fixed to the lower side of said frame, adjustable means, including rollers adapted to engage said rails, whereby said frame may be vertically adjusted while in horizontal position, said frame in its lowest adjusted position resting wholly within said lower fixed walls and freeing said upper walls for inward swinging movement to cover said frame, and means for temporarily securing said upper walls in said inward positions.

7. A cooking grill comprising a casing, a fire box vertically movable in horizontal position within said casing, said fire box comprising a frame having an opening therein, inwardly converging walls hinged to said frame adjacent said frame opening, springs mounted on said frame and walls to urge said walls inwardly, a grate hingedly mounted on the free end of one of said walls and having locking means engageable with counterpart locking means adjacent the free end of another of said walls to hold said walls in open position, in which position they assume substantially the form of an inverted frustum of a pyramid, said walls, upon release of said locking means, being urged to closed position in which the several parts lie substantially flat and parallel to said frame.

2,460,126
INSULATING AND DIELECTRIC COMPOSITIONS
Frank M. Clark, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
No Drawing. Application October 23, 1945, Serial No. 624,087
3 Claims. (Cl. 252—66)

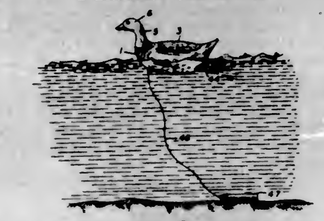
2. A composition consisting of liquid chlorinated aryl hydrocarbon, which is susceptible to decomposition by an electric arc and has a viscosity not materially greater than about 58 seconds Saybolt at 100° F., and one-fourth to one per cent of tin naphthenate dissolved in said hydrocarbon, said tin naphthenate not substantially increasing the viscosity of said composition.

2,460,127
ELECTRIC CONTROL CIRCUITS
Edward M. Gardiner, Schenectady, and Orrin W. Livingston, Scotia, N. Y., assignors to General Electric Company, a corporation of New York
Application July 2, 1946, Serial No. 680,962
3 Claims. (Cl. 315—246)



1. In combination, an alternating current supply circuit, a unilaterally conducting device, an electromagnetic switching device having a contact connecting said device to said alternating current circuit for energization therefrom, electric valve timing means including peaked voltage producing means for initiating operation of said timing means, means impressing a voltage derived from said alternating current circuit on said timing means to effect operation of said switching device during half cycles of voltage of said supply circuit during which said device is nonconductive as a result of its unilaterally conductive characteristic, a capacitor, and a circuit completed by operation of said peaked voltage producing means for effecting operation of said switching device to open position a predetermined time after circuit closing operation thereof.

2,460,128
ANIMATED DECOY DUCK
Carroll V. Greenleaf, Edmonds, Wash., assignor of one-half to James I. Greenleaf, Edmonds, Wash.
Application April 8, 1947, Serial No. 740,008
4 Claims. (Cl. 43—3)



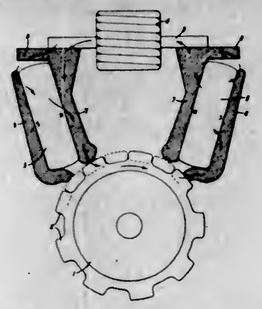
1. In a decoy duck, a hollow buoyant body, a neck extending into said body and pivoted therein to swing forwardly and rearwardly, a rotary propeller shaft extending into said body and having a propeller fast thereon, and mechanism in said body for rotating said shaft by swinging of said neck.

2,460,129
APPARATUS FOR MANUFACTURE OF FIBROUS ARTICLES
Paul E. Ista, Paris, France, assignor to General Electric Company, a corporation of New York
Application August 10, 1946, Serial No. 689,803
In France April 10, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires May 28, 1965
2 Claims. (Cl. 92—54)

1. A device for making a fibrous article comprising a foraminous form, chambers situated above said form for holding and supplying fibers to different portions of said form, said portions being defined by the lower edges of the walls of said chamber, means situated below said form for maintaining a zone of reduced pressure at the lower side thereof and pressure sensitive means for separating said form and said edges, said separating means comprising a pressure-responsive resilient spring mount for said form which is reactive to changes in pressure below said form.

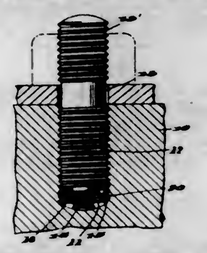
2,460,130
MAGNETO
Ingolf B. Johnson, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application June 9, 1945, Serial No. 598,509
10 Claims. (Cl. 171—209)

1. A magneto including a rotatable inductor member having a plurality of circumferentially spaced apart teeth, a coil member, a core member threading said coil member, a plurality of permanent magnets, each of said permanent magnets, having pole piece core members of magnetic material connected to each pole face thereof with portions extending toward said rotatable member teeth, said permanent magnet being con-



nected to said coil core through said pole piece core members, and a keeper portion on said pole piece core members partially closing the air gap between pole faces of opposite polarity of each of said permanent magnets.

2,460,131
NUT OR BOLT LOCK
John F. Kendrick, Elizabeth, N. J.
Application January 19, 1944, Serial No. 518,813
7 Claims. (Cl. 151—32)



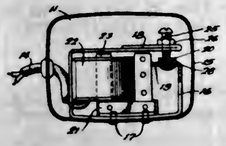
1. Locking means for cooperating threaded members of the type having an externally threaded member positioned in an internally threaded hole, comprising an externally threaded member formed at one end with a reduced-diameter externally threaded extension, an internally threaded member, said threads possessing the customary clearances, crests, grooves, minor, major and pitch diameters and helix angles and a locking element comprising a thin unthreaded, coaxially apertured resilient plate, the aperture of which defines a thread-engaging edge possessing an uninterrupted, continuous and circular form, said plate being proportioned to impart axial resilience to said thread-engaging edge, the thickness of the thread-engaging edge being such as will permit it to enter the thread-groove of the reduced-diameter externally threaded member and being such as will permit the thread-engaging edge to be tilted axially by the helix angle of the reduced-diameter externally threaded member, the diameter of the aperture being such as will permit the thread-engaging edge to cross the crest of the reduced-diameter external thread and reenter the external thread-groove, when the thread-engaging edge is deflected radially by the crest of the reduced-diameter external thread, thereby closing the clearance on one side of said

cooperating threads, the outer portions of said plate being so formed to be threadedly engaged with the internally threaded member to position said aperture in longitudinal registration with and at right angles to the axis of said internally threaded member, the tilted thread-engaging edge applying an axial force to the internal threads and the reduced-diameter external threads, restraining relative rotation.

2,460,132
ELECTRICAL DISCHARGE DEVICE
Henry de Boyne Knight, Rugby, England, assignor to General Electric Company, a corporation of New York
Application September 25, 1946, Serial No. 699,205
In Great Britain November 10, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires November 10, 1963
14 Claims. (Cl. 250—27.5)

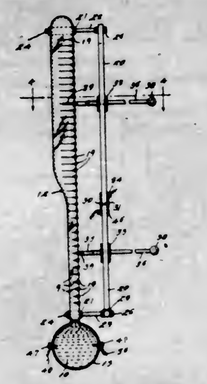
1. An electric discharge device comprising a plurality of electrodes, an hermetically sealed envelope for said electrodes including a portion defining a part of a closed discharge chamber and having an opening therein, a closure member hermetically sealed to said portion and covering said openir.., and a shoulder adjacent the juncture of said portion and said closure member, one of said electrodes having a portion secured between said portion of said envelope and said closure member in engagement with said shoulder whereby said electrode is supported from and positioned within said envelope.

2,460,133
ALARM DEVICE
William E. La Pedus, Rockford, Ill.
Application February 6, 1946, Serial No. 645,839
3 Claims. (Cl. 161—22)



1. In an alarm device, a pressure-resisting casing providing a hollow interior and a smooth exterior, a spring member secured to said casing and extending from the inner wall thereof to a point approaching the opposite wall of said casing, a vibrating arm on said spring member, a coil magnet for subjecting said arm to magnetic impulses, means for supplying alternating current to said coil, timing mechanism controlling said last mentioned means to energize said coil after a predetermined time, and a resilient body spaced from and engaging said vibrating arm to limit the stroke thereof and to dampen the sound thereof.

2,460,134
THERMOMETRIC ALARM SWITCH
Jonathan O. Lee, Richmond, Va.
Application September 6, 1945, Serial No. 614,766
1 Claim. (Cl. 200—141)



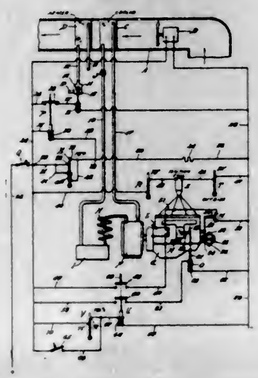
In a device of the class described, an expansible liquid thermo-meter including a bulb having a tube communicating therewith and rising therefrom, a series of longitudinally spaced terminal pins projecting through the wall of the tube of the thermo-meter above the bulb thereof and having contact heads exterior to the tube, a guide of electrical conducting material extending parallel to the tube, a movable electric contact slidably disposed on the guide and having a portion for selective engagement with the heads of the terminal pins, an arcuate guide element carried by the movable contact having portions disposed for engagement with the tube on either side of the heads of the terminal pins for maintaining said movable contact portion in position to engage the terminal pin head disposed on the same plane as the movable contact, and a conductor pin extending through the wall of the bulb and in constant contact with the expansible liquid for completing an electric connection therefrom to the first mentioned guide through the liquid and the terminal pin engaged by the liquid and movable contact.

2,460,135
ELECTRIC CONTROL FOR BUS HEATING AND COOLING SYSTEMS
Timothy J. Lehane and Everett H. Burgess, Chicago, Ill., assignors, by mesne assignments, to Vapor Heating Corporation, a corporation of Delaware
Application September 23, 1946, Serial No. 698,770
6 Claims. (Cl. 257—3)

5. In combination with means including a conduit and a fan for withdrawing air from an enclosed space and thereafter re-introducing the air into the space, a radiator in the conduit for heating the air and a cooling apparatus including a cooler in said conduit for cooling said air, an internal combustion engine provided with an electrical ignition circuit, an electrically energized starter and a throttle valve normally supported in partially opened position to maintain slow speed operation of the engine; of means for cooperatively controlling the heating and cooling apparatuses comprises an electrically energized valve for delivering heating medium to the radi-

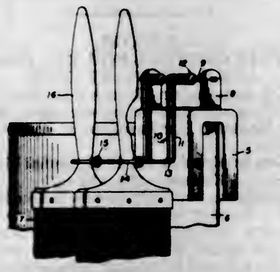
ward position.

ator; means including a thermostat responsive to temperature changes within enclosed space and set to function at a pre-determined temperature to close said valve; a second thermostat responsive to temperature changes within the enclosed space and set to function at a lower temperature than the first thermostat to make said ignition circuit effective; electrically energized throttle opening means for moving said



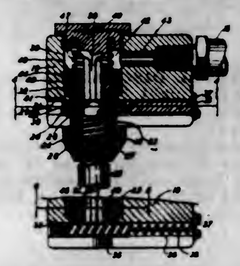
throttle to its full open position; and an electrically energized relay for simultaneously closing an energizing circuit through said starter and through said throttle opening means; manually operable means for momentarily energizing said relay to start said engine with fully open throttle and thereafter permit the engine to return to its low speed operation, whereby the heating apparatus is effective to re-heat the air during the low stage cooling of the cooling apparatus.

2,460,126
BRUSH HOLDER
John Leonard, West New York, and Willibald Trenkamp, Hoboken, N. J.
Application April 25, 1947, Serial No. 743,990
3 Claims. (Cl. 248—112)



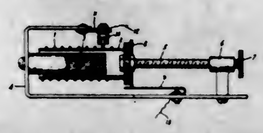
1. In a device of the class described, a body detachably mounted on the vertical edge of a receptacle, a horizontally positioned shaft carried by the body, a pair of substantially inverted L-shaped arms pivoted at one end to the shaft, and a pair of gripping jaws integrally formed at the lower ends of said arms for receiving a brush handle.

2,460,127
HYDRAULIC COUPLING
Jesse G. Lindeman, Yakima, Wash., assignor, by mesne assignments, to John Deere-Lindeman Company, Yakima, Wash., a corporation of Washington
Application October 30, 1945, Serial No. 625,643
3 Claims. (Cl. 284—17)



1. A fluid line coupling, comprising: first and second coupling elements, each including a fluid passage, constructed and arranged for separable interconnection with the fluid passages positioned for communication with each other; means providing a guideway in the first element generally normal to and intersecting the fluid passage therein; means on the second element cooperable with a portion of said guideway to provide for the interconnection of the elements; a valve movably carried in the guideway and operable between open and closed positions as respects the fluid passage in said first element and normally occupying an open position in another portion of the guideway, being retained in that position by the aforesaid means on the second element; means biasing the valve toward closed position; and detent means carried by the first element and releasably retaining the second element against separation and operable after separation of the elements to engage the valve, upon movement of the latter to closed position, for retaining said valve in closed position.

2,460,138
VARIABLE INDUCTANCE DEVICE
Lambert H. Lynn, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application June 27, 1945, Serial No. 601,887
7 Claims. (Cl. 177—777)

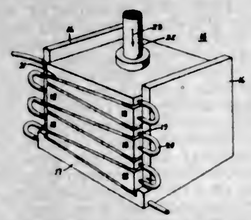


1. A variable inductance device comprising a substantially helical coil and a comminuted iron core member mounted for relative axial movement, a variable contact element mechanically mounted in fixed position relative to said core for concurrent movement relative to said coil, said element electrically engaging said coil at a point adjacent one end of said core member, and means including electrical connections to said coil through said contact member to provide an active portion of said coil of selectable inductance disposed on the same side of said point as said core member.

2,460,139
ALKAMINE ESTERS OF 2-CHLORO-4-AMINO BENZOIC ACID
Henry C. Marks, Glen Ridge, N. J., and Martin I. Rubin, New York, N. Y., assignors to Wallace & Tiernan Products, Inc., a corporation of New Jersey
No Drawing. Application July 21, 1945, Serial No. 606,476
5 Claims. (Cl. 260—472)

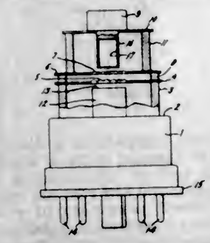
1. The 2-chloro-4-aminobenzoic acid esters of the N-alkyl substituted alkyl amino alcohols having less than six carbon atoms and their addition salts.

2,460,140
METHOD OF PASTING MICA
Kenneth N. Mathes, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application August 6, 1947, Serial No. 766,626
8 Claims. (Cl. 154—2.6)



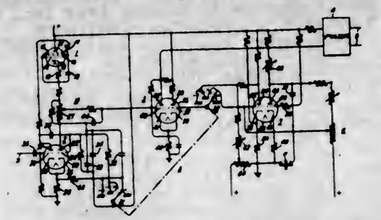
1. In the manufacture of pasted mica articles the process of adjusting the mica flakes therein which comprises cementing the flakes together with a resinous binder and curing under heat and pressure said pressure being so applied that the general plane of said mica flakes is at an angle to a component of the pressure-producing lines of force.

2,460,141
ELECTRIC DISCHARGE DEVICE
Elmer D. McArthur, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application June 4, 1946, Serial No. 674,195
1 Claim. (Cl. 250—176)



An electrical discharge device including a cathode, a control grid, a screen grid and an anode mounted in spaced relation in the order enumerated, said anode comprising an elongated body recessed from the end thereof facing the screen grid, conductive means extending over the open end of said recess and conductively connected to said anode to sub-divide it so that the recess is substantially deeper than the minimum cross sectional dimension of the sub-divisions to provide a substantially field-free region for the collection of electrons whereby the emission of secondary electrons is minimized.

2,460,142
ELECTRONIC CALIBRATING MEANS FOR INDICATING INSTRUMENTS IN PULSE ECHO SYSTEMS
Philip C. Michel, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application January 30, 1945, Serial No. 576,567
7 Claims. (Cl. 250—27)



7. The combination, in a system for producing pulses simulating echoes from a remote moving object of recurrent pulses transmitted thereto, means to produce a unidirectional voltage, means to control the duration of the interval between each recurrent pulse and the next echo simulating pulse in accord with said voltage, said last means comprising a pair of electron discharge devices and a source of operating potential, each discharge device having an anode, a control electrode, and a cathode, said cathodes being connected to the negative terminal of said source and said anodes being connected through respective resistors to the positive terminal of said source, a condenser connected between the control electrode and anode of one of said devices, a switch connected between said last control electrode and a point of fixed potential, and a potentiometer connected between the anode of said one device and a point of fixed potential equal to the potential of said last anode when said switch is closed whereby when said switch is opened the potential across said potentiometer increases at a rate corresponding to the rate of change in charge in said condenser, means to supply potential from said potentiometer to said control electrode of said other devices, and means to derive said voltage either from said potentiometer or from the anode of said other device, whereby the time intervals between said recurrent pulses and said echo simulating pulses increase or decrease when said switch is open from a duration independent of the adjustment of said potentiometer and at a rate determined by said condenser and the adjustment of said potentiometer, and means to adjust the potentials derived by said last means when said switch is initially opened to equal values and to equalize the rates of change of said derived potentials.

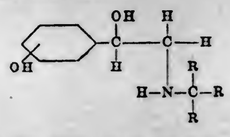
2,460,143
PRODUCTION OF KETOAMINES
Maurice L. Moore and John R. Corrigan, Detroit, Mich., assignors to Sterling Drug Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application August 8, 1945, Serial No. 609,722
2 Claims. (Cl. 260—570.5)

1. The method for the preparation of meta-hydroxy - omega - methylaminoacetophenone

which includes: continuously and separately introducing meta-benzoyloxy-omega-bromo-acetophenone and methylamine into a reaction zone containing a liquid inert to the reaction mixture and maintained at a temperature below about 65 degrees centigrade, removing the ketoamine from the said reaction zone in a portion of the reaction medium and neutralizing the ketoamine-containing product substantially as rapidly as it is formed.

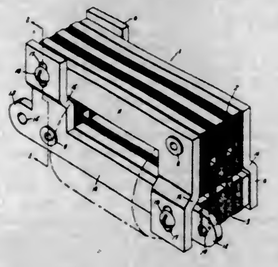
2,460,144
HYDROXYPHENYL ALKANOLAMINES
Maurice L. Moore and John R. Corrigan, Detroit, Mich., assignors to Sterling Drug Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application April 11, 1946, Serial No. 661,243
4 Claims. (Cl. 260—570.6)

1. A compound selected from the group consisting of (*a*) (hydroxyphenyl) alkanolamines having the general formula



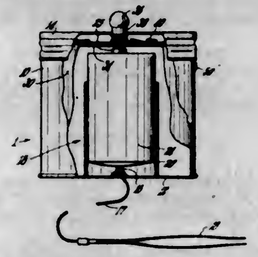
wherein R represents hydrogen or a lower-alkyl radical; and wherein at least two R groups are a lower-alkyl radical, and (*b*) salts thereof.

2,460,145
VARIABLE RELUCTANCE CORE
Richard A. Pfuntner, Saugus, and Franklin R. D'Entremont, Lynnfield, Mass., assignors to General Electric Company, a corporation of New York
Application January 23, 1948, Serial No. 4,026
1 Claim. (Cl. 171—777)



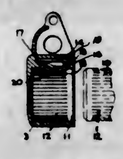
An adjustable reluctance core for induction apparatus comprising, in combination, two laminated parts having interfitting multiple tongue and groove joints, nonmagnetic wrappers around alternate groups of laminations in each part for providing nonmagnetic gaps between the sides of the interfitting tongues and grooves in said joints, hollow clamping members extending through each core part for firmly holding its wrapped laminations together, and adjustable means for controlling the degree of closure of said joints, said adjustable means including additional clamping members extending through said hollow clamping members.

2,460,146
ELECTRICAL JACKSTRAWS GAME APPARATUS
James M. Prentice, South Hadley, Mass.
Application November 12, 1947, Serial No. 785,486
3 Claims. (Cl. 273—1)



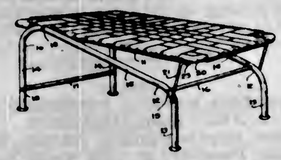
1. A jackstraw game comprising in combination, a support for a plurality of jackstraws, a closure over and spaced from said support having openings therethrough for the passage of jackstraws onto and from said support, a plurality of jackstraws some of which are made from conductive material and being adapted to be inserted through and withdrawn from said support, said closure being made from conductive material, an electrically operated signal, a source of electrical energy, electrical connections between said closure, signal, source of energy providing a normally open electric circuit and having a flexible conductor provided with a manually manipulatable tweezer on a free end thereof formed from conductive material, all adapted whereby said tweezer may be inserted through an opening of said closure to engage one of said jackstraws and arranged so that if said tweezer or one of said conductive jackstraws engaged thereby contacts said closure a circuit is closed and said signal is energized.

2,460,147
WINDSHIELD CLEANER
Anton Rappl, Eggertsville, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y.
Application March 23, 1945, Serial No. 584,267
6 Claims. (Cl. 287—53)



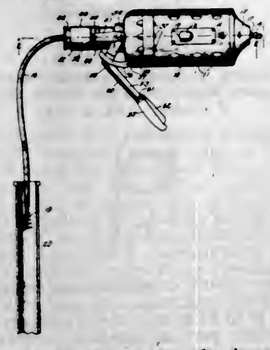
1. A wiper arm comprising a die-cast section having one face formed with a shaft-receiving socket the side wall of which latter being provided with a multiplicity of ribs for interlockingly receiving the ribbed periphery of a shaft part, said section also formed with a narrow chamber opening into the socket through its side wall and between spaced ribs, the chamber opening as a radial continuation of the socket through such face, the bottom of the chamber having a latch anchoring recess, and a latch in the chamber having a mounting shank engaged in the recess and an active part yieldably extending into the socket to engage a shaft, the mounting shank extending from the recess into lateral supporting contact with the side wall of the chamber above the recess.

2,460,148
COMBINATION TABLE AND FOOTREST
Andrew Roth, Philadelphia, Pa., assignor to Bunting Glider Company, Philadelphia, Pa., a corporation of Pennsylvania
Application March 23, 1946, Serial No. 656,687
2 Claims. (Cl. 311—38)



1. A combination table and foot-rest unit comprising a pair of laterally spaced side frame members of inverted U-shape, each having vertically extending supporting legs connected at their upper ends by a longitudinally extending element, the frontal legs of said frame members being of substantially greater height than the rear legs thereof whereby said longitudinally extending elements are rearwardly and downwardly inclined with respect to the horizontal, transversely extending elements interconnecting said frame members to constitute the same a rigid, self-sustaining support for a top member, a top member hingedly mounted between the raised ends of said longitudinally extending elements and adapted to be swung from a raised horizontally disposed position into an inclined position substantially coincident with the common transverse plane of said longitudinally extending elements, means pivotally secured to the rear legs of the unit and adapted to be swung into position to support said top member in horizontally disposed position to serve as a table top for the unit.

2,460,149
FLEXIBLE ROD DRIVER
Lothar W. Schoensiegel, Chicago, Ill.
Application July 26, 1946, Serial No. 686,583
5 Claims. (Cl. 74—421)

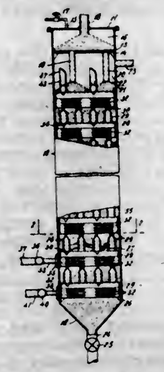


1. In rod driving apparatus having rotatable rod guiding means and drive means for rotating said rod guiding means, lever operated apparatus of the character described for selectively gripping and releasing the rod to be driven, such lever operated apparatus including gripping means rotatable with said rod guiding means an operating device comprising a pivotally mounted member, and coupling means including at least one link eccentrically pivoted on said operating device and connecting said operating device with said gripping apparatus.

2,460,150
APPARATUS FOR THE COOLING OF HEATED OBJECTS
Arthur Schupp, New York, N. Y.
Application November 17, 1944, Serial No. 563,934
8 Claims. (Cl. 62—102)

1. An apparatus for the cooling of heated objects, having a tunnel and means moving said objects from the entrance end to the discharge end of said tunnel, comprising a housing communicating with the interior of the tunnel, at a point substantially centrally located along the length of the tunnel, vertically superposed refrigerating fin devices arranged along opposite sides of the housing, vertically superposed refrigerating blowers, one for each device, and a plurality of ducts extending from the sides of said housing and communicating at their discharge ends with the interior of the tunnel at spaced points thereof, at both sides of said housing, said ducts having their entrance ends in communication with the interior of said housing for receiving the air from the devices and blowers.

2,460,151
APPARATUS FOR GAS-SOLID CONTACT OPERATIONS
Edward L. Sinclair, Haverford Township, Delaware County, Pa., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application June 9, 1944, Serial No. 539,474
10 Claims. (Cl. 23—288)



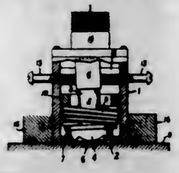
7. An apparatus for conducting catalytic hydrocarbon conversions comprising a substantially vertical closed vessel, a partition across said vessel within the upper section thereof defining a seal chamber within the upper end of said vessel, means to introduce an inert seal gas into said seal chamber, means to introduce a particle form solid contact material into said seal chamber, uniformly spaced feed conduits depending from said partition and terminating a vertical interval therebelow, thereby providing passages for said solid material to the reaction zone of said vessel and providing a gas space within said vessel below said partition and above the lower end of said conduits, outlet means for solid flow from the lower end of said vessel, flow throttling means

associated with said outlet to permit control of solid withdrawal so as to provide a substantially compact column of particle form solid material within said vessel, a plurality of superimposed, criss-crossed rows of horizontally extending, inverted trough members within said vessel extending through a major portion thereof below said solid material feed conduits, the through members in any given row being parallel and spaced apart so as to provide a passageway of substantial width for flow of said solid material therebetween, and alternate trough members having openings at horizontal intervals along their tops, the openings being so spaced and the trough members so arranged that said openings in the tops of trough members of any row are covered by trough members having closed tops in the row immediately above, inlets for introduction of purge gas under trough members having closed tops in the lowermost row, inlets for introduction of hydrocarbons under trough members having closed tops in a row above said lowermost row, ducts covering the openings in the tops of trough members having such openings in the uppermost row, said ducts extending vertically upward and terminating in said gas space, gas outlet means from said vessel near the upper end of said gas space.

2,460,152
DRIVING MEANS FOR SPINNING, TWISTING, AND LIKE SPINDLES
Jose Serra y Sió, Barcelona, Spain
Application January 23, 1947, Serial No. 723,830
In Spain March 16, 1944
5 Claims. (Cl. 57—104)

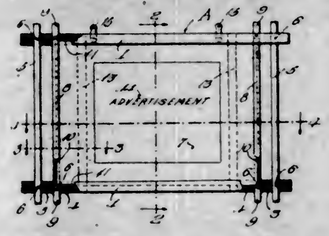
1. A device for actuating the spindles of continuous spinning, twisting and like machines comprising a pulley rotatably mounted with its axis extending vertically, said pulley being formed with a pair of peripheral grooves, means for driving said pulley, a plurality of vertically positioned spindles and an endless band extending horizontally around part of one of said pulley grooves to and around an opposite side of two of said spindles, then to and around the other of said pulley grooves, then to and around an opposite side of a second pair of spindles and back to said first mentioned pulley groove.

2,460,153
PIEZOELECTRIC CRYSTAL HOLDER
Roman Smoluchowski, Pittsburgh, Pa., assignor to General Electric Company, a corporation of New York
Application July 30, 1946, Serial No. 687,201
10 Claims. (Cl. 171—327)



1. A piezoelectric crystal holder comprising a member possessing a surface adapted for mounting a crystal thereon and adapted to face a test piece, a base member, resilient means supported by said base member urging said member towards the surface of a test piece upon which said base member is adapted to be placed, means for adjustably fixing the angle between said crystal mounting surface and an axis of said base member, and a stop to limit the movement of said member in the direction urged by said resilient means.

2,460,154
SIGN HOLDER HAVING RECESSED ROTATABLE SIDE MEMBERS
John Heyward Stokes, Atlanta, Ga.
Application December 19, 1944, Serial No. 568,829
3 Claims. (Cl. 40—125)



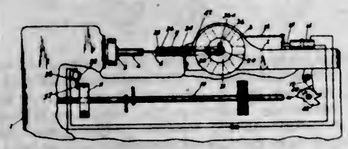
1. A magazine poster display device comprising a retaining frame defining an opening, said frame being formed within said opening with a seat adapted to receive a plurality of posters, and locking elements at opposite edges of the magazine and within the frame for engaging the opposite free edges of the outermost poster within the magazine, said locking elements being channeled to provide a poster engaging surface and partially rotatable to position said surface into locking and unlocking engagement with the exposed surface of the outermost poster whereby to lock said posters in said seat and to permit their removal therefrom.

2,460,155
FINGER GUARD
Joseph Talarico, Spokane, Wash.
Application March 26, 1945, Serial No. 584,829
1 Claim. (Cl. 2—21)

A finger guard comprising an annular body open at front and rear ends and of a diameter adapting it to fit snugly about a finger and having its outer portion extended rearwardly and forming a rear extension, the extension being of a length adapting it to overlie the first joint of a finger and having its rear end portion bent to form an outwardly curved lip, and a tongue formed integral with the said outer portion of the body and extending forwardly therefrom and being tapered forwardly and having a blunt front end formed with an arcuate front edge merging into side edges of the tongue, said tongue being of a length adapting it to project forwardly beyond a finger about which the body fits and having its forward portion curved downwardly

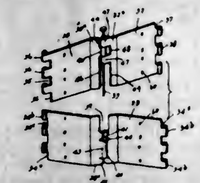
and forming a blunt bill disposed in position for extending across the front end of the finger in forwardly spaced relation thereto and shielding the front end of the finger and the nail thereof.

2,460,156
AUTOMATIC DRILLING MACHINE
Robert E. Vanderhide, Kelly Field, Tex.
Application April 4, 1945, Serial No. 586,475
16 Claims. (Cl. 77—32)



1. In a drilling machine, in combination, a drill holder, a drill carried thereby, a support in which the drill holder is movably mounted, a work holder for supporting work engageable by said drill, a feeding device for advancing the drill into the work, means for periodically moving the holder relatively to its support for pulling the drill out of the work during the feeding movement of the drill to the work, the said pulling out means comprising a releasable latch member to limit the movement of the holder on its support while the drill is being advanced into the work.

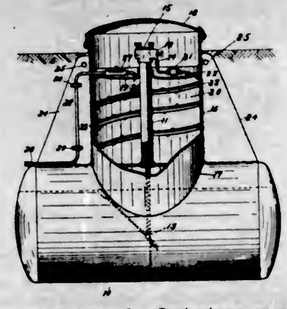
2,460,157
CURVED FOLDABLE CLOSURE
Ernest B. Watkins, Anderson, Ind., assignor, by mesne assignments, to New Castle Products, Inc., New Castle, Ind., a corporation
Application July 19, 1946, Serial No. 684,891
3 Claims. (Cl. 160—84)



1. An extensible and collapsible closure structure movable arcuately comprising in combination two sequentially connected series of hinge plate elements, the two series crossing each other at regular intervals, one series including half length elements at the ends and a plurality of full length elements therebetween and the other series comprising substantially all half length elements, the series where crossing having common pivotal connection.

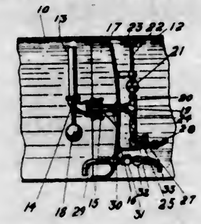
2,460,158
TWO-STAGE LIQUEFIED PETROLEUM GAS DISPENSING SYSTEM
Loyd J. White, San Antonio, Tex., assignor to Southern Steel Company, San Antonio, Tex., a corporation of Texas
Application March 13, 1945, Serial No. 582,450
7 Claims. (Cl. 62—1)

1. A liquefied petroleum gas system of the liquid eduction type, comprising in combination, an underground pressure storage container adapted to be charged with a mixture of butane and propane; a standpipe connected to the container and carrying filling and liquid dispensing means; a protecting casing for the standpipe connected to the container; a first stage pressure reducer connected to receive the educted liquid; a gas-tight vaporizing compartment formed by the lower portion of said casing with the container constituting the bottom wall there-



of and connected to the first stage pressure reducer to vaporize residual liquid discharged therefrom by heat exchange with the container; and a second stage pressure reducer connected to said vaporizing chamber and arranged to deliver the vapor at service pressure for use in gas consuming appliances.

2,460,159
VAPOR OUTLET FOR TRUCK TANKS
Loyd J. White, San Antonio, Tex., assignor to Southern Steel Company, San Antonio, Tex., a corporation of Texas
Application April 19, 1945, Serial No. 589,256
4 Claims. (Cl. 62—1)



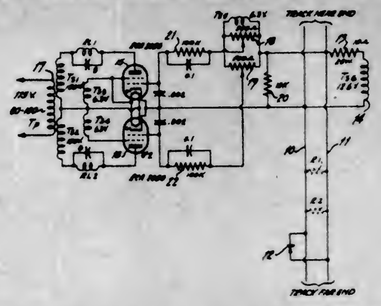
1. In a service truck tank for transporting liquefied petroleum gas, a vapor relief outlet connected to one end of the tank including a shiftable conduit section within the tank communicating with the vapor space therein and a fixed conduit portion outside the tank carrying a pressure relief valve; and means connected to said shiftable conduit section positioned to shift it automatically as the liquid level is shifted when the truck falls on one side or turns over, and thereby maintain communication with the shifted vapor space.

2,460,160
HIGH-LOW IMPEDANCE ELECTRON TUBE DETECTOR
Hubert H. Wittenberg, Lancaster, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application November 29, 1945, Serial No. 631,723
6 Claims. (Cl. 250—27)

1. The combination of a pair of electron discharge devices connected in push-pull relation

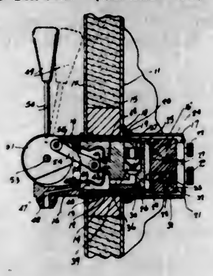
to each other to form a box-like assembly;

and each having a cathode, an anode and control and shield grids, means for applying alternating potentials of opposite polarities to the anode and shield grid of each of said devices, a pair of conductors, and means interconnecting



said conductors with each other and with said control grids for deenergizing one of said devices when the impedance between said conductors assumes a predetermined relatively low value and for deenergizing the other of said devices when said impedance assumes a relatively high value.

2,460,161
MIXING VALVE
Rudolph Yuza, Chicago, Ill., assignor to A. Dalkin Company, Chicago, Ill., a corporation of Illinois
Application June 11, 1945, Serial No. 598,836
5 Claims. (Cl. 225—26)



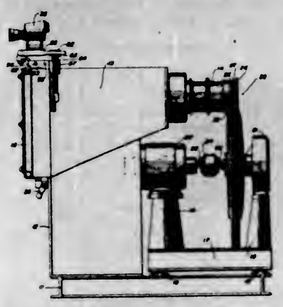
1. A mixing valve comprising a valve body having a plurality of passages formed therein, valve members controlling communication through said passages, a piston including a flexible diaphragm movable in said valve body and providing rearward and forward chambers, the rearward chamber communicating with the valve passages, a valve structure carried by and movable with the piston and adapted to open communication between the chambers, and means for moving said piston within said valve body.

2,460,162
CLOTHESPIN
Ernest Albert Alsop and Harold Victor King, Melbourne, Victoria, Australia
Application October 18, 1946, Serial No. 704,070
9 Claims. (Cl. 24—137)

2. A clothes pin comprising two elongated body members, spring means fitted between said body members near the upper ends thereof, each of the body members including an upwardly and outwardly tapering head portion, a transverse recess in the inner surface of said head portion for retaining said spring means, a longitudinal groove and an adjacent longitudinal tongue on the inner surface of said head portion coextending

lengthwise of the latter and below said transverse recess, a hip on the outer surface of said body member below said head portion, a transverse recess in said hip for accommodating the ends of said spring means, respectively, and a clamping jaw portion extending below said hip.

2,460,163
PROJECTILE FLIGHT RECORDING MULTIPLE EXPOSURE CAMERA
Ira S. Bowen, Pasadena, Calif., assignor to the United States of America as represented by the Secretary of the Navy
Application April 15, 1947, Serial No. 741,453
1 Claim. (Cl. 95—36)

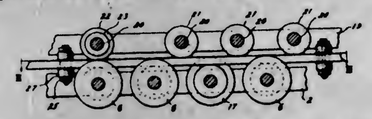


In a camera a light focusing unit and a light sensitive surface, a masking screen provided with an aperture and located between the light focusing unit and the light sensitive surface, manually operable means for aligning the aperture with the camera image of an object, a sight operable in train by said means, a cam having a surface vertically disposed relative to a reference plane corresponding substantially to at least a portion of the trajectory of said object in said vertical plane, follower means for said cam operatively connected to said sight for changing its vertical angle with respect to said reference plane as said sight is moved in train to maintain said object in the field of view of said sight and an automatic shutter for said light focusing unit.

2,460,164
STRAIGHTENING APPARATUS
Ernest E. Brayshaw, Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application August 30, 1946, Serial No. 693,869
2 Claims. (Cl. 153—54)

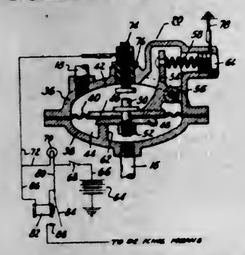
1. A straightening apparatus for metallic sections comprising a series of power-driven rolls the axes of which occupy a common plane, a collar on the first of said rolls, a collar on another of

said rolls, said last-named collar occupying a different longitudinal position on its carrying roll than said first-named collar, whereby there is defined by and between said collars the sides of a rolling pass, and a series of idle rolls the axes of which occupy a plane which is parallel and adjacent the plane of said series of power-driven



rolls, the first of said series of idle rolls having a reduced diameter portion contacting the periphery of the collar of the first of said power-driven rolls and a main portion spaced from the main portion of the first of said power-driven rolls to form a pinch pass for feeding the section into the straightening apparatus.

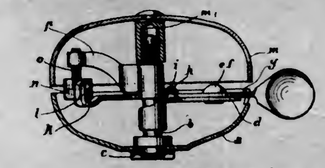
2,460,165
MEANS FOR INDICATING ICE ON AIRCRAFT SURFACES
Karl B. Britton, Cleveland, Ohio, assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application January 10, 1946, Serial No. 640,223
4 Claims. (Cl. 177—311)



4. An ice anticipator for aircraft comprising a venturi having its throat located in the airstream, said throat constituted so that the pressures created on either side thereof are normally the same but subject to variation when the area of the throat portion is varied, means responsive to differential pressure, means connecting opposite sides of said Venturi throat to said first-named means, said venturi being constructed and arranged to form ice in the throat thereof to thereby restrict the flow therethrough when the meteorological conditions ambient the aircraft are conducive to formation of ice on the aircraft surfaces, whereby a differential pressure is created within the first-named means to actuate the same, and means controlled by the first-named means for indicating said ambient conditions.

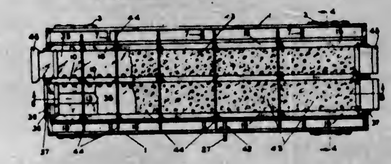
2,460,166
CYCLE BELL
Marcel Brun, Saint-Etienne, France
Application February 26, 1946, Serial No. 650,211
In France May 23, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires May 23, 1961
4 Claims. (Cl. 116—155)

1. A cycle bell comprising a support embodying a post; a pair of sounding domes carried by said post in opposed co-axial relation with their bases spaced from but substantially close to each other to form a box-like assembly; brackets carried by said post within said assembly; coil springs supported by the free ends of said brackets in substantially parallel relation to said post; striker members supported by said coil springs in close but spaced relation to said domes in the vicinity of the bases thereof, each of said striker members being adapted for cooperation with but one of said domes; a pivot



substantially parallel to said post and carried by same within said assembly; an operating lever adapted for oscillating movement, pivoted on said pivot with one end protruding from said assembly, the inner end of said lever being turned-up and adapted to pass between said striker members and said domes; and means on said inner end to actuate said striker members by pushing same aside from said domes and then freeing them.

2,460,167
CONCRETE BLOCK MAKING MACHINE
Alf G. Carlsen, Tacoma, Wash.
Application April 2, 1947, Serial No. 738,772
9 Claims. (Cl. 25—41)



1. A machine for molding plastic material such as concrete and which comprises a support, a mold member fixed on said support, a second support, a second mold member on said second-mentioned support in spaced relation from said fixed mold member and movable with said second support for movement relative to said fixed mold member, a pallet mounted on said supports by and between said mold members for supporting the molded plastic material, and means for moving said movable mold member and its support relative to said pallet and said fixed mold member and simultaneously moving said pallet relative to said fixed mold member to free the pallet and the molded objects thereon from between said mold members.

2,460,168
METHOD OF MAKING A DIAPHRAGM
Michele Caserta, Detroit, Mich.
Application August 14, 1944, Serial No. 549,475
1 Claim. (Cl. 18—59)

The method of making a diaphragm, which comprises coating a thin, flexible foraminous fabric disk with an uncured synthetic plastic to anchor said plastic in the openings of said fabric, positioning masses of a similar uncured synthetic plastic at opposite sides of said disk, compressing said disk and masses to form said masses into inner and outer spaced ring portions and said disk into a thin flexible web portion joining

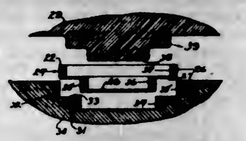
said ring portions and closing said inner ring por-

said vehicle, comprising a box-like member

aperture in said plate in alinement with said

2,460,175
IONIC VACUUM PUMP

said ring portions and closing said inner ring portion, curing the portions so formed to produce

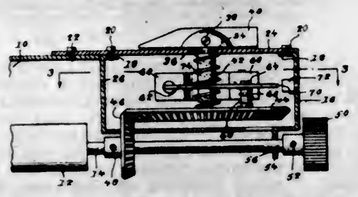


an integral diaphragm, and removing the central part of said web portion closing said inner ring portion to leave a central opening therethrough.

2,460,169
DOUBLE-CUT EDUCATIONAL NOVELTY
Louise Harris Fireng, Wayne, Pa.
Application April 17, 1946, Serial No. 662,713
4 Claims. (Cl. 35—35)

1. A cut-out of the class described comprising a plurality of pairs of angularly related halves of the same object, said pairs being joined at a base line, and each of said halves being of such area that it may serve as a substantially horizontal supporting base for the other half.

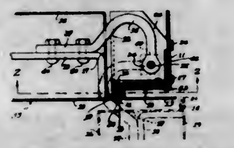
2,460,170
PAGE END INDICATOR FOR TYPEWRITERS
John G. Furchak, Mill Valley, Calif.
Application April 8, 1946, Serial No. 660,453
4 Claims. (Cl. 197—189)



1. A device of the character described, comprising a housing, a removable cover on said housing, a dial on said cover, a pointer on said dial coacting therewith, a vertical shaft for mounting said pointer at the upper end thereof, a gear on the lower end of said shaft, a rotatable axle below said gear, a gear on said rotatable axle coacting with the first mentioned gear to cause rotation of said pointer, an inwardly extending projection on said housing, and means on said first mentioned gear coacting with the projection on said housing to sound an audible signal when said pointer has reached a predetermined setting on said dial.

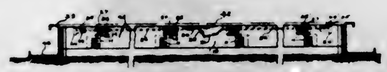
2,460,171
CONCEALED HINGE
Otto C. Gessler, Detroit, Mich.
Application March 13, 1944, Serial No. 526,163
2 Claims. (Cl. 16—135)

2. A hinge structure for supporting a vehicle door on a vertical channel frame member of said vehicle, comprising a box-like member adapted to be attached to the channel frame member, said box-like member having a base wall and side walls connected thereto, a hinge strap secured to the vehicle door and projecting between said side walls, and a hinge pintle extending through an eye in said hinge strap and



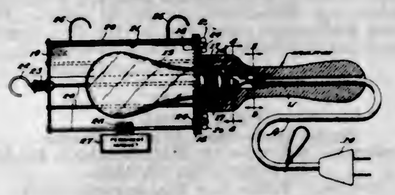
passing through aligned openings in said side walls, said side walls and the opposite ends of said base wall being provided with tab extensions forming anchoring lugs for reception and interlocking engagement in apertures located in said channel frame member whereby said channel member is gripped between the lugs of said base wall to secure said box-like member thereto.

2,460,172
DOWEL SUPPORTING ASSEMBLY
William S. Godwin, Baltimore, Md.
Application June 10, 1944, Serial No. 539,679
15 Claims. (Cl. 94—51)



1. A dowel-supporting assembly for concrete road joints comprising an elongated hollow main plate, dowel spacing means for a plurality of dowels spaced along said plate, dowel supporting members, means mounting said members within said main plate adjacent said spacing means for movement between two positions, each of said members in one position holding a dowel within one of said spacing means and in the other position releasing the dowel therefrom, a common operating means enclosed within the main plate and extending longitudinally thereof, and means operatively connecting said operating means to a plurality of said members.

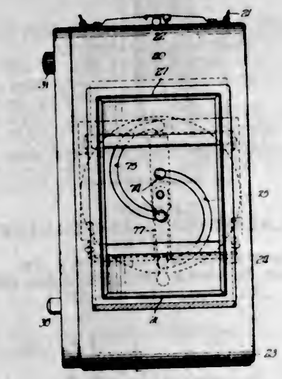
2,460,173
SQUARE LAMP GUARD
Anthony T. Halbing, Waterbury, Conn.
Application March 19, 1945, Serial No. 583,525
2 Claims. (Cl. 240—54)



1. A magnetic fixture for holding a portable electrical appliance in the form of a trouble lamp, comprising a handle, a recess in said handle, an electric light bulb socket in said recess, a carrier plate mounted on said handle, a central

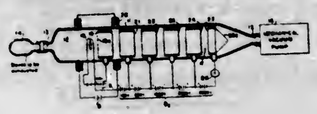
aperture in said plate in alinement with said recess, an out-turned rim on said plate, an electric light bulb guard having flat sides thereto secured to said plate within said flange, said guard involving outer protective rods, a clip snugly fitting a selective side and having detachable connection with certain of the rods thereof, and a permanent magnet carried by said clip.

2,460,174
CAMERA WITH VARISIZE FOCAL PLANE APERTURE
Clement E. Hannum, Chicago, Ill.
Application October 22, 1941, Serial No. 416,038
5 Claims. (Cl. 95—32)



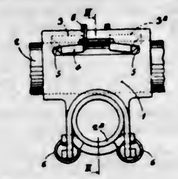
1. In a folding camera of the type described, having the usual roll type film, bellows, case with hinged back and button operated lens means; a means for regulating the amount of exposure reaching the film on any particular exposure in snapping a picture, said regulating means comprising, in addition to the regular shutter means, a plurality of adjustable sliding panels carried within the camera case between the film and the lens means and closely adjacent to the film, said sliding panels being movable to regulate the size of the opening between the film and the regular shutter and lens means of the camera, and means positioning the sliding shutters at predetermined locations, said last mentioned means being operable by means outside the camera case; means controlling the movement of the film in an amount corresponding to the size of the opening between the sliding panels, said film moving means comprising a film winding knob engaging the roller on which the film is being wound, a ratchet attached to said film winding knob, a roller rotated by film within the camera, a large gear wheel engaging gear means on said roller and operated by said roller on movement of the film, a cam and marker button carried by said large gear means and normally movable therewith, said gear and marker button means being likewise independently movable, a pawl engaging said winding button mechanism and locking the same against rotation, said cam engaging said pawl and releasing said winding button upon rotation of said marker button, markers on said marker button, a starting marker on said camera case adjacent said marker button, an exposure counter normally driven through said large gear wheel and normally movable for setting, and a double exposure preventing means.

2,460,175
IONIC VACUUM PUMP
Rudolf C. Hergenrother, Beechhurst, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application July 31, 1945, Serial No. 608,038
11 Claims. (Cl. 103—69)



1. An ionic vacuum pump comprising, a housing having a chamber and including an inlet port for connecting said chamber to a device to be evacuated and an outlet port for connecting said chamber to an external vacuum pump, said chamber providing a gas-discharge path between said inlet and outlet ports, means for providing a flow of electrons directed into said gas-discharge path to ionize gas molecules therein, and means tending to confine the movement of said electrons to provide an electron stream in said discharge path and co-operating with said first-mentioned means to cause a substantial number of said electrons each repeatedly to traverse said electron stream in longitudinal forward and backward direction therealong, thereby substantially to increase the probability of ionization of additional molecules in said discharge path by the repeated traversals of said electrons therethrough, said last-mentioned means including means for attracting said ionized gas molecules toward said outlet port to render them potentially accessible for evacuation by said external vacuum pump.

2,460,176
CLAMP FOR RODS AND TUBULAR MEMBERS
Henri Héritier, Geneva, Switzerland
Application September 10, 1945, Serial No. 615,334
In Switzerland October 26, 1944
1 Claim. (Cl. 287—54)



A clamp for assembling longitudinal rod and tube members which members cross each other at an angle without intersecting each other comprising a cradle for receiving each longitudinal member, a pair of bars cooperating with each cradle for retaining the longitudinal member therein, and cooperating cam surfaces between each bar and its cradle operable upon movement of one bar of the pair in one direction and upon movement of the other bar in the opposite direction longitudinally of the member in the cradle to cause said bars to grip the member, whereby movement of the bar longitudinally in either direction in its cradle will effect a tightening of one of said bars.

2,460,177

in whereby a combination sleeve packed and

resistant vinyl resin of a class consisting of vinyl

opening, and a partition in said dust bin between said side walls and extending from the top of said

2,460,177
PRESERVING SYNTHETIC RUBBER
Louis H. Howland, Waterbury, Conn., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application June 12, 1945, Serial No. 599,113
3 Claims. (Cl. 260—86.5)

1. A rubber-like conjugated dienehydrocarbon-vinyl copolymer selected from the class consisting of 1,3-butadiene-styrene, and 1,3-butadiene-acrylonitrile copolymers containing by weight from 0.5 part to 5 parts, based on 100 parts of the copolymer, of thioacetamide.

2,460,178
EMERGENCY ROAD WHEEL ASSEMBLY FOR AUTOMOBILES
Federico Carlos Kember, Buenos Aires, Argentina
Application June 2, 1945, Serial No. 597,164
In Argentina March 16, 1945
21 Claims. (Cl. 180—1)

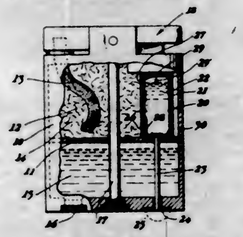
1. An emergency road wheel assembly for automotive vehicles having a plurality of main vehicle wheels comprising a secondary retractile emergency wheel located next to each main vehicle wheel and of smaller diameter than such main vehicle wheel, a displacement assembly, an emergency wheel change-over cylinder including a piston, the cylinder being combined with the displacement assembly and the secondary wheels being mounted on said displacement assembly, control means for the displacement of said assembly connected to said piston, a tank, the internal pressure of which differs from that of the atmosphere, a pipe connecting said cylinder and tank, an inflatable tire on the vehicle wheels, an automatic device including a stop and a movable element, said movable element being maintained in inoperative position by normal pressure in said inflated tire, this last element being constantly spring urged towards an operative position by means having a force slightly less than the normal pressure in the inflated tire, a valve inserted in said pipe, and a valve-opening element located in the path of said stop.

2,460,179
COMBINATION PUMP
Walter L. Knott, Los Angeles, Calif., assignor to Lester B. Clark, Houston, Tex.
Application June 21, 1945, Serial No. 600,750
2 Claims. (Cl. 103—179)

2. A pump for wells including a tubing in the well, a standing valve in the tubing, a plurality of iron bushings disposed in said tubing above said valve, said bushings being hollow to provide a working barrel, a collar in said tubing to anchor said bushings, a standing tube extending upwardly from said collar, a plunger including a head and a pair of concentric spaced tubes depending therefrom to seal on the inside and outside of said standing tube, the inner of said tubes being of a length to extend into said bushings to work thereby a combination sleeve packed and working barrel seal pump is provided, said

plunger having a pair of spaced traveling valves therein.

2,460,180
FUEL RESERVOIR FOR CIGARETTE LIGHTERS
Harry Knox, Mechanicsburg, Pa.
Application October 8, 1945, Serial No. 620,973
3 Claims. (Cl. 67—81)



3. In a cigarette lighter, a body member, a partition in said body member defining a fuel tank and a wick compartment, a rotary valve in said wick compartment, said valve comprising a second fuel tank journaled on said partition, an aperture in said partition, an aperture in said second fuel tank adapted to be selectively aligned with said partition aperture upon rotation of said second tank, a housing encasing said second tank, a port therein and a port in said second tank adapted to be aligned with said housing port upon rotation of said second tank.

2,460,181
SEALING MATERIAL
Wallace P. Marshall, Newark, N. J., assignor to Pittsburgh Plate Glass Company, Essex County, N. J., a corporation of Pennsylvania
Application June 17, 1944, Serial No. 540,851
5 Claims. (Cl. 154—53.5)

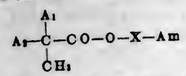
2. A tacky sealing tape for interposition between and adherence to overlapping portions of two sheets of metal which are to be joined together by mechanical fastening elements, which tape comprises a layer of a mixture of a non-drying, heat fusible and soluble alkyd resin which is a polyester of a polyhydric alcohol and a saturated dicarboxylic acid, zinc chromate, a water

resistant vinyl resin of a class consisting of vinyl acetal, vinyl chloride and a copolymer of vinyl chloride and vinyl acetate, the zinc chromate being employed in a ratio of approximately 5 to 30%, the vinyl resin being in a ratio of 20 to 40% based

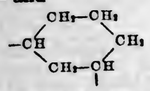
upon the alkyd resin content, said layer further comprising 100 to 250% based upon the alkyd resin content of an inert filler, the layer further being superposed upon a backing layer from which said layer is adapted to be stripped from the tape to expose the surfaces thereof.

2,460,182
BASIC ESTERS OF ALIPHATIC TERTIARY CARBOXYLIC ACIDS
Henry Martin and Alfred Margot, Basel, Switzerland, assignors to J. R. Geigy A. G., Basel, Switzerland, a Swiss firm
No Drawing. Application August 14, 1944, Serial No. 549,492. In Switzerland August 4, 1943
5 Claims. (Cl. 260—293)

1. A basic ester of an aliphatic tertiary carboxylic acid, of the formula

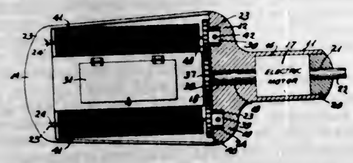


wherein A_1 and A_2 each represents a lower alkyl group and A_1 and A_2 together contain from 5 to 8 carbon atoms, X represents a divalent radical selected from the group consisting of $-CH_2.CH_2-$, $-CH_2.CH_2.CH_2-$ and



radicals, and Am stands for the radical of a secondary amine selected from the group consisting of lower dialkyl amines and piperidine.

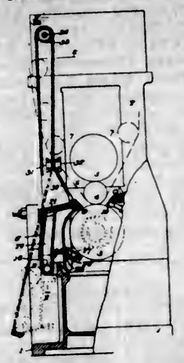
2,460,183
ELECTRICAL UTILITY BRUSH
Samuel Mayer, New York, N. Y.
Application May 17, 1944, Serial No. 535,915
2 Claims. (Cl. 15—23)



1. A brush comprising a handle having a recess, driving means disposed in said recess, a hood secured to said handle and open at its bottom, said hood having longitudinally curved sides, two spaced rotatable cylindrical brushes in said hood, one adjacent each of said curved sides, gear means connecting said brushes with said driving means, a dust bin disposed between said brushes, said dust bin having a curved side portion adjacent each of said brushes, each of said curved sides having an opening adjacent its correlated brush and above the bottom of said dust bin, said dust bin further having a bottom wall between said side walls, said bottom wall being provided with an opening, a hinged door for said bottom wall

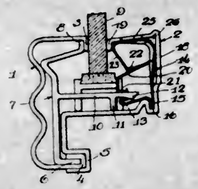
opening, and a partition in said dust bin between said side walls and extending from the top of said dust bin to adjacent said door for preventing dust from blowing out of its side openings, said brushes extending below said hood.

2,460,184
INK FOUNTAIN FOR INTAGLIO PRINTING PRESSES
Joseph E. Meyer, Westerly, R. I., assignor to C. B. Cottrell & Sons Company, Westerly, R. I., a corporation of Delaware
Application February 1, 1945, Serial No. 575,679
3 Claims. (Cl. 101—157)



2. In an enclosed ink fountain for rotary intaglio printing presses, a hollow base, side uprights carried thereby, a rotary printing cylinder, a horizontally disposed ink supply pipe mounted on the base, an inker head pivoted on said pipe to be swung between a raised substantially vertical inking position and a lowered substantially vertical non-inking position, and manually operated power increasing means for swinging the inker head between said inking and non-inking positions, including a cross shaft mounted in said side uprights above the inker head, pulleys on said cross shaft adjacent said side uprights, side chains leading upwardly from the top of the inker head to and around said pulleys, and guides on said side uprights through which the side chains pass to ensure the positive movement of the inker head past its vertical dead center as the inker head is swung away from its inking position.

2,460,185
GLASS SETTING FOR STORE FRONTS
James T. Miller, Niles, Mich., assignor to The Kawneer Company, Niles, Mich., a corporation of Michigan
Application June 22, 1944, Serial No. 541,593
6 Claims. (Cl. 20—56.4)



4. In a store front construction, a glass setting device for supporting a pane of glass, com-

prising a pair of sash members including an inner member secured in place and an outer member

tionally engage the walls of a groove, and an adjustable track-plate pivotally mounted on the

2,460,191
PROCESS FOR PREPARING ESTERS OF ORGANIC CARBOXYLIC ACIDS

having means for supporting an end of a curtain rod and adjustably secured to said plate member

prising a pair of sash members including an inner member secured in place and an outer member detachable with respect to the inner member, spaced lugs of extruded construction carried by the outer member and similarly spaced resilient clips carried by the inner member, a rearwardly projecting leg on the lugs and resilient projections on the spring clips for resiliently gripping and clamping therebetween the opposite sides of the leg and retaining it and the associated outer sash member in assembled relation.

2,460,186

COATING COMPOSITION COMPRISING AN AMIDE-ALDEHYDE RESIN AND A POLYESTER OF 2-ETHYL HEXANEDIOL-1,3 AND A DICARBOXYLIC ACID AS A PLASTICIZER

Eugene W. Moffett, Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania

No Drawing. Application March 7, 1946, Serial No. 652,806

17 Claims. (Cl. 260—31.6)

1. An alcohol modified urea-formaldehyde resin which is soluble in organic solvents, said resin being plasticized with a compatible plasticizer a polyester of 2-ethyl hexanediol-1,3 and a dicarboxylic acid containing at least 6 to 19 carbon atoms.

2,460,187

COATING COMPOSITION COMPRISING AN AMIDE-ALDEHYDE RESIN AND A POLYESTER OF AN ALPHA-ALKYL ETHER OF GLYCEROL AND A DICARBOXYLIC ACID AS PLASTICIZER

Eugene W. Moffett, Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania

No Drawing. Application March 7, 1946, Serial No. 652,807

19 Claims. (Cl. 260—31.4)

3. A coating composition comprising a fluid solution of a non-aqueous solvent and a resinous condensation product of formaldehyde and an amide of a class consisting of urea and melamine, said solution also containing a plastifying amount for said product of a polyester of an alpha-alkyl ether of glycerol containing 4 to 10 carbon atoms in the alkyl group and a dicarboxylic acid containing 6 to 19 carbon atoms.

2,460,188

FUNGICIDAL COMPOSITIONS

Walter C. O'Kane, Durham, N. H., and Glen H. Morey, Terre Haute, Ind., assignors to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland

No Drawing. Application May 2, 1945, Serial No. 591,632

7 Claims. (Cl. 167—33)

1. A method for suppressing parasitic fungus growths on living plants which comprises bringing into contact therewith a kojic acid salt of a divalent heavy metal, said heavy metal having a specific gravity between 7 and 14.

2,460,189

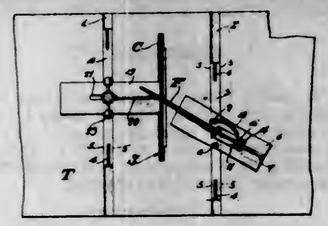
SAW-FILE HOLDER AND GUIDE

Clarence Perry, Santa Ana, Calif.

Application July 17, 1947, Serial No. 761,670

4 Claims. (Cl. 76—31)

1. In a file holder and guide the combination with a base plate having a bifurcated end forming laterally resilient tongues adapted to frictionally engage the walls of a groove, and an adjustable track-plate pivotally mounted on the base plate, of a manually operated holder having a pair of spaced annular walls movable on the track-plate, and a file rigidly mounted in the holder.



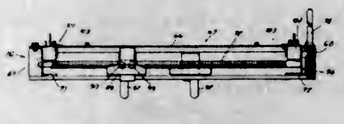
2,460,190

WIRE RECORDER INDICATOR

Merlin O. Petroff, Lake Bluff, and William F. Straub, Chicago, Ill., assignors to Charles P. Peirce, Evanston, Ill.

Application March 21, 1946, Serial No. 656,141

6 Claims. (Cl. 33—127)



6. In an indicating device for a wire recorder or the like having driving means for causing wire to travel from a supply spool to a take-up spool, or vice versa, the combination of an elongated casing, a feed screw extending lengthwise within said casing and adapted to be rotated by driving means in opposite directions depending upon the direction of travel of wire from one spool to the other spool, a first indicating means and a second indicating means each including spring means for normally biasing the same into engagement with said feed screw for movement lengthwise of said casing and axially of said feed screw by rotation of the latter, said first and second indicating means being adapted to be manually disengaged from said feed screw against the force of said spring means for movement lengthwise of said casing to selectively position the same relative to and for engagement with said feed screw, a pair of normally closed switches one disposed adjacent each end of said feed screw for effecting operation of said driving means, said switch means having actuator members engageable by said indicating means when disposed at the ends of said feed screw for opening said switch means to render said driving means inoperative, whereby said first indicating means is adapted to be positioned at either end of said feed screw to actuate either of said switch means after the wire has been substantially completely withdrawn from one spool and wound upon the other, and said second indicating means is adapted to be positioned relative to said feed screw to actuate selectively said switch means adjacent the end of said feed screw toward which it is adapted to be moved in the travel of the wire from said supply spool to said take-up spool and upon the transfer of a predetermined amount of wire from said supply spool to said take-up spool.

2,460,191

PROCESS FOR PREPARING ESTERS OF ORGANIC CARBOXYLIC ACIDS

Richard F. Phillips, Westfield, N. J., assignor to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey

No Drawing. Application July 13, 1946, Serial No. 683,429

4 Claims. (Cl. 260—482)

1. The process that comprises reacting an N-acylamino acid with approximately a molar equivalent of a dialkyl sulfite in the presence of the corresponding alcohol and an acidic catalyst to form an N-acylamino ester.

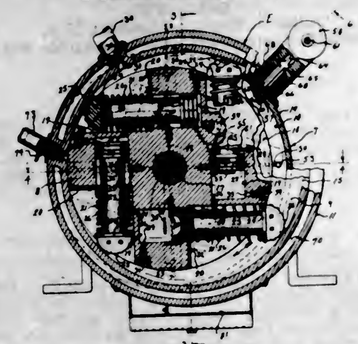
2,460,192

ROTARY DIESEL ENGINE

George F. Pieper, Milwaukee, Wis.

Application September 20, 1946, Serial No. 698,283

1 Claim. (Cl. 123—43)



In a rotary internal combustion engine of the type having a stator, a rotor eccentrically mounted in said stator with cylinders therein arranged around the axis of the rotor and extending substantially tangentially to a circle concentric with said axis, pistons slidably mounted in said cylinders, and means urging the pistons in said cylinders to a compression position by the outer wall of the stator during a part of the cycle of rotation of the rotor; said rotor having engagement at one point only with the outer wall of the stator and defining an air chamber between the stator and rotor, means for supplying fresh air in quantities to the chamber, inwardly opening intake valves communicating with the inner ends of the cylinders and having communication with the fresh air chamber, whereby upon outward movement of the pistons, fresh air will be sucked into the cylinders, and means for supplying atomized fuel to the cylinders at the appropriate times during rotation of the rotor.

2,460,193

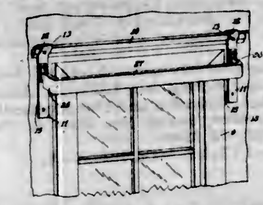
CURTAIN ROD BRACKET

Theodor Baudenkolb, New York, N. Y.

Application July 23, 1947, Serial No. 762,995

2 Claims. (Cl. 248—265)

1. Brackets for supporting a curtain rod, including in each bracket a plate member terminating in a hook at the top for suspending said plate member from a picture moulding or the like, said plate member having a plurality of holes arranged in a vertical series, a suction cup mounted upon the rear portion of the lower end of the same plate member, and a supporting plate having means for supporting an end of a curtain rod and adjustably secured to said plate member



by a manually releasable screw extending through said supporting plate into one of the holes in the vertical series in said plate member.

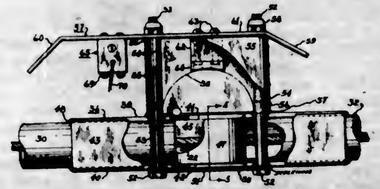
2,460,194

APPARATUS FOR SEVERING TOWLINES AND THE LIKE

Arthur B. Schultz, Wilmington, Del., assignor to All American Airways, Inc., a corporation of Delaware

Application October 10, 1944, Serial No. 558,022

1 Claim. (Cl. 164—34)



In supporting structure for explosively severing cables and the like, a first tubular cable guide, a second tubular guide in alignment with said first guide, the ends of said guides being in spaced relation, a pair of connecting plates between said guides rigidly attached thereto at a distance from said ends, side plates welded to said connecting plates forming a rigid enclosure therewith, a cable guiding restriction at the end of each tubular guide, a secondary supporting collar welded to each end of said guides, an explosive charge positioned over said secondary collar, means for detonating said explosive charge including a length of primer cord and a blasting cap, resilient holding means for said charge, a first shield positioned in spaced relation to said explosive charge, means for supporting said shield on said connecting plates, and means for protecting said charge and secondary collar including a screen and a readily frangible shield, said frangible shield enclosing the space between said collar and said first shield.

2,460,195

PROCESS FOR THE POLYMERIZATION OF 4-VINYLCYCLOHEXENE DIOXIDE

Gordon Hart Segall, McMasterville, Quebec, Canada, assignor to Canadian Industries Limited, Montreal, Quebec, Canada, a corporation of Canada

No Drawing. Application August 5, 1947, Serial No. 766,455. In Canada April 19, 1947

4 Claims. (Cl. 260—2)

1. Process for the polymerization of 4-vinylcyclohexene dioxide which comprises maintaining 4-vinylcyclohexene dioxide at a temperature of 0°–150° C. in the presence of 0.0001%–10%, by weight thereof, of perchloric acid until said 4-vinylcyclohexene dioxide is polymerized.

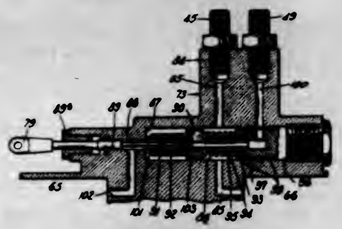
2,460,196

densable gas from the chamber through the spray

the motion of said material, voltage deriving

sulating ring-like members constituting the insulating envelope, the abutting surfaces of all

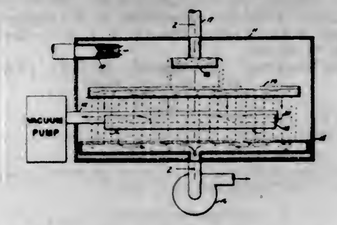
2,460,196
BALANCED FLUID MOTOR VALVE
John Keith Simpson, Leamington Spa, England, assignor to Automotive Products Company Limited, Leamington Spa, Warwickshire, England
Original application July 7, 1941, Serial No. 401,370, now Patent No. 2,361,130, dated October 24, 1944. Divided and this application February 11, 1944, Serial No. 522,006. In Great Britain July 10, 1940
1 Claim. (Cl. 121—46.5)



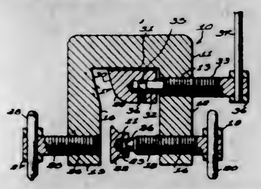
In a valve for controlling the flow of fluid to a fluid motor of the class wherein a pair of cylinders coaxially arranged house a pair of pistons connected one to the other for movement together and with corresponding ends with equally effective areas, the combination of a valve body having inlet and exhaust ports, a passageway connecting one end of one of said cylinders to the inlet port at all times, a passageway connecting the other end of said one cylinder and the corresponding end of the other cylinder to the inlet port, a passageway connecting the other end of said one cylinder and the corresponding end of the other cylinder to the exhaust port, a secondary valve normally seated in the second named passageway and constructed and arranged to be hydraulically balanced, a spring urging a secondary valve toward its seat, said secondary valve being constituted with a hollow interior which forms a part of said last named passageway and which includes a valve seat therein, a primary valve located in the hollow interior of said secondary valve and normally urged against said seat and constructed and arranged to be hydraulically balanced, a spring urging said primary valve toward the seat, and manual means for selectively opening the secondary and primary valves against the spring force only of their respective springs, said secondary and primary valves being so arranged one with respect to the other that any force applied to said manual means in a direction tending to open said secondary valve urges said primary valve toward closed position and any force applied to said manual means in a direction tending to open said primary valve urges said secondary valve toward closed position.

2,460,197
VACUUM CHAMBER EVACUATION
Horace L. Smith, Jr., Richmond, Va., assignor to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application November 14, 1945, Serial No. 628,428
11 Claims. (Cl. 230—73)

1. A method for removing condensable and noncondensable gases from a chamber, which comprises providing in the chamber a spray of a condensing liquid, withdrawing the noncondensable gas from the chamber through the spray while the condensable gas is condensed and collected in the spray and thereafter condensing the condensable gas in the chamber.

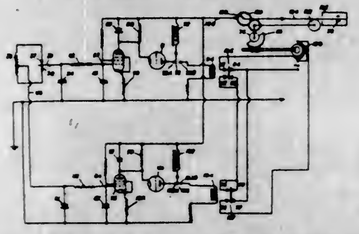


2,460,198
SAW SET
Julius J. Stocker, Flanders, N. J.
Application September 13, 1946, Serial No. 696,651
2 Claims. (Cl. 78—60)



1. A saw set comprising in combination, a substantially U-shaped body, one arm of said body having a bevelled recess formed on the inner surface thereof and constituting a stationary jaw, a clamping bolt provided on the remaining arm of said body, a bevelled setting block positioned between said arms and engageable with said recess, and an actuating screw provided on said remaining arm, said block being pivotally and adjustably mounted on said block.

2,460,199
MEASUREMENT OR VARIATION OF PHYSICAL STATES OF MATERIALS
Maurice Kenyon Taylor, Belmont, Scotland, and Alfred Douglas Knowles, Chadderton, England, assignors to Ferranti Limited, Hollinwood, England, a British company
Application October 21, 1946, Serial No. 704,580
In Great Britain October 25, 1945
2 Claims. (Cl. 34—52)



1. An apparatus for controlling the movement of material in accordance with variations in the physical state thereof comprising means for moving the material relative to a treatment zone, means for positively and negatively accelerating the motion of said material, voltage deriving means for deriving two control voltages one of which is positive, and the other of which is negative according to the direction of deviation from a standard and each of which is proportional to the dampness or other physical state of the material, means for rendering the voltage deriving means operative only at predetermined regular distances along the material, a pair of condensers adapted to be charged at rates dependent on the polarities and potentials of said control voltages respectively, means for discharging the condensers when predetermined potentials are reached, and relay means operated by the discharging current and controlling the operation of said accelerating means so as to accelerate said motion positively and negatively according to which of the condensers discharges first, said relay means being also operated to stop the acceleration when the other condenser discharges, whereby the period of positive or negative acceleration is proportional to the period between discharging of the two condensers.

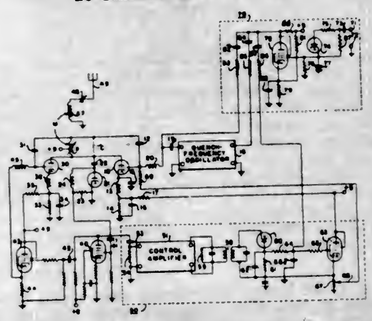
2,460,200
THERMAL CONVERSION OF HYDROCARBONS
Carlisle M. Thacker, Highland Park, and Hillis O. Folkins, Skokie, Ill., assignors to The Pure Oil Company, Chicago, Ill., a corporation of Ohio
No Drawing. Application November 18, 1944, Serial No. 564,180
1 Claim. (Cl. 196—52)

The process of cracking hydrocarbon oils to hydrocarbons within the gasoline boiling range comprising, subjecting said oils to temperatures of approximately 650° to 1200° F., in a cracking zone in the presence of about 0.05 to 3.0 mol per cent of ethyl hypochlorite.

2,460,201
LAMINATED ENVELOPE STRUCTURE FOR ELECTRON DISCHARGE DEVICES
John G. Trump, Winchester, and Robert W. Cloud, Lexington, Mass., assignors to Research Corporation, New York, N. Y., a corporation of New York
Application December 20, 1946, Serial No. 717,380
11 Claims. (Cl. 250—27.5)

1. A rigid, self-supporting, high-voltage, high-vacuum electronic device, capable of insulating the highest gradients along its length, the said device for that purpose comprising a multiplicity of metallic ring-like members and alternating insulating ring-like members constituting the insulating envelope, the abutting surfaces of all said members being bonded together by a plastic film, the said device, by reason of the bonding characteristics of said plastic film, being structurally rigid and structurally self-supporting mechanically, and the said bonding plastic film having low residual vapor pressure after baking, the said device also having throughout, by reason of said bonded plastic film, a vacuum-tight seal free from bubbles and inhomogeneities, the said bonded plastic film also having high chemical stability in the presence of vacuum and in the presence of high electric stress and under electronic bombardment, the said device being effectively sealed off by said plastic film bond, the said insulating members and metallic members of the device bonded by said plastic film having coefficients of expansion respectively indifferent to each other and permissibly differing, and the said plastic bond having itself a strength comparable to the intrinsic strength of the said metallic members and the said insulating members.

2,460,202
RADIO RECEIVER GAIN-CONTROL ARRANGEMENT
Benjamin F. Tyson, Bayside, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application April 19, 1944, Serial No. 531,759
10 Claims. (Cl. 250—20)



1. A gain-control arrangement comprising, a wave-signal receiver having a gain characteristic, means for deriving from said receiver an output signal having a characteristic which varies with an operating condition of said receiver, means having a predetermined time constant for deriving from said output signal a control effect, means for utilizing said control effect to control said gain characteristic of said receiver, means for substantially decreasing said output signal for a predetermined interval long with reference to said time constant, and means responsive to said last-named means for effectively maintaining the magnitude of said control effect within a predetermined range of values during said interval.

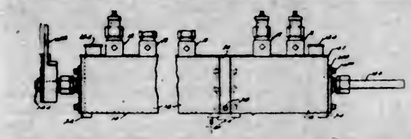
2,460,203
LUBRICATOR PUMP AND RESERVOIR ASSEMBLY
Ralph F. Urso, Detroit, Mich., assignor to McCord Corporation, Detroit, Mich., a corporation of Maine
Application April 10, 1946, Serial No. 660,984
11 Claims. (Cl. 184—27)

1. Lubricator construction comprising a pair of spaced and aligned lubricant reservoirs, each

device disposed within the casing and having an

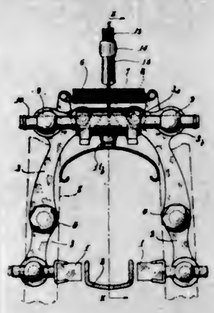
a hollow spool spindle, the combination of a helical spring in said hollow spool spindle having one

having an apertured end wall and a drive shaft, a pump driven by each of said shafts, a hollow partition sandwiched between and secured to both of said apertured end walls so as to form a unit with said reservoirs and closing the aperture in



each of said end walls so as to separate the contents of said reservoirs, said hollow partition including spaced wall portions provided with bearings, a shaft journaled in said bearings and connected to said drive shafts, and a drain outlet from the space enclosed by said walls.

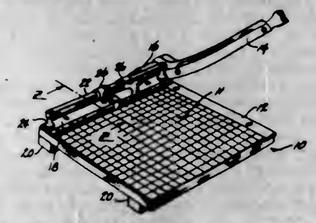
2,460,204
CYCLE BRAKE
Nicolas Vacher, Saint-Etienne, France
Application December 26, 1945, Serial No. 637,164
In France October 10, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires October 10, 1960
7 Claims. (Cl. 188—24)



1. A cycle brake comprising two brake shoes adapted to laterally cooperate with the rim of the wheel to be braked; two brake levers respectively pivoted about parallel pivots fixed to the branches of a fork carrying said wheel, said levers carrying said shoes at one end while their other end extends beyond said pivots; a head pivoted on each of said last-named ends about an axis parallel to the axes of said pivots; a spindle slidably and rotatably engaged through said heads transversely to the same; a drum carried by said spindle between said heads, said drum having a substantially triangular projection on its periphery substantially symmetrical with respect to a plane transverse to said drum; means on said last-named ends to co-act with the sides of said triangular projection; means to rotate said drum to move said last-named ends apart; and spring means to restore said brake levers to the inactive position.

2,460,205
TRIMMING BOARD
Robert A. Webster, Santa Monica, Calif.
Application April 26, 1945, Serial No. 590,340
10 Claims. (Cl. 164—59)

1. In combination with a trimming board having a planar, imperforate bed plate provided with means along one edge for shearing a thin sheet of material; guide means extending along another edge of said bed plate for substantially the entire length of said edge for aligning a thin sheet of material; a support member mounted adjacent and parallel to said guide means and extending along substantially the entire length of



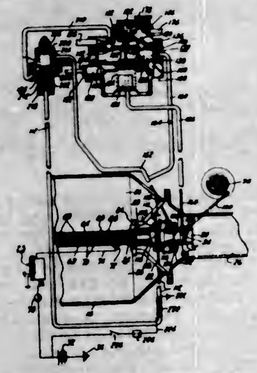
said last mentioned edge; and a pair of stop means slidably mounted on said support member for longitudinal movement along substantially its entire length parallel to said guide means and toward and away from said shearing means, said stop means further being mounted for substantially vertical movement to positions spaced above and in contact with the surface of said bed plate.

2,460,206
METHOD OF CONTINUOUS DYEING
William Marcy Wentz, Carneys Point, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application December 7, 1945, Serial No. 633,480
4 Claims. (Cl. 8—149.1)

1. A process of dyeing textile fibers in unwoven form, which comprises passing a continuous bundle of said fiber through an impregnation bath, then through a constricted passage whereby to squeeze the fiber bundle to a predetermined moisture retention, and into a developing chamber wherein the impregnated dye liquor is fixed upon the bundle, said impregnation bath, constricted passage and developing chamber being so arranged as to form a liquid-sealed, air-excluding passage for the fiber, whereby the fiber is prevented from exposure to the atmosphere until after it has passed through the fixing stage.

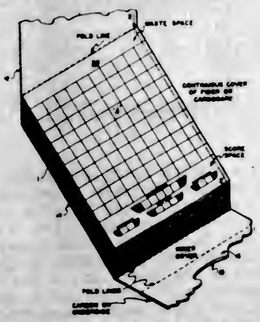
2,460,207
HEATING SYSTEM
Emil O. Wirth and Frederik Barfod, South Bend, Ind., assignors to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application May 15, 1944, Serial No. 535,591
4 Claims. (Cl. 236—9)

2. In a heating system for buildings and the like: a heater comprising a casing; a carbureting device disposed within the casing and having an induction passage disposed therein; a duct for conveying heated air to a room to be heated; electrically operated means for inducing a flow of air to the casing and the induction passage; an electric circuit for the last mentioned means; a temperature responsive device adapted to be disposed



in the room to be heated; a second temperature responsive device adjacent the heater, said temperature responsive devices being connected in series and adapted to control said electric circuit; a balanced throttle controlling the flow of fuel through the induction passage; and a temperature responsive device linked with the throttle for controlling the position thereof.

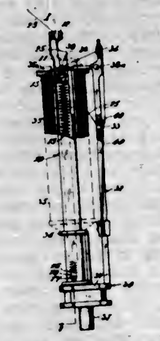
2,460,208
DEVICE FOR PLAYING "SALVO"
Albert M. Zalkind, Arlington, Va.
Application June 21, 1946, Serial No. 678,496
7 Claims. (Cl. 273—130)



1. A device for playing "Salvo" comprising a sheet printed with a grid on each side thereof, said grids being in register with each other, and a carbonized member having a carbonized surface disposed under said sheet with the carbonized surface in contiguity therewith.

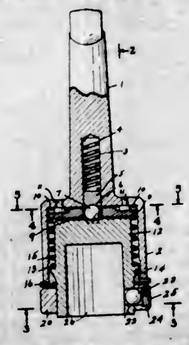
2,460,209
SPOOL HOLDER
William C. Adlman, New York, N. Y.
Application November 15, 1947, Serial No. 786,305
1 Claim. (Cl. 87—22)

In a spool holder for braiding machines having a braiding apparatus, said spool holder having a hollow spool spindle, the combination of a helical spring in said hollow spool spindle having one end secured to the lower end of the spool spindle, and having its upper end free to move and when the spring is stretched to have its upper end in proximity to the upper end of the spool holder, said stretching being to a length about two times the length of the initial length of the spring, the thread passing through the upper end of the spring and resiliently held thereby when passing from the spool to the braiding apparatus, a vertical thread guiding member to guide the thread from the spool to the spring, having an upper thread guide above the spool and above the ex-



tended end of the spring, and having a thread guide about centrally the height of the spool, and a pawl having an eyelet and pivoted to the guiding member, said eyelet being immediately above the upper end of the spring for guiding the thread from the guiding member to the spring and from the spring to the braiding apparatus, said guiding member being parallel with the axis of the spool, with a movable weighted loop disposed between the outgoing side of the central thread guide and the incoming side of the upper thread guide of the guiding member, to loop the thread as it passes from its spool and before it engages the spring.

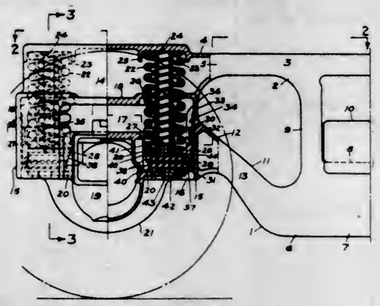
2,460,210
TOOLHOLDER
Braeell Barrett, Galena Park, Tex.
Application January 19, 1946, Serial No. 642,332
1 Claim. (Cl. 279—16)



A tool holder comprising, a shank whose outer end is formed with a hollow body of greater

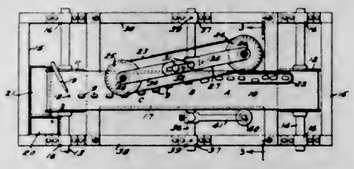
diameter than the shank, said shank being formed with a deep socket, a coil pressure spring in said socket, a ball retainer seated on the spring within said socket and whose outer face is formed with a concaved depression, a ball seated in the depression, a circular plate mounted within the body and forming a floating driver which is provided with a central opening in which said ball is located, said driver having opposed radial marginal grooves, drive pins anchored to the bottom of the body and extending loosely into said grooves to clutch the driver with the body for rotation therewith, a floating adapter in the body provided with an outer end, tool-receiving, socket and with an external, annular, inwardly directed shoulder and an outer tapering shoulder, a coil spring around the adapter and interposed between the driver and the inwardly directed shoulder, a gland screwed into the outer end of the body and having an external annular flange which abuts said outer end and whose inner end is tapered to conform to the taper of said tapering shoulder, said spring around the adapter normally holding said tapering parts in contact, said adapter being provided with a concaved recess in its inner end to receive said ball and being provided with radial marginal slots at angles to said grooves, pins on the driver having heads which work loosely in said marginal slots to clutch the driver with the floating adapter, a locking ring on the body having an inside, double cam-shaped groove which converges into a central opening through the adapter and a ball retained in said double cam-shaped groove and working through the opening thereof.

2,460,211
RAILWAY TRUCK JOURNAL BOX MOUNTING
Donald S. Barrows and Emil H. Blattner, Rochester, N. Y., assignors to The Symington-Gould Corporation, Rochester, N. Y., a corporation of Maryland
Application September 20, 1944, Serial No. 554,954
17 Claims. (Cl. 105—224)



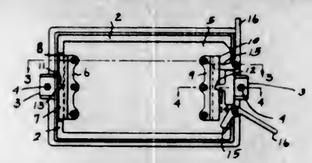
2. In a railway truck wherein a side frame is provided with downwardly opening jaws facing one another and a journal box disposed between said jaws and arranged to have the side frame move vertically relative thereto, the combination of, resilient elements of different character acting in series for the support of said side frame from said journal box, and shoes between said resilient elements; at least one of said resilient elements being distorted to urge an associated shoe into frictional engagement with a related jaw.

2,460,212
POSITIONING OBJECTS FOR AUTOMATIC COLOR SORTING
Everett H. Bickley, Bala-Cynwyd, Pa.
Application June 25, 1946, Serial No. 679,186
3 Claims. (Cl. 198—33)



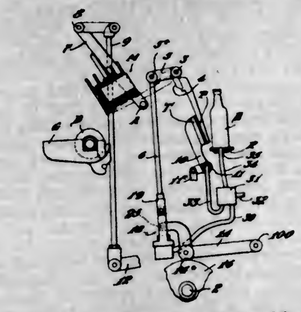
3. A mechanism for feeding coffee beans to an inspection point in predetermined exposed surface condition, comprising a conveyor belt having a bean supporting friction surface, means for causing beans to be delivered to said surface in random arrangement of flat and convex sides seated on said surface, means guiding said beans into single file relation, a vertically disposed driven endless smooth-faced band partially overlying said conveyor surface angularly with respect to the length thereof and intercepting the path of the file of beans to thereby cause those beans resting on a convex side to turn about a friction point of contact and be inverted, whereby all beans leave said band with the convex side uppermost as delivered to said inspection point.

2,460,213
PATTERN BOARD
Harold O. Capps, Houston, Tex.
Application July 28, 1945, Serial No. 607,612
1 Claim. (Cl. 22—157)



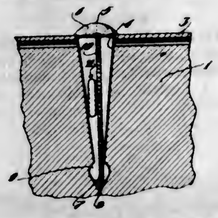
In a mold, a pattern board comprising, a frame having an inside inwardly extending flange around the frame and spaced from the top thereof, a plate fitted closely within the frame and resting on said flange and whose upper face is flush with the top of the frame, a transverse clamp secured to the under side of the plate, at one end thereof, and whose outer margin is spaced from the plate, said spaced margin engaging underneath the adjacent end flange of the frame, a transverse clamp secured to the bottom of the plate and spaced from the other end of said plate and whose outer margin is spaced from the plate, clamp dogs pivoted to the frame and whose free ends are engageable with and releasable from the spaced margin of the last mentioned clamp, handles on the pivoted ends of said dogs whereby the dogs may be moved into engagement with, or released from, said clamp, the outer margins of said clamps each having a central, outwardly flared notch, tapering lugs on the ends of the frame extending into said notches to hold the plate centered relative to the frame.

2,460,214
SAFETY DEVICE FOR LABELING MACHINES
Sidney T. Carter, Worcester, Mass., assignor to Economic Machinery Company, Worcester, Mass., a corporation of Massachusetts
Application May 2, 1945, Serial No. 591,616
8 Claims. (Cl. 216—54)



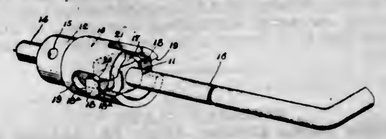
1. In a labeling machine of the kind wherein a picker element normally receives adhesive from a supply, presses its adhesive coated surface against the exposed label in a magazine, withdraws the label from the magazine and conveys it to a transfer point, a picker, a picker-actuating cam designed to move the picker through a path such that the picker may perform its normal cycle of operation, and control means responsive to the presence or absence, respectively, at the label-applying point, of an article to be labeled, said controlling means being operative so to limit the movement of the picker along said path as to prevent the picker from receiving its usual coating of adhesive.

2,460,215
TELLTALE FOR FROZEN FOOD PACKAGES
Kenneth J. Chase, Wilmington, Mass.
Application July 8, 1946, Serial No. 682,101
14 Claims. (Cl. 99—192)



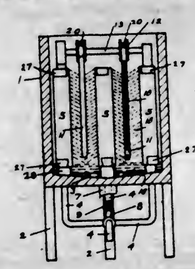
1. A warning device for a quick-frozen food package comprising a fluid-tight elongate casing having an outer portion designed to be located adjacent to an outer surface of the package, and an inner portion designed to be located deep within the package, fluid-activated signal material within the outer part of the casing, said signal material being of a kind which is permanently changed in appearance by contact with a selected fluid, a fluid conductor extending from the inner part of the casing to the outer part thereof, and means in the inner portion of the casing operative to supply fluid, operative to change the appearance of the signal material, to the conductor when the temperature of the interior of the previously frozen package rises above the freezing point.

2,460,216
DISCONNECTIBLE UNIVERSAL JOINT
Donald A. Dalton, Warsaw, Ind., assignor to The Dalton Foundries, Incorporated, Warsaw, Ind., a corporation of Indiana
Application January 10, 1945, Serial No. 572,141
1 Claim. (Cl. 64—8)



A disconnectible universal joint for operating an automobile jack or the like comprising, in combination, a T-shaped head including a stem with a pair of generally cylindrical arms projecting laterally at opposite sides thereof, said arms being relieved to provide diametrically opposed flat faces and assembled into the stem with their major diameters disposed in a direction trans-axially of the stem and their minor diameters disposed in a direction axially of the stem, a tubular socket member internally dimensioned to receive said head and having longitudinal slots at diametrically opposite points in its side walls opening at the ends of the member for the reception of said arms, said slots having a width adjacent their inner ends slightly greater than the major arm diameter to permit the head to rock freely about the longitudinal axes of said arms, the outer end portions of said slots having a width slightly greater than the minor arm diameter and defining inwardly facing shoulders operative to confine said arms within the inner portions of said slots when said stem is disposed in any position other than normal to the axis of said socket member, said inner portions of the slots being of sufficient length to permit lateral rocking of the head with said arms fulorumed on the shoulder in either of said slots, and said socket member also having a third slot opening from said one end and extending longitudinally thereof substantially midway between said first mentioned slots to afford clearance for swinging said stem into a position normal to the axis of said socket member whereby to present the minor diameter of said arms for insertion through or removal from the first mentioned slots.

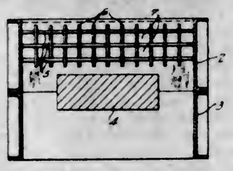
2,460,217
WASHING TANK FOR PHOTOGRAPHIC FILMS
Fred W. Deerfield, Baltimore, Md.
Application September 19, 1944, Serial No. 554,776
3 Claims. (Cl. 95—98)



1. An X-ray film washing comprising in combination, a tank, a film holder mounted in the

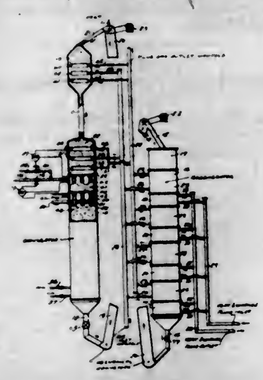
tank, water feeding means having holes for directing streams of water in a downwardly and outwardly direction from the face of said water feeding means, cam means mounted in said tank, film holder supporting means positioned on said cams and rotated in an up and down and crosswise manner in the path of water from said water feeding means, and means for controlling the amount of water contacting the face of said X-ray film in a downwardly and outwardly manner.

2,460,218
FOUNDRY FLASK
William Mellen Duncan, Alton, Ill., assignor to Duncan Foundry and Machine Works, Inc., Alton, Ill., a corporation of Illinois
Application September 28, 1945, Serial No. 619,125
1 Claim. (Cl. 22—111)



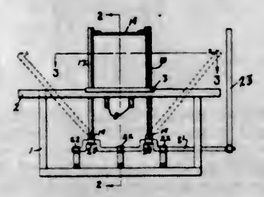
The combination with a molder's flask of a metallic grill composed of interwoven wire members with diameters not exceeding one-fourth the maximum lineal dimension of a contiguous opening of the grill, said grill extending vertically of the flask and from side to opposite side of the cope portion of the flask and secured thereto, the interstices of said grill being open for the inflow of sand from both sides of the grill.

2,460,219
HIGH-TEMPERATURE HYDROCARBON CONVERSION PROCESS
Sylvander C. Eastwood, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application February 28, 1948, Serial No. 11,893
9 Claims. (Cl. 196—52)



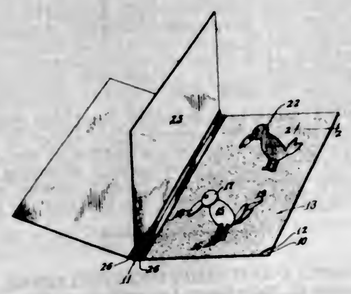
1. A continuous process for conducting endothermic conversions of fluid hydrocarbons at elevated temperatures in the presence of a suitable contact material consisting of particles of substantial size as distinguished from powdered material which process comprises: introducing said contact material into the upper section of a confined conversion zone at a temperature suitable for supporting the conversion of said fluid hydrocarbons and for supplying at least most of the heat of reaction, passing said contact material downwardly through said conversion zone while contacting it with said hydrocarbons to effect the conversion thereof with resultant deposition of a carbonaceous contaminant deposit on said contact material, withdrawing the used contact material from the lower section of said conversion zone and passing it to a mechanical conveying zone at a temperature at which it may be practically mechanically conveyed, maintaining a confined burning zone separate from said conversion zone, mechanically conveying said used contact material to a location from which it may flow into said burning zone, passing said contact material downwardly through said burning zone, passing a combustion supporting gas into contact with said contact material in said burning zone to effect burning of a substantial portion of but less than all of said contaminant deposit from said contact material, passing the contact material bearing a residual portion of the original contaminant deposit from said burning zone to a confined conveying zone and controlling the temperature of said contact material passing to said last named conveying zone at a level at which the contact material may be practically mechanically conveyed, maintaining a confined final burning zone above said conversion zone, conveying said contact material bearing said residual portion of the original contaminant deposit to a location from which it may flow into said final burning zone, passing said contact material through said final burning zone and effecting an increase in its temperature to a level which is suitable for supporting said hydrocarbon conversion and for supplying at least most of the heat absorbed by the hydrocarbon reaction by burning off at least a substantial portion of the residual contaminant deposit with an oxygen containing gas and passing the contact material by gravity flow from said final burning zone into the upper section of said conversion zone as aforesaid.

2,460,220
BLOCK MOLDING MACHINE
Lester T. Ferrin, Tonasket, Wash.
Application November 18, 1946, Serial No. 710,620
1 Claim. (Cl. 25—41)



In a plastic block machine the combination with a base board and a pallet, and a pair of upright supporting sleeves forming sockets rigid with and projecting below the board, of a central hollow core having a pair of centering pins located in said sockets, an open-center die-frame mounted on the pallet and spaced from the core, a separable mold mounted on the base board and enclosing the pallet and die-frame, a presser board mounted in the upper open end of the mold and spaced above the core, an open-center die-frame mounted on the inner face of the presser board and engaging the outer surface of the upper end of the core, and means for depressing the presser board.

2,460,221
LUMINESCENT AMUSEMENT DEVICE
Joseph M. Gordon, Chicago, Ill., assignor to Raymond T. Moloney, Chicago, Ill.
Application June 9, 1944, Serial No. 539,411
6 Claims. (Cl. 250—71)



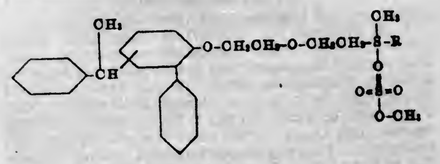
1. A device of the class described comprising a sheet surfaced with a luminescent paint adapted to glow for record purposes after exposure to visible light, and a filter member hingedly mounted with said first-mentioned sheet to move onto and away from said sheet and colored red to a degree adapted to filter out light which will excite said luminescent paint but which will pass light of longer wavelength than visible light and in the neighborhood of infra-red wavelengths for the purpose of quenching excitation of said luminescent paint by radiation including infra-red radiations and visible light, which is directed upon the filter member when in position upon said sheet.

2,460,222
TRAVELING NUT LIMIT STOP
Walter S. Hall, Jr., Los Angeles, Calif., assignor to the United States of America as represented by the Secretary of the Navy
Application February 20, 1946, Serial No. 649,066
1 Claim. (Cl. 74—424.8)

A travelling nut limit stop comprising a shaft, a casing rotably supporting the same, said shaft having a threaded portion, a nut threaded on said threaded portion, an annular projection on each end of said nut, means on said nut and casing preventing rotation of said nut, stops mounted on said shaft at the opposite ends of said threaded portion, said stops having annular grooves facing said annular projections, respectively, and in alignment therewith and resilient annular members in said grooves adapted to engage said annular projections, respectively, to cushion the engagement of said nut against either of said stops.

2,460,223
SULFONIUM METHOSULFATES
John N. Hansen, Albert Lea, Minn., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application September 10, 1947, Serial No. 773,302
4 Claims. (Cl. 260—457)

1. A compound having the formula



wherein R represents an alkyl group containing from 2 to 4 carbon atoms, inclusive.

2,460,224
BIOTIN INTERMEDIATE
Stanton A. Harris, Westfield, and Karl Folkers, Plainfield, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application September 16, 1944, Serial No. 554,453
18 Claims. (Cl. 260—329)

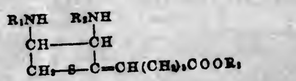
1. A compound selected from the class consisting of aryl, alkyl and arylakyl esters of 2-(omega-carboxy-alkylidene) - 3 - isonitroso - 4-acylamido-tetrahydrothiophene.

2,460,225
BIOTIN INTERMEDIATE
Stanton A. Harris, Westfield, and Karl Folkers, Plainfield, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application December 15, 1945, Serial No. 635,427
13 Claims. (Cl. 260—329)

1. A compound selected from the group which consists of oximes, arylhydrazones and semicarbazones of 2-(omega-carboxy-alkylidene)-3-keto - 4 - acylamido - tetrahydrothiophene, and alkyl, aryl, and arylalkyl esters thereof.

2,460,226
BIOTIN INTERMEDIATE
Stanton A. Harris, Westfield, and Glen E. Arth, Rahway, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application December 15, 1945, Serial No. 635,428
12 Claims. (Cl. 260—329)

4. Butylidene substituted tetrahydrothiophenes having the following structure:



where R_1 and R_2 are acyl radicals, and R_3 is a radical selected from the group which consists of hydrogen, alkyl radicals, aryl radicals and aralkyl radicals.

2,460,227
EXTRACTION OF ELEMENTAL SULFUR FROM OILS
James Andrew Hart, Louis Nicholas Hollis and John Wilson Randolph, Hammond, Ind., assignors to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application April 11, 1945, Serial No. 587,840
2 Claims. (Cl. 196—30)

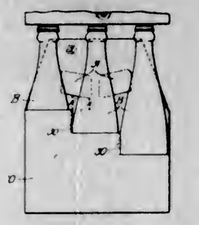
1. A method for removing elemental sulfur from gasoline which comprises contacting gasoline containing elemental sulfur with an aqueous solution containing about 15 per cent to about 25 per cent by weight of sodium hydroxide, about 5 per cent to about 10 per cent by weight sodium sulfide, and about 0.5 per cent to about 10 per cent thiocresols, thereby dissolving said elemental sulfur in said aqueous solution, and separating said aqueous solution from the gasoline.

2,460,228
BUCKLE
Max Hoffman, Roxbury, Mass.
Application March 5, 1947, Serial No. 732,467
2 Claims. (Cl. 24—73)

1. A buckle comprising a yoke having a rigid cross bar and spaced limbs arranged to define a strap-receiving slot, each limb having a bearing at its free end, the bearings being axially aligned, a pair of strap-penetrating prongs each having a sharp end designed to contact the cross bar of the yoke, each prong having a pintle portion arranged to turn and to slide axially in one of the yoke bearings respectively, the prongs with their pintle portions being independent of each other, each pintle portion integrally joining an elongate leg member, each leg member having an eye at its free end, each eye having a substantially straight side, the straight sides of the two eyes being in alignment, and a button-engaging loop comprising spaced arms whose free ends are hooked over the straight sides of the respective eye and movable longitudinally of said straight sides.

2,460,229
BOTTLE HOLDER
Samuel N. Lebold, Chicago, Ill., assignor to Morris Paper Mills, Chicago, Ill., a corporation of Illinois
Continuation of application Serial No. 567,560, December 11, 1944. This application September 27, 1947, Serial No. 776,553
4 Claims. (Cl. 229—52)

1. A paperboard carrier for a plurality of like bottles, said carrier including a bottom, a pair of flexible side walls connected to the bottom, a vertically extending panel disposed between and terminating above said walls, and transverse partition means in collapsible relation to and disposed between said panel and respective walls and adapted to subdivide the space on opposite sides of said panel into cells to accommodate said bottles, the ratio of the height of said panel in its normal, fully extended upright position to the length of one of said side walls being less than 1.5:1.0, the upper edge of said panel terminating below the top of said bottles in said cells

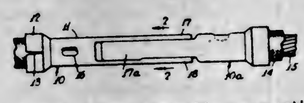


to enable stable, non-wobbling, vertically aligned stacking of loaded carriers one on top of another, each supported by the bottles in the subjacent carrier, said panel having provision for manually suspending the loaded carrier with the user's knuckles between the necks of the bottles.

2,460,230
DISPLAY AND SHIPPING CONTAINER
James K. Makrianes, Longmeadow, Mass.
Application July 18, 1947, Serial No. 761,931
2 Claims. (Cl. 211—60)

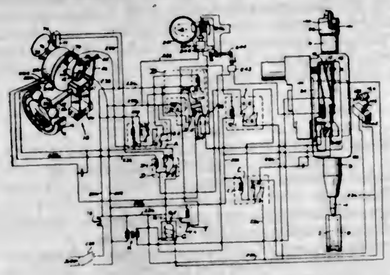
1. A display and shipping box for golf clubs and the like comprising in combination, a foundation member including an elongated flat base having longitudinal side portions bent upwardly over and inwardly to form double thickness longitudinal side walls, a holder having the lower portion formed to provide a transverse tube having an upper platform wall provided with openings adapted to receive the heads of golf clubs, a lower support in said tube having an upper wall spaced downwardly from said platform wall adapted to support the heads of golf clubs in the opening therein, said holder being superposed on said base and having intermediate portions extending upwardly from said base in the form of a V providing a guide and having guide means for the shafts of golf clubs, a wedge member on said holder at the upper end thereof between said side walls having a lower surface spaced above said guide and inclining towards said guide between said side walls, a lower cap around the lower portions of said base and holder, and an upper cap around the upper portion of said base and wedge member.

2,460,231
SEPARABLE CONNECTOR
Irving Frederick Matthysse, New York, N. Y., assignor to Burndy Engineering Company, Inc., a corporation of New York
Application January 23, 1943, Serial No. 473,414
3 Claims. (Cl. 287—76)



1. A connector for separably connecting two conductors together, consisting of two body halves, each half having means at one end thereof for attaching a conductor thereto, and slotted at the other end thereof to form resiliently extending interlocking fingers, each of said fingers having a pair of flat radially engaging contact surfaces, one of which surfaces has a flat offset portion with a camming surface positioned at the junction of the offset portion therewith for interlocking with a flat offset portion on a finger of the remaining body half, providing a flat engaging electrical contact during the movement of the engaging finger on said one surface and on its offset portion.

2,460,232
GAUGING APPARATUS FOR CONTROLLING A GRINDING OPERATION
Henry Michelsen and Merton E. Reid, Bristol, Conn., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application August 16, 1944, Serial No. 549,666
21 Claims. (Cl. 51—165)



1. In apparatus for regulating the grinding to size of one of a pair of articles under control of the size of the other article, gauging mechanism responsive to the size of the article being ground, grinding controlling means responsive to the gauging mechanism, and motor actuated mechanism controlled by the size of said other article for adjusting the position of the gauging mechanism at which the grinding controlling means is actuated.

2,460,233
ESTERS OF SULFOLENE HALOHYDRINS
Rupert C. Morris, Berkeley, Edward C. Shokal, Oakland, and John L. Van Winkle, San Lorenzo, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application October 22, 1945, Serial No. 623,862
7 Claims. (Cl. 260—329)

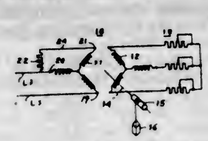
7. A haloester of a carboxylic acid of the group consisting of the halosulfolenyl esters of the formula

and the halosulfolanyl esters of the formula

in which formulae Hal represents a halogen atom and

is an acyloxy radical of a carboxylic acid of not more than 20 carbon atoms.

2,460,234
INDUCTION MOTOR CONTROL SYSTEM
Asa H. Myles and Alfred C. Prottengeier, Solon, Ohio, assignors to The Electric Controller & Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application June 18, 1943, Serial No. 491,310
14 Claims. (Cl. 318—211)

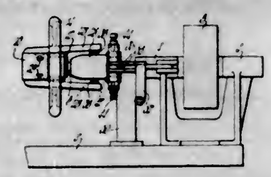


1. A control system for a three-phase induction motor arranged to be driven at times by an overhauling load and having a secondary winding and a primary winding which is provided with only three accessible terminals all of which are non-neutral, comprising a secondary circuit network of relatively high resistance, means for connecting said network to said secondary winding, means for connecting said primary winding to a source of power to produce within said motor the phenomenon considered as oppositely rotating magnetic fields, said secondary circuit network having an ohmic resistance approximately equal to the ohmic reactance of said secondary winding measured at twice the frequency of said source, means for electrically interconnecting two of said terminals to define a local closed circuit to cause said motor to produce a braking torque when driven by said overhauling load, and means interposed in said local closed circuit to cause said oppositely rotating fields to be sufficiently unequal in magnitude to produce a starting torque in said motor.

2,460,235
WIRE TWISTING APPARATUS
James A. Openshaw, Southampton, Mass., assignor to Stanley Home Products, Inc., Westfield, Mass., a corporation of Massachusetts
Application December 23, 1946, Serial No. 717,861
2 Claims. (Cl. 279—1)

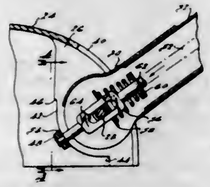
1. Wire twisting apparatus comprising in combination, bearing means, a shaft rotatable therein, a chuck fixed on said shaft having a slot therethrough disposed transversely to the longitudinal axis thereof, jaws slidable in said slot radially of said chuck, separating means urging said jaws apart, levers pivoted in said chuck, bearing means at the forward ends of said levers

bearing on outer sides of said jaws, a cam slidable on said shaft adapted to act on and separate said levers when moved towards said chuck, and means to actuate said cam, said separating means



including ledges projecting from a side of said jaws disposed in a bore provided in said chuck and a spring between said ledges, and said bearing means including sockets provided in said levers and balls disposed therein.

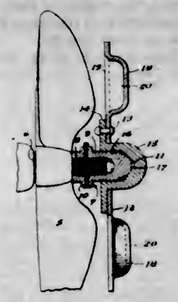
2,460,236
HANDLE CONTROL FOR SUCTION CLEANERS
Ralph C. Osborn, Bloomington, Ill., assignor to Eureka Williams Corporation, Detroit, Mich., a corporation of Michigan
Application March 9, 1946, Serial No. 653,411
7 Claims. (Cl. 306—10)



1. In a suction cleaner, a wheeled chassis having a handle pivoted thereto, said chassis having a curved surface whose center of curvature is the pivotal axis of said handle on the cleaner, a locking bar arranged parallel to said pivotal axis and movable with the handle in its pivoting movement about said axis and frictionally engageable with said surface to lock said handle against pivoting movement, spring means operable for biasing said locking bar into frictional locking engagement with any part of said surface to lock said handle in a selected position relative to said chassis, said handle having a hand grip, a manually operable trigger associated with said hand grip and a connection between said trigger and bar for releasing the frictional locking engagement between said bar and surface to permit pivoting movement of said handle only when said trigger is actuated.

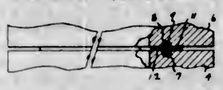
2,460,237
TROLLING PLATE
Orrin C. Palmer, Melrose, Mass.
Application August 15, 1947, Serial No. 768,843
6 Claims. (Cl. 170—135)

1. A trolling plate to be threaded upon a rearward extension of a propeller shaft in a direction opposite to the direction of rotation of the propeller, and scoop-like elements carried by said plate and projecting laterally therefrom to resist rotation of said plate so that in use said plate



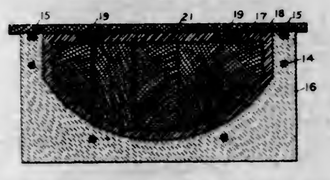
tends to become more tightly threaded upon said propeller shaft extension.

2,460,238
CASING HEAD
Arthur J. Penick, Houston, Tex., assignor to Oil Center Tool Company, Houston, Tex., a corporation of Texas
Application September 18, 1944, Serial No. 554,693
2 Claims. (Cl. 166—14)



1. In a well head having adjacent sections formed with registering grooves, a hard metal seal ring in the grooves and a soft metal, annular, gasket adjacent the seal ring and clamped between said sections with its margin, adjacent said ring, having lip-like, annular extensions which extend into both grooves.

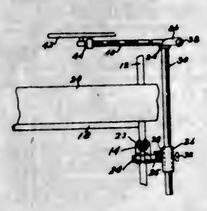
2,460,239
RESOLUTION OF RACEMIC α HYDROXY β,β DIMETHYL γ BUTYROLACTONE
Frank D. Pickel, Flemington, N. J., and Jacob I. Fass and Saul Chodroff, Brooklyn, N. Y., assignors to Nopco Chemical Company, Harrison, N. J., a corporation of New Jersey
No Drawing. Application July 4, 1945, Serial No. 603,282
7 Claims. (Cl. 260—344)



3. As a new compound a salt selected from the group consisting of a d-ephedrine salt of l-α-γ dihydroxy β,β dimethyl butyric acid and a d-ephedrine salt of d-α-γ dihydroxy β,β dimethyl butyric acid.

7. A process for the resolution of racemic α hydroxy β,β dimethyl γ butyrolactone which comprises reacting the aforesaid lactone with d-ephedrine to form a d-ephedrine derivative of l-α-γ dihydroxy β,β dimethyl butyric acid and a d-ephedrine derivative of d-α-γ dihydroxy β,β dimethyl butyric acid at a temperature below the decomposition temperatures of said ephedrine derivatives, dissolving the mixtures of the butyric acid compounds in a solvent, crystallising the d-ephedrine derivative of d-α-γ dihydroxy β,β dimethyl butyric acid from the solution, lactonising the d-ephedrine d-α-γ dihydroxy β,β dimethyl butyric acid to produce l-α hydroxy β,β dimethyl γ butyrolactone, dissolving the lactone in methyl isobutyl ketone, and cooling the solution to precipitate purified l-α hydroxy β,β dimethyl γ butyrolactone therefrom.

2,460,240
RESOLUTION OF RACEMIC α HYDROXY β,β DIMETHYL γ BUTYROLACTONE
Frank D. Pickel, Flemington, N. J., and Jacob I. Fass and Saul Chodroff, Brooklyn, N. Y., assignors to Nopco Chemical Company, Harrison, N. J., a corporation of New Jersey
No Drawing. Application July 4, 1945, Serial No. 603,283
7 Claims. (Cl. 260—344)



3. As a new compound a salt selected from the group consisting of an l-ephedrine salt of d-α-γ dihydroxy β,β dimethyl butyric acid and an l-ephedrine salt of l-α-γ dihydroxy β,β dimethyl butyric acid.

6. A process for the resolution of racemic α hydroxy β,β dimethyl γ butyrolactone which comprises reacting the aforesaid lactone with l-ephedrine to form an l-ephedrine derivative of l-α-γ dihydroxy β,β dimethyl butyric acid and an l-ephedrine derivative of d-α-γ dihydroxy β,β dimethyl butyric acid at a temperature below the decomposition temperatures of said ephedrine derivatives, dissolving the reaction products in a solvent for said ephedrine derivatives, removing the l-ephedrine derivative of l-α-γ dihydroxy β,β dimethyl butyric acid from the solution by crystallization, removing the solvent from the solution comprising mainly crude l-ephedrine derivative of d-α-γ dihydroxy β,β dimethyl butyric acid, lactonizing the l-ephedrine d-α-γ dihydroxy β,β dimethyl butyric acid to produce crude l-α hydroxy β,β dimethyl γ butyrolactone, dissolving the crude l-lactone in a solvent for the l-lactone and cooling the solution to crystallize substantially pure l-α hydroxy β,β dimethyl γ butyrolactone therefrom.

2,460,241
BASIC LEAD SULFATE PIGMENT
Adrian Richard Pitrot, Hempstead, N. Y., assignor to National Lead Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application February 5, 1947, Serial No. 726,741
7 Claims. (Cl. 106—297)

3. A process for manufacturing basic lead sulphate-alumina pigment which comprises forming an intimate mixture of finely divided basic lead sulphate and an aluminum compound which on heating produces aluminum oxide in amount as to produce between about 2% and about 10% aluminum oxide in the mixture and heating the mixture at a temperature of between about 900° C. and about 1000° C. until chemico-physical combination is effected.

2,460,242
METHOD OF MAKING MODEL DUPLICATES
Harold E. Renaud, Lansing, Mich., assignor to Renaud Plastics, Inc., Lansing, Mich., a corporation of Michigan
Application December 6, 1946, Serial No. 714,591
5 Claims. (Cl. 18—58)

1. The method of making a replica of a portion of a three dimensional object which comprises providing a model of said portion, forming a mold from said model using the latter as a pattern, providing a rigid substantially shrink free core smaller in all dimensions than said mold, suspending said core in said mold in spaced relation to the walls thereof, thereafter pouring fluid non-metallic thermo-setting plastic into said mold to cover said core and fill the spaces between the core and the walls of the mold, hardening said plastic to form a solid casting, and subsequently removing said casting from the mold.

2,460,243
PRODUCTION OF NITRO OLEFINES
Charles William Scaife, Norton-on-Tees, and Arthur Ernest Wilder Smith, Wallingford, England, and Harold Baldock, deceased, late of Norton-on-Tees, England, by Herbert Baldock, legal representative, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application December 10, 1945, Serial No. 634,147. In Great Britain December 11, 1944
2 Claims. (Cl. 260—644)

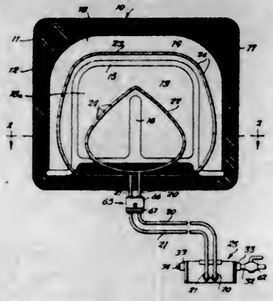
2. A process for the production of nitro-aliphatic olefines containing from four to eight carbon atoms which comprises reacting a nitrate of a saturated nitro-aliphatic hydrocarbon of from four to eight carbon atoms, in which the nitro and nitrate groups are on adjacent carbon atoms, the former carbon atom also having a hydrogen atom attached thereto, in an aqueous medium with a substance selected from the group consisting of alkali metal carbonates, bicarbonates, hydroxides; alkaline earth metal carbonates, bicarbonates, hydroxides; and ammonium carbonate, bicarbonate, hydroxide.

2,460,244
BED TABLE
Carol Lewis Strauss, Bangor, Maine
Application January 15, 1944, Serial No. 518,313
3 Claims. (Cl. 311—27)

1. A bed table for a bed having a longitudinal rail and a mattress support above the bed rail, said table comprising a clamp on the bed rail, means to tighten and loosen said clamp, said clamp being rotatable about the bed rail in a plane transverse thereto, a member secured to the clamp, a sleeve on the member disposed at right angles to the bed rail, a standard in the sleeve for rotary and longitudinal adjustment therein, means to clamp the former to the latter in adjusted position, a laterally extending projection at one end of the standard, a pivot pin in the projection, said pin being spaced from the standard,

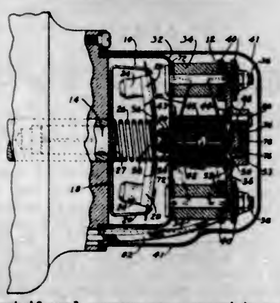
a rod pivoted to the projection on the pin and being supported on the end of the standard for location at right angles thereto or selectively swingable on the pin through approximately three-quarters of a turn to lie alongside of and parallel to the standard, a table element on the rod, and means providing for rotation of the table element on said rod as an axis.

2,460,245
MASSAGING APPARATUS OR THE LIKE
Donald V. Summerville, Fort Erie, Ontario, Canada, assignor to Acromat Products Company, Inc., Buffalo, N. Y.
Application May 26, 1945, Serial No. 595,929
8 Claims. (Cl. 128—33)



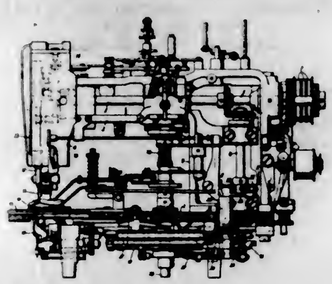
1. An apparatus of the character described comprising an element having adjacent fluid pressure-confining cells adapted to support a person's body, each of said cells having a flexible top wall, means for supplying fluid under pressure to said cells, and valve mechanism admitting the pressure fluid to one cell while exhausting it from the adjacent cell thereby producing out of phase fluid pressure pulsations in said adjacent cells, and including an actuator subject to the pressures in said cells and operable upon a predetermined maximum pressure in either one of said cells to shift said valve mechanism to exhaust pressure fluid from said one cell and admit pressure fluid to the other cell.

2,460,246
SPEED-RESPONSIVE RHEOSTAT
Fred P. Vacha, Atlantic, Mass., assignor, by mesne assignments, to Redmond Company, Inc., a corporation of Michigan
Application April 7, 1945, Serial No. 587,103
16 Claims. (Cl. 201—51)



1. A centrifugal governor comprising a rotary unit provided with a centrifugal weight, a pressure-responsive resistance device, a stationary spring acting on the resistance device, the rotary unit having spring means variably opposing said stationary spring in the running range, and means independent of the running range control for applying pressure to the resistance under starting conditions.

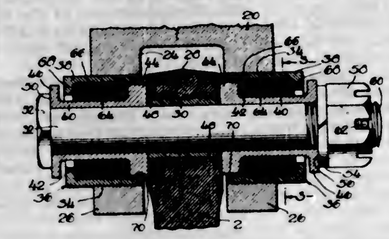
2,460,247
SEWING-MACHINE CLUTCH
Alfred R. Wood, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Original application July 15, 1944, Serial No. 545,035. Divided and this application June 12, 1945, Serial No. 599,061
8 Claims. (Cl. 74—126)



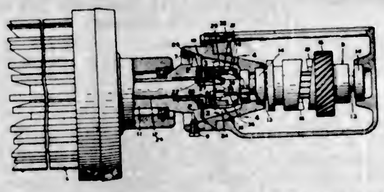
1. A driving mechanism of the class described, including an intermittent clutch having a driven element and a driving element having an advancing stroke and a return stroke, means for imparting the advancing and return strokes to said driving element, and a brake applying member engageable with said driven element for exerting a minimum of braking pressure at the beginning of the advancing stroke and a maximum of braking pressure at the termination of the advancing stroke, said brake applying member having one end stationary and its other end continuously connected to said driving element actuating means.

2,460,248
HANGER SUPPORT
Walter H. Baselt, Flossmoor, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application November 1, 1945, Serial No. 626,021
15 Claims. (Cl. 188—209)

1. In a railway car truck, a frame having a brake hanger bracket comprising spaced depending supports, a brake hanger extending between said supports, a pivot member extending through aligned openings in said supports and said hanger, bushings in the openings in said supports and sleeved over said member, each of said bushings comprising a pair of telescoping tubular elements, and resilient means compressed therebetween, the outer elements of said bushings being fixed to the associated supports and having an inwardly directed annular flange at one end thereof, the inner elements of said bushings having an annular flange at one end thereof cooperating with said inwardly directed flange to position said resilient means therebetween, a pair of annular plates sleeved over said pivot member at opposite ends thereof and having abutment with the adjacent other ends of said inner elements, and abutment means on said pivot member in engagement with said plates and urging said inner elements into engagement with opposite sides of said hanger, whereby said hanger, said inner elements and said pivot member are rotatable as a unit during movement of said hanger relative to said bracket, said resilient means being placed in shear during such movement.



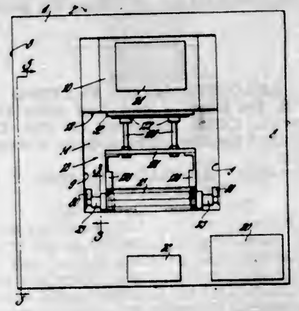
2,460,249
SHAFT COUPLING
Richard F. Bergmann, Winnetka, Ill., assignor to Industrial Rayon Corporation, Cleveland, Ohio, a corporation of Delaware
Application September 10, 1942, Serial No. 457,806
2 Claims. (Cl. 64—9)



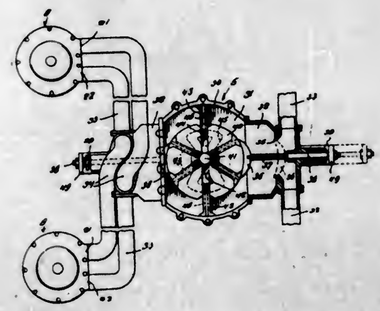
1. In combination, a thread-advancing store device including a rotatable shaft, a drive shaft for actuating said thread-advancing thread store device, a sleeve coupling comprising a sleeve having within it a pair of movable shaft receiving hub members for connecting said shafts, means for retaining said hub members in said sleeve, one of said hub members being adapted to receive one of said shafts and adapted to be demountably secured thereto, and the other of said hub members being provided with an axially extending bore in which are disposed at least two spaced blade members extending transversely of said bore and between which blade members an end of one of the shafts may be slidably inserted.

2,460,250
ABRASIVE APPARATUS
Earle M. Chase, Springfield, Mass., assignor to Porter-McLeod Machine Tool Co., Inc., Hatfield, Mass., a corporation of Massachusetts
Application April 14, 1947, Serial No. 741,353
6 Claims. (Cl. 51—84)

1. A machine of the class described comprising in combination, spaced pairs of relatively movable roll supports, a pair of rolls, engageable connections between opposite ends of the rolls and the supports of the pairs thereof, separate means at opposite ends of said rolls for driving one of them, independent pressure operated means at opposite ends of the rolls operatively connected to said supports for moving the supports of the pairs towards and away from one another, holder supporting means, a holder for a plurality of depending work pieces disposed between said rolls, actuating means for moving said holder supporting means up and down and back and forth whereby work pieces therebetween are moved longitudinally of the rolls and in planes at right angles thereto.



2,460,251
VARIABLE CAPACITY ROTARY PUMP
Pascual M. Dias, San Antonio, Tex.; Mary Louise Dias administratrix of said Pascual M. Dias, deceased
Original application January 13, 1944, Serial No. 518,139. Divided and this application July 21, 1944, Serial No. 547,341
2 Claims. (Cl. 103—120)



1. In a fluid drive unit, a housing, a rotor chamber, a plurality of fluid chests in communication with the chamber, an inlet and outlet port for each chest, a power shaft centrally journaled in the housing, a rotor secured to the shaft, a plurality of radially slidable blades on the shaft for engaging with the walls of the chamber, a gate in each chest slidable between the inlet and outlet ports for engagement with the rotor, a plurality of rollers carried by the blades, the housing having a plurality of cam grooves to receive the rollers whereby to impart radially sliding

movement to the blades during rotation of the rotor for clearing the gates, a plurality of arms slidably mounted on the housing and connected to the gates, rollers carried by the arms, a plurality of bell crank levers pivotally mounted on the housing and engaging the arm rollers, means for moving the crank levers to simultaneously operate the gates, and a dashpot connected to the last-claimed means for operating the gates gradually.

2,460,252
LEAD-TIN ALLOY PLATING
Arthur H. Du Rose, Euclid, and John D. Little, Lakewood, Ohio, assignors to The Harshaw Chemical Company, Elyria, Ohio, a corporation of Ohio
No Drawing. Application February 9, 1946, Serial No. 646,712
5 Claims. (Cl. 204—43)

1. An aqueous, acid lead-tin plating solution essentially consisting of from 100 to 400 grams per liter combined concentration of lead and tin ions, negative ions of the class consisting of fluoborate and sulfamate and an addition agent effective to cause increased deposition of tin in proportion to lead deposited, the concentration of tin ions being from 1% to 5% of the combined weight of lead and tin ions, and said addition agent being present to the extent of from 0.2 to 5 grams per liter and being selected from the class consisting of resorcinol, catechol, hydroquinone, pyrogallol, phloroglucinol, phenol, naphthol, cresol, 3,4 dihydroxydiphenyl, orthobromophenol, p-amino phenol and o-amyl phenol.

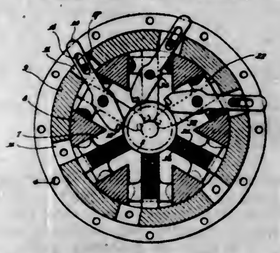
2,460,253
LADY'S DRESS GARMENT
Charlotte Goldstein, New York, N. Y., assignor to Laurel Fashions, Inc., a corporation of New York
Application October 14, 1948, Serial No. 54,373
10 Claims. (Cl. 2—105)

1. A lady's garment of the character described having a front presenting a V-shaped neckline, a pair of substantially pointed wings unitary with said front, each wing having a root substantially the entire width of which extends along the corresponding side of said V-shaped neckline, said wings being of length such as to admit of tying their pointed ends together at the back of the neck.

6. A lady's garment of the character described, comprising a back panel, and a front panel having sleeve openings therebetween, said panels being laterally stitched together along substantially the height thereof other than said sleeve openings and being further stitched together at their upper parts to form shoulder seams, the flattened extended front panels each having an upwardly directed wedge shaped wing, said wings in the flattened extended garment having continuous upright edges rising from the mid-point of the front panel which determines the vertex of a V-neck, and having oblique outer edges curved inward from the neck end of the respective shoulder seams and thence directed obliquely upward to an acute apex with respect to the corresponding inner upright edge, the extremities of the upright edges of the wedge shaped wings being nearly equidistant from the neck end of the corresponding shoulder seam.

10. A lady's garment of the character described, comprising a back panel, a pair of bias-cut front panels stitched together along the vertical midline of the garment, said garment having a V-neck line, said vertical mid-line terminating at the vertex of said neckline, each of said front panels having a wing unitary therewith, each of said wings having its root extending obliquely from the said vertex to the side of the neckline, the inner edges of said wings extending substantially upward from said mid-line in juxtaposed relationship when the garment is laid flat upon a table, the outer edges of said wings being substantially straight for the major portion of the length thereof and merging at their root ends with the sides of the neckline, said outer edges extending at an acute angle with respect to said inner edges for a pointed tip of each wing, said wings being of length such as to admit of being tied together at their pointed ends about the back of the neck.

2,460,254
UNIVERSAL GRIPPER HEAD
Edwin D. Greer, Jr., Pittsburgh, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application August 13, 1947, Serial No. 768,439
5 Claims. (Cl. 279—34)



5. Apparatus for gripping cylindrical blanks, comprising a frame provided with a central transverse opening for receiving a cylindrical blank and with a plurality of radial passages, a bracket slidably mounted in each of said passages, a radially disposed arm pivotally mounted in each bracket and formed at its inner end to grip a cylindrical blank, said brackets each having a face provided with spiral threads, the outer portions of each bracket forming a box that slidably engages the walls of one of said passages, the inner portion being reduced in width and forming legs in which one of said arms is pivotally supported, an inner ring rotatably carried in said frame and having a face provided with spiral threads engaging those of said bracket, said threaded engagement being adapted upon rotation of said inner ring to move said brackets radially in said passages for adjusting said arms for gripping blanks of different diameter, an outer ring rotatably carried in said frame and provided with a plurality of annularly spaced openings, the outer ends of said arms being slotted and extending through said openings, and transverse pins mounted in said outer ring and projecting through said slots, said outer ring being rotatable simultaneously to swing the arms to and from blank gripping position.

2,460,255
ALLYL ETHER OF ANACARDIC MATERIALS, BODIED PRODUCTS THEREOF, AND NOVEL COMPOSITIONS AND FRICTION ELEMENTS PRODUCED THEREWITH
Mortimer T. Harvey, South Orange, N. J., assignor to The Harvel Corporation, a corporation of New Jersey
No Drawing. Application December 1, 1944, Serial No. 566,242
10 Claims. (Cl. 260—23)

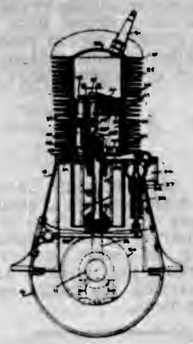
1. Allyl ether of a liquid anacardic material selected from the group consisting of cashew nut shell liquid and its polymers, distillates of cashew nut shell liquid and their polymers, said distillates having a boiling point of approximately 225° C. at 10 mm. of mercury pressure, residues of cashew nut shell liquid obtained by heating cashew nut shell liquid until the quantity by weight of the residue is between 25% to 75% by weight of the cashew nut shell liquid and the polymers of said residues.

2,460,256
REACTION PRODUCTS OF AN ALDEHYDE WITH ALLYL ETHER OF ANACARDIC MATERIAL
Mortimer T. Harvey, South Orange, N. J., assignor to The Harvel Corporation, a corporation of New Jersey
No Drawing. Application January 8, 1945, Serial No. 571,958
13 Claims. (Cl. 260—18)

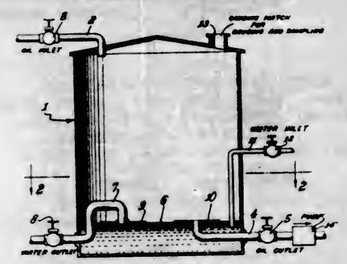
1. A resinous organic reaction product of (1) a material selected from the group consisting of formaldehyde, paraformaldehyde, hexamethylene tetramine, furfuraldehyde, trioxymethylene, glyoxal, acetaldehyde, acrolein and polymerized acrolein and (2) an aldehyde-reactive product produced by heating allyl ether of a liquid anacardic material selected from the group consisting of cashew nut shell liquid and its polymers, distillates of cashew nut shell liquid and their polymers, said distillates having a boiling point of approximately 225° C. at 10 mm. of mercury pressure, residues of cashew nut shell liquid obtained by heating cashew nut shell liquid until the quantity by weight of the residues is between 25% to 75% by weight of the cashew nut shell liquid and the polymers of said residues.

2,460,257
INTERNAL-COMBUSTION ENGINE
Harry O. Hedges, Philadelphia, Pa., assignor to Hedges Motor Company, Seattle, Wash., a corporation of Washington
Application June 26, 1945, Serial No. 601,585
8 Claims. (Cl. 123—74)

6. In a two cycle engine, in combination, a closed cylinder having an explosion chamber at one end thereof and a fuel intake chamber at its opposite end, said cylinder also having diametrically opposed air inlet and exhaust ports in the wall thereof, a hollow piston reciprocally operative in said cylinder, said piston having oppositely closed heads, an internal baffle within said hollow piston extending diametrically thereof with the one end of said baffle contiguous to the head of the piston adjoining the fuel intake chamber of the cylinder and the opposite end of said baffle spaced from the head of the piston adjoining the explosion chamber of the cylinder, the wall segments of said piston to either side of said internal baffle having openings therein for respective registry with said air inlet and exhaust ports in the wall of the cylinder.



2,460,258
TANK PUMP-OUT METHOD
Philip H. Jones, Redondo Beach, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application November 20, 1944, Serial No. 564,372
7 Claims. (Cl. 210—51)



1. The method of pumping oil from an oil storage tank having a water out line and an oil pump out line with horizontal openings in the tank at the same elevation above the bottom of the tank, comprising introducing water into the tank in sufficient quantities so as to create a water level even with the elevation of the two horizontal openings, filling the tank with oil, allowing at least some of the water contained in said oil to settle, draining water level down to the elevation of the two horizontal openings, closing water drain, and pumping dry oil out of the tank.

2,460,259
METHOD OF PROTECTING SYSTEMS FOR TRANSPORTING MEDIA CORROSIVE TO METAL
Harry Lewis Kahler, Feasterville, Pa., assignor to W. H. and L. D. Betz, Philadelphia, Pa., a firm
Application January 22, 1946, Serial No. 642,709
7 Claims. (Cl. 117—97)

1. The method of protecting the metal contacting surfaces in a continuously flowing system

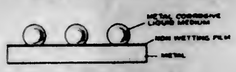
for transporting aqueous media having corrosive

2,460,261

band, and an outsole making flat contact with the

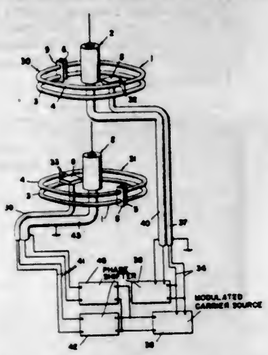
thereon and having apertures therethrough, a principal playing piece for movement around the

for transporting aqueous media having corrosive qualities which comprises the step of adding to the transporting media an aliphatic compound taken from a group consisting of the high molecular weight amines, amine salts, and amine oxides, having straight carbon chains in which the straight carbon chains contain from 10 to 18 carbon atoms in concentrations of not more



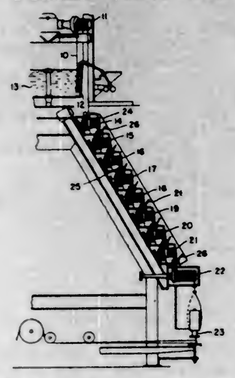
than 100 P. P. M., the media having a pH of not more than 8, the amount of compound being sufficient to form on the surfaces of the system a uniform film having the characteristics of being mono-molecular, of being non-wetting and capable of blocking the corrosive action of the media and conveying the media sufficiently to allow the film to form.

2,460,260
ANTENNA FOR RADIATING CIRCULARLY POLARIZED WAVES
Paul J. Kibler, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application October 3, 1945, Serial No. 619,995
5 Claims. (Cl. 250—33.53)



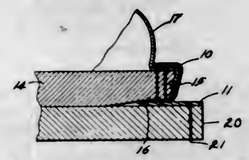
1. A high frequency directive antenna array comprising two stacked antenna systems each having a horizontal radiator including a plurality of conductors arranged horizontally with a common vertical axis, connected together at their ends and forming each a peripherally incomplete loop, one of said conductors being open at its mid point to provide a pair of terminals, said horizontal radiator having an effective electrical length substantially equal to one-half wavelength at said high frequency, a first transmission line connected to said terminals for transfer of high frequency energy between said horizontal radiator and said first line; each of said two antenna systems further having a vertical radiator including a dipole conductor arranged vertically along said common axis, said vertical radiator having an effective electrical length substantially equal to one-half said wavelength, and a second transmission line connected to said vertical radiator for transfer of high frequency energy between said vertical radiator and said second line, the terminals of said two horizontal radiators being arranged opposite to each other in a vertical plane passing through said common axis.

2,460,261
APPARATUS FOR THE FLUID TREATMENT OF THREAD OR THE LIKE
Kenneth M. McLellan, Cleveland, Ohio, assignor to Industrial Rayon Corporation, Cleveland, Ohio, a corporation of Delaware
Application July 24, 1944, Serial No. 546,394
4 Claims. (Cl. 68—200)



2. In combination with an apparatus for handling thread or the like including a panel, a plurality of adjacent downwardly extending series of thread-advancing thread store devices mounted on said panel, a plurality of troughs having substantially U-shaped frames on said panel and under said thread store devices for carrying away processing fluids; a dividing partition positioned between each vertical series of said thread-store devices notched to prevent its vertical slippage, the notches adapted to fit the upper forward edges of said trough frames, means on the trough frames for holding the partition against vertical displacement, and stationary split guides fixed on said trough frames for lateral support of said partition.

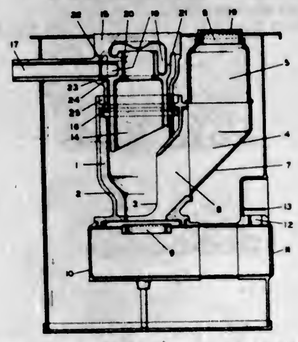
2,460,262
SHOE WITH SOLE EDGE BINDING AND WELT
William L. Mills, Keene, N. H., and Frederick W. Kruger, Worcester, Mass., assignors to Sealed Seam Welt Process, Inc., Boston, Mass., a corporation of Massachusetts
Application November 15, 1945, Serial No. 628,762
1 Claim. (Cl. 36—16)



A welt shoe having an unchanneled insole beveled about its outer marginal face, an upper with an out-turned margin stitched to the edge of the insole by a line of vertical stitching, a composite binding and welt strip stitched to the edge of the insole by a line of vertical stitching located inside the upper-attaching stitching and passing completely through the insole, said composite strip including a binding band wrapped about the edge of the insole and a single-ply welt strip stitched to the binding band and lying with its inner edge outside the inner edge of the binding

band, and an outsole making flat contact with the insole and the welt strip and stitched thereto by a line of stitching located outside the outer contour of the binding band.

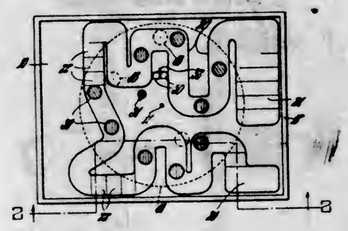
2,460,263
KITCHEN RANGE
Olof Ollert, Stockholm, Sweden
Application November 5, 1945, Serial No. 626,874
In Sweden November 11, 1944
1 Claim. (Cl. 126—10)



In a stove means forming a combustion chamber, a metal cooking plate disposed above said chamber, a tubular flange integral and extending downwardly from said plate, a tubular member spaced from said combustion chamber and integrally connected circumferentially at an intermediate point thereof to the lower end of said flange, the lower portion of said tubular member extending into said combustion chamber and the upper portion of said member being of less diameter than said flange and extending upwardly within the flange and spaced therefrom to form therewith an annular passage, the upper end of said upper portion being spaced below said plate to provide communication between the interior of said tubular member and said annular passage, said plate having a supporting surface radially outside said flange and substantially at the same level as the upper end of said tubular member, and a flue connected to said annular passage.

2,460,264
ROTATABLE GAME BOARD AND PIECE THEREFOR
James M. Prentice, South Hadley, James Robert Umbach, Longmeadow, and Kenwood Ross, Springfield, Mass., assignors to The Electric Game Company, Holyoke, Mass., a corporation of Massachusetts
Application November 29, 1947, Serial No. 788,940
6 Claims. (Cl. 273—134)

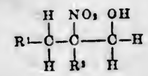
4. A game apparatus comprising, a horizontal game board having a playing path delineated thereon and having apertures therethrough, a principal playing piece for movement around the path of said game board having a neck portion adapted for seating in the apertures in said game board and having an opening extending therethrough, a secondary playing piece receivable in the opening in said principal playing piece and movable downwardly therethrough, and a movably mounted member beneath said game board



having apertures therethrough with certain of the apertures being registrable with certain of the apertures of said game board as said movably mounted member is moved relative to said game board, all adapted and arranged whereby said secondary playing piece disposed in said principal playing piece may be permitted to pass downwardly therethrough and through the registered apertures of said game board and said movably mounted member.

2,460,265
ARYLALKYLNITROALCOHOLS
John B. Tindall, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland
No Drawing. Application June 27, 1945, Serial No. 601,944
4 Claims. (Cl. 260—618)

4. As new compositions of matter γ-phenyl-β-nitroalkanols having the following structure:



wherein R^1 represents a member selected from the group consisting of phenyl and alkylated phenyl radicals and R^2 represents a member selected from the group consisting of hydrogen and alkyl radicals.

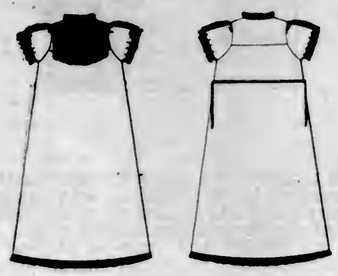
152,452
DESIGN FOR AN ASH TRAY

152,454
DESIGN FOR A BRACELET OR THE LIKE

DESIGNS

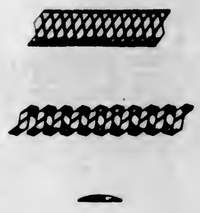
JANUARY 25, 1949

152,448
DESIGN FOR A LADY'S NIGHTGOWN
Paul J. Balog, North Hollywood, Calif.
Application March 6, 1948, Serial No. 144,941
Term of patent 7 years
(Cl. D2—26)



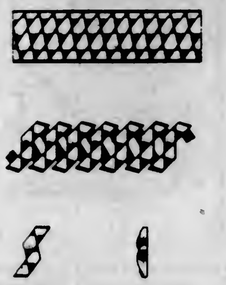
The ornamental design for a lady's nightgown, as shown.

152,449
DESIGN FOR AN EXPANSIBLE LINK CHAIN FOR A BRACELET OR THE LIKE
Joseph M. Bender, Manhasset, N. Y., assignor to Jacoby-Bender, Inc., New York, N. Y., a corporation of New York
Application February 24, 1947, Serial No. 137,116
Term of patent 7 years
(Cl. D45—4)



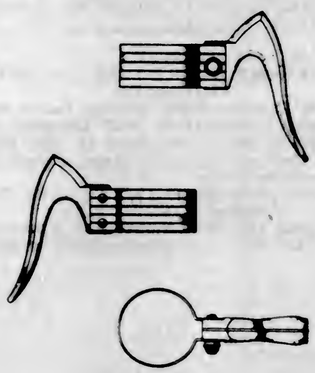
The ornamental design for an expansible link chain for a bracelet or the like, as shown.

152,450
DESIGN FOR AN EXPANSIBLE LINK CHAIN FOR A BRACELET OR THE LIKE
Joseph M. Bender, Manhasset, N. N. Y., assignor to Jacoby-Bender, Inc., New York, N. Y., a corporation of New York
Application November 14, 1947, Serial No. 142,530
Term of patent 7 years
(Cl. D45—4)



The ornamental design for an expansible link chain for a bracelet or the like, as shown.

152,451
DESIGN FOR A COMBINED COLLAR AND HANDLE FOR A COFFEE MAKER BOWL OR THE LIKE
Herbert G. Blakeslee, Evanston, Ill., assignor to Cory Corporation, Chicago, Ill., a corporation of Delaware
Application December 28, 1946, Serial No. 135,812
Term of patent 14 years
(Cl. D44—16)



The ornamental design for a combined collar and handle for a coffee maker bowl or the like, as shown.

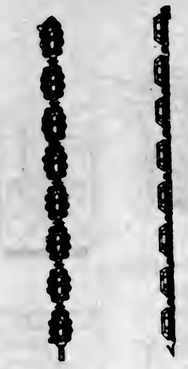
152,452
DESIGN FOR AN ASH TRAY
Boris Blecher, Philadelphia, Pa.
Application November 1, 1946, Serial No. 134,444
Term of patent 14 years
(Cl. D85—2)

The ornamental design for an ash tray, as shown.

152,453
DESIGN FOR A BRACELET OR THE LIKE
Herman Bogoff, Chicago, Ill.
Application December 6, 1947, Serial No. 142,989
Term of patent 7 years
(Cl. D45—4)

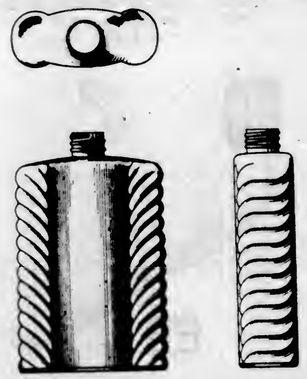
The ornamental design for a bracelet or the like, substantially as shown.

152,454
DESIGN FOR A BRACELET OR THE LIKE
Herman Bogoff, Chicago, Ill.
Application December 6, 1947, Serial No. 142,990
Term of patent 7 years
(Cl. D45—4)



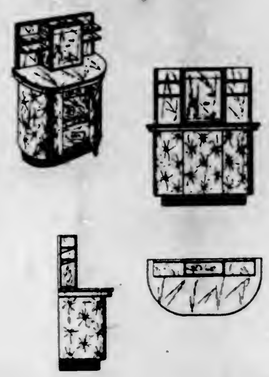
The ornamental design for a bracelet or the like, substantially as shown.

152,455
DESIGN FOR A BOTTLE
Julius Braun, Chicago, Ill., assignor to W. Braun Co., Chicago, Ill., a copartnership consisting of Julius Braun, Morris Braun, and Eve C. Erenberg
Application July 19, 1947, Serial No. 140,398
Term of patent 14 years
(Cl. D58—8)



The ornamental design for a bottle, substantially as shown.

152,456
DESIGN FOR A CONSOLE BAR WITH AQUARIUM
Mac Buxbaum and Moe Lebensfeld, Flushing, N. Y.
Application March 5, 1947, Serial No. 137,382
Term of patent 3½ years
(Cl. D33—19)

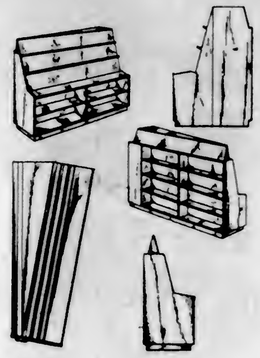


The ornamental design for a console bar with aquarium, as shown.

152,457
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application July 19, 1947, Serial No. 140,408
Term of patent 7 years
(Cl. D45—9)

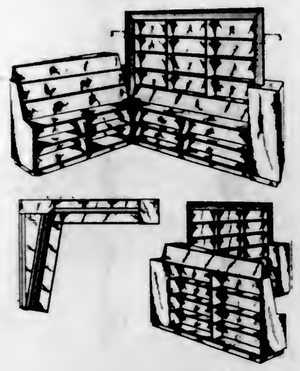
The ornamental design for an earring or similar article, substantially as shown.

152,458
DESIGN FOR A BOOKSTAND
James Stott Dawson, New York, N. Y.
Application July 27, 1946, Serial No. 132,038
Term of patent 7 years
(Cl. D80—9)



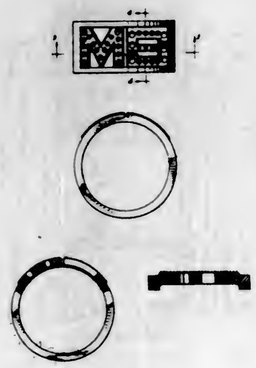
The ornamental design for a bookstand, substantially as shown.

152,459
DESIGN FOR A BOOKSTALL
James Stott Dawson, New York, N. Y.
Application July 27, 1946, Serial No. 132,039
Term of patent 7 years
(Cl. D80—9)



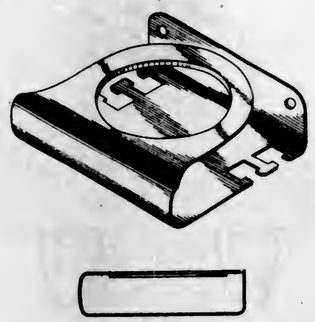
The ornamental design for a bookstall, substantially as shown.

152,460
DESIGN FOR A WEDDING RING
Sydney Davis Dunovitz, Brooklyn, N. Y.
Application June 16, 1948, Serial No. 146,999
Term of patent 7 years
(Cl. D45—10)



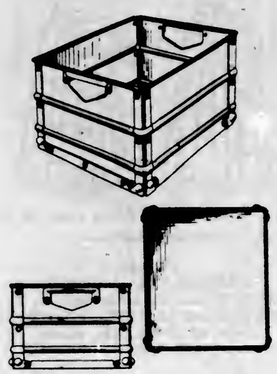
The ornamental design for a wedding ring, as shown and described.

152,461
DESIGN FOR A TOOTHBRUSH AND GLASS HOLDER
George E. Elliott, Birmingham, Ala.
Application October 18, 1946, Serial No. 134,044
Term of patent 7 years
(Cl. D4—3)



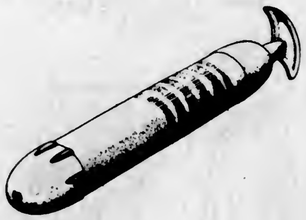
The ornamental design for a toothbrush and glass holder, as shown.

152,462
DESIGN FOR A MILK BOTTLE CASE OR SIMILAR ARTICLE
Ernest R. Erickson, Des Moines, Iowa
Application June 19, 1947, Serial No. 139,814
Term of patent 14 years
(Cl. D58—13)



The ornamental design for a milk bottle case or similar article, substantially as shown.

152,463
DESIGN FOR A LUBRICANT DISPENSING DEVICE
Richard P. Field, Cincinnati, Ohio, assignor to Balcrank, Inc., Disney, near Marburg, Cincinnati, Ohio, a corporation of Ohio
Application January 14, 1947, Serial No. 136,142
Term of patent 7 years
(Cl. D46—1)



The ornamental design for a lubricant dispensing device, substantially as shown and described.

152,464
DESIGN FOR A COAT
Joseph Frumkes, Harrison, N. Y.
Application October 12, 1948, Serial No. 149,092
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a coat, as shown.

152,465
DESIGN FOR A COAT
Joseph Frumkes, Harrison, N. Y.
Application October 12, 1948, Serial No. 149,093
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a coat, as shown.

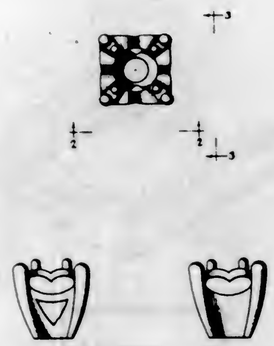
152,466
DESIGN FOR A COAT
Joseph Frumkes, Harrison, N. Y.
Application October 12, 1948, Serial No. 149,096
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a coat, as shown.

152,467
DESIGN FOR A COAT
Joseph Frumkes, Harrison, N. Y.
Application October 12, 1948, Serial No. 149,097
Term of patent 3½ years
(Cl. D3—4)

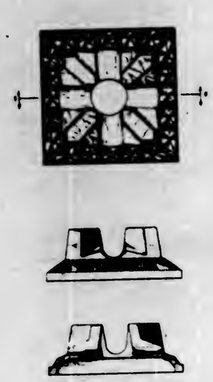
The ornamental design for a coat, as shown.

152,468
DESIGN FOR A JEWELRY SETTING OR SIMILAR ARTICLE
Fred J. Gaertner, Maplewood, N. J.
Application May 5, 1947, Serial No. 138,809
Term of patent 14 years
(Cl. D45—1)



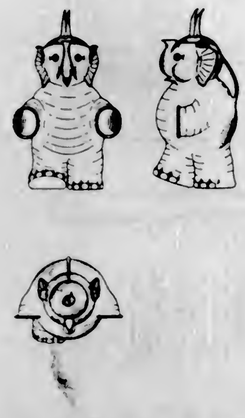
The ornamental design for a jewelry setting or similar article, as shown.

152,469
DESIGN FOR A JEWELRY SETTING
Morris Goodman, Indianapolis, Ind.
Application October 4, 1948, Serial No. 148,950
Term of patent 14 years
(Cl. D45—1)



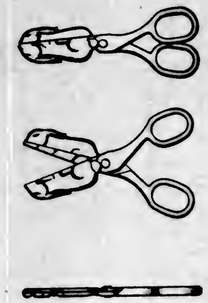
The ornamental design for a jewelry setting, as shown.

152,470
DESIGN FOR A COOKY JAR OR SIMILAR ARTICLE
Nettie E. Graven, Wooster, Ohio
Application November 12, 1947, Serial No. 142,469
Term of patent 14 years
(Cl. D58—25)



The ornamental design for a cooky jar or similar article, substantially as shown.

152,471
DESIGN FOR A PAIR OF SCISSORS
Paul L. Hartnett, Leominster, Mass.
Application March 7, 1947, Serial No. 137,456
Term of patent 7 years
(Cl. D22—5)



The ornamental design for a pair of scissors, as shown.

152,472
DESIGN FOR A BIRD HOUSE
Bertil E. Hawkinson, Duluth, Minn.
Application July 24, 1947, Serial No. 140,490
Term of patent 7 years
(Cl. D31—2)

The ornamental design for a bird house, as shown.

152,473
DESIGN FOR A BIRD HOUSE
Bertil E. Hawkinson, Duluth, Minn.
Application July 24, 1947, Serial No. 140,491
Term of patent 7 years
(Cl. D31—2)

The ornamental design for a bird house, as shown.

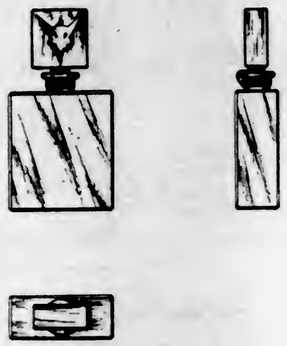
152,474
DESIGN FOR A BIRD HOUSE
Bertil E. Hawkinson, Duluth, Minn.
Application July 24, 1947, Serial No. 140,492
Term of patent 7 years
(Cl. D31—2)

The ornamental design for a bird house, as shown.

152,475
DESIGN FOR A BIRD HOUSE
Bertil E. Hawkinson, Duluth, Minn.
Application July 24, 1947, Serial No. 140,493
Term of patent 7 years
(Cl. D31—2)

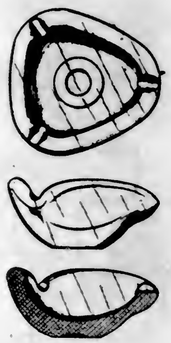
The ornamental design for a bird house, as shown.

152,473
DESIGN FOR A BOTTLE
Jacques Heim, Paris, France
Application February 26, 1947, Serial No. 137,185
Term of patent 3½ years
(Cl. D58—6)



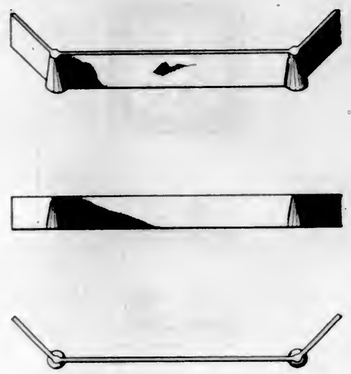
The ornamental design for a bottle, substantially as shown.

152,474
DESIGN FOR AN ASH TRAY
Walter Ture Heintze, Elizabeth, N. J., assignor to Fostoria Glass Company, Moundsville, W. Va., a corporation of West Virginia
Application April 29, 1948, Serial No. 146,043
Term of patent 14 years
(Cl. D85—2)



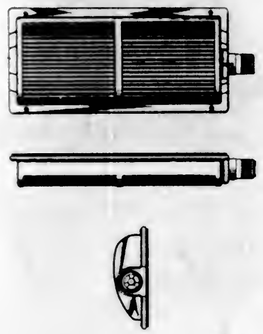
The ornamental design for an ash tray, as shown.

152,475
DESIGN FOR AN ARTICLE HOLDING GUARD OR THE LIKE
Otto W. Hueter, Toledo, Ohio
Application August 10, 1948, Serial No. 148,020
Term of patent 14 years
(Cl. D14—6)



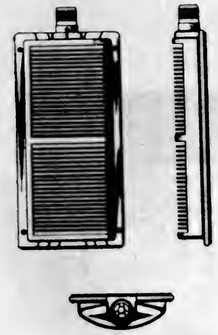
The ornamental design for an article holding guard or the like, as shown and described.

152,476
DESIGN FOR A REGISTER
Ralph D. Huszagh, Chicago, Ill., assignor to Don Manufacturing Co., Chicago, Ill., a corporation of Illinois
Application January 26, 1948, Serial No. 144,023
Term of patent 14 years
(Cl. D81—21)



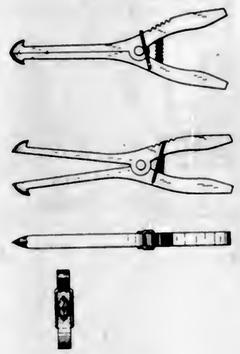
The ornamental design for a register, as shown.

152,477
DESIGN FOR A REGISTER
Ralph D. Huszagh, Chicago, Ill., assignor to Don Manufacturing Co., Chicago, Ill., a corporation of Illinois
Application January 26, 1948, Serial No. 144,024
Term of patent 14 years
(Cl. D81—21)



The ornamental design for a register, as shown.

152,478
DESIGN FOR A FISH MOUTH OPENER OR SIMILAR ARTICLE
Francis H. Hutchinson, Denver, and Cyral T. Walsh, Larimer County, Colo.
Application July 30, 1947, Serial No. 140,624
Term of patent 7 years
(Cl. D11—1)

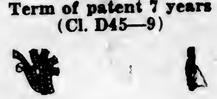


The ornamental design for a fish mouth opener or similar article, as shown.

152,479
DESIGN FOR A CONTAINER CAP
Albert H. Jung, Flushing, N. Y., assignor to Victor Industries Corporation, Brooklyn, N. Y., a corporation of New York
Application October 21, 1947, Serial No. 142,056
Term of patent 14 years
(Cl. D58—26)

The ornamental design for a container cap as shown and described.

152,480
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 29, 1948, Serial No. 149,391
Term of patent 7 years
(Cl. D45—9)



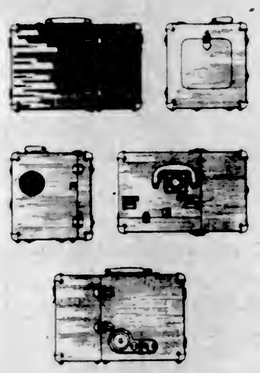
The ornamental design for an earring or similar article, substantially as shown.

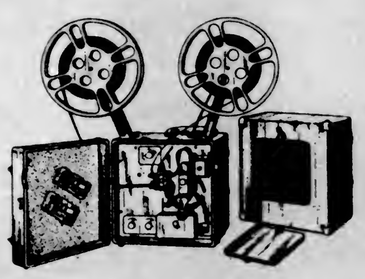
152,481
DESIGN FOR A SEPARABLE BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 29, 1948, Serial No. 149,392
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a separable brooch or similar article, substantially as shown.

152,485

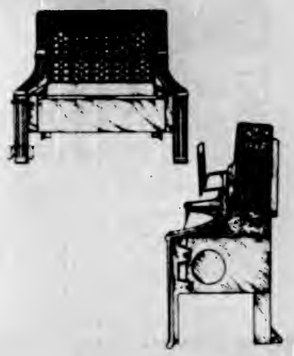
152,482
DESIGN FOR A COMBINED SOUND AND MOTION-PICTURE PROJECTOR AND CARRYING CASE THEREFOR
Osmond Kendall, Ottawa, and Smiley W. Loach, Toronto, Ontario, Canada, assignors to Raymond Allen, Toronto, Ontario, Canada
Application February 26, 1947, Serial No. 137,190
Term of patent 14 years
(Cl. D61—1)

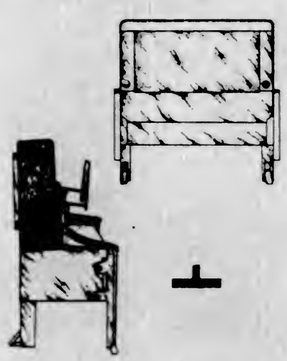




The ornamental design for a combined sound and motion-picture projector and carrying case therefor, as shown.

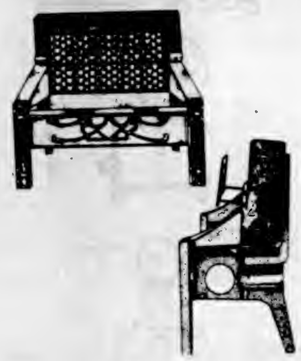
152,483
DESIGN FOR A GAS HEATER
Jay Fred King, Marietta, and Joseph Newman White, Atlanta, Ga., assignors to The Atlanta Stove Works, Inc., Atlanta, Ga.
Application January 26, 1948, Serial No. 144,043
Term of patent 14 years
(Cl. D81—10)





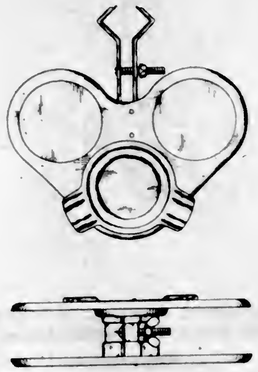
The ornamental design for a gas heater, substantially as shown.

152,484
DESIGN FOR A GAS HEATER
Jay Fred King, Marietta, and Joseph Newman White, Atlanta, Ga., assignors to The Atlanta Stove Works, Inc., Atlanta, Ga.
Application January 26, 1948, Serial No. 144,044
Term of patent 14 years
(Cl. D81—10)



The ornamental design for a gas heater, substantially as shown.

152,485
DESIGN FOR A COMBINED ASH TRAY AND GLASS HOLDER
Ralph T. Leach, Evansville, Ind.
Application March 10, 1947, Serial No. 137,497
Term of patent 3½ years
(Cl. D85—2)



The ornamental design for a combined ash tray and glass holder, substantially as shown.

152,490
DESIGN FOR A LAMP
Ralph Lee Smith, Jr., Chicago, Ill., assignor to Sylvania Electric Products Inc., a corporation of Delaware
Application January 26, 1948, Serial No. 144,045
Term of patent 14 years
(Cl. D26—1)

The ornamental design for a lamp, as shown.

152,492
DESIGN FOR A LAMP
Ralph Lee Smith, Jr., Chicago, Ill., assignor to Sylvania Electric Products Inc., a corporation of Delaware
Application January 26, 1948, Serial No. 144,047
Term of patent 14 years
(Cl. D26—1)

The ornamental design for a lamp, as shown.

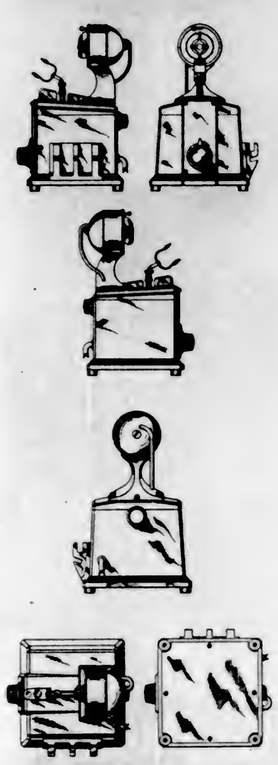
152,486
DESIGN FOR A COMBINED RING AND PERFUME CONTAINER
Elaine Guthrie Lorillard, Providence, R. I., assignor to Ostby & Barton Company, Providence, R. I.
Application September 17, 1948, Serial No. 148,629
Term of patent 7 years
(Cl. D45—10)

The ornamental design for a combined ring and perfume container, substantially as shown.

152,487
DESIGN FOR A SPECTACLE FRAME
Aurel E. Mangold, New York, N. Y.
Application April 12, 1946, Serial No. 128,557
Term of patent 14 years
(Cl. D57—1)

The ornamental design for a spectacle frame, as shown and described.

152,488
DESIGN FOR AN AMALGAM MIXER
Henry E. Meltzer, Racine, Wis.
Application August 1, 1947, Serial No. 140,660
Term of patent 14 years
(Cl. D24—1)



The ornamental design for an amalgam mixer, as shown.

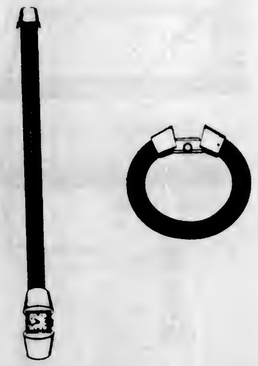
152,489
DESIGN FOR A DRIP CATCHER FOR A BOTTLE
Doris E. O'Brien, Billings, Mont.
Application October 17, 1946, Serial No. 134,005
Term of patent 7 years
(Cl. D58—26)

The ornamental design for a drip catcher for a bottle, as shown and described.

152,490
DESIGN FOR A CHRISTMAS TREE ORNAMENT
Vincent P. O'Brien, Belle Harbor, N. Y.
Application November 27, 1946, Serial No. 135,123
Term of patent 14 years
(Cl. D29—1)

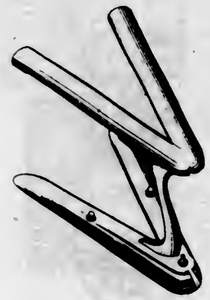
The ornamental design for a Christmas tree ornament, as shown.

152,491
DESIGN FOR A COMBINED WRIST WATCH AND STRAP THEREFOR
Marianne Ostier, New York, N. Y.
Application May 13, 1948, Serial No. 146,338
Term of patent 14 years
(Cl. D42—8)



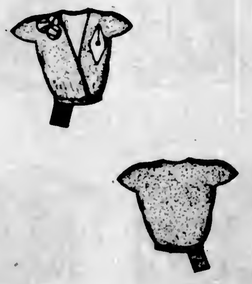
The ornamental design for a combined wrist watch and strap therefor, as shown.

152,492
DESIGN FOR A LAMP
Albert Pfaltz, Flushing, N. Y.
Application September 4, 1947, Serial No. 141,210
Term of patent 14 years
(Cl. D48—20)



The ornamental design for a lamp, substantially as shown.

152,493
DESIGN FOR A BLOUSE OR SIMILAR ARTICLE
Sam Platt, Brooklyn, N. Y.
Substituted for abandoned application Serial No. 130,701, June 14, 1946. This application December 20, 1947, Serial No. 143,268
Term of patent 3½ years
(Cl. D3—25)



The ornamental design for a blouse or similar article, as shown.

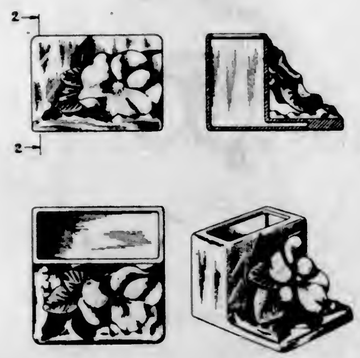
152,498—Continued

152,499—Continued

152,494
DESIGN FOR A CIGARETTE HOLDER OR SIMILAR ARTICLE
Clifford Potts, Zanesville, Ohio, assignor to Louis A. Butler and Arvilla K. Butler, doing business as Ohio Porcelain Company, Zanesville, Ohio
Application January 13, 1948, Serial No. 143,696
Term of patent 14 years
(Cl. D85—2)

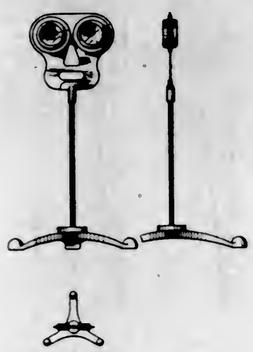
The ornamental design for a cigarette holder or similar article, substantially as shown.

152,495
DESIGN FOR A CIGARETTE HOLDER OR SIMILAR ARTICLE
Clifford Potts, Zanesville, Ohio, assignor to Louis A. Butler and Arvilla K. Butler, doing business as Ohio Porcelain Company, Zanesville, Ohio
Application January 15, 1948, Serial No. 143,809
Term of patent 14 years
(Cl. D85—2)



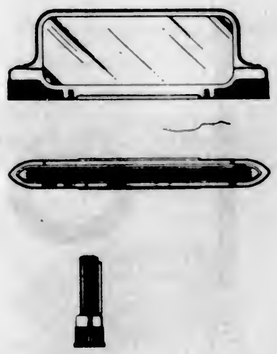
The ornamental design for a cigarette holder or similar article, substantially as shown.

152,496
DESIGN FOR A ROAD SIGNAL OR THE LIKE
Hyman A. Fromack, Chicago, Ill.
Application December 19, 1946, Serial No. 135,609
Term of patent 3½ years
(Cl. D72—1)



The ornamental design for a road signal or the like, as shown.

152,497
DESIGN FOR AN ILLUMINABLE DISPLAY SIGN
Raymond M. Price, Chesterton, Ind., and Lewis E. Peters, Chicago, Ill.; said Peters assignor to said Price
Application November 23, 1946, Serial No. 135,026
Term of patent 14 years
(Cl. D1—12)

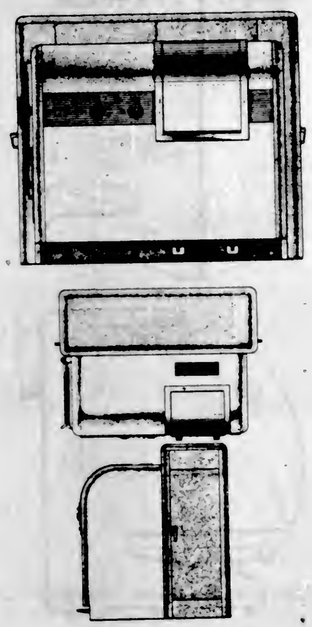


The ornamental design for an illuminable display sign, as shown.

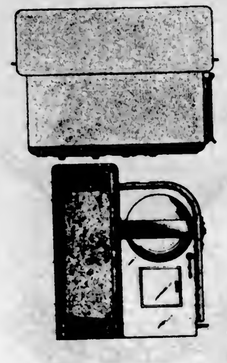
152,498
DESIGN FOR A SMOKER'S PIPE RACK
Edward A. Rosenbaum, Milwaukee, Wis.
Application April 16, 1947, Serial No. 126,427
Term of patent 3½ years
(Cl. D85—3)

The ornamental design for a smoker's pipe rack, substantially as shown.

152,499
DESIGN FOR A CASING FOR DRY CLEANING MACHINES
Peter Schladerman dt, Bronxville, N. Y., and Charles L. Metzler, Palisades Park, and Elvin E. Hallander, West Caldwell, N. J., assignors to International Projector Corporation, Bloomfield, N. J., a corporation of Delaware
Application September 11, 1948, Serial No. 148,553
Term of patent 14 years
(Cl. D49—1)



152,499—Continued



The ornamental design for a casing for dry cleaning machines, as shown.

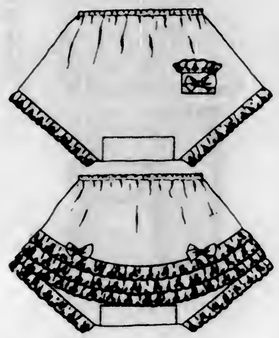
152,500
DESIGN FOR A BALL PENDANT WATCH OR SIMILAR ARTICLE
Ernst G. Schwarz, New York, N. Y.
Application October 26, 1948, Serial No. 149,805
Term of patent 3½ years
(Cl. D42—8)

The ornamental design for a ball pendant watch or similar article, substantially as shown.

152,504—Continued

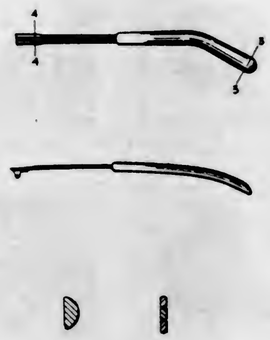
152,506
DESIGN FOR A BLOUSE OR SIMILAR

152,501
DESIGN FOR PANTIES
Anna Mae Sebastian, Cairo, Ill.
Application February 27, 1948, Serial No. 144,779
Term of patent 14 years
(Cl. D3—17)



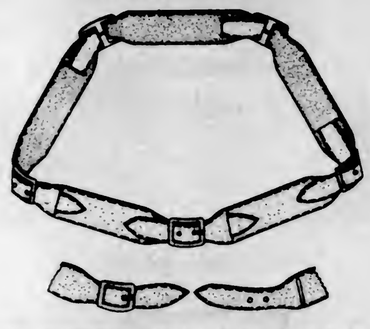
The ornamental design for panties, as shown.

152,502
DESIGN FOR A SPECTACLE TEMPLE
Raymond F. E. Stegeman, Greece, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application November 12, 1947, Serial No. 142,488
Term of patent 14 years
(Cl. D57—1)



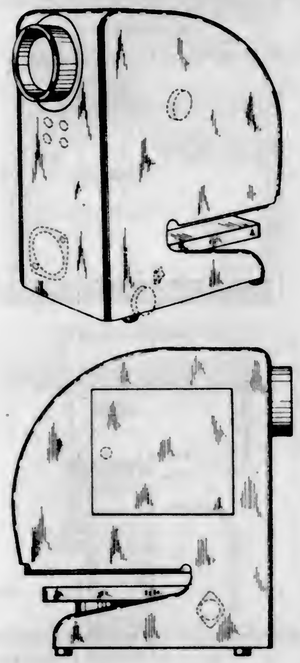
The ornamental design for a spectacle temple, as shown.

152,503
DESIGN FOR AN ADJUSTABLE BELT
Harry Steiner, New York, N. Y.
Application November 13, 1947, Serial No. 142,512
Term of patent 14 years
(Cl. D3—10)



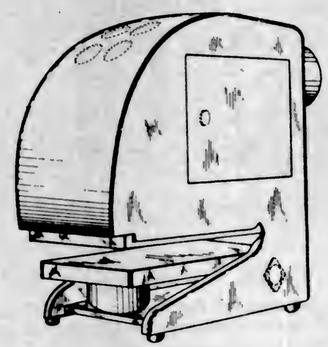
The ornamental design for an adjustable belt, substantially as shown and described.

152,504
DESIGN FOR A PROJECTION APPARATUS
James Y. Taylor and Carl C. Taylor, Garland, Tex., assignors to J. Y. Taylor Company, Garland, Tex., a partnership composed of James Y. Taylor and David D. Simpson
Application August 18, 1948, Serial No. 148,168
Term of patent 14 years
(Cl. D61—1)

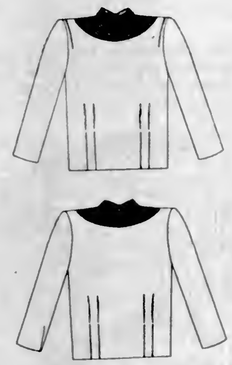


The ornamental design for a projection apparatus, substantially as shown and described.

152,504—Continued

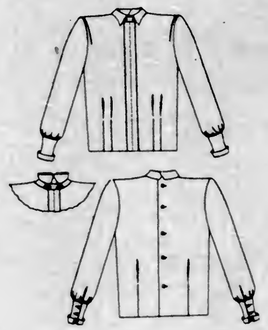


152,505
DESIGN FOR A BLOUSE OR SIMILAR ARTICLE
Victor Tomshinsky, New York, N. Y.
Application July 13, 1948, Serial No. 147,519
Term of patent 3½ years
(Cl. D3—25)



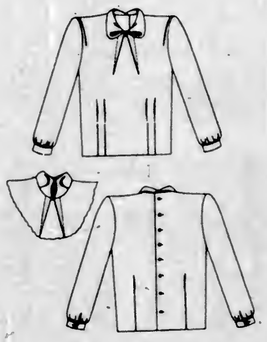
The ornamental design for a blouse or similar article, substantially as shown.

152,506
DESIGN FOR A BLOUSE OR SIMILAR ARTICLE
Victor Tomshinsky, New York, N. Y.
Application July 13, 1948, Serial No. 147,520
Term of patent 3½ years
(Cl. D3—25)



The ornamental design for a blouse or similar article, substantially as shown and described.

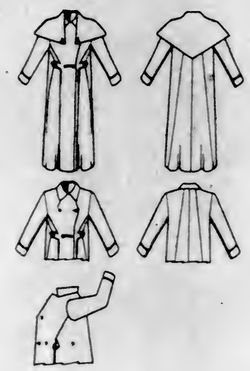
152,507
DESIGN FOR A BLOUSE OR SIMILAR ARTICLE
Victor Tomshinsky, New York, N. Y.
Application July 14, 1948, Serial No. 147,565
Term of patent 3½ years
(Cl. D3—25)



The ornamental design for a blouse or similar article, substantially as shown and described.

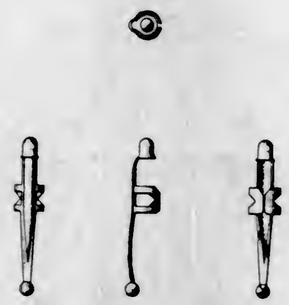
LIST OF TRADE-MARK APPLICANTS

182,508
DESIGN FOR A COAT OR THE LIKE
Robert Trigère, New York, N. Y.
Application September 22, 1948, Serial No. 148,697
Term of patent 3½ years
(Cl. D2—4)



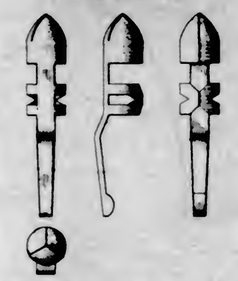
The ornamental design for a coat or the like, substantially as shown and described.

152,509
DESIGN FOR A COMBINED CLIP AND POINT PROTECTOR FOR FOUNTAIN PENS OR THE LIKE
Mauriee J. Waldinger, New York, N. Y.
Application September 5, 1947, Serial No. 141,220
Term of patent 3½ years
(Cl. D74—1)



The ornamental design for a combined clip and point protector for fountain pens or the like, as shown.

152,510
DESIGN FOR A COMBINATION CLIP AND CAP FOR BALL PENS OR THE LIKE
Maurice J. Waldinger, New York, N. Y.
Application March 13, 1948, Serial No. 145,066
Term of patent 14 years
(Cl. D74—1)

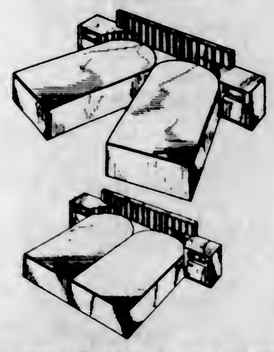


The ornamental design for a combination clip and cap for ball pens or the like, as shown.

152,511
DESIGN FOR A SHOE
Josephine Brintz Whatley, Fluvanna, Tex.
Application July 9, 1948, Serial No. 147,450
Term of patent 7 years
(Cl. D7—7)

The ornamental design for a shoe, substantially as shown.

152,512
DESIGN FOR A COMBINATION TWIN BED UNIT
Truman S. Ziegenfuss, Los Angeles, Calif.
Application April 28, 1947, Serial No. 138,660
Term of patent 14 years
(Cl. D5—4)



The ornamental design for a combination twin bed unit, as shown.

Aspirin, iron and yeast, etc. Katz Drug Company. 410,079, Nov. 7, 1944. Republished Jan. 25.
Bitters, Orange. John Wagner & Sons. 324,724, May 28, 1935. Republished Jan. 25.
Blue. Ultramarine, laundry blue, iron blue, etc. The Standard Ultramarine Co. 506,056, Jan. 25; Serial No. 539,097, published Oct. 5, 1948.
Carbon dioxide, Solid, anhydrous ammonia, nitrogen solution. Spencer Chemical Company. 506,125, Jan. 25; Serial No. 538,190.
Carbon dioxide, Solid, anhydrous ammonia, nitrogen solution, etc. Spencer Chemical Company. 506,126, Jan 25; Serial No. 538,192.
Chemical preparation. The Solvay Process Company. 288,309, Oct. 27, 1931. Republished Jan. 25.
Chemical preparation. The Solvay Process Company. 289,052, Nov. 17, 1931. Republished Jan. 25.
Chemical preparation recommended for cleansing, bleaching, and softening of hard water. The Solvay Process Company. 203,065, Sept. 8, 1925. Republished Jan. 25.
Chemical preparations. Printing Arts Research Laboratories, Inc. 403,023, Aug. 31, 1943. Republished Jan. 25.
Cosmetic and beauty preparations. S. A. Luxana. 506,071, Jan. 25; Serial No. 541,004, published Sept. 14, 1948.
Face powder, rouge, and lipstick. R. Hudnut. 441,933, Jan. 25; Serial No. 524,134, published Oct. 19, 1948.
Fly spray and insecticide. J. B. Rosefield. 201,133, July 21, 1925. Republished Jan. 26, 1949.
Hair dressing and dandruff remedy. A. J. Krank. 170,193, July 10, 1923. Republished Jan. 25.
Hair tonic. Laboratoire Garnier. 506,112, Jan. 25; Serial No. 499,786.
Insecticides. Strawsons. 67,880, Feb. 25, 1908. Republished Jan. 25.
Insecticides. U. S. Phosphoric Products Corporation. 306,737, Sept. 26, 1933. Republished Jan. 25.
Insecticides and fungicides. The Solvay Process Company. 370,452–3, Aug. 29, 1939. Republished Jan. 25.
Laxative preparation. J. T. Wellington. 99,030, Aug. 11, 1914. Republished Jan. 25.
Malt product, Medicated. The British Drug Houses, Limited. 248,338, renewed Oct. 16, 1948. O. G. Jan. 25.
Materials for coloring low spots on balls or rollers of bearings as a guide for grinding. Thompson Chemical Company. 434,925, Dec. 9, 1947. Republished Jan. 25.
Medicinal preparation. The British Drug Houses, Limited. 249,273, renewed Nov. 13, 1948. O. G. Jan. 25.
Perfume and cologne. R. Lowenbaum Manufacturing Co. 441,911, Jan. 25; Serial No. 506,382, published Oct. 5, 1948.
Perfume, rouge, and dentifrice. C. Hirsch. 441,912, Jan. 25; Serial No. 506,529, published Oct. 5, 1948.
Perfumes, colognes, and toilet waters. Parfums Weil Paris Co. 506,104, Jan. 25; Serial No. 553,735, published Oct. 19, 1948.
Pharmaceutical products, etc. F. Lehnhoff-Wyld. 165,521, renewed Mar. 13, 1943. O. G. Jan. 25.
Preparation for the treatment of textile fibres. Hygrolit Incorporated. 247,396, renewed Sept. 25, 1948. O. G. Jan. 25.
Preparation for treatment of hypochromic anemia. Rare Chemicals, Inc. 505,922, Jan. 25; Serial No. 509,599, published Oct. 5, 1948.
Preparation for use in the treatment of headache, backache, and toothache. Marswell, Incorporated. 249,830. Nov. 20, 1928. Republished Jan. 25.
Remedy, Round worm, chocolate flavored laxative, headache tablets, etc. Furst-McNess Company. 505,939, Jan. 25; Serial No. 522,765, published Oct. 12, 1948.
Salve, Medicinal. Vick Chemical Company. 241,961, renewed May 8, 1948. O. G. Jan. 25.
Sesquicarbonate of soda. The Solvay Process Company. 168,395, May 22, 1923. Republished Jan. 25.
Shampoo. Nopco Chemical Company. 505,913, Jan. 25; Serial No. 476,302, published Oct. 12, 1948.
Shampoo, Soapless. The Andrew Jergens Company. 505,924, Jan. 25; Serial No. 513,286, published Oct. 19, 1948.
Skin cream, skin tonic, muscle oil, etc. Elizabeth Arden, Inc. 252,449, renewed Feb. 5, 1949. O. G. Jan. 25.
Soda ash, crystals of soda, caustic soda, etc. The Solvay Process Company. 88,968, Oct. 29, 1912. Republished Jan. 25.
Soda ash, crystals of soda, caustic soda, etc. The Solvay Process Company. 129,312, Feb. 10, 1920. Republished Jan. 25.
Soda, Caustic. The Solvay Process Company. 375,563, Feb. 20, 1940. Republished Jan. 25.
Soil and grain fumigants. Eston Chemicals, Inc. 505,937, Jan. 25; Serial No. 520,500, published Oct. 19, 1948.
Sulfathiazole-sulfadiazine buffered with sodium citrate. Ames Company, Inc. 506,088, Jan. 25; Serial No. 547,415, published Oct. 19, 1948.
Vaccines, etc., Polygenetic and polyvalent. Compagnie Nationale de Matieres Colorantes & Manufactures de Produits Chimiques du Nord Reunies, Etablissements Kuhlmann. 221,807, renewed Dec. 14, 1946. O. G. Jan. 25.
Vitamin B complex compound in tablet form. Broemmel's Pharmaceuticals. 441,902, Jan. 25; Serial No. 487,980, published Oct. 12, 1948.
Vitamin capsules. J. C. Totzka. 422,017, June 25, 1946. Republished Jan. 25.
Vitamin concentrate. Thompson-Hayward Chemical Company. 428,678, Apr. 1, 1947. Republished Jan. 25.
Vitamin containing solid, High potency. Nopco Chemical Company. 505,931, Jan. 25; Serial No. 518,554, published Oct. 5, 1948.
Vitamin D concentrate. Vitamins, Inc. 506,070, Jan. 25; Serial No. 540,945, published Oct. 5, 1948.
Wetting agents, Organic. Nopco Chemical Company. 505,919, Jan. 25; Serial No. 507,333, published Oct. 5, 1948.

CLASS 7

Venetian blinds. Western (Illinois) Venetian Blind Company. 384,355, Jan. 14, 1941. Republished Jan. 25.

CLASS 9

Explosives. Safety Mining Company. 242,120, May 15, 1928. Republished Jan. 25.
Fertilizers. Planters Cotton Oil & Fertilizer Co. 396,471, July 21, 1942. Republished Jan. 25.

CLASS 11

Carbon paper. Royal Typewriter Company, Inc. 506,090, Jan. 25; Serial No. 547,874, published Oct. 19, 1948.
Carbon paper and typewriter ribbons. W. J. Crowley. 236,154, renewed Dec. 6, 1947. O. G. Jan. 25.
Ink pigments, printing inks and lithographing inks. The Sherwin-Williams Company. 327,698, Sept. 3, 1935. Republisehd Jan. 25.
Typewriter ribbons and carbon paper. Columbia Ribbon & Carbon Manufacturing Company, Inc. 506,067, Jan. 25; Serial No. 540,175, published Oct. 19, 1948.

CLASS 29

CLASS 12

Awnings, Metal. Meta-Fold Awning Company. 305,849, June 16, 1942. Republished Jan. 25.
Cement, Portland, and masons cement. Dewey Portland Cement Company. 506,050, Jan. 25; Serial No. 537,295, published Sept. 14, 1948.
Doors, structural panels, panel stock, etc. Farley & Loetscher Manufacturing Company. 302,732, Apr. 25, 1933. Republished Jan. 25.
Mastic compound for caulking, glazing, pointing, etc. The Tremco Manufacturing Company. 506,051, Jan. 25; Serial No. 537,489, published Sept. 14, 1948.
Plaster. E. D. Coddington Manufacturing Company. 252,039, Jan. 22, 1929. Republished Jan. 25.
Plaster, Colored. National Chemical & Manufacturing Company. 505,974, Jan. 25; Serial No. 529,919, published Sept. 7, 1948.
Sawmill products. Capilano Timber Co. Ltd. 248,144, renewed Oct. 16, 1948. O. G. Jan. 25.

CLASS 13

Bathroom fixtures. J. H. Balmer Co. 505,993, Jan. 25; Serial No. 532,108, published Sept. 28, 1948.
Bracket type supports for clothes hangers. C. J. Patt. 505,947, Jan. 25; Serial No. 526,676, published Oct. 19, 1948.
Fencing, Metal. Jones & Laughlin Steel Corporation. 505,960, Jan. 25; Serial No. 528,481, published Sept. 28, 1948.
Hardware for garage doors of the vertical turn-over type. Richards-Wilcox Manufacturing Company. 505,952, Jan. 25; Serial No. 527,255, published Oct. 19, 1948.
Hardware, Venetian blind. The E. W. Carpenter Manufacturing Company. 505,946, Jan. 25; Serial No. 526,573, published Oct. 5, 1948.
Heel-plates. L. Sacks. 27,975, Mar. 17, 1896. Republished Jan. 25.
Heel plates. L. Sacks. 56,506, Oct. 2, 1906. Republished Jan. 25.
Kitchen appliance in the form of a combination portable drainboard, tray and cover. Cincinnati Iron Fence Co. Inc. 441,923, Jan. 25; Serial No. 517,617, published Oct. 19, 1948.
Lawn sprinklers. Balt-Dart Incorporated. 441,919, Jan. 25; Serial No. 512,482, published Oct. 5, 1948.
Pipe and tubing, Ferrous. Jones & Laughlin Steel Corporation. 505,961, Jan. 25; Serial No. 528,487, published Sept. 28, 1948.
Posts, Metal fence. Inland Steel Company. 505,982, Jan. 25; Serial No. 531,479, published Sept. 28, 1948.
Screens, Well. Edward E. Johnson, Inc. 505,962, Jan. 25; Serial No. 528,573, published Oct. 19, 1948.
Sheet material, Metal and plastic perforated. H. Warp. 505,915, Jan. 25; Serial No. 497,905, published Oct. 5, 1948.
Shower sprays and shower heads, Flexible. F. B. Stannard. 441,929, Jan. 25; Serial No. 520,572, published Oct. 5, 1948.
Steel fittings. Houston Oil Field Material Company, Inc. 432,221, Aug. 26, 1947. Republished Jan. 25.
Track, Metallic sliding door. Richards-Wilcox Manufacturing Company. 505,956, Jan. 25; Serial No. 527,937, published Oct. 19, 1948.
Valves. John L. Moore and Harry C. Moore. 441,914, Jan. 25; Serial No. 508,490, published Oct. 19, 1948.
Valves, Float. F. D. Posada. 441,898, Jan. 25; Serial No. 478,188, published Sept. 28, 1948.
Valves, Globe and angle. The Fairbanks Company. 506,001, Jan. 25; Serial No. 533,288, published Sept. 28, 1948.
Valves, Plumbing and steam-fitting. The Fairbanks Company. 506,013, Jan. 25; Serial No. 533,870, published Oct. 19, 1948.
Valves, Steam and water. The Fairbanks Company. 506,012, Jan. 25; Serial No. 533,868, published Oct. 19, 1948.
Valves, Steam, and water valves. The Fairbanks Company. 506,000, Jan. 25; Serial No. 533,287, published Sept. 28, 1948.
Venetian blinds. Western (Illinois) Venetian Blind Company. 384,335, Jan. 14, 1941. Republished Jan. 25.
Washers, Metallic. Aeroquip Corporation. 441,904, Jan. 25; Serial No. 497,436, published Oct. 5, 1948.
Water closets, tanks, and bowls, Vitreous china. Kokomo Sanitary Pottery Corporation. 505,990–1; Jan. 25; Serial Nos. 532,033–6, published Oct. 19, 1948.

CLASS 14

Electrodes for arc welding stainless and alloy steels. Alloy Rods Company. 506,100, Jan. 25; Serial No. 485,391.

CLASS 15

Oil, Cylinder. Standard Oil Co. 312,707, May 8, 1934. Republished Jan. 25.
Oils and greases, Lubricating, cutting oils, etc. Quaker Chemical Products Corporation. 506,039, Jan. 25; Serial No. 535,873, published Oct. 5, 1948.
Oils, Lubricating. Standard Oil Company. 248,399, renewed Oct. 23, 1948. O. G. Jan. 25.

CLASS 16

Linseed oil. Thomas Hubbuck & Son Limited. 248,531, renewed Oct. 23, 1948. O. G. Jan. 25.
Paint, Flat-finish. The Smith-Alsop Paint & Varnish Company. 249,362, renewed Nov. 13, 1948. O. G. Jan. 25.
Paint, Ready-mixed and paste. The Duquesne Paint Company. 118,009, Aug. 14, 1917. Republished Jan. 25.
Paints, paint enamels, lacquers, etc. The Sherwin-Williams Company. 323,647, Apr. 23, 1935. Republished Jan. 25.
Paints, Ready-mixed. Valentine & Company. 261,568, Sept. 17, 1929. Republished Jan. 25.
Polish. Golden Star Polish Manufacturing Company. 198,680, May 26, 1925. Republished Jan. 25.

CLASS 17

Cigarettes. Christian Peper Tobacco Company. 505,929, Jan. 25; Serial No. 562,178, published Oct. 12, 1948.
Cigars. W. P. Allen. 435,331, Dec. 16, 1947. Republished Jan. 25.
Cigars. Jose Escalante & Co. 505,999, Jan. 25; Serial No. 533,239, published Oct. 12, 1948.
Cigars. Gradlaz, Annis & Co., Inc. 506,075, Jan. 25; Serial No. 542,827, published Oct. 12, 1948.
Cigars. Emil D. Klein Co., Inc. 505,972, Jan. 25; Serial No. 529,774, published Oct. 5, 1948.
Cigars. Emil D. Klein Co., Inc. 505,973, Jan. 25; Serial No. 529,780, published Oct. 5, 1948.
Cigars. Metropolitan Cigar Corporation. 505,989, Jan. 25; Serial No. 531,927, published Oct. 5, 1948.
Cigars and cigarettes. Kuenzle & Streiff. 80,061, Nov. 1, 1910. Republished Jan. 25.
Cigars, cigarettes, and smoking tobacco. John Wagner & Sons. 266,615, Jan. 28, 1930. Republished Jan. 25.
Cigars, smoking tobacco, and cigarettes. John Wagner & Sons. 303,036, May 9, 1933. Republished Jan. 25.
Tobacco, Pipe. F. R. Tripler & Co. Inc. 505,926, Jan. 25; Serial No. 515,640, published Oct. 12, 1948.

CLASS 21

Arc etching machines, Electric. Taylor, Taylor & Hobson, Limited. 506,030, Jan. 25; Serial No. 535,097, published Oct. 5, 1948.
Automotive equipment and accessories. Laher Spring and Tire Corporation. 505,918, Jan. 25; Serial No. 507,263, published Oct. 5, 1948.
Batteries, Storage. Monarch Battery Company, Inc. 506,066, Jan. 25; Serial No. 539,832, published Oct. 5, 1948.
Battery charging and testing apparatus, Combination. The Mercury Battery Charger Co. 441,897, Jan. 25; Serial No. 477,428, published Sept. 28, 1948.
Cable, Electric. The Okonite Company. 506,036, Jan. 25; Serial No. 535,592, published Oct. 5, 1948.
Capacitors and resistors, Combination. Jeffers Electronics, Inc. 506,086, Jan. 25; Serial No. 546,195, published Oct. 12, 1948.
Capacitors, Electrical. Cornell-Dubilier Electric Corporation. 506,083, Jan. 25; Serial No. 544,855, published Sept. 28, 1948.
Connecting and terminating devices or sleeves for wires and cables. The National Telephone Supply Company. 505,917, Jan. 25; Serial No. 505,611, published Oct. 5, 1948.
Contacts for electrical switches. Bulldog Electric Products Company. 392,800, Jan. 13, 1942. Republished Jan. 25.
Electric contacts. P. R. Mallory & Co., Inc. 401,580, May 25, 1943. Republished Jan. 25.
Electric equipment and parts therefor, etc. J. H. Cannon. 505,927–8, Jan. 25; Serial Nos. 516,458–9, published Oct. 5, 1948.
Electric fans, electric motors, electric generator sets, etc. Marathon Electric Manufacturing Company. 247,346, renewed Sept. 25, 1948. O. G. Jan. 25.
Electric motors, generators, rotary converters, etc. The Louis Allis Company. 180,349, Feb. 26, 1924. Republished Jan. 25.
Electric motors, generators, rotary converters, etc. The Louis Allis Company. 183,269, Apr. 29, 1924. Republished Jan. 25.
Electric motors, generators, rotary converters, etc. The Louis Allis Company. 191,628, Nov. 11, 1924. Republished Jan. 25.
Electrical apparatus and supplies for electric conductors. The Ohio Brass Company. 505,941, Jan. 25; Serial No. 522,914, published Sept. 14, 1948.
Electrical appliances. Bersted Manufacturing Company. 505,936, Jan. 25; Serial No. 519,721, published Oct. 5, 1948.
Electrical elements, Replacement. The Hartford Element Company. 441,903, Jan. 25; Serial No. 496,380, published Sept. 28, 1948.
Fire detecting and fire alarm apparatus, Temperature controlled electrically actuated. J. H. Scharff, Inc. 505,968, Jan. 25; Serial No. 529,205, published Sept. 28, 1948.
Frequency converters, Electrical static. Lorain Products Corporation. 506,054, Jan. 25; Serial No. 537,909, published Oct. 5, 1948.
Generators, Electric, electric welding generators, electric welding transformers, etc. Harnischefeger Corporation. 505,930, Jan. 25; Serial No. 518,221, published Sept. 28, 1948.

Heaters, Electrical water. The De Laval Separator Company. 441,926, Jan. 25; Serial No. 519,381, published Sept. 28, 1948.
Heating and cooking apparatus, Electrical. Therma Fabrik Für elektrische Heizung A. G. 242,260, renewed May 22, 1948. O. G. Jan. 25.
Heating units, Electric, and electric heaters. Edwin L. Weigand Company. 505,955, Jan. 25; Serial No. 527,709, published Oct. 5, 1948.
Irons, Steam electric. Dry Cleaning Machinery Corporation. 505,940, Jan. 25; Serial No. 522,787, published Oct. 5, 1948.
Lamps, Arc. The Strong Electric Corporation. 506,085, Jan. 25; Serial No. 545,596, published Oct. 12, 1948.
Lamps, Electric. L. Rosenfeld & Co., Inc. 506,120, Jan. 25; Serial No. 518,253.
Roasters and cookers, Electric food, electric water heaters, etc. The Swartzbaugh Manufacturing Company. 505,925, Jan. 25; Serial No. 514,510, published Sept. 28, 1948.
Shades for electric lamps. Sher-Bair Lamp Shade Co. 441,940, Jan. 25; Serial No. 525,959, published Sept. 28, 1948.
Spark plugs. Lodge Plugs Limited. 506,072, Jan. 25; Serial No. 542,474, published Oct. 5, 1948.
Speaker systems. Altec Lansing Corporation. 505,938, Jan. 25; Serial No. 520,598, published Oct. 5, 1948.
Storage batteries. Solar Corporation. 505,971, Jan. 25; Serial No. 529,414, published Oct. 5, 1948.
Transmitters and recorders, etc. Finch Telecommunications, Inc. 441,916, Jan. 25; Serial No. 511,677, published Aug. 17, 1948.
Tray wheeled conveyors or trucks, and electrically heated food wheeled conveyors or trucks, Electrically heated food. The Merriam Company, Inc. 506,042, Jan. 25; Serial No. 536,411, published Sept. 28, 1948.

CLASS 22

Spinners, Trolling. L. M. Davis. 355,751, Mar. 29, 1938. Republished Jan. 25.

CLASS 23

Extractors, Fruit juice. National Die Casting Company. 505,951, Jan. 25; Serial No. 527,226, published Sept. 28, 1948.
Jacks, Mine or timber. E. S. Fields. 422,194, July 9, 1946. Republished Jan. 25.
Reamers, pistons, piston pins, etc. L. O. Beard Tool Company. 362,136, Nov. 15, 1938. Republished Jan. 25.
Road-grading machines, rock crushers, elevators, etc. American Road Machinery Company, Inc. 215,404, July 20, 1926. Republished Jan. 25.
Rollers, Printers', composition coated rollers, offset and lithograph rollers, etc. Rapid Roller Co. 299,303, Nov. 29, 1932. Republished Jan. 25.
Rolling mills, chilled-iron rolls, gray-iron rolls, etc. Farrel-Birmingham Company, Incorporated. 245,978, Aug. 28, 1928. Republished Jan. 25.
Saws, Circular, band saws, rip and panel saws, etc. E. C. Atkins and Company. 230,153, July 12, 1927. Republished Jan. 25.
Scissors. Perfecut Scissors Co. 430,282, June 10, 1947. Republished Jan. 25.
Tenderizing machines, Meat. A. L. Jackson. 505,916, Jan. 25; Serial No. 500,221, published Sept. 28, 1948.
Tools and parts thereof, Oil well. Houston Oil Field Material Company, Inc. 428,094, Mar. 11, 1947. Republished Jan. 25.
Tools for fitting saws. E. C. Atkins and Company. 64,334, Aug. 6, 1907. Republished Jan. 25.
Tools, Hand. The Billings & Spencer Company. 248,759, Oct. 30, 1928. Republished Jan. 25.
Wheeled attachments, Adjustable. Minneapolis-Moline Power Implement Company. 505,958, Jan. 25; Serial No. 528,360, published Sept. 28, 1948.

CLASS 26

Optical instruments, lenses, and optical products. L. H. Scadron. 252,728, renewed Feb. 12, 1949. O. G. Jan. 25.

CLASS 27

Horological instruments. Ed. Huer & Co. Jules Jurgensen Watch Co. 285,956, Aug. 11, 1931. Republished Jan. 25.
Watches and parts of watches. Fabriques Movado. 251,736, renewed Jan. 15, 1949. O. G. Jan. 25.
Watches and watches and attached bracelets. Benrus Watch Company, Inc. 370,243, Aug. 22, 1939. Republished Jan. 25.

CLASS 28

Jewelry. Sheffield, Inc. 506,023, Jan. 25; Serial No. 534,477, published Oct. 12, 1948.
Rings, Finger. Goodman and Company. 386,831, Apr. 22, 1941. Republished Jan. 25.
Rings, Finger, necklaces, bracelets, etc. Goodman and Company. 393,532, Feb. 17, 1942. Republished Jan. 25.
Rings, Finger, necklaces, bracelets, etc. Goodman and Company. 397,240, Aug. 25, 1942. Republished Jan. 25.

CLASS 29

Brooms. Atlantic Southwestern Broom Company. 431,452, July 22, 1947. Republished Jan. 25.

Bennett, Robert M., Birmingham Township, Chester County, Pa., assignor to General Electric Company. Circuit interrupter. 2,460,118, Jan. 25.
Berggren, George E., Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y. Electrical brazing of conductors. 2,459,863, Jan. 25.
Bergmann, Richard F., Winnetka, Ill., assignor to Industrial Rayon Corporation, Cleveland, Ohio. Shaft coupling. 2,460,249, Jan. 25.
Betz, W. H. and L. D., assignees: *See*—
Kahler, Harry L.
Bickley, Everett H., Bala-Cynwyd, Pa. Positioning objects for automatic color sorting. 2,460,212, Jan. 25.
Bigelo-Lipstak Corporation, assignee: *See*—
Werner, Nels E.
Billisly, Julius P., Baton Rouge, La., assignor to Standard Oil Development Company. Mixed silica-alumina, silica-magnesia catalyst. 2,459,987, Jan. 25.
Billeter, Jean R.: *See*—
Miescher, Karl, Heer, and Billeter.
Binns, Geoffrey L.: *See*—
Lacey, Charles W. G., and Binns.
Bishop, Richard: *See*—
Graves, Orman L., and Bishop.
Bissett, Norman T., Reading, and N. C. Moore, Haverbille, Mass., assignors to Western Electric Company, Incorporated, New York, N. Y. Strap cutting tool. 2,459,864, Jan. 25.
Blattner, Emil H.: *See*—
Barrows, Donald S., and Blattner.
Blewett, John P., and R. V. Langmuir, Schenectady, N. Y., assignors to General Electric Company. Magnetron. 2,460,119, Jan. 25.

Bloom, Mortimer C., Newton Highlands, Mass., assignor, by mesne assignments, to Federal Telephone and Radio Corporation, New York, N. Y. Metal rectifier bridge. 2,459,787, Jan. 25.
Boadle Ronald D. assignor to Amalgamated Wireless (Australasia) Limited, Sydney, New South Wales, Australia. Radio-frequency oscillator power supply circuits. 2,459,988, Jan. 25.
Bobek, William J., and F. W. Wohlfield, Detroit, assignors to Ford Motor Company, Dearborn, Mich. Spring holding attachment for automobiles. 2,459,989, Jan. 25.
Boehme, Werner R.: *See*—
  Huber, Wolfgang, and Boehme.
Carlsen, Alf G., Tacoma, Wash. Concrete block making
Boeing Airplane Company, assignee: *See*—
  Haberlin, John F.
  Wells, Edward C.
Bondley, Ralph J., Scotia, N. Y., assignor to General Electric Company. Electrode structure for electric discharge devices. 2,460,120, Jan. 25.
Bonner, Walter F., Glen Ridge, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Full-wave rectifier in glass or other insulating container. 2,459,788, Jan. 25.
Borg, George W., Corporation, assignee: *See*—
  Fink, Jean.
Bossard, Werner, assignor to the firm J. R. Geigy A. B., Basel, Switzerland. Metallisable tetrakisago dye. 2,459,913, Jan. 25.
Bourne, Sarah E., Mount Rainer, Md. Shopper's combination carrier and conveyance. 2,459,865, Jan. 25.
Bowen, Ira S., Pasadena, Calif., assignor to the United States of America as represented by the Secretary of the Navy. Projectile flight recording multiple exposure camera. 2,460,163, Jan. 25.
Brandt, Allen J., assignee: *See*—
  McGuiness, Michael F.
Brayshaw, Ernest E., Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation. Straightening apparatus. 2,460,164, Jan. 25.
Breese Burners, Inc., assignee: *See*—
  Huston, Milton D.
  Huston, Milton D., and Hayter.
Brennan, Joseph H.: *See*—
  Burwell, Blair, and Brennan.
Brielmaier, Aloysius J., assignor to Water Hammer Arrester Corp., Milwaukee, Wis. Water-hammer arrester. 2,460,121, Jan. 25.
Briggs, Thomas H., Jr., Norristown, assignor to Superior Tube Company, Philadelphia, Pa. Electrode construction for neon signs. 2,459,789, Jan. 25.
Britton, Karl B., Cleveland, Ohio, assignor to Bendix Aviation Corporation, South Bend, Ind. Indicating ice on aircraft surfaces. 2,460,165, Jan. 25.
Brock, Irvin A., assignee: *See*—
  Hill, Glenn.
Brodeur, Robert M., assignor to Parker Manufacturing Company, Worcester, Mass. Hydraulic power apparatus. 2,460,058, Jan. 25.
Brooke, Frank W., Pittsburgh, Pa. Track joint lubrication. 2,459,990, Jan. 25.
Brooks, Gaius Fabius: *See*—
  Woodbury, Charles H., and Brooks.
Brown, Harold J., and J. A. Mas, Indianapolis, Ind., assignors to Electronic Laboratories, Inc. Vibrator circuit. 2,459,866, Jan. 25.
Brown, Louis B., Duquesne, Pa. Chuck reconditioning device. 2,459,914, Jan. 25.
Bruker, Hobart W., assignor to George W. Swift, Jr., Inc., Bordentown, N. J. Siphon apparatus for heated rolls. 2,460,059, Jan. 25.
Brun, Marcel, Saint-Etienne, France. Cycle bell. 2,460,166, Jan. 25.
Brunne, Alwin E., assignor of twenty per cent to H. M. Sherman, Toronto, Ontario, Canada. Conveyer for dehydrating machines. 2,459,915, Jan. 25.
Buchanan, Russell B., Lynbrook, assignor t Bell Telephone Laboratories, Incorporated, New York N. Y. Gunnery training device. 2,459,867, Jan. 25.
Bunting Glider Company, assignee: *See*—
  Roth, Andrew.
Burgess, Everett H.: *See*—
  Lehane, Timothy J., and Burgess.
Burks, Arthur W., Decatur, Ill. Pump. 2,460,122, Jan. 25.
Burndy Engineering Company, Inc., assignee: *See*—
  Matthysse, Irving F.
Burwell, Blair, Grand Junction, Colo., and J. H. Brennan, Niagara Falls, N. Y., assignors to United States Vanadium Corporation. Recovering tungsten values from ore. 2,459,868, Jan. 25.
Busignies, Henri G., Forest Hills, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Indicating cathode-ray tube. 2,459,790, Jan. 25.
Butler, Donald L., Saint John's, Newfoundland. Negative carrier with density comparison scale. 2,460,060, Jan. 25.
Byrns, Alva C., Los Altos, Calif., and G. von Stroh, Coatesville, Pa., assignors to The Permanente Metals Corporation, Oakland, Calif. Vulcanisation of butadiene-styrene rubbery copolymer. 2,459,916, Jan. 25.
Cahill, William J., Merion, Pa., assignor to Carrier Corporation, Syracuse, N. Y. Peening machine. 2,460,123, Jan. 25.
Canadian Industries Limited, assignee: *See*—
  Segall, Gordon H.
Capdevielle, Clarence C., New York, N. Y. Making sirup. 2,459,991, Jan. 25.
Capps, Harold O., Houston, Tex. Pattern board. 2,460,213, Jan. 25.
Carlile, Alfred E., Great Neck, N. Y., assignor to Talon, Inc. End stop for slide fasteners. 2,460,124, Jan. 25. machine. 2,460,167, Jan. 25.
Carnegie-Illinois Steel Corporation, assignee: *See*—
  Brayshaw, Ernest E.
Carrier Corporation, assignee: *See*—
  Cahill, William J.
Carrington, Blake W., assignor to The General Industries Company, Elyria, Ohio. Speed regulating motor drive. 2,459,917, Jan. 25.
Carroll, Frank L., North Hollywood, Calif. Folding charcoal cooking grill. 2,460,125, Jan. 25.
Carter, Sidney T., assignor to Economic Machinery Company, Worcester, Mass. Safety device for labeling machines. 2,460,214, Jan. 25.
Caserta, Michele, Detroit, Mich. Making a diaphragm. 2,460,168, Jan. 25.
Celanese Corporation of America, assignee: *See*—
  Dreyfus, Camille, Andersen, and Kojevnikoff.
Chain Belt Company, assignee: *See*—
  Smith, Horace L., Jr.
Chaney Manufacturing Company, The, assignee: *See*—
  Welch, William E.
Chapin, Reynold S., Flushing, assignor to Press Wireless, Inc., New York, N. Y. Keying control system. 2,460,061, Jan. 25.
Charton, Paul W., Montclair, N. J., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Grid controlled electron tube. 2,460,062, Jan. 25.
Chase, Earle M., Springfield, assignor to Porter-McLeod Machine Tool Co., Inc., Hatfield, Mass. Abrasive apparatus. 2,460,250, Jan. 25.
Chase, Kenneth J., Wilmington, Mass. Telltale for frozen food packages. 2,460,215, Jan. 25.
Chester, Carroll W., Los Angeles, Calif. Size adaption for automobile exhaust pipe extensions and the like. 2,459,918, Jan. 25.
Chevigny, Paul G., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Beam type electron discharge device. 2,459,792, Jan. 25.
Chevigny, Paul G., New York, N. Y., and C. M. Wheeler, Montclair, assignors to Federal Telephone and Radio Corporation, Newark, N. J. Vacuum tube. 2,459,791, Jan. 25.
Chicago Bridge & Iron Company, assignee: *See*—
  Lebedeff, Michael N.
Chiksan Company, assignee: *See*—
  Warren, Doyle C.
Chodroff, Saul: *See*—
  Pickel, Frank D., Fass, and Chodroff.
Christensen, Carl J., Summit, and A. C. Walker, Short Hills, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Crystal growing apparatus. 2,459,869, Jan. 25.
Churchill, Harold E., assignor to The Studebaker Corporation, South Bend, Ind. Transmission. 2,459,793, Jan. 25.
Ciba Limited, assignee: *See*—
  Holbro, Theodor, Kern, and Sutter.
Ciba Pharmaceutical Products, Inc., assignee: *See*—
  Miescher, Karl.
  Miescher, Karl, and Anner.
  Miescher, Karl, Heer, and Billeter.
Cimino, Thomas D., New Kensington, Pa. Sleevelet purse. 2,459,992, Jan. 25.
Cincinnati Milling Machine Co., The, assignee: *See*—
  Hassman, Fred A., and Ernst.
  Vancil, Edgar D., and Hassman.
  Martellotti, Mario E.
Clark, Edwin L.: *See*—
  Wright, Antony, and Clark.
Clark, Frank M., Pittsfield, Mass., assignor to General Electric Company. Insulating and dielectric compositions. 2,460,126, Jan. 25.
Clark, John A., Harrow, England. Door locking means. 2,459,920, Jan. 25.
Clark, Kendall, Oakwood, assignor to General Motors Corporation, Dayton, Ohio. Bomb sight. 2,459,919, Jan 25.
Clark, Lester B., assignee: *See*—
  Knott, Walter L.
Clifton Products, Inc., assignee: *See*—
  Schormuller, Anton.
Cloud, Robert W.: *See*—
  Trump, John G., and Cloud.
Cole, Edward J., Peekskill, N. Y. Spring motor. 2,459,871, Jan. 25.
Cole, James D., Park Ridge, Ill. Electric motor. 2,460,063, Jan. 25.
Collins, Henry M.: *See*—
  Morrison, George O., Shaw, Mercier, and Collins.

Combs, Edward E., Long Branch, N. J. Spherical coil for variometers. 2,459,794, Jan. 25.
Comer, Burt, assignor of one-third to P. F. Comer and one-third to J. B. Comer, Wichita, Kans. Bottle carrier 2,459,921, Jan. 25.
Comer, Jerry B., assignee: *See*—
  Comer, Burt.
Comer, P. F., assignee: *See*—
  Comer, Burt.
Commercial Solvents Corporation, assignee: *See*—
  O'Kane, Walter C., and Morey.
Compagnie Generale D'Electricite, assignee: *See*—
  Hurault, Jean L.
Continental Oil Company, assignee: *See*—
  Richardson, Vernon E.
Cook, Everett J., assignor to Cook Research Laboratory, Inc., Toledo, Ohio. Differential lock. 2,459,870, Jan. 25.
Cook Research Laboratory, Inc., assignee: *See*—
  Cook, Everett J.
Corrigan, John R.: *See*—
  Moore, Maurice L., and Corrigan.
Cottrell, C. B., & Sons Company, assignee: *See*—
  Meyer, Joseph E.
Courtaulds Limited, assignee: *See*—
  Millidge, Alfred F., and Knight.
Cox, Frank E., Brooklyn, N. Y. Coupling for round pipes and tubes. 2,459,872, Jan. 25.
Crafts, Curtis S., Oak Park, Ill., assignor to Goss Printing Press Company. Liquid feed control, particularly for the ink feed of printing presses. 2,459,922, Jan. 25.
Crain, Darrell C., Washington, D. C. Fountain pen. 2,459,993, Jan. 25.
Crompton, George, Jr., Framingham, assignor to Norton Company, Worcester, Mass. Truing apparatus for centerless machines. 2,459,923, Jan. 25.
Culhane, Edward A., deceased, Danbury, Conn., by J. M. Culhane, executor, Bridgeport, and D. D. Wilson, Danbury, Conn., assignors to John B. Stetson Company, Philadelphia, Pa. Machine for carroting loose fur. 2,459,924, Jan. 25.
Culhane, James M., executor: *See*—
  Culhane, Edward A., and Wilson.
Curteman, Wallas D., Kansas City, Mo. Impression instrument. 2,459,925, Jan. 25.
Curtis, Austen M., South Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Motor control circuit. 2,460,064, Jan. 25.
Curtis, William H., Pass Christian, Miss. Reading stand. 2,459,873, Jan. 25.
Cutler-Hammer, Inc., assignee: *See*—
  Robbins, Clyde F.
  Seeger, Edwin W.
D'Alberto, Benedetto, Brooklyn, N. Y. Hair clip. 2,459,926, Jan. 25.
Dalkin, A. Company, assignee: *See*—
  Yuza, Rudolph.
Dalton, Donald A., assignor to The Dalton Foundries, Incorporated, Warsaw, Ind. Disconnectible universal joint. 2,460,216, Jan. 25.
Dalton Foundries, Inc., The, assignee: *See*—
  Dalton, Donald A.
Davis, Paul B., assignor to The Davison Chemical Corporation, Baltimore, Md. Cobalt sulfate relative humidity indicators. 2,460,065, Jan. 25.
Davis, Paul B., assignor to The Davison Chemical Corporation, Baltimore, Md. Cobalt sulfate relative humidity indicators. 2,460,066, Jan. 25.
Davis, Paul B., assignor to The Davison Chemical Corporation, Baltimore, Md. Copper bromide relative humidity indicators. 2,460,067, Jan. 25.
Davis, Paul B., assignor to The Davison Chemical Corporation, Baltimore, Md. Cobalt bromide relative humidity indicators. 2,460,068, Jan. 25.
Davis, Paul B., assignor to The Davison Chemical Corporation, Baltimore, Md. Cobalt bromide relative humidity indicators. 2,460,069, Jan. 25.
Davis, Paul B., assignor to The Davison Chemical Corporation, Baltimore, Md. Cobalt phosphate relative humidity indicators. 2,460,070, Jan. 25.
Davis, Paul B., assignor to The Davison Chemical Corporation, Baltimore, Md. Cobalt chloride relative humidity indicators. 2,460,071, Jan. 25.
Davis, Paul B., assignor to The Davison Chemical Corporation, Baltimore, Md. Copper chloride relative humidity indicators. 2,460,072, Jan. 25.
Davis, Paul B., assignor to The Davison Chemical Corporation, Baltimore, Md. Cobalt iodide relative humidity indicators. 2,460,073, Jan. 25.
Davis, Paul B., assignor to The Davison Chemical Corporation, Baltimore, Md. Cobalt thiocyanate relative humidity indicators. 2,460,074, Jan. 25.
Davison Chemical Corporation, The, assignee: *See*—
  Davis, Paul B.
Dawson, John W., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Method and apparatus for electric welding. 2,459,795, Jan. 25.
Dawson, John W., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Welding system. 2,459,796, Jan. 25.
Deere, John, Lindeman Company, assignee: *See*—
  Lindeman, Jesse G.
Deerfield, Fred W., Baltimore, Md. Washing tank for photographic films. 2,460,217, Jan. 25.
De Groote, Melvin, University City, and B. Keiser, Webster Groves, Mo., assignors to Petrolite Corporation, Ltd., Wilmington, Del. Quaternary ammonium compounds. 2,459,994, Jan. 25.
De Havilland Aircraft Company, The, assignee: *See*—
  Halford, Frank B.
Den, Frank, New York, N. Y. Steering wheel for motor vehicles. 2,459,797, Jan. 25.
D'Entremont, Franklin R.: *See*—
  Pfuntner, Richard A., and D'Entremont.
Detroit Lubricator Company, assignee: *See*—
  Von Wangenheim, Adolf.
Dettman, Maxwell C., Brooklyn, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Signal translator blocking circuit. 2,459,798, Jan. 25.
Diaz, Mary L., administratrix: *See*—
  Diaz, Pascual M.
Diaz, Pascual M., deceased, San Antonio, Tex.; M. L. Diaz, administratrix. Variable capacity rotary pump. 2,460,251, Jan. 25.
Dickieson, Alton C., Mountain Lake, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Transmission control system. 2,460,075, Jan. 25.
Doerr, Raymond S.: *See*—
  Stinchcomb, Loid M., and Doerr.
Dow Chemical Company, The, assignee: *See*—
  Hansen, John N.
Doyle, William T., Albertson, N. Y., and E. R. Baker, Delta, Colo. Spurious response computer. 2,459,799, Jan. 25.
Dresser Industries, Inc., assignee: *See*—
  Risley, Roger E.
Dreyfus, Camille, New York, N. Y., B. Andersen, Maplewood, N. J., and N. N. Kojevnikoff, New York, N. Y., assignors to Celanese Corporation of America. Process of manufacturing regenerated cellulose sheet material. 2,459,927, Jan. 25.
Duncan Foundry and Machine Works, Inc., assignee: *See*—
  Duncan, William M.
Duncan, Gordon W., Westfield, and J. C. Zimmer, Union, N. J., assignors to Standard Oil Development Company. Producing hydrocarbon oil concentrates of metal sulfonates. 2,459,995, Jan. 25.
Duncan, Thomas P., Jr., Newport News, Va. Golf club grip. 2,459,996, Jan. 25.
Duncan, William M., assignor to Duncan Foundry and Machine Works, Inc., Alton, Ill. Foundry flask. 2,460,218, Jan. 25.
Du Pont, E. I., de Nemours & Company, assignee: *See*—
  Fay, Robert E., Jr.
  Harbaugh, Max L.
  McGrew, Frank C., and Sharkey.
  Richards, Lawrence M.
  Wentz, William M.
Du Rose, Arthur H., Euclid, and J. D. Little, Lakewood, assignors to The Harshaw Chemical Company, Elyria, Ohio. Lead-tin alloy plating. 2,460,252, Jan. 25.
Eastwood, Sylvander C., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. High-temperature hydrocarbon conversion process. 2,460,219, Jan. 25.
Economic Machinery Company, assignee: *See*—
  Carter, Sidney T.
Edison Products Corp., assignee: *See*—
  Himmel, Martin M.
Edison, Thomas A., Incorporated, assignee: *See*—
  Furn, Hans H.
Edwards, Donald V., Montclair, and E. K. Smith, West Orange, assignors to Electrons, Incorporated, Newark, N. J. Partially indirectly heated cathode structure for gas tubes. 2,459,997, Jan. 25.
Edwards, James R., Cincinnati, assignor to The Kroger Grocery & Baking Company, Hamilton County, Ohio. Sign holder with base and standard. 2,459,928, Jan. 25.
Electric Controller & Manufacturing Company, The, assignee: *See*—
  Myles, Asa H., and Prottengeier.
Electronic Laboratories, Inc., assignee: *See*—
  Brown, Harold J., and Mas.
Electrons, Incorporated, assignee: *See*—
  Edwards, Donald V., and Smith.
Elliott, Edward O., Jenkintown, Pa. Locomotive cylinder and frame. 2,459,929, Jan. 25.

Gibson, Percy O., Kokomo, Ind. Adjustable time interval control device. 2,459,876, Jan. 25.
Gillis, Randall, Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for making multiply cable sheaths. 2,459,877, Jan. 25.
Godwin, William S., Baltimore, Md. Dowel supporting assembly. 2,460,172, Jan. 25.
Goldstein, Charlotte, New York, N. Y., assignor to Laurel Fashions, Inc. Lady's dress garment. 2,460,253, Jan. 25.
Gomersall, John R., assignor to McGraw Electric Company, Elgin, Ill. Electric egg baker. 2,459,933, Jan. 25.
Good, John N., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Plural engine control system. 2,459,878, Jan. 25.
Goodchild, David C., London, England. Epicyclic change-speed gear. 2,460,081, Jan. 25.
Goodrich, B. F., Company, The, assignee: *See*—
Hasselquist, Victor H.
Gordon, Joseph M., assignor to R. T. Moloney, Chicago, Ill. Luminescent amusement device. 2,460,221, Jan. 25.
Gorham, John E., Spring Lake, and I. Sager, Deal, N. J. High-power pulse generator. 2,459,809, Jan. 25.
Goss Printing Press Company, assignee: *See*—
Crafts, Curtis S.
Grant, Alan S.: *See*—
Smyth, Charles N., and Grant.
Graves, Orman L., Santa Clara, and R. Bishop, Palo Alto, Calif. Dew-point indicator. 2,459,810, Jan. 25.
Gray, Norman A., assignor to Schick Incorporated, Stamford, Conn. Electric cord reel. 2,460,082, Jan. 25.
Green, Samuel S., and D. Keene, Los Angeles, Calif. Carbonating apparatus. 2,460,004, Jan. 25.
Greenleaf, Carroll V., assignor of one-half to J. I. Greenleaf, Edmonds, Wash. Animated decoy duck. 2,460,128, Jan. 25.
Greenleaf, James I., assignee: *See*—
Greenleaf, Carroll V.
Greer, Edwin D., Jr., assignor to United Engineering & Foundry Company, Pittsburgh, Pa. Universal gripper head. 2,460,254, Jan. 25.
Grey, Ralph E.: *See*—
Gavin, Edward M., Grey, Aspelin, and Tate.
Grieg, Donald D., Forest Hills, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Radio identifying system. 2,459,811, Jan. 25.
Griffiths, Thomas W., Newark, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Welding apparatus. 2,459,812, Jan. 25.
Grimmel, Harry W., and L. Richter, Easton, Pa., assignors to General Aniline & Film Corporation, New York, N. Y. Monoazo chromium complex. 2,459,813, Jan. 25.
Gruen, Henry, New York, N. Y. Plumbing fixture. 2,460,005, Jan. 25.
H-P-M Development Corporation, assignee: *See*—
Lindsey, Robert J.
Tucker, Warren R.
Haberlin, John F., Seattle, Wash., assignor to Boeing Airplane Company. Ammunition box. 2,459,934, Jan. 25.
Hadley Company, Inc., The, assignee: *See*—
Johnson, Sylvester A.
Hahne, Max, New York, N. Y. Narrow ware loom. 2,459,814, Jan. 25.
Halbing, Anthony T., Waterbury, Conn. Square lamp guard. 2,460,173, Jan. 25.
Halford, Frank B., assignor to The De Havilland Aircraft Company, Limited, Edgware, England. Jet propulsion plant. 2,459,935, Jan. 25.

Hall, Walter S., Jr., Los Angeles, Calif., assignor to the United States of America as represented by the Secretary of the Navy. Traveling nut limit stop. 2,460,222, Jan. 25.
Hammell, Kemper M., Bloomington, Ill., assignor to Eureka Williams Corporation, Detroit, Mich. Automatic air shutoff and draft control for oil burners. 2,459,815, Jan. 25.
Handley Brown Heater Company, assignee: *See*—
Handley, Harold E.
Handley, Harold E., assignor to Handley Brown Heater Company, Jackson, Mich. Water heater conversion unit. 2,459,816, Jan. 25.
Hannum, Clement E., Chicago, Ill. Camera with varisize focal plane aperture. 2,460,174, Jan. 25.
Hansen, John N., Albert Lea, Minn., assignor to The Dow Chemical Company, Midland, Mich. Sulfonium methosulfates. 2,460,223, Jan. 25.
Hansen, Klaus L., Milwaukee, Wis. Rectifier and transformer unit. 2,460,006, Jan. 25.
Hanson, Frank E.: *See*—
Richa, John H., and Hanson.
Harbaugh, Max L., Cleveland, Ohio, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Reaction tank with flaker. 2,460,083, Jan. 25.
Hardwick, Christopher L., Cleveland, Tenn. Clamping means. 2,459,879, Jan. 25.
Harris, Stanton A., Westfield, and G. E. Arth, assignors to Merck & Co., Inc., Rahway, N. J. 2-(4′ carboxybutyl)-3:4-di (acylamido)-4:5 dihydrothiophene and its esters. 2,459,817, Jan. 25.
Harris, Stanton A., Westfield, and K. Folkers, Plainfield, assignors to Merck & Co., Inc., Rahway, N. J. Biotin intermediate. 2,460,224, Jan. 25.
Harris, Stanton A., Westfield, and K. Folkers, Plainfield, assignors to Merck & Co., Inc., Rahway, N. J. Biotin intermediate. 2,460,225, Jan. 25.
Harris, Stanton A., Westfield, and G. E. Arth, assignors to Merck & Co., Inc., Rahway, N. J. Biotin intermediate. 2,460,226, Jan. 25.
Harshaw Chemical Company, The, assignee: *See*—
Durrose, Arthur H., and Little.
Hart, James A., L. N. Hollis, and J. W. Randolph, Hammond, Ind., assignors to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Extraction of elemental sulfur from oils. 2,460,227, Jan. 25.
Hartford National Bank & Trust Company, The, assignee, as trustees: *See*—
Pye, Charles R.
Van der Heem, Jan.
Harvel Corporation, The, assignee: *See*—
Harvey, Mortimer T.
Harvey, Mortimer T., South Orange, N. J., assignor to The Harvel Corporation. Allyl ether of anacardic materials, bodied products thereof, and novel compositions and friction elements produced therewith. 2,460,255, Jan. 25.
Harvey, Mortimer T., South Orange, N. J., assignor to The Harvel Corporation. Reaction products of an aldehyde with allyl ether of anacardic material. 2,460,256, Jan. 25.
Hasler, Robert H., Old Westbury, and H. P. Stevens, Oyster Bay, assignors to The Hasler Stevens Corporation, Mineola, N. Y. Rotary valve for internal-combustion engines. 2,459,936, Jan. 25.
Hasler Stevens Corporation, The, assignee: *See*—
Hasler, Robert H., and Stevens.
Stevens, Harry P.
Hasselquist, Victor H., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Sheet gripping and pulling tool. 2,460,007, Jan. 25.
Hassman, Fred A.: *See*—
Vancil, Edgar D., and Hassman.
Hassman, Fred A., and H. Ernst, assignors to The Cincinnati Milling Machine Co., Cincinnati, Ohio. Hydraulic control system. 2,459,937, Jan. 25.
Hayter, Bruce: *See*—
Huston, Milton D., and Hayter.
Hazeltine Research, Inc., assignee: *See*—
Hergenrother, Rudolf C.
Tyson, Benjamin F.
Hebo, Halfdan, New York, N. Y. Filter. 2,460,084, Jan. 25.
Hedges, Harry O., Philadelphia, Pa., assignor to Hedges Motor Company, Seattle, Wash. Internal-combustion engine. 2,460,257, Jan. 25.
Hedges Motor Company, assignee: *See*—
Hedges, Harry O.
Heer, Jules: *See*—
Miescher, Karl, Heer, and Billeter.
Heise, George W.: *See*—
Winslow, Nathaniel M., and Heise.
Heller, Oswald, assignor to Bamag, Limited, London, England. Concurrent flow drier with rotor, stationary casing, and terminal separation means for drying materials and drying fluid. 2,460,008, Jan. 25.
Henderson, Lloyd F., Reading, assignor to Lever Brothers Company, Cambridge, Mass. Soap product containing guanidine stearate. 2,459,818, Jan. 25.
Hergenrother, Rudolf C., Beechhurst, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Ionic vacuum pump. 2,460,175, Jan. 25.
Héritier, Henri, Geneva, Switzerland. Clamp for rods and tubular members. 2,460,176, Jan. 25.

Hess, Frederic O., assignor to Selas Corporation of America, Philadelphia, Pa. Method of and apparatus for heat-treating. 2,460,085, Jan. 25.
Hess, Frederic O., assignor to Selas Corporation of America, Philadelphia, Pa. Heat-treating. 2,460,086, Jan. 25.
Higgins, Harold T., Boston, Mass. Safety control device for motor vehicles. 2,459,938, Jan. 25.
Hill, Glenn, assignor to I. A. Brock, Los Angeles, Calif. Bed-rail extension. 2,459,880, Jan. 25.
Hill, Irving and J. D., assignors to The Lawrence Paper Company, Lawrence, Kans. Container. 2,459,939, Jan. 25.
Hill, Justin D.: *See*—
Hill, Irving and J. D.
Himmel, Martin M., assignor to Edison Products Corp., New York, N. Y. Partition device for cooking pots. 2,459,940, Jan. 25.
Hoage, Clyde C., St. Paul, Minn. Weedless fish lure. 2,459,819, Jan. 25.
Hoffman, Max, Roxbury, Mass. Buckle. 2,460,228, Jan. 25.
Holbro, Theodor, Basel, W. Kern, Sissach, and P. Sutter, Basel, Switzerland, assignors to Ciba Limited. Anthraquinone vat dyestuffs. 2,459,941, Jan. 25.
Hollis, Gilbert, assignor to S. G. Young, London, England. Snap-action electric switch. 2,460,087, Jan. 25.
Hollis, Louis N.: *See*—
Hart, James A., Hollis, and Randolph.
Holophane Company, Inc., assignee: *See*—
Tuck, Davis H.
Howland, Louis H., Waterbury, Conn., assignor to United States Rubber Company, New York, N. Y. Preserving synthetic rubber. 2,460,177, Jan. 25.
Huber, Wolfgang, Hillbrow, Castleton on Hudson, and W. R. Boehme, Albany, assignors, by mesne assignments, to Winthrop-Stearns Inc., New York, N. Y. Vitamin compositions. 2,460,009, Jan. 25.
Hulman, Julius: *See*—
Beaman, Bernard, Hulman, and Stein.
Humboldt, Arthur E., Milwaukee, Wis. Flexible tool for the application of emergency tire chains. 2,460,010, Jan. 25.
Humburger, Ernst L.: *See*—
Robinson, Ralph S., and Humburger.
Hungerford, Churchill, Jr., Wenonah, and J. G. Reutter, assignors to Hungerford & Terry, Inc., Clayton, N. J. Base exchange water treating equipment. 2,460,011, Jan. 25.
Hunderford & Terry, Inc., assignee: *See*—
Hungerford, Churchill, Jr., and Reutter.
Hurault, Jean L., assignor to Compagnie Generale D'Electricite, Paris, France. System of producing harmonics. 2,460,012, Jan. 25.
Huston, Milton D., Chicago, Ill., assignor, by mesne assignments, to Breese Burners, Inc., Santa Fe, N. Mex. Quadrant pilot for pot type oil burners. 2,460,013, Jan. 25.
Huston, Milton D., and B. Hayter, assignors, by mesne assignments, to Breese Burners, Inc., Santa Fe, N. Mex. Liquid fuel burner and pilot structure. 2,460,014, Jan. 25.
Hutchings, Donald E., Toronto, Ontario, Canada. Adjusting clotheslines. 2,460,088, Jan. 25.
Huxtable, Melvin J., assignee: *See*—
Ferree, Leon J.
Imperial Brass Manufacturing Company, The, assignee: *See*—
Alvin, Walter C.
Imperial Chemical Industries Limited, assignee: *See*—
Schaife, Charles W., Smith, and Baldock.
Induction Heating Corp., assignee: *See*—
Stanton, Robert J.
Industrial Rayon Corporation, assignee: *See*—
Bergmann, Richard F.
McLellan, Kenneth M.
International Standard Electric Corporation, assignee: *See*—
Fremlin, John H.
Fremlin, John H., and Foulkes.
Kozma, Ladislas, and Lens.
Lalande, Marc A.
Smyth, Charles N., and Grant.
Ista, Paul E., Paris, France, assignor to General Electric Company. Apparatus for manufacture of fibrous articles. 2,460,129, Jan. 25.
Jackson, Rupert F., Cleveland, assignor of one-half to A. Knudsen, Mentor, Ohio. Reciprocating tool. 2,459,942, Jan. 25.
Jacobs Manufacturing Company, The, assignee: *See*—
Stoner, Arthur M.
Jacobsson, Wilgot J., Plainfield, N. J., assignor to Union Carbide and Carbon Corporation. Blowpipe. 2,459,881, Jan. 25.
James, Edward M., Winchester, Mass., assignor to Lever Brothers Company. Fractionation of unsaturated glyceride oils. 2,459,820, Jan. 25.
Jauss, Carlos L., New York, N. Y. Terminal means for electrical devices 2,459,943, Jan. 25.
Johnson, Ingolf B., Schenectady, N. Y., assignor to General Electric Company. Magneto. 2,460,130, Jan. 25.
Johnson & Johnson, assignee: *See*—
Nelson, William R., and Sinnig.

Johnson, Rollie, Edgerton, Mo. Swinging jaw adjustable wrench. 2,459,882, Jan. 25.

Johnson, Sylvester A., assignor to The Hadley Company, Inc., Providence, R. I. Necktie holder. 2,460,089, Jan. 25.

Johnston, Benjamin H., Oklahoma City, Okla. Sharpening device. 2,459,945, Jan. 25.

Jones, Leo D., and H. S. Barnaby, assignors to The Sharples Corporation, Philadelphia, Pa. Centrifugal separator. 2,459,944, Jan. 25.

Jones, Neven J., Natrona Heights, Pa. Motion transmitting mechanism. 2,460,015, Jan. 25.

Jones, Philip H., Redondo Beach, assignor to Union Oil Company of California, Los Angeles, Calif. Tank pump-out method. 2,460,258, Jan. 25.

Kahler, Harry L., Feasterville, assignor to W. H. and L. D. Betz, Philadelphia, Pa. Protecting systems for transporting media corrosive to metal. 2,460,259, Jan. 25.

Kannenberg, Walter F., Lyndhurst, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Frequency selective apparatus. 2,460,090, Jan. 25.

Kawneer Company, The, assignee: *See*—
Miller, James T.

Kearfott Company, Inc., assignee: *See*—
Emerson, John F.

Keene, Donald: *See*—
Green, Samuel S., and Keene.

Keiser, Bernard: *See*—
De Groote, Melvin and Keiser.

Kelley, Cecil S., Forest Hills, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Control apparatus. 2,459,883, Jan. 25.

Kember, Federico C., Buenos Aires, Argentina. Emergency roadwheel assembly for automobiles. 2,460,178, Jan. 25.

Kendrick, John F., Elizabeth, N. J. Nut or bolt lock. 2,460,131, Jan. 25.

Kern, Walter: *See*—
Holbro, Theodor, Kern and Sutter.

Kibler, Paul J., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Antenna for radiating circularly polarized waves. 2,460,260, Jan. 25.

Kieckhefer Container Company, assignee: *See*—
Smith, Richard E., and Musso.

King, Harold V.: *See*—
Alsop, Ernest A., and King.

Kirkpatrick, Henry O., assignor to Advance Manufacturing, Inc., Detroit, Mich. Mounting for refrigerating apparatus and the like. 2,459,946, Jan. 25.

Klepp, Edwin C.: *See*—
Seath, Edward G., and Klepp.

Knauer, Erwin R.: *See*—
Wilson, Rosser L., and Knauer.

Knight, Claude L.: *See*—
Millidge, Alfred F., and Knight.

Knight, Henry D., Rugby, England, assignor to General Electric Company. Electrical discharge device. 2,460,132, Jan. 25.

Knott, Walter L., Los Angeles, Calif., assignor to L. B. Clark, Houston, Tex. Combination pump. 2,460,179, Jan. 25.

Knowles, Alfred D.: *See*—
Taylor, Maurice K., and Knowles.

Knox, Harry, Mechanicsburg, Pa. Fuel reservoir for cigarette lighters. 2,460,180, Jan. 25.

Knudsen, Alfred, assignee: *See*—
Jackson, Rupert P.

Kojevnikoff, Nickolas N.: *See*—
Dreyfus, Camille, Andersen, and Kojevnikoff.

Kopf, Harold, New York, N. Y. Safety window guard. 2,459,884, Jan. 25.

Koppers Company, Inc., assignee: *See*—
Monroe, Kenneth P.

Kosma, Ladislas, and G. X. Lens, Antwerp, Belgium, assignors to International Standard Electric Corporation, New York, N. Y. Electrical code printer. 2,459,821, Jan. 25.

Krause, Erwin W., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Securing mechanical members to shafts or the like. 2,460,091, Jan. 25.

Kroger Grocery & Baking Company, The, assignee: *See*—
Edwards, James R.

Krogseng, Helge, Bronxville, assignor to Krogseng Laboratories, Inc., New York, N. Y. Bottom margin guide for typewriting machines. 2,459,885, Jan. 25.

Krogseng Laboratories, Inc., assignee: *See*—
Krogseng, Helge.

Krok, Walter P., assignor, by mesne assignments, to Lorain Products Corporation, Lorain, Ohio. Selenium rectifier. 2,459,886, Jan. 25.

Kruger, Frederick W.: *See*—
Mills, William L., and Kruger.

Kuhn, George F., Sinclair, Wyo., assignor to Sinclair Refining Company, New York, N. Y. Flare ignition apparatus. 2,460,016, Jan. 25.

Kune, Raymond L., assignee: *See*—
Faudree, John D.

Lacey, Charles W. G., and G. L. Binns, assignors to Optical Measuring Tools Limited, Slough, England. Boring head for machine tools. 2,460,092, Jan. 25.

Lalande, Marc A., Paris, France, assignor to International Standard Electric Corporation, New York, N. Y. Frequency generating system. 2,459,822, Jan. 25.

Langmuir, Robert V.: *See*—
Blewett, John P., and Langmuir.

La Pedus, William B., Rockford, Ill. Alarm device. 2,460,133, Jan. 25.

Latina, Harry E., East St. Louis, Ill., assignor to Rawlings Manufacturing Company, St. Louis, Mo. Baseball glove. 2,459,887, Jan. 25.

Laurel Fashions, Inc., assignee: *See*—
Goldstein, Charlotte.

Lautrup, George W., Yonkers, N. Y., and J. N. Anderson, Hoboken, N. J., assignors to Otis Elevator Company, New York, N. Y. Moving stairway brake. 2,460,017, Jan. 25.

Law, Harold B., Princeton, N. J., assignor to Radio Corporation of America. Cathode beam transmitter tube. 2,460,093, Jan. 25.

Lawrence Paper Company, The, assignee: *See*—
Hill, Irving and J. D.

Lebedeff, Michael N., Chicago, Ill., assignor to Chicago Bridge & Iron Company. Pipe mitering apparatus. 2,459,823, Jan. 25.

Lebold, Samuel N., assignor to Morris Paper Mills, Chicago, Ill. Bottle holder. 2,460,229, Jan. 25.

Lee, Jonathan O., Richmond, Va. Thermometric alarm switch. 2,460,134, Jan. 25.

Leffer, Frederick W., Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Method and apparatus for contacting subdivided solid contact material with fluid reactants, particularly hydrocarbons. 2,459,824, Jan. 25.

Lefar, Jerome, assignor to The Master Electric Company, Dayton, Ohio. Balancing device. 2,459,947, Jan. 25.

Lehane, Timothy J., and E. H. Burgess, Chicago, Ill., assignors, by mesne assignments, to Vapor Heating Corporation. Electric control for bus heating and cooling systems. 2,460,135, Jan. 25.

Lens, Georges X.: *See*—
Kosma, Ladislas, and Lens.

Lens, John L., assignee: *See*—
Muller, Johan A.

Leonard, John, West New York, and W. Trenkamp, Hoboken, N. J. Brush holder. 2,460,136, Jan. 25.

Lever Brothers Company, assignee: *See*—
Henderson, Lloyd F.
James, Edward M.

Ligett, Waldo B., Detroit, Mich., E. T. McBee, La Fayette, and V. V. Lindgren, assignors to Purdue Research Foundation, West Lafayette, Ind. Perhalotoluenes. 2,459,779, Jan. 25.

Lindeman, Jesse G., assignor, by mesne assignments, to John Deere-Lindeman Company, Yakima, Wash. Hydraulic coupling. 2,460,137, Jan. 25.

Linderoth, Lambert S., Jr.: *See*—
Seely, Thomas H.

Lindgren, Vincent V.: *See*—
Ligett, Waldo B., McBee, and Lindgren.

Lindsey, Robert J., Mount Gilead, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del. Momentary slowdown device for high-speed blankholder presses. 2,459,888, Jan. 25.

Little, Edward W., Naches, Wash. Roller attachment. 2,460,094, Jan. 25.

Little, John D.: *See*—
Du Rose, Arthur H., and Little.

Livingston, Orrin W.: *See*—
Gardiner, Edward M., and Livingston.

Lobelle, Marcel J. O., Slough, England, assignor to M. L. Aviation Company, Limited. Safety device for aircraft pilots. 2,459,948, Jan. 25.

Long, John D., Westfield, and C. O. Rhys, Jr., Cranford, N. J., assignors to Standard Oil Development Company. Method and apparatus for counter-current contacting of liquids. 2,460,019, Jan. 25.

Looke, Harry H., Caulfield, Victoria, Australia. Roller vane rotary pump. 2,460,018, Jan. 25.

Lorain Products Corporation, assignee: *See*—
Krok, Walter P.

Love, Angus, Cumnor, England. Instrument for measuring resistances. 2,460,095, Jan. 25.

Lupton, Elmer H., Ilchester, Md., assignor to The Bartgis Bros. Company. Egg crate. 2,460,020, Jan. 25.

Lynn, Lambert H., Scotia, N. Y., assignor to General Electric Company. Variable inductance device. 2,460,138, Jan. 25.

Lyon, George A., Allenhurst, N. J. Plastic cover for automobile seats. 2,459,889, Jan. 25.

Lyon, George A., Allenhurst, N. J. Wheel hub cap structure. 2,459,890, Jan. 25.

Lyon, Norman W., assignor to Package Machinery Company, Springfield, Mass. Linking and delinking machine for ammunition belts. 2,460,096, Jan. 25.

M. L. Aviation Company, Limited, assignee: *See*—
Lobelle, Marcel J. O.

Macklin, Donald J.: *See*—
Bachman, Benjamin B., and Macklin.

Makrianes, James K., Longmeadow, Mass. Display and shipping container. 2,460,220, Jan. 25.

Maling, Roy, Chestnut Hill, Mass. Platform type welt shoe. 2,460,097, Jan. 25.

Maling, Roy, Chestnut Hill, Mass. Platform type shoe. 2,460,098, Jan. 25.

Mallory, P. R., & Co., Inc., assignee: *See*—
Wall, Alexander C.

Malpert, Rudolph, Fargo, N. Dak. Sleet cutter. 2,460,099, Jan. 25.

Manthey, Victor W., Manston, Wis. Low center of gravity sleds. 2,460,021, Jan. 25.

Marchant Calculating Machine Company, assignee: *See*—
Avery, Harold T.

Margot, Alfred: *See*—
Martin, Henry, and Margot.

Marks, Henry C., Glen Ridge, N. J., and M. I. Rubin, New York, N. Y., assignors to Wallace & Tiernan Products, Inc. Alkamine esters of 2-chloro-4-amino benzoic acid. 2,460,139, Jan. 25.

Marshall, Wallace P., Newark, assignor to Pittsburgh Plate Glass Company, Essex County, N. J. Sealing material. 2,460,181, Jan. 25.

Martellotti, Mario E., assignor to The Cincinnati Milling Machine Company, Cincinnati, Ohio. Bearing. 2,459,825, Jan. 25.

Martellotti, Mario E., assignor to The Cincinnati Milling Machine Company, Cincinnati, Ohio. Fluid pressure bearing. 2,459,826, Jan. 25.

Marti, Othmar K., Wauwatosa, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Electric valve with vitreous enamel seals. 2,459,827, Jan. 25.

Marti, Othmar K., Wauwatosa, and E. B. Steinberg, assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Electric valve with grid mounted on divided anode insulator. 2,459,828, Jan. 25.

Martin, Henry, and A. Margot, assignors to J. R. Geigy A. G., Basel, Switzerland. Basic esters of aliphatic tertiary carboxylic acids. 2,460,182, Jan. 25.

Mas, Joseph A.: *See*—
Brown, Harold J., and Mas.

Masonite Corporation, assignee: *See*—
Story, Charles F.

Master Electric Company, The, assignee: *See*—
Lefar, Jerome.

Mathes, Kenneth N., Schenectady, N. Y., assignor to General Electric Company. Pasting mica. 2,460,140, Jan. 25.

Matthysse, Irving F., New York, N. Y., assignor to Burndy Engineering Company, Inc. Separable connector. 2,460,231, Jan. 25.

Maxwell, Edward C., U. S. Navy. Power transmission. 2,459,829, Jan. 25.

Mayer, Samuel, New York, N. Y. Electrical utility brush. 2,460,183, Jan. 25.

McArthur, Elmer D., Schenectady, N. Y., assignor to General Electric Company. Electric discharge device. 2,460,141, Jan. 25.

McBee, Earl T.: *See*—
Ligett, Waldo B., McBee, and Lindgren.

McBee, Earl T., La Fayette, Ind., and L. D. Bechtol, Baltimore, Md., assignors to Purdue Research Foundation, West Lafayette, Ind. Anellated polycarbocyclic perfluorocompounds. 2,459,780, Jan. 25.

McBee, Earl T., La Fayette, Ind., and L. D. Bechtol, Baltimore, Md., assignors to Purdue Research Foundation, West Lafayette, Ind. Anellated fluorocarbons. 2,459,781, Jan. 25.

McBee, Earl T., La Fayette, Ind., and L. D. Bechtol, Baltimore, Md., assignors to Purdue Research Foundation, West Lafayette, Ind. Anellated fluorocarbons. 2,459,782, Jan. 25.

McBee, Earl T., La Fayette, and P. A. Wiseman, assignors to Purdue Research Foundation, West Lafayette, Ind. Flourination of unsaturated cyclic perchlorocompounds. 2,459,783, Jan. 25.

McCarthy, Frederick I., and C. Schandler, New York, N. Y. Spark plug. 2,460,022, Jan. 25.

McCarthy, Thomas O., U. S. Navy. Motion repeating system. 2,459,830, Jan. 25.

McCord Corporation, assignee: *See*—
Urso, Ralph F.

McCord, Frank G., Atlanta, Ga. Adjustable truss. 2,460,100, Jan. 25.

McDonie, Lawrence L.: *See*—
Quinn, John, and McDonie.

McGill Manufacturing Company, Inc., assignee: *See*—
Popp, Rudolf.

McGraw Electric Company, assignee: *See*—
Gomersall, John R.

McGrew, Frank C., and W. H. Sharkey, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company. Dyeing nylon with acid dyes of limited solubility. 2,459,831, Jan. 25.

McGuiness, Michael F., assignor of one-half to A. J. Brandt, Scranton, Pa. Antiskid tire chain anchoring device. 2,460,023, Jan. 25.

McKee, Neal T., Bronxville, assignor to The Superheater Company, New York, N. Y. Making heat-exchange unit. 2,460,024, Jan. 25.

McKinley, Benjamin P., Bradenton, Fla. Electrical outlet terminal. 2,459,832, Jan. 25.

McLain, Joseph H., and A. C. Fairchild, U. S. Army. Smoke bomb projector. 2,459,833, Jan. 25.

McLellan, Kenneth M., assignor to Industrial Rayon Corporation, Cleveland, Ohio. Apparatus for the fluid treatment of thread or the like. 2,460,261, Jan. 25.

McMurray, Arthur A., Nashville, Tenn. Optical method of testing milk for relative uniformity. 2,460,101, Jan. 25.

McNab, John G., Cranford, and J. H. Bartlett, Westfield, N. J., assignors to Standard Oil Development Company. Lubricating oil composition. 2,460,025, Jan. 25.

Mercier, Joseph D. P. E.: *See*—
Morrison, George O., Shaw, Mercier, and Collins.

Merck & Co., Inc., assignee: *See*—
Harris, Stanton A., and Arth.
Harris, Stanton A., and Folkers.
Phillips, Richard F.

Metsner, Ernest K., Los Angeles, Calif. Screw conveying steam distilling apparatus for pomace. 2,459,951, Jan. 25.

Meyer, Joseph E., assignor to C. B. Cottrell & Sons Company, Westerly, R. I. Ink fountain for intaglio printing presses. 2,460,184, Jan. 25.

Michel, Philip C., Schenectady, N. Y., assignor to General Electric Company. Electronic calibrating means or indicating instruments in pulse echo systems. 2,460,142, Jan. 25.

Michelsen, Henry, and M. E. Reid, Bristol, Conn., assignors to General Motors Corporation, Detroit, Mich. Gauging apparatus for controlling a grinding operation. 2,460,282, Jan. 25.

Miescher, Karl, Riehen, and J. Heer, and Jean R. Billeter, Basel, Switzerland, assignors to Ciba Pharmaceutical Products Inc., Summit, N. J. Preparing hydroxy hydrophenanthrene carboxylic acids and their esters. 2,459,834, Jan. 25.

Miescher, Karl, Riehen, and G. Anner, Basel, Switzerland, assignors to Ciba Pharmaceutical Products Inc., Summit, N. J. Preparation of hydroxy-hydrophenanthrene carboxylic acids and esters. 2,459,949, Jan. 25.

Miescher, Karl, Riehen, and G. Anner, Basel, Switzerland, assignors to Ciba Pharmaceutical Products, Inc., Summit, N. J. Hydrophenanthrene carboxylic acid intermediates. 2,459,950, Jan. 25.

Miles, Ernest C.: *See*—
Werner, Fred, and Miles.

Miller, James T., assignor to The Kawneer Company, Niles, Mich. Glass setting for store fronts. 2,460,185, Jan. 25.

Millidge, Alfred F., Coventry, and C. L. Knight, Kenilworth, assignors to Courtaulds Limited, London, England. Stabilized alkaline vegetable protein solutions. 2,459,952, Jan. 25.

Mills Engineering Company, assignee: *See*—
Mills, Herbert E.

Mills, Herbert E., assignor, by mesne assignments, to Mills Engineering Company, Detroit, Mich. Panel and fastener assembly. 2,459,953, Jan. 25.

Mills, William L., Keene, N. H., and F. W. Kruger, Worcester, assignors to Sealed Seam Welt Process, Inc., Boston, Mass. Shoe with sole edge binding and welt. 2,460,262, Jan. 25.

Minerals Separation North American Corporation, assignee: *See*—
Schilling, Karl F.

Mitchell, Jethro, Cincinnati, Ohio. Amusement device. 2,460,026, Jan. 25.

Moffett, Eugene W., Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa. Coating composition comprising an amide-aldehyde resin and a polyester of 2-ethyl hexane-diol-1,3 and a dicarboxylic acid as a plasticiser. 2,460,186, Jan. 25.

Moffett, Eugene W., Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa. Coating composition comprising an amide-aldehyde resin and a polyester of an alpha-alkyl ether of glycerol and a dicarboxylic acid as plasticiser. 2,460,187, Jan. 25.

Moloney, Raymond T., assignee: *See*—
Gordon, Joseph M.

Monroe, Kenneth P., Butler, assignor to Koppers Company, Inc., Pittsburgh, Pa. Allylation of dihydroxy benzene. 2,459,835, Jan. 25.

Moore, Maurice L., and J. R. Corrigan, Detroit, Mich., assignors to Sterling Drug Inc., New York, N. Y. Production of ketoamines. 2,460,143, Jan. 25.

Moore, Maurice L., and J. R. Corrigan, Detroit, Mich., assignors to Sterling Drug Inc., New York, N. Y. Hydroxyphenyl alkanolamines. 2,460,144, Jan. 25.

Moore, Norman C.: *See*—
Bissett, Norman T., and Moore.

Morey, Glen H.: *See*—
O'Kane, Walter C., and Morey.

Morgan, Dwight C., Jr., assignor to Scaife Company, Oakmont, Pa. Apparatus for pressing ends into cylindrical shells. 2,459,954, Jan. 25.

Morin, Louis H., Bronx, N. Y. Controlling the lengths of separable fasteners. 2,460,102, Jan. 25.

Morris Paper Mills, assignee: *See*—
Lebold, Samuel N.

Morris, Rupert C., Berkeley, E. C. Shokal, Oakland, and J. L. Van Winkle, San Lorenzo, assignors to Shell Development Company, San Francisco, Calif. Esters of sulfolene halohydrins. 2,460,238, Jan. 25.

Morrison, George O., T. P. G. Shaw, and J. D. P.-E. Mercier, Shawinigan Falls, Quebec, Canada, and H. M. Collins, Stamford, Conn., assignors to Shawinigan Chemicals Limited, Montreal, Quebec, Canada. Polyvinyl acetate emulsion adhesive. 2,459,955, Jan. 25.

Muller, Johan A., assignor to J. L. Lens, Dayton, Ohio. Pipe coupling. 2,459,956, Jan. 25.

Murphree, Eger V., Summit, N. J., assignor to Standard Oil Development Company. Controlling reaction temperatures. 2,459,836, Jan. 25.
Musso, Paul A.: *See*—
Smith, Richard E., and Musso.
Myles, Asa H., and A. C. Prottengeier, Solon, assignors to The Electric Controller & Manufacturing Company, Cleveland, Ohio. Induction motor control system. 2,460,234, Jan. 25.
Nash, John J., assignor to American Fixture & Manufacturing Co., St. Louis, Mo. Metal chair. 2,460,027, Jan. 25.
National Carbon Company, Inc., assignee: *See*—
Winslow, Nathaniel M., and Heise.
National Cylinder Gas Company, assignee: *See*—
Palmer, Walter E.
National Lead Company, assignee: *See*—
Pitrot, Adrian R.
Navy, United States of America as represented by the Secretary of, assignee: *See*—
Bowen, Ira S.
Hall, Walter S., Jr.
Swennes, Benjamin A., Shelton, and Swenson.
Nelson, William L., Highland Park, and O. R. Sinnig, New Brunswick, N. J., assignors to Johnson & Johnson. Pressure sensitive adhesive mass. 2,459,891, Jan. 25.
New Castle Products, Inc., assignee: *See*—
Watkins, Ernest R.
Nopco Chemical Company, assignee: *See*—
Pickel, Frank D., Fass, and Chodroff.
Norton Company, assignee: *See*—
Crompton, George, Jr.
Obert, Leon D., Bremerton, Wash. Fence construction. 2,460,028, Jan. 25.
Oil Center Tool Company, assignee: *See*—
Penick, Arthur J.
O'Kane, Walter C., Durham, N. H., and G. H. Morey, assignors to Commercial Solvents Corporation, Terre Haute, Ind. Fungicidal compositions. 2,460,188, Jan. 25.
Okonite Company, The, assignee: *See*—
Slade, Harry B.
Olliert, Olof, Stockholm, Sweden. Kitchen range. 2,460,263, Jan. 25.
Openshaw, James A., Southampton, assignor to Stanley Home Products, Inc., Westfield, Mass. Wire twisting apparatus. 2,460,235, Jan. 25.
Optical Measuring Tools Limited, assignee: *See*—
Lacey, Charles W. G., and Binns, G. L.
Osborn, Ralph C., Bloomington, Ill., assignor to Eureka Williams Corporation, Detroit, Mich. Handle control for suction cleaners. 2,460,236, Jan. 25.
Otis Elevator Company, assignee: *See*—
Lautrup, George W., and Anderson.
Package Machinery Company, assignee: *See*—
Lyon, Norman W.
Packard Motor Car Company, assignee: *See*—
Vincent, Charles H.
Palmer, Orrin C., Melrose, Mass. Trolling plate. 2,460,237, Jan. 25.
Palmer, Sidney L., San Francisco, and L. M. Beckes, San Bruno, Calif., assignors to American Smelting and Refining Company, New York, N. Y. Metal casting apparatus. 2,459,892, Jan. 25.
Palmer, Walter E., Fair Lawn, N. J., assignor, by mesne assignments, to National Cylinder Gas Company, Chicago, Ill. Welding stud. 2,459,957, Jan. 25.
Parker Manufacturing Company, assignee: *See*—
Brodeur, Robert M.
Parnell, Frank G., assignor to Automotive Products Company Limited, Leamington Spa, England. Internal shoe drum brake. 2,459,958, Jan. 25.
Peirce, Charles P., assignee: *See*—
Petroff, Merlin O., and Straub.
Pelmarsh, Joseph, Milwaukee, Wis. Sinker. 2,459,959, Jan. 25.
Penick, Arthur J., assignor to Oil Center Tool Company, Houston, Tex. Casing head. 2,460,238, Jan. 25.
Périssé, Richard, Paris, France. Internal-combustion engine. 2,459,960, Jan. 25.
Permanente Metals Corporation, The, assignee: *See*—
Byrns, Alva C., and von Stroh.
Perry, Clarence, Santa Ana, Calif. Saw-file holder and guide. 2,460,189, Jan. 25.
Peterson, Walter P., Chicago, Ill. Abrading device. 2,459,893, Jan. 25.
Petroff, Merlin O., Lake Bluff, and W. F. Straub, Chicago, assignors to C. P. Peirce, Evanston, Ill. Wire recorder indicator. 2,460,190, Jan. 25.
Petrolite Corporation, Ltd., assignee: *See*—
De Groote, Melvin, and Keiser.
Pfuntner, Richard A., Saugus, and F. R. D'Entremont, Lynnfield, Mass., assignors to General Electric Company. Variable reluctance core. 2,460,145, Jan. 25.
Philadelphia Thermometer Company, The, assignee: *See*—
Schwarts, John L.
Philco Corporation, assignee: *See*—
Charton, Paul W.
Phillips, Richard F., Westfield, assignor to Merck & Co., Inc., Rahway, N. J. Preparing esters of organic carboxylic acids. 2,460,191, Jan. 25.
Pickel, Frank D., Flemington, N. J., and J. I. Fass, and S. Chodroff, Brooklyn, N. Y., assignors to Nopco Chemical Company, Harrison, N. J. Resolution of racemic α hydroxy β,β dimethyl γ butyrolactone. 2,460,239, Jan. 25.
Pickel, Frank D., Flemington, N. J., and J. I. Fass, and S. Chodroff, Brooklyn, N. Y., assignors to Nopco Chemical Company, Harrison, N. J. Resolution of racemic α hydroxy β,β dimethyl γ butyrolactone. 2,460,240, Jan. 25.
Pieper, George F., Milwaukee, Wis. Rotary Diesel engine. 2,460,192, Jan. 25.
Pitrot, Adrian R., Hempstead, assignor to National Lead Company, New York, N. Y. Basic lead sulfate pigment. 2,460,241, Jan. 25.
Pittsburgh Plate Glass Company, assignee: *See*—
Marshall, Wallace P.
Moffett, Eugene W.
Pollard, Ernest C., Welcome, Minn. Windrow lifter and turner. 2,459,961, Jan. 25.
Popp, Rudolf, assignor to McGill Manufacturing Company, Inc., Valparaiso, Ind. Housing for electrical switches. 2,459,837, Jan. 25.
Porter-McLeod Machine Tool Co., Inc., assignee: *See*—
Chase, Earle M.
Powell, Raymond E., Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Electrical coil and making such. 2,459,894, Jan. 25.
Preco Incorporated, assignee: *See*—
Beemer, Paul K.
Prentice, James M., South Hadley, Mass. Electrical jackstraws game apparatus. 2,460,146, Jan. 25.
Prentice, James M., South Hadley, J. R. Umbach, Longmeadow, and K. Ross, Springfield, assignors to The Electric Game Company, Holyoke, Mass. Rotatable game board and piece therefor. 2,460,264, Jan. 25.
Press Wireless, Inc., assignee: *See*—
Chapin, Reynold S.
Prottengeier, Alfred C.: *See*—
Myles, Asa H., and Prottengeier.
Purdue Research Foundation, assignee: *See*—
Ligett, Waldo B., McBee, and Lindgren.
McBee, Earl T., and Bechtol.
McBee, Earl T., and Wiseman.
Pure Oil Company, The, assignee: *See*—
Thacker, Carlisle M., and Folkins.
Pye, Charles R., London, England, assignor to The Hartford National Bank & Trust Company, Hartford, Conn., as trustees. Moisture-resistant lacquer for the protection of electrical components. 2,460,103, Jan. 25.
Quinn, John, Washington, D. C., and L. L. McDonie, Coral Hills, Md. Trigger lock for pistols. 2,459,838, Jan. 25.
Radio Corporation of America, assignee: *See*—
Law, Harold B.
Roberds, Wesley M.
Wittenberg, Hubert H.
Wright, Antony, and Clark.
Ramp, Russell M., Houma, La., assignor to the United States of America as represented by the Secretary of Agriculture. Russian dandelion seed harvester. 2,460,029, Jan. 25.
Randolph, John W.: *See*—
Hart, James A., Hollis, and Randolph.
Rapp, Leon R., Carpentersville, N. J. Knockdown box or crate. 2,460,104, Jan. 25.
Rappl, Anton, Eggertsville, assignor to Trico Products Corporation, Buffalo, N. Y. Windshield cleaner. 2,460,147, Jan. 25.
Raudenkolb, Theodor, New York, N. Y. Curtain rod bracket. 2,460,193, Jan. 25.
Rawlings Manufacturing Company, assignee: *See*—
Latina, Harry B.
Raytheon Manufacturing Company, assignee: *See*—
Dawson, John W.
Spencer, Percy L.
Westcott, Vernon C.
Wood, Ross.
Rear, James C., Berkeley, assignor to The Union Ice Company, San Francisco, Calif. Open-top refrigerated display case. 2,460,030, Jan. 25.
Redmond Company, Inc., assignee: *See*—
Vacha, Fred P.
Reid, Merton E.: *See*—
Michelsen, Henry, and Reid.
Renaud, Harold E., assignor to Renaud Plastics, Inc., Lansing, Mich. Making model duplicates. 2,460,242, Jan. 25.
Renaud Plastics, Inc., assignee: *See*—
Renaud, Harold E.
Research Corporation, assignee: *See*—
Trump, John G., and Cloud.
Reutter, John G.: *See*—
Hungerford, Churchill, Jr., and Reutter.
Rhys, Cyril O., Jr.: *See*—
Long, John D., and Rhys, Jr.
Rice Barton Corporation, assignee: *See*—
Stafford, Stephen B.
Richa, John H., and F. E. Hanson, Kansas City, Mo. Garment finishing apparatus. 2,459,962, Jan. 25.
Richards, Henry I., Arlington, Va. Delivery truck loading and dispensing apparatus. 2,459,839, Jan. 25.

Richards, Lawrence M., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Photopolymerization of vinylidene compounds with organic disulfides. 2,460,105, Jan. 25.
Richardson, Vernon E., Albuquerque, N. Mex., assignor to Continental Oil Company, Ponca City, Okla. Pulldown device. 2,459,840, Jan. 25.
Richter, Ludwig: *See*—
Grimmel, Harry W., and Richter.
Ripley, Charles T., assignor to Spring Packing Corporation, Chicago, Ill. Packing retainer. 2,460,031, Jan. 25.
Risley, Roger E., Bradford, Pa., assignor to Dresser Industries, Inc., Cleveland, Ohio. Coupling for beaded pipes or tubings. 2,460,032, Jan. 25.
Roark, Martin L., Elisabethton, Tenn. Fishing line changer. 2,459,963, Jan. 25.
Robbins, Clyde F., assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Electric switch. 2,460,034, Jan. 25.
Roberds, Wesley M., Collingswood, N. J., assignor to Radio Corporation of America. Electrical condenser. 2,460,033, Jan. 25.
Robertshaw-Fulton Controls Company, assignee: *See*—
Weber, Victor.
Robertson, Walter H., Elkhart, Ind. Trailer hitch. 2,459,965, Jan. 25.
Robinson, Ralph S., Hunt's Cross, near Liverpool, and E. L. Humburger, Allerton, assignors to Beck, Koller and Company (England) Limited, Speke, Liverpool, England. Manufacture of maleamic acid. 2,459,964, Jan. 25.
Rogers, Dilworth T., Summit, and J. H. Bartlett, Westfield, N. J., assignors to Standard Oil Development Company. Synthetic lubricant. 2,460,035, Jan. 25.
Roth, Andrew, assignor to Bunting Glider Company, Philadelphia, Pa. Combination table and footrest. 2,460,148, Jan. 25.
Rouse, Glenn F., Long Branch, N. J. Cathode. 2,459,841, Jan. 25.
Rowland, Frederick T., Grosse Pointe, Mich., assignor to Standard Steel Spring Company, Coraopolis, Pa. Spring suspension for vehicles. 2,460,106, Jan. 25.
Royden, George T., South Orange, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Crystal controlled oscillator. 2,459,842, Jan. 25.
Rubin, Martin I.: *See*—
Marks, Henry C., and Rubin.
Sager, Irving: *See*—
Gorham, John E., and Sager.
Scaife, Charles W., Norton-on-Tees, A. E. W. Smith, Wallingford, and H. Baldock, deceased, by H. Baldock, legal representative, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited. Production of nitro olefines. 2,460,243, Jan. 25.
Scaife Company, assignee: *See*—
Morgan, Dwight C., Jr.
Schandler, Charles: *See*—
McCarthy, Frederick I., and Schandler.
Scherer, John O.: *See*—
Scherer, Robert P., and Scherer.
Scherer, R. P., Corporation, assignee: *See*—
Scherer, Robert P. and J. O.
Scherer, Robert P. and J. O., Detroit, Mich., assignors, by mesne assignments, to R. P. Scherer Corporation. Hypodermic syringe. 2,460,039, Jan. 25.
Schick Incorporated, assignee: *See*—
Gray, Norman A.
Schilling, Karl F., Lakeland, Fla., assignor to Minerals Separation North American Corporation, New York, N. Y. Concentration of nonsulfide ores. 2,459,966, Jan. 25.
Schilling, Karl F., Lakeland, Fla., assignor to Minerals Separation North American Corporation, New York, N. Y. Concentration of nonsulfide ores. 2,459,967, Jan. 25.
Schmidt, C., & Sons, Inc., assignee: *See*—
Smith, Richard E., and Musso.
Schoensiegel, Lothar W., Chicago, Ill. Flexible rod driver. 2,460,149, Jan. 25.
Scholander, Per F., Swarthmore, Pa. Sling type seat for aircrafts. 2,459,843, Jan. 25.
Schormuller, Anton, assignor to Clifton Products, Inc., Painesville, Ohio. Recovering beryllium oxide from beryllium ore. 2,459,895, Jan. 25.
Schultz, Arthur B., Wilmington, Del., assignor to All American Airways, Inc. Apparatus for severing towlines and the like. 2,460,194, Jan. 25.
Schupp, Arthur, New York, N. Y. Apparatus for the cooling of heated objects. 2,460,150, Jan. 25.
Schwarts, John L., assignor, by mesne assignments, to The Philadelphia Thermometer Company, Philadelphia, Pa. Adjustable thermostat. 2,459,968, Jan. 25.
Schwarz, George, Williamstown, Mass. Silver impregnation. 2,459,896, Jan. 25.
Schwarz, George, Williamstown, Mass. Silver impregnation. 2,459,897, Jan. 25.
Schweickart, William M., Bay Village, Ohio. Variable-speed drive. 2,459,969, Jan. 25.
Sealed Seam Welt Process, Inc., assignee: *See*—
Mills, William L., and Kruger.
Seath, Edward G., and E. C. Klepp, assignors to Standard Telephones and Cables Limited, and S. Smith and Sons (England) Limited, London, England. Circuit element and motor for driving the same. 2,459,844, Jan. 25.
Sebald, Joseph F., Bloomfield, assignor to Worthington Pump and Machinery Corporation, Harrison, N. J. Water treating apparatus. 2,460,036, Jan. 25.
Seeger, Edwin W., Wauwatosa, assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Combined primary and secondary control of polyphase motors. 2,460,037, Jan. 25.
Seely, Thomas H., Melrose, and L. S. Linderoth, Jr., Marblehead, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J. Sole-pressing mechanism. 2,459,845, Jan. 25.
Segall, Gordon H., McMasterville, assignor to Canadian Industries Limited, Montreal, Quebec, Canada. Process for the polymerization of 4-vinylcyclohexene dioxide. 2,460,195, Jan. 25.
Selas Corporation of America, assignee: *See*—
Hess, Frederic O.
Serniuk, George E., Roselle, N. J., assignor to Standard Oil Development Company. Emulsion polymerisation process. 2,460,038, Jan. 25.
Serra y Sió, Jose, Barcelona, Spain. Driving means for spinning, twisting, and like spindles. 2,460,152, Jan. 25.
Sharkey, William H.: *See*—
McGrew, Frank C., and Sharkey.
Sharples Corporation, The, assignee: *See*—
Jones, Leo D., and Barnaby.
Shaw, Thomas P. G.: *See*—
Morrison, George O., Shaw, Mercier, and Collins.
Shawinigan Chemical Limited, assignee: *See*—
Morrison, George O., Shaw, Mercier, and Collins.
Shell Development Company, assignee: *See*—
Morris, Rupert C., Shokal, and Van Winkle.
Shelton, Lee E.: *See*—
Swennes, Benjamin A., Shelton, and Swenson.
Sherman, H. B., Manufacturing Company, assignee: *See*—
Stinchcomb, Loid M., and Doerr.
Sherman, Harry M., assignee: *See*—
Brunne, Alwin E.
Shokal, Edward C.: *See*—
Morris, Rupert C., Shokal, and Van Winkle.
Sifferd, Robert H., Clarendon Hills, assignor to Armour and Company, Chicago, Ill. Preparation of amino acids. 2,460,040, Jan. 25.
Simpson, John K., Leamington Spa, assignor to Automotive Products Company Limited, Leamington Spa, Warwickshire, England. Balanced fluid motor valve. 2,460,196, Jan. 25.
Sinclair, Edward L., Haverford Township, Delaware County, Pa., assignor to Socony-Vacuum Oil Company, Incorporated. Apparatus for gas-solid contact operations. 2,460,151, Jan. 25.
Sinclair Refining Company, assignee: *See*—
Kuhn, George F.
Singer Manufacturing Company, The, assignee: *See*—
Wood, Alfred R.
Sinnig, Otto R.: *See*—
Nelson, William L., and Sinnig.
Slade, Harry B., assignor to The Okonite Company, Passaic, N. J. Apparatus for testing insulated wire and cable. 2,460,107, Jan. 25.
Smith, Arthur E. W.: *See*—
Scaife, Charles W., Smith, and Baldock.
Smith, Earl K.: *See*—
Edwards, Donald V., and Smith.
Smith, Horace L., Jr., Richmond, Va., assignor to Chain Belt Company, Milwaukee, Wis. Vacuum chamber evacuation. 2,460,197, Jan. 25.
Smith, Richard E., Rydall, Pa., and P. A. Musso, Riverton, N. J., assignors to C. Schmidt & Sons, Inc., Philadelphia, Pa., and to Kleckhefer Container Company, Camden, N. J. Collapsible carrier. 2,460,108, Jan. 25.
Smith, S., and Sons (England), Limited, assignee: *See*—
Seath, Edward G., and Klepp.
Smith, Travis O., Kansas City, Mo., assignor, by mesne assignments, to Arbee Products Company, Kansas City, Kans. Refuse bag support. 2,459,970, Jan. 25.
Smoluchowski, Roman, Pittsburgh, Pa., assignor to General Electric Company. Piezoelectric crystal holder. 2,460,153, Jan. 25.
Smyth, Charles N., and A. S. Grant, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Voltage control arrangement. 2,459,846, Jan. 25.
Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Eastwood, Sylvander C.
Hart, James A., Hollis, and Randolph.
Sinclair, Edward L.
Solar Corporation, assignee: *See*—
Welby, Alfred C.
Southern Steel Company, assignee: *See*—
White, Loyd J.
Southworth, George C., Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electrical translating device. 2,460,109, Jan. 25.
Sparks, William J., Westfield, and D. W. Young, Roselle, N. J., assignors to Standard Oil Development Company. Lubricating composition. 2,460,041, Jan. 25.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Electric flash percussive welding. 2,459,847, Jan. 25.

Spring Packing Corporation, assignee: *See*—
Ripley, Charles T.

Stafford, Stephen B., Oxford, assignor to Rice Barton Corporation, Worcester, Mass. Making cockle paper. 2,460,042, Jan. 25.

Standard Oil Company, assignee: *See*—
Voorhees, Vanderveer.

Standard Oil Development Company, assignee: *See*—
Billisoly, Julius P.
Duncan, Gordon W., and Zimmer.
Long, John D., and Rhys.
McNab, John G., and Bartlett.
Murphree, Eger V.
Rogers, Dilworth T., and Bartlett.
Serniuk, George E.
Sparks, William J., and Young.
Yowell, Howard L., and Swaney.

Standard Steel Spring Company, assignee: *See*—
Rowland, Frederick T.

Standard Telephones and Cables Limited, assignee: *See*—
Seath, Edward G., and Klepp.

Stanley Home Products, Inc., assignee: *See*—
Openshaw, James A.

Stanton, Robert J., Brooklyn, assignor to Induction Heating Corp., New York, N. Y. Inductor for high-frequency induction heating apparatus. 2,459,971, Jan. 25.

Starkey, William C., assignor, by mesne assignments, to Fletcher Trust Company, Indianapolis, Ind., as trustee. Torque limiting device. 2,459,972, Jan. 25.

Stateman, Murray J., Brooklyn, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Rectifier element. 2,459,848, Jan. 25.

Stateman, Murray J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Testing circuit. 2,459,849, Jan. 25.

Stein, Robert A.: *See*—
Beaman, Bernard, Hulman, and Stein.

Martl, Othmar K., and Steinberg.

Sterling Drug Inc., assignee: *See*—
Moore, Maurice L., and Corrigan.

Stetson, John B., Company, assignee: *See*—
Culhane, Edward A., and Wilson.

Stevens, Harry P.: *See*—
Hasler, Robert H., and Stevens.

Stevens, Harry P., Oyster Bay, assignor to The Hasler Stevens Corporation, Minneola, N. Y. Rotary valve internal-combustion engine. 2,459,973, Jan. 25.

Stiffel, Theophile A., Chicago, Ill. Actuating electrical switches. 2,459,898, Jan. 25.

Stinchcomb, Loid M., and R. S. Doerr, assignors to H. B. Sherman Manufacturing Company, Battle Creek, Mich. Coupling means. 2,460,110, Jan. 25.

Stine, Samuel S., Lansdowne, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Turbine apparatus. 2,459,850, Jan. 25.

Stocker, Julius J., Flanders, N. J. Saw set. 2,460,198, Jan. 25.

Stokes, John H., Atlanta, Ga. Sign holder having recessed rotatable side members. 2,460,154, Jan. 25.

Stoner, Arthur M., West Hartford, assignor to The Jacobs Manufacturing Company, Hartford, Conn. Collet. 2,459,899, Jan. 25.

Stoner, Arthur M., West Hartford, assignor to The Jacobs Manufacturing Company, Hartford, Conn. Collet. 2,459,900, Jan. 25.

Story, Charles F., assignor to Masonite Corporation, Laurel, Miss. Ligno-cellulose die-stock and making. 2,459,851, Jan. 25.

Stout, Orin C., Hamilton, Ohio. Making rhubard juice. 2,459,901, Jan. 25.

Straub, William F.: *See*—
Petroff, Merlin O., and Straub.

Strauss, Carol L., Bangor, Maine. Bed table. 2,460,244, Jan. 25.

Studebaker Corporation, The, assignee: *See*—
Churchill, Harold E.

Summerhayes, Harry R., Jr., Schenectady, N. Y., assignor to General Electric Company. Trigger network. 2,459,852, Jan. 25.

Summerville, Donald V., Fort Erie, Ontario, Canada, assignor to Aeromat Products Company, Inc., Buffalo, N. Y. Massaging apparatus or the like. 2,460,245, Jan. 25.

Superheater Company, The, assignee: *See*—
McKee, Neal T.

Superior Tube Company, assignee: *See*—
Briggs, Thomas H., Jr.

Sutter, Paul: *See*—
Holbro, Theodor, Kern and Sutter.

Swaney, Miller W.: *See*—
Yowell, Howard L., and Swaney.

Swennes, Benjamin A., Rockford, Ill., L. E. Shelton, Kalamazoo, Mich., and C. E. Swenson, Rockford, Ill., assignors, by mesne assignments, to United States of America as represented by the Secretary of the Navy. Wheels for endless track vehicles and mounting same. 2,459,975, Jan. 25.

Swenson, Carl E.: *See*—
Swennes, Benjamin A., Shelton, and Swenson.

Swetnam, Lewis H., El Paso, Tex., assignor of one-half to H. D. Fulwiler. Hose protector. 2,459,853, Jan. 25.

Swift, George W., Jr. Inc., assignee: *See*—
Bruker, Hobart W.

Swift, Willard E., Jr., Foxboro, Mass. Grenade projector. 2,459,854, Jan. 25.

Symington-Gould Corporation, The, assignee: *See*—
Barrows, Donald S., and Blattner.

Talarico, Joseph, Spokane, Wash. Finger guard. 2,460,155, Jan. 25.

Talon, Inc., assignee: *See*—
Carlile, Alfred E.

Tate, George F.: *See*—
Gavin, Edward M., Grey, Aspelin, and Tate.

Taylor, Maurice K., Belmont, Scotland, and A. D. Knowles, Chadderton, assignors to Ferranti Limited, Hollinwood, England. Measurement or variation of physical states of materials. 2,460,199, Jan. 25.

Teeters, Wilber O., River Edge, N. J., assignor to Allied Chemical & Dye Corporation, New York, N. Y. Phosphonic acid esters. 2,460,043, Jan. 25.

Thacker, Carlisle M., Highland Park, and H. O. Folkins, Skokie, assignors to The Pure Oil Company, Chicago, Ill. Thermal conversion of hydrocarbons. 2,460,200, Jan. 25.

Thompson Manufacturing Co., assignee: *See*—
Ernest, Thomas R.

Tindall, John B., assignor to Commercial Solvents Corporation, Terre Haute, Ind. Arylalkylnitroalcohols. 2,460,265, Jan. 25.

Tomey, Michael B., South Norwalk, Conn. Automatic safety flatiron holder. 2,460,044, Jan. 25.

Trenkamp, Willibald: *See*—
Leonard, John, and Trenkamp.

Trico Products Corporation, assignee: *See*—
Rappl, Anton.

Trump, John G., Winchester, and R. W. Cloud, Lexington, Mass., assignors to Research Corporation, New York, N. Y. Laminated envelope structure for electron discharge devices. 2,460,201 Jan. 25.

Tuck, Davis H., Redding Ridge, Conn., assignor to Holophane Company, Inc., New York, N. Y. Airplane engine test cell and lighting therefor. 2,460,045, Jan. 25.

Tucker, Warren R., Dayton, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del. Hydraulic operating circuit for machine tools. 2,459,902, Jan. 25.

Turner, Arthur C., Chilhowee, Mo. Method and apparatus for vaporizing liquefied petroleum gas. 2,459,974, Jan. 25.

Tyson, Benjamin F., Bayside, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Radio receiver gain-control arrangement. 2,460,202, Jan. 25.

Union Carbide and Carbon Corporation, assignee: *See*—
Jacobson, Wilgot J.

Union Ice Company, The, assignee: *See*—
Rear, James C.

Union Oil Company of California, assignee: *See*—
Jones, Philip H.

United Engineering & Foundry Company, assignee: *See*—
Greer, Edwin D., Jr.

United Shoe Machinery Corporation, assignee: *See*—
Seely, Thomas H., and Linderoth, Jr.

United States Rubber Company, assignee: *See*—
Howland, Louis H.

United States Vanadium Corporation, assignee: *See*—
Burwell, Blair, and Brennan.

Universal Oil Products Company, assignee: *See*—
Leffer, Frederick W.

Urso, Ralph F., assignor to McCord Corporation, Detroit, Mich. Lubricator pump and reservoir assembly. 2,460,203, Jan. 25.

Vacha, Fred P., Atlantic, Mass., assignor, by mesne assignments, to Redmond Company, Inc. Speed-responsive rheostat. 2,460,246, Jan. 25.

Vacher, Nicholas, Saint-Etienne, France. Cycle brake. 2,460,204, Jan. 25.

Vancil, Edgar D., and F. A. Hassman, assignors to The Cincinnati Milling Machine Co., Cincinnati, Ohio. Milling machine transmission and control. 2,459,976, Jan. 25.

Van der Heem, Jan, The Hague, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Stabilized power supply. 2,459,977, Jan. 25.

Vanderhide, Robert E., Kelly Field, Tex. Automatic drilling machine. 2,460,156, Jan. 25.

Van Winkle, John L.: *See*—
Morris, Rupert C., Shokal, and Van Winkle.

Vapor Heating Corporation, assignee: *See*—
Lehane, Timothy J., and Burgess.

Vincent, Charles H., Avoca, assignor to Packard Motor Car Company, Detroit, Mich. Internal-combustion engine. 2,460,046, Jan. 25.

Von Stroh, Gerald: *See*—
Byrns, Alva C., and von Stroh.

Von Wangenheim, Adolf, assignor to Detroit Lubricator Company, Detroit, Mich. Vane pump and pressure control means. 2,460,047, Jan. 25.

Von Wangenheim, Adolf, assignor to Detroit Lubricator Company, Detroit, Mich. Pressure regulating means. 2,460,048, Jan. 25.

Voorhees, Vanderveer, Homewood, assignor to Standard Oil Company, Chicago, Ill. Catalyst gels. 2,459,903, Jan. 25.

Wagner, Gustave H.: *See*—
Wagner, Harold A. and G. H.

Wagner, Harold A. and G. H., Portland, Oreg. Material handling apparatus. 2,459,978, Jan. 25.

Wagner, Harold A. and G. H., Portland, Oreg. Material lifting and transporting truck. 2,459,979, Jan. 25.

Wagner, Harold A. and G. H., Portland, Oreg. Scoop truck. 2,459,980, Jan. 25.

Walker, Albert C.: *See*—
Christensen, Carl J., and Walker.

Wall, Alexander C., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Ignition system and apparatus thereof. 2,459,855, Jan. 25.

Wall, Alexander C., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Transformer spark plug. 2,459,856, Jan. 25.

Wallace & Tiernan Products, Inc., assignee: *See*—
Marks, Henry C., and Rubin.

War, United States of America as represented by the Secretary of, assignee: *See*—
Alderson, Jon W.

Warren, Doyle C., Monrovia, assignor to Chiksan Company, Brea, Calif. Swivel joint. 2,459,981, Jan. 25.

Water Hammer Arrester Corp., assignee: *See*—
Brielmaier, Aloysius J.

Watkins, Ernest R., Anderson, assignor, by mesne assignments, to New Castle Products, Inc., New Castle, Ind. Curved foldable closure. 2,460,157, Jan. 25.

Watson, Edward F., Larchmont, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telegraph signal code translator. 2,459,904, Jan. 25.

Watts, Chester B., Jr., East Orange, N. J., assignor to Federal Telephone and Radio Corporation. Attenuating line for ultra-high frequencies. 2,459,857, Jan. 25.

Weber, Theodore R., Latrobe, Pa., assignor to American Locomotive Company, New York, N. Y. Journal box lid structure. 2,459,905, Jan. 25.

Weber, Victor, Greensburg, Pa., assignor to Robertshaw-Fulton Controls Company. Automatic reversing control for electric motors. 2,459,906, Jan. 25.

Webster, Robert A., Santa Monica, Calif. Trimming board. 2,460,206, Jan. 25.

Welby, Alfred C., Minneapolis, Minn., assignor to Solar Corporation, Milwaukee, Wis. Milk pail cover. 2,460,049, Jan. 25.

Weisbecker, Frank G., Glenside, Pa. Knitting machine attachment. 2,460,050, Jan. 25.

Welch, William E., assignor to The Chaney Manufacturing Company, Springfield, Ohio. Thermometer having a casing with a magnifying element. 2,460,051, Jan. 25.

Wells, Edward C., Seattle, Wash., assignor to Boeing Airplane Company. Retractable shock absorbing strut. 2,459,982, Jan. 25.

Wents, William M., Carneys Point, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Continuous dyeing. 2,460,206, Jan. 25.

Werner, Fred, and E. C. Miles, Dallas, Tex. Awning and ventilator. 2,459,983, Jan. 25.

Werner, Nels E., assignor to Bigelow-Liptak Corporation, Detroit, Mich. Lined container. 2,460,052, Jan. 25.

West, Willis Z., Jr., and M. F. Gamble, Winston-Salem, N. C. Centrifugal force operated switch. 2,459,984, Jan. 25.

Westcott, Vernon C., Lincoln, assignor to Raytheon Manufacturing Company, Newton, Mass. Electrical pulse system. 2,459,858, Jan. 25.

Western Electric Company, Incorporated, assignee: *See*—
Berggren, George E.
Bissett, Norman T., and Moore.
Gillis, Randall.
Powell, Raymond E.

Westinghouse Air Brake Company, The, assignee: *See*—
Good, John N.
Kelley, Cecil S.

Westinghouse Electric Corporation, assignee: *See*—
Stine, Samuel S.

Weston, Simeon, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Grid structure for electron discharge devices. 2,459,859, Jan. 25.

Wheeler, Carson M.: *See*—
Chevigny, Paul G., and Wheeler.

White, Loyd J., assignor to Southern Steel Company, San Antonio, Tex. Two-stage liquefied petroleum gas dispensing system. 2,460,158, Jan. 25.

White, Loyd J., assignor to Southern Steel Company, San Antonio, Tex. Vapor outlet for truck tanks. 2,460,159, Jan. 25.

Wiggins, John H., Chicago, Ill. Floating roof for liquid storage tanks. 2,460,053, Jan. 25.

Wiggins, John H., Chicago, Ill. Tank bottoms equipped with improved means for testing seams and recovering leakage from same. 2,460,054, Jan. 25.

Wilkinson, Claude K., U. S. Navy. Engine noise equipment. 2,459,860, Jan. 25.

Wilson, David D.: *See*—
Culhane, Edward A., and Wilson.

Wilson, Rosser L., Mahwah, and E. R. Knauer, Westwood, N. J., assignors to American Brake Shoe Company, New York, N. Y. Control apparatus. 2,460,055, Jan. 25.

Winslow, Nathaniel M., Lakewood, and G. W. Heise, Rocky River, Ohio, assignors to National Carbon Company, Inc. Conducting chemical reactions. 2,459,907, Jan. 25.

Winthrop-Stearns Inc., assignee: *See*—
Huber, Wolfgang, and Boehme.

Wirth, Emil O., and F. Barfod, assignors to Bendix Aviation Corporation, South Bend, Ind. Heating system. 2,460,207, Jan. 25.

Wiseman, Park A.: *See*—
McBee, Earl T., and Wiseman.

Wittenberg, Hubert H., Lancaster, Pa., assignor to Radio Corporation of America. High-low impedance electron tube detector. 2,460,160, Jan. 25.

Wohlfield, Frederick W.: *See*—
Bobek, William J., and Wohlfield.

Wood, Alfred R., Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Sewing-machine clutch. 2,460,247, Jan. 25.

Wood, Ross, Waltham, assignor to Raytheon Manufacturing Company, Newton, Mass. Electrode structure for electrical space discharge tubes. 2,459,861, Jan. 25.

Woodbury, Charles H., and G. F. Brooks, Los Angeles, Calif. Hand covering. 2,459,985, Jan. 25.

Woodstock Typewriter Company, assignee: *See*—
Gattuso, Peter F.

Worden, Willard H., Seattle, Wash. Electric house furnace. 2,459,986, Jan. 25.

Worthington, Edward H., East Stroudsburg, Pa. Lawn mower fly knife. 2,460,111, Jan. 25.

Worthington Pump and Machinery Corporation, assignee: *See*—
Sebald, Joseph F.

Wright, Antony, Drexel Hill, Pa., and E. L. Clark, Collingswood, N. J., assignors to Radio Corporation of America. Beam deflection control for cathode-ray devices. 2,460,112, Jan. 25.

Young, David W.: *See*—
Sparks, William J., and Young.

Young, Sidney G., assignee: *See*—
Hollis, Gilbert.

Young, Sidney G., London, England. Centering or like punch. 2,460,113, Jan. 25.

Yowell, Howard L., Elizabeth, and M. W. Swaney, Cranford, N. J., assignors to Standard Oil Development Company. Purification of unsaturated hydrocarbon mixtures. 2,460,056, Jan. 25.

Yuza, Rudolph, assignor to A. Dalkin Company, Chicago, Ill. Mixing valve. 2,460,161, Jan. 25.

Zalkind, Albert M., Arlington, Va. Device for playing "salvo." 2,460,208, Jan. 25.

Zern, Warren B., Pottstown, Pa. Tank flush ball and guide support. 2,460,114, Jan. 25.

Zimmer, John C.: *See*—
Duncan, Gordon W., and Zimmer.

Swenson, Carl E.: *See*—
Swennes, Benjamin A., Shelton, and Swenson.

Company, Detroit, Mich. Pressure regulating means. 2,460,048, Jan. 25.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 25TH DAY OF JANUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Apparatus including power unit for setting brakes. E. A. Rockwekk. Re. 23,081, Jan. 25.
Grease composition. J. C. Zimmer and G. W. Duncan. Re. 23,082, Jan. 25.
Lethal composition for insects. H. W. Eck and J. H. Ford. Re. 23,080, Jan. 25.

LIST OF DESIGN INVENTIONS

Ash tray. B. Blecher. 152,452, Jan. 25.
Ash tray. W. T. Heintze. 152,474, Jan. 25.
Ash tray and glass holder, Combined. R. T. Leach. 152,485, Jan. 25.
Bed unit, Combination twin. T. S. Ziegenfuss. 152,512, Jan. 25.
Belt, Adjustable. H. Stelzer. 152,503, Jan. 25.
Bird house. B. E. Hawkinson. 152,472, Jan. 25.
Blouse or similar article. S. Platt. 152,493, Jan. 25.
Blouse or similar article. V. Tomahinsky. 152,505–7, Jan. 25.
Bookstall. J. S. Dawson. 152,459, Jan. 25.
Bookstand. J. S. Dawson. 152,458, Jan. 25.
Bottle. J. Braun. 152,455, Jan. 25.
Bottle. J. Heim. 152,473, Jan. 25.
Bracelet or the like. H. Bogoff. 152,453–4, Jan. 25.
Brooch or similar article, Separable. A. Katz. 152,481, Jan. 25.
Cap, Container. A. H. Jung. 152,479, Jan. 25.
Case or similar article, Milk bottle. E. B. Erickson. 152,462, Jan. 25.
Casing for dry cleaning machines. P. Schladermundt, C. L. Metzler, and E. E. Hallander. 152,499, Jan. 25.
Chain for a bracelet or the like, Expansible link. J. M. Bender. 152,449–50, Jan. 25.
Clip and cap for ball pens or the like, Combination. M. J. Waldinger. 152,510, Jan. 25.
Clip and point protector for fountain pens or the like, Combined. M. J. Waldinger. 152,509, Jan. 25.
Coat. J. Frumkes. 152,464–7, Jan. 25.
Coat or the like. R. Trigére. 152,508, Jan. 25.
Collar and handle for a coffee maker bowl or the like, Combined. H. G. Blakeslee. 152,451, Jan. 25.
Console bar with aquarium. M. Buxbaum and M. Lebensfeld. 152,456, Jan. 25.
Dispensing device, Lubricant. R. P. Field. 152,463, Jan. 25.
Display sign, Illuminable. R. M. Price and L. E. Peters. 152,497, Jan. 25.
Drip catcher for a bottle. D. E. O'Brien. 152,489, Jan. 25.
Earring or similar article. M. Chernow. 152,457, Jan. 25.
Earring or similar article. A. Katz. 152,480, Jan. 25.
Frame, Spectacle. A. E. Mangold. 152,487, Jan. 25.
Guard or the like, Article holding. O. W. Hueter. 152,475, Jan. 25.
Heater, Gas. J. F. King and J. N. White. 152,483–4, Jan. 25.
Holder or similar article, Cigarette. C. Potts. 152,494–5, Jan. 25.
Jar or similar article, Cookie. N. E. Graven. 152,470, Jan. 25.
Jewelry setting. M. Goodman. 152,469, Jan. 25.
Jewelry setting or similar article. F. J. Gaertner. 152,468, Jan. 25.
Lamp. A. Pfaltz. 152,492, Jan. 25.
Mixer, Amalgam. H. E. Meltzer. 152,488, Jan. 25.
Nightgown, Lady's. P. J. Balog. 152,448, Jan. 25.
Opener or similar article, Fish mouth. F. H. Hutchinson and C. T. Walsh. 152,478, Jan. 25.
Ornament, Christmas tree. V. P. O'Brien. 152,490, Jan. 25.
Panties. A. M. Sebastian. 152,501, Jan. 25.
Pipe rack, Smoker's. E. A. Rosenbaum. 152,498, Jan. 25.
Projection apparatus. J. Y. and C. C. Taylor. 152,504, Jan. 25.
Projector and carrying case therefor, Combined sound and motion-picture. O. Kendall and S. W. Loach. 152,482, Jan. 25.
Register. R. D. Huszagh. 152,476–7, Jan. 25.
Ring and perfume container, Combined. E. G. Lorillard. 152,486, Jan. 25.
Ring, Wedding. S. D. Dumovits. 152,460, Jan. 25.
Scissors, Pair of. P. L. Hartnett. 152,471, Jan. 25.
Shoe. J. B. Whatley. 152,511, Jan. 25.
Signal or the like, Road. H. A. Premack. 152,496, Jan. 25.
Temple, Spectacle. R. F. E. Stegeman. 152,502, Jan. 25.
Toothbrush and glass holder. G. E. Elliott. 152,461, Jan. 25.
Watch or similar article, Ball pendant. E. G. Schwarz. 152,500, Jan. 25.
Wrist watch and strap therefor, Combined. M. Ostier. 152,491, Jan. 25.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 25TH DAY OF JANUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrading device. W. P. Peterson. 2,459,893, Jan. 25.
Abrasive apparatus. E. M. Chase. 2,460,250, Jan. 25.
Actuating electrical switches. T. A. Stiffel. 2,459,898, Jan. 25.
Air-conditioning apparatus. W. L. Fleisher. 2,459,802, Jan. 25.
Airplane engine test cell and lighting therefor. D. H. Tuck. 2,460,045, Jan. 25.
Alarm device. W. E. La Pedus. 2,460,133, Jan. 25.
Alkaline vegetable protein solutions, Stabilized. A. F. Millidge and C. L. Knight. 2,459,952, Jan. 25.
Allyl ether of anacardic materials, bodied products thereof, and novel compositions and friction elements produced therewith. M. T. Harvey. 2,460,255, Jan. 25.
Amino acids, Preparation of. R. H. Sifferd. 2,460,040, Jan. 25.
Ammonium compounds, Quaternary. M. De Groote and B. Keiser. 2,459,994, Jan. 25.
Ammunition box. J. F. Haberlin. 2,459,934, Jan. 25.
Amusement device. J. Mitchell. 2,460,026, Jan. 25.
Amusement device, Luminescent. J. M. Gordon. 4,260,221, Jan. 25.
Anchoring device, Antiskid tire chain. M. F. McGuiness. 2,460,023, Jan. 25.
Anellated fluorocarbons. E. T. McBee and L. D. Bechtol. 2,459,781, Jan. 25.
Antenna for radiating circularly polarized waves. P. J. Kibler. 2,460,260, Jan. 25.
Antiskid device. B. B. Gemeny. 2,460,003, Jan. 25.
Apparatus for gas-solid contact operations. E. L. Sinclair. 2,460,151, Jan. 25.
Apparatus for making multiply cable sheaths. R. Gillis. 2,459,877, Jan. 25.
Apparatus for manufacture of fibrous articles. P. E. Ista. 2,460,129, Jan. 25.
Apparatus for pressing ends into cylindrical shells. D. C. Morgan, Jr. 2,459,954, Jan. 25.
Apparatus for severing towlines and the like. A. B. Schults. 2,460,194, Jan. 25.
Apparatus for testing insulated wire and cable. H. B. Slade. 2,460,107, Jan. 25.
Apparatus for the cooling of heated objects. A. Schupp. 2,460,150, Jan. 25.
Apparatus for the fluid treatment of thread or the like. K. M. McLellan. 2,460,261, Jan. 25.
Arrester, Water-hammer. A. J. Brielmaier. 2,460,121, Jan. 25.
Arylalkylnitroalcohols. J. B. Tindall. 2,460,265, Jan. 25.
Automatic safety flatiron holder. M. B. Tomey. 2,460,044, Jan. 25.
Awning and ventilator. F. Werner and E. C. Miles. 2,459,983, Jan. 25.
Baker, Electric egg. J. R. Gomersall. 2,459,933, Jan. 25.
Balanced fluid motor valve. J. K. Simpson. 2,460,196, Jan. 25.
Balancing device. J. Lefar. 2,459,947, Jan. 25.
Basic esters of aliphatic tertiary carboxylic acids. H. Martin and A. Margot. 2,460,182, Jan. 25.
Beam deflection control for cathode-ray devices. A. Wright and E. L. Clark. 2,460,112, Jan. 25.

Bearing: *See*—
Fluid pressure bearing.

Bearing. M. E. Martellotti. 2,459,825, Jan. 25.
Bed-rail extension. G. Hill. 2,459,880, Jan. 25.
Bed table. C. L. Strauss. 2,460,244, Jan. 25.
Bell, Cycle. M. Brun. 2,460,166, Jan. 25.
Beryllium oxide from berryllium ore, Recovering. A. Schormuller. 2,459,895, Jan. 25.
Biotin intermediate. S. A. Harris and K. Folkers. 2,460,224–5, Jan. 25.
Biotin intermediate. S. A. Harris and G. E. Arth. 2,460,226, Jan. 25.
Block making machine, Concrete. A. G. Carlsen. 2,460,167, Jan. 25.
Block molding machine. L. T. Ferrin. 2,460,220, Jan. 25.
Blowpipe. W. J. Jacobsson. 2,459,881, Jan. 25.

Board: *See*—
Pattern board.
Trimming board.

Bomb sight. K. Clark. 2,459,919, Jan. 25.
Boring head for machine tools. C. W. G. Lacey and G. L. Binns. 2,460,092, Jan. 25.
Bottle carrier. B. Comer. 2,459,921, Jan. 25.
Bottle holder. S. N. Lebold. 2,460,229, Jan. 25.

Box: *See*—
Ammunition box.

Box or crate, Knockdown. L. R. Rapp. 2,460,104, Jan. 25.

Bracket: *See*—
Curtain rod bracket.

Brake: *See*—
Cycle brake.
Internal shoe drum brake.
Moving stairway brake.

Brazing of conductors, Electrical. G. E. Berggren. 2,459,863, Jan. 25.
Brush, Electrical utility. S. Mayer. 2,460,188, Jan. 25.
Brush holder. J. Leonard and W. Treukamp. 2,460,136, Jan. 25.
Buckle. M. Hoffman. 2,460,228, Jan. 25.
Burner and pilot structure, Liquid fuel. M. D. Huston and B. Hayter. 2,460,014, Jan. 25.
Butadiene-styrene rubbery copolymer, Vulcanization of. A. C. Byrns and G. von Stroh. 2,459,916, Jan. 25.
Calibrating means for indicating instruments in pulse echo systems, Electronic. P. C. Michel. 2,460,142, Jan. 25.
Camera, Projectile flight recording multiple exposure. I. S. Bowen. 2,460,163, Jan. 25.
Camera with variaize focal plane aperture. C. E. Hannum. 2,460,174, Jan. 25.
Carbonating apparatus. S. S. Green and D. Keene. 2,460,004, Jan. 25.

Carrier: *See*—
Bottle carrier.
Collapsible carrier.

Carrier and conveyance, Shopper's combination. S. E. Bourne. 2,459,865, Jan. 25.
Carrier with density comparison scale, Negative. D. L. Butler. 2,460,060, Jan. 25.

Case: *See*—
Open-top refrigerated case.

Casing head. A. J. Penick. 2,460,238, Jan. 25.
Casings, Processing. T. R. Ernest. 2,460,077, Jan. 25.
Casting apparatus, Metal. S. L. Palmer and L. M. Beckes. 2,459,892, Jan. 25.
Catalyst gels. V. Voorhees. 2,459,903, Jan. 25.
Catalytic amidization process. P. W. Garbo. 2,460,002, Jan. 25.
Cathode. G. F. Rouse. 2,459,841, Jan. 25.
Cathode beam transmitter tube. H. B. Law. 2,460,093, Jan. 25.
Cathode structure for gas tubes, Partially indirectly heated. D. V. Edwards and E. K. Smith. 2,459,997, Jan. 25.
Cellulose sheet material, Manufacturing regenerated. C. Dreyfus, B. Andersen, and N. N. Kojevnikoff. 2,459,927, Jan. 25.
Centering or like punch. S. G. Young. 2,460,113, Jan. 25.
Centrifugal force operated switch. W. Z. West, Jr., and M. F. Gamble. 2,459,984, Jan. 25.
Centrifugal separator. L. D. Jones and H. S. Barnaby. 2,459,944, Jan. 25.

Chair: *See*—
Metal chair.

Changer, Fishing line. M. L. Roark. 2,459,963, Jan. 25.
Chemical reactions, Conducting. N. M. Winslow and G. W. Heise. 2,459,907, Jan. 25.
Chromium complex. Monoazo. H. W. Grimmel and L. Richter. 2,459,813, Jan. 25.
Chuck reconditioning device. L. B. Brown. 2,459,914, Jan. 25.

Circuit: *See*—
Motor control circuit.
Signal translator blocking circuit.
Testing circuit.
Vibrator circuit.

Circuit element and motor for driving the same. E. G. Seath and E. C. Klepp. 2,459,844, Jan. 25.
Circuit for machine tools, Hydraulic operating. W. B. Tucker. 2,459,902, Jan. 25.
Circuit interrupter. R. M. Bennett. 2,460,118, Jan. 25.
Circuits, Electric control. E. M. Gardiner and O. W. Livingston. 2,460,127, Jan. 25.
Circuits, Radio-frequency oscillator power supply. R. D. Boadle. 2,459,988, Jan. 25.
Clamp for rods and tubular members. H. Héritier. 2,460,176, Jan. 25.
Clamping means. C. L. Hardwick. 2,459,879, Jan. 25.

Cleaner: *See*—
Windshield cleaner.

Clip: *See*—
Hair clip.

Clock, Electric balance. J. Fink. 2,459,930, Jan. 25.
Closure, Curved foldable. E. R. Watkins. 2,460,157, Jan. 25.
Clothesline, Adjusting. D. E. Hutchings. 2,460,088, Jan. 25.
Clothespin. E. A. Alsop and H. V. King. 2,460,162, Jan. 25.

Clutch: *See*—
Sewing-machine clutch.
Coating composition and sheets coated therewith. R. E. Fay, Jr. 2,459,874, Jan. 25.
Coating composition comprising an amide-aldehyde resin and a polyester of an alpha-alkyl ether of glycerol and a dicarboxylic acid as plasticizer. E. W. Moffett. 2,460,187, Jan. 25.
Coating composition comprising an amide-aldehyde resin and a polyester of 2-ethyl hexane-diol-1,3 and a dicarboxylic acid as a plasticizer. E. W. Moffett. 2,460,186, Jan. 25.
Cobalt bromide relative humidity indicators. P. B. Davis. 2,460,068–9, Jan. 25.
Cobalt chloride relative humidity indicators. P. B. Davis. 2,460,071, Jan. 25.
Cobalt iodide relative humidity indicators. P. B. Davis. 2,460,073, Jan. 25.
Cobalt phosphate relative humidity indicators. P. B. Davis. 2,460,070, Jan. 25.
Cobalt sulfate relative humidity indicators. P. B. Davis. 2,460,065–6, Jan. 25.
Cobalt thiocyanate relative humidity indicators. P. B. Davis. 2,460,074, Jan. 25.
Coil and making such, Electrical. R. E. Powell. 2,459,894, Jan. 25.
Coal for variometers, Spherical. E. E. Combs. 2,459,794, Jan. 25.
Collapsible carrier. R. E. Smith and P. A. Musso. 2,460,108, Jan. 25.
Collet. A. M. Stoner. 2,459,899-900, Jan. 25.
Combination pump. W. L. Knott. 2,460,179, Jan. 25.
Computer, Spurious response. W. T. Doyle and E. R. Baker. 2,459,799, Jan. 25.
Condenser: *See*—
Electrical condenser.
Connector: *See*—
Separable connector.
Confectioneries, Making. J. J. Alikonis. 2,459,908, Jan. 25.
Construction for neon signs, Electrode. T. H. Briggs, Jr. 2,459,789, Jan. 25.
Contacting of liquids, Method and apparatus for countercurrent. J. D. Long and C. O. Rhys, Jr. 2,460,019, Jan. 25.
Contacting subdivided solid contact material with fluid reactants, particularly hydrocarbons, Method and apparatus for. F. W. Leffer. 2,459,824, Jan. 25.
Container: *See*—
Display and shipping container. Lined container.
Container. I. and J. D. Hill. 2,459,939, Jan. 25.
Control apparatus. C. S. Kelley. 2,459,883, Jan. 25.
Control apparatus. R. L. Wilson and E. R. Knauer. 2,460,055, Jan. 25.
Control arrangement, Voltage. C. N. Smyth and A. S. Grant. 2,459,846, Jan. 25.
Control device. C. E. Basley. 2,460,116, Jan. 25.
Control for bus heating and cooling systems, Electric. T. J. Lehane and E. H. Burgess. 2,460,135, Jan. 25.
Control for electric motors, Automatic reversing. V. Weber. 2,459,906, Jan. 25.
Control for oil burners, Automatic air shutoff and draft. K. M. Hammell. 2,459,815, Jan. 25.
Control of polyphase motors, Combined primary and secondary. E. W. Seeger. 2,460,037, Jan. 25.
Control system, Hydraulic. F. A. Hassman and H. Ernst. 2,459,937, Jan. 25.
Control system, Keying. R. S. Chapin. 2,460,061, Jan. 25.
Control unit, Millivolt. J. W. Alderson. 2,459,784, Jan. 25.
Controlling the lengths of separable fasteners. L. H. Morin. 2,460,102, Jan. 25.
Conversion of hydrocarbons, Thermal. G. M. Thacker and H. O. Folkins. 2,460,200, Jan. 25.
Conversion unit, Water heater. H. E. Handley. 2,459,816, Jan. 25.
Conveyer for dehydrating machines. A. E. Brunne. 2,459,915, Jan. 25.
Copper bromide relative humidity indicators. P. B. Davis. 2,460,067, Jan. 25.
Copper chloride relative humidity indicators. P. B. Davis. 2,460,072, Jan. 25.
Core, Variable reluctance. R. A. Pfuntner and F. R. D'Entremont. 2,460,145, Jan. 25.
Coupling: *See*—
Hydraulic coupling. Shaft coupling.
Pipe coupling.
Coupling for beaded pipes or tubings. R. E. Risley. 2,460,032, Jan. 25.
Coupling for round pipes and tubes. F. E. Cox. 2,459,872, Jan. 25.
Coupling means. L. M. Stinchcomb and R. S. Doerr. 2,460,110, Jan. 25.
Cover: *See*—
Milk pail cove.
Cover for automobile seats, Plastic. G. A. Lyon. 2,459,889, Jan. 25.
Covering, Hand. C. H. Woodbury and G. F. Brooks. 2,459,985, Jan. 25.
Crate, Egg. E. H. Lupton. 2,460,020, Jan. 25.
Crystal growing apparatus. C. J. Christensen and A. C. Walker. 2,459,869, Jan. 25.
Cup, Indoor practice putting. L. H. Gerding. 2,460,060, Jan. 25.
Curtain rod bracket. T. Raudenkolb. 2,460,193, Jan. 25.
Cutter: *See*—
Sleet cutter.
Cycle brake, N. Vacher. 2,460,204, Jan. 25.
Cyclic perchloro compounds, Fluorination of unsaturated. E. T. McBee and P. A. Wiseman. 2,459,783, Jan. 25.
Cylinder and frame, Locomotive. E. O. Elliott. 2,459,929, Jan. 25.
Decoy duck, Animated. C. V. Greenleaf. 2,460,128, Jan. 25.
Detector, High-low impedance electron tube. H. H. Wittenberg. 2,460,160, Jan. 25.
Device for playing "salvo." A. M. Zalkind. 2,460,208, Jan. 25.
Dew-point indicator. O. L. Graves and R. Bishop. 2,459,810, Jan. 25.
Diaphragm, Making a. M. Caserta. 2,460,168, Jan. 25.
Differential lock. E. J. Cook. 2,459,870, Jan. 25.
Dihydroxy benzene, Allylation of. K. P. Monroe. 2,459,835, Jan. 25.
Discharge device, Beam type electron. P. G. Chevigny. 2,459,792, Jan. 25.
Discharge device, Electric. E. D. McArthur. 2,460,141, Jan. 25.
Discharge device, Electrical. H. de B. Knight. 2,460,132, Jan. 25.
Discharge device of the velocity modulation type, Electron. J. H. Fremlin. 2,459,805, Jan. 25.
Discharge device, Velocity-modulated electron. J. H. Fremlin and C. H. Foulkes. 2,459,806, Jan. 25.
Disconnectible universal joint. D. A. Dalton. 2,460,216, Jan. 25.
Dispensing system, Two-stage liquefied petroleum gas. L. J. White. 2,460,158, Jan. 25.
Display and shipping container. J. K. Makrianes. 2,460,230, Jan. 25.
Distributor checker, Bomb station. J. A. Fahrner. 2,459,801, Jan. 25.
Dowel supporting assembly. W. S. Godwin. 2,460,172, Jan. 25.
Drier with rotor, stationary casing, and terminal separation means for drying matrials and drying fluid, Concurrent flow. O. Heller. 2,460,008, Jan. 25.
Drilling machine, Automatic. R. E. Vanderhide. 2,460,156, Jan. 25.
Drive, Variable-speed. W. M. Schweickart. 2,459,969, Jan. 25.
Driving means for spinning, twisting, and like spindles. J. Serra y Sló. 2,460,152, Jan. 25.
Dyeing, Continuous. W. M. Wentz. 2,460,206, Jan. 25.
Dyeing nylon with acid dyes of limited solubility. F. C. McGrew and W. H. Sharkey. 2,459,831, Jan. 25.
Dyestuffs, Anthraquinone vat. T. Holbro, W. Kern, and P. Sutter. 2,459,941, Jan. 25.
Electric cord reel. N. A. Gray. 2,460,082, Jan. 25.
Electric house furnace. W. H. Worden. 2,459,986, Jan. 25.
Electric motor. J. D. Cole. 2,460,063, Jan. 25.
Electric switch. C. F. Robbins. 2,460,034, Jan. 25.
Electric welding, Method and apparatus for. J. W. Dawson. 2,459,795, Jan. 25.
Electrical condenser. W. M. Roberds. 2,460,033, Jan. 25.
Electrode structure for electrical space discharge tubes. R. Wood. 2,459,861, Jan. 25.
Electromagnetic pressure gauge. J. F. Emerson. 2,460,076, Jan. 25.
Emulsion polymerization process. G. E. Serniuk. 2,460,038, Jan. 25.
Engine: *See*—
Internal-combustion engine. Rotary valve internal-combustion engine.

Loom: *See*—
Narrow ware loom.
Low center of gravity sleds. V. W. Manthey. 2,460,021, Jan. 25.
Lubricant, Synthetic. D. T. Rogers and J. H. Bartlett. 2,460,035, Jan. 25.
Lubricating composition. W. J. Sparks and D. W. Young. 2,460,041, Jan. 25.
Lubrication, Track joint. F. W. Brooke. 2,459,990, Jan. 25.
Machine for carroting loose fur. E. A. Culhane and D. D. Wilson. 2,459,924, Jan. 25.
Machine transmission and control, Milling. E. D. Vancil and F. A. Hassman. 2,459,976, Jan. 25.
Magneto. I. B. Johnson. 2,460,130, Jan. 25.
Magnetron. J. P. Blewett and R. V. Langmuir. 2,460,119, Jan. 25.
Maleamic acid, Manufacture of. R. S. Robinson and E. L. Humburger. 2,459,964, Jan. 25.
Massaging apparatus or the like. D. V. Summerville. 2,460,245, Jan. 25.
Material handling apparatus. H. A. and G. H. Wagner. 2,459,978, Jan. 25.
Measurement or variation of physical states of materials. M. K. Taylor and A. D. Knowles. 2,460,199, Jan. 25.

Cup. Indoor practice putting. L. H. Gerding. 2,460,080, Jan. 25.

Flash percussive welding, Electric. P. L. Spencer. 2,459,847, Jan. 25.

Mechanical members to shafts or the like, Securing. E. W. Krause. 2,460,091, Jan. 25.
Mechanism for typewriters, Silent key. P. F. Gattuso. 2,459,932, Jan. 25.
Metal chair. J. J. Nash. 2,460,027, Jan. 25.
Metallizable tetrakisazo dye. W. Bossard. 2,459,913, Jan. 25.
Mica, Peating. K. N. Mathes. 2,460,140, Jan. 25.
Milk pail cover. A. C. Welby. 2,460,049, Jan. 25.
Mixer for gas burners. C. Bellios. 2,460,057, Jan. 25.
Mixing valve. R. Yuza. 2,460,161, Jan. 25.
Model duplicates, Making. H. E. Renaud. 2,460,242, Jan. 25.
Momentary slowdown device for high-speed blankholder presses. R. J. Lindsey. 2,459,888, Jan. 25.
Motion repeating system. T. O. McCarthy. 2,459,830, Jan. 25.
Motor: *See*—
  Electric motor. Spring motor.
Motor control circuit. A. M. Curtis. 2,460,064, Jan. 25.
Motor control system, Induction. A. H. Myles and A. C. Prottengeier. 2,460,234, Jan. 25.
Motor drive, Speed regulating. B. W. Carrington. 2,459,917, Jan. 25.
Mounting: *See*—
  Railway truck journal box mounting.
Mounting for refrigerating apparatus and the like. H. O. Kirkpatrick. 2,459,946, Jan. 25.
Moving stairway brake. G. W. Lautrup and J. N. Anderson. 2,460,017, Jan. 25.
Narrow ware loom. M. Hahne. 2,459,814, Jan. 25.
Necktie holder. S. A. Johnson. 2,460,089, Jan. 25.
Network, Trigger. H. R. Summerhayes, Jr. 2,459,852, Jan. 25.
Nitro olefines, Production of. C. W. Scaife, A. E. W. Smith, and H. Baldock. 2,460,243, Jan. 25.
Nonsulfide ores, Concentration of. K. F. Schilling. 2,459,966–7, Jan. 25.
Novelty, Double-cut educational. L. H. Fireng. 2,460,169, Jan. 25.
Nut or bolt lock. J. F. Kendrick. 2,460,131, Jan. 25.
Oil composition, Lubricating. J. G. McNab and J. H. Bartlett. 2,460,025, Jan. 25.
Open-top refrigerated display case. J. C. Rear. 2,460,030, Jan. 25.
Optical method of testing milk for relative uniformity. A. A. McMurray. 2,460,101, Jan. 25.
Oscillator, Crystal controlled. G. T. Royden. 2,459,842, Jan. 25.
Panel and fastener assembly. H. E. Mills. 2,459,953, Jan. 25.
Paper, Making cockle. S. B. Stafford. 2,460,042, Jan. 25.
Partition device for cooking pots. M. M. Himmel. 2,459,940, Jan. 25.
Pattern board. H. O. Capps. 2,460,213, Jan. 25.
Peening machine. W. J. Cahill. 2,460,123, Jan. 25.
Pen, Fountain. D. C. Crain. 2,459,993, Jan. 25.
Perhalotoluenes. W. B. Ligett, E. T. McBee, and V. V. Lindgren. 2,459,779, Jan. 25.
Petroleum gas, Method and apparatus for vaporizing liquefied. A. C. Turner. 2,459,974, Jan. 25.
Phosphonic acid esters. W. O. Teeters. 2,460,043, Jan. 25.
Photopolymerization of vinylidene compounds with organic disulfides. L. M. Richards. 2,460,105, Jan. 25.
Piezoelectric crystal holder. R. Smoluchowski. 2,460,153, Jan. 25.
Pilot for pot type oil burners, Quadrant. M. D. Huston. 2,460,013, Jan. 25.
Pipe coupling. J. A. Muller. 2,459,956, Jan. 25.
Pipe mitering apparatus. M. N. Lebedeff. 2,459,823, Jan. 25.
Plate, Trolling. O. C. Palmer. 2,460,237, Jan. 25.
Plow or the like and making same. R. H. Figard. 2,459,999, Jan. 25.
Plug: *See*—
  Spark plug. Transformer spark plug.
Polycarbocyclic perfluoro-compounds, Anellated. E. T. McBee and L. D. Bechtol. 2,459,780, Jan. 25.
Polyvinyl acetate emulsion adhesive. G. O. Morrison, T. P. G. Shaw, J. D. P.-E. Mercier, and H. M. Collins. 2,459,955, Jan. 25.
Positioning objects for automatic color sorting. E. H. Bickley. 2,460,212, Jan. 25.
Power apparatus, Hydraulic. R. M. Brodeur. 2,460,058, Jan. 25.
Power supply, Stabilized. J. van der Heem. 2,459,977, Jan. 25.
Power transmission. E. C. Maxwell. 2,459,829, Jan. 25.
Pressure gauge. H. H. Furn. 2,459,931, Jan. 25.
Pressure regulating means. A. von Wangenheim. 2,460,048, Jan. 25.
Pressure sensitive adhesive mass. W. L. Nelson and O. R. Sinnig. 2,459,891, Jan. 25.
Printer, Electrical code. L. Kozma and G. X. Lens. 2,459,821, Jan. 25.
Projector, Grenade. W. E. Swift, Jr. 2,459,854, Jan. 25.
Projector, Smoke bomb. J. H. McLain and A. C. Fairchild. 2,459,833, Jan. 25.
Protecting systems for transporting media corrosive to metal. H. L. Kahler. 2,460,259, Jan. 25.
Protector: *See*—
  Hose protector.
Pull down device. V. E. Richardson. 2,459,840, Jan. 25.
Pulse system, Electrical. V. C. Westcott. 2,459,858, Jan. 25.
Pump: *See*—
  Combination pump. Variable capacity rotary pump.
  Ionic vacuum pump.
  Roller vane rotary pump.
Pump. A. W. Burks. 2,460,122, Jan. 25.
Pump and pressure control means, Vane. A. von Wangenheim. 2,460,047, Jan. 25.
Pump and reservoir assembly, Lubricator. R. F. Urso. 2,460,203, Jan. 25.
Pump or motor, Hydraulic pressure. B. Beaman, J. Hulman, and R. A. Stein. 2,459,786, Jan. 25.
Purse, Sleevelet. T. D. Cimino. 2,459,992, Jan. 25.
Racemic *α* hydroxy *β,β* dimethyl *α* butyrolactone, Resolution of. F. D. Pickel, J. I. Fass, and S. Chodroff. 2,460,239–40, Jan. 25.
Radio identifying system. D. D. Grieg. 2,459,811, Jan. 25.
Radio receiver gain-control arrangement. B. F. Tyson. 2,460,202, Jan. 25.
Railway truck journal box mounting. D. S. Barrows and E. H. Blattner. 2,460,211, Jan. 25.
Range, Kitchen. O. Ollert. 2,460,263, Jan. 25.
Reaction products of an aldehyde with allyl ether of anacardic material. M. T. Harvey. 2,460,256, Jan. 25.
Reading stand. W. H. Curtis. 2,459,873, Jan. 25.
Reciprocating tool. R. F. Jackson. 2,459,942, Jan. 25.
Rectifier and transformer unit. K. L. Hansen. 2,460,006, Jan. 25.
Rectifier bridge, Metal. M. C. Bloom. 2,459,787, Jan. 25.
Rectifier element. M. J. Stateman. 2,459,848, Jan. 25.
Rectifier in glass or other insulating container, Full-wave. W. F. Bonner. 2,459,788, Jan. 25.
Rectifier, Selenium. W. P. Krok. 2,459,886, Jan. 25.
Reel: *See*—
  Electric cord reel.
Refuse bag support. T. O. Smith. 2,459,970, Jan. 25.
Retainer, Packing. C. T. Ripley. 2,460,031, Jan. 25.
Rheostat, Speed-responsive. F. P. Vacha. 2,460,246, Jan. 25.
Roadwheel assembly for automobiles, Emergency. F. C. Kember. 2,460,178, Jan. 25.
Rod driver, Flexible. L. W. Schoensiegel. 2,460,149, Jan. 25.
Roller attachment. E. W. Little. 2,460,094, Jan. 25.
Roller vane rotary pump. H. H. Looke. 2,460,018, Jan. 25.
Roof for liquid storage tanks, Floating. J. H. Wiggins. 2,460,053, Jan. 25.
Rotary Diesel engine. G. F. Pieper. 2,460,192, Jan. 25.
Rotary electric switch. G. S. Ellithorpe. 2,459,998, Jan. 25.
Rotary valve internal-combustion engine. H. P. Stevens. 2,459,973, Jan. 25.
Rotation rate change generator. A. P. Adamson. 2,460,115, Jan. 25.
Rubber, Preserving synthetic. L. H. Howland. 2,460,177, Jan. 25.
Safety control device for motor vehicles. H. T. Higgins. 2,459,938, Jan. 25.
Safety device for aircraft pilots. M. J. O. Lobelle. 2,459,948, Jan. 25.
Safety device for labeling machines. S. T. Carter. 2,460,214, Jan. 25.
Saw set. J. J. Stocker. 2,460,198, Jan. 25.
Sawmill construction. E. E. Esgate. 2,459,800, Jan. 25.
Screw conveying steam distilling apparatus for pomace. E. K. Metzner. 2,459,951, Jan. 25.
Sealing material. W. P. Marshall. 2,460,181, Jan. 25.
Seat for aircrafts, Sling type. P. F. Scholander. 2,459,843, Jan. 25.
Selective apparatus, Frequency. W. F. Kannenberg. 2,460,090, Jan. 25.
Separable connector. I. F. Matthysse. 2,460,231, Jan. 25.
Separator: *See*—
  Centrifugal separator.
Sewing-machine clutch. A. R. Wood. 2,460,247, Jan. 25.
Shaft coupling. R. F. Bergmann. 2,460,249, Jan. 25.
Sharpening device. B. H. Johnston. 2,459,945, Jan. 25.
Sheet gripping and pulling tool. V. H. Hasselquist. 2,460,007, Jan. 25.
Shock absorbing strut, Retractable. E. C. Wells. 2,459,982, Jan. 25.
Shoe, Platform type. R. Maling. 2,460,098, Jan. 25.
Shoe, Platform type welt. R. Maling. 2,460,097, Jan. 25.
Shoe with sole edge binding and welt. W. L. Mills and F. W. Kruger. 2,460,262, Jan. 25.
Signal translator blocking circuit. M. C. Dettman. 2,459,798, Jan. 25.
Silica-alumina, silica-magnesia catalyst, Mixed. J. P. Billisoly. 2,459,987, Jan. 25.
Silver impregnation. G. Schwarz. 2,459,896–7, Jan. 25.
Sinker. J. Pelmarsh. 2,459,959, Jan. 25.
Siphon apparatus for heated rolls. H. W. Bruker. 2,460,059, Jan. 25.

Sirup, Making. C. C. Capdevielle. 2,459,991, Jan. 25.
Size adaption for automobile exhaust pipe extensions and the like. C. W. Chester. 2,459,918, Jan. 25.
Sleet cutter. R. Malpert. 2,460,099, Jan. 25.
Snap-action electric switch. G. Hollis. 2,460,087, Jan. 25.
Soap product containing guanidine stearate. L. F. Henderson. 2,459,818, Jan. 25.
Sole-pressing mechanism. T. H. Seely and L. S. Linderoth, Jr. 2,459,845, Jan. 25.
Spark plug. F. I. McCarthy and C. Schandler. 2,460,022, Jan. 25.
Spool holder. W. C. Adiman. 2,460,209, Jan. 25.
Spring motor. E. J. Cole. 2,459,871, Jan. 25.
Spring suspension for vehicles. F. T. Rowland. 2,460,106, Jan. 25.
Stand: *See*—
  Reading stand.
Still and decanter for the recovery of products from alcoholic solutions of oleaginous materials. A. C. Beckel and P. A. Belter. 2,460,117, Jan. 25.
Stop for slide fasteners, End. A. E. Carlile. 2,460,124, Jan. 25.
Straightening apparatus. E. E. Brayshaw. 2,460,164, Jan. 25.
Strap cutting tool. N. T. Bissett and N. C. Moore. 2,459,864, Jan. 25.
Structure for electric discharge devices, Electrode. R. J. Bondley. 2,460,120, Jan. 25.
Stud, Welding. W. E. Palmer. 2,459,957, Jan. 25.
Support: *See*—
  Hanger support. Tank flush ball and guide support.
  Refuse bag support.
Sulfonium methosulfates. J. N. Hansen. 2,460,223, Jan. 25.
Swinging jaw adjustable wrench. R. Johnson. 2,459,882, Jan. 25.
Switch: *See*—
  Centrifugal force operated switch. Snap-action electric switch.
  Electric switch. Thermometric alarm switch.
  Rotary electric switch.
Swivel joint. D. C. Warren. 2,459,981, Jan. 25.
Syringe and ampoule. M. L. Folkman. 2,459,875, Jan. 25.
Syringe, Hypodermic. R. P. and J. O. Scherer. 2,460,039, Jan. 25.
System of producing harmonics. J. L. Hurault. 2,460,012, Jan. 25.
Table: *See*—
  Bed table.
Table and footrest, Combination. A. Roth. 2,460,148, Jan. 25.
Tank bottoms equipped with improved means for testing seams and recovering leakage from same. J. H. Wiggins. 2,460,054, Jan. 25.
Tank flush ball and guide support. W. B. Zern. 2,460,114, Jan. 25.
Tank for photographic films, Washing. F. W. Deerfield. 2,460,217, Jan. 25.
Tank pump-out method. P. H. Jones. 2,460,258, Jan. 25.
Tank with flaker, Reaction. M. L. Harbaugh. 2,460,083, Jan. 25.
Telltale for frozen food packages. K. J. Chase. 2,460,215, Jan. 25.
Temperatures, Controlling reaction. E. V. Murphree. 2,459,836, Jan. 25.
Ten key entry mechanism. H. T. Avery. 2,459,862, Jan. 25.
Terminal, Electrical outlet. B. P. McKinley. 2,459,832, Jan. 25.
Terminal means for electrical devices. C. L. Jauss. 2,459,943, Jan. 25.
Testing circuit. M. J. Stateman. 2,459,849, Jan. 25.
Thermometer having a casing with a magnifying element. W. E. Welch. 2,460,051, Jan. 25.
Thermometric alarm switch. J. O. Lee. 2,460,134, Jan. 25.
Thermostat, Adjustable. J. L. Schwartz. 2,459,968, Jan. 25.
Time interval control device, Adjustable. P. O. Gibson. 2,459,876, Jan. 25.
Tool: *See*—
  Reciprocating tool. Strap cutting tool.
  Sheet gripping and pulling tool.
Tool for the application of emergency tire chains, Flexible. A. E. Humboldt. 2,460,010, Jan. 25.
Toolholder. B. Barrett. 2,460,210, Jan. 25.
Tool parts, Making. W. C. Alvin. 2,459,910, Jan. 25.
Torque limiting device. W. C. Starkey. 2,459,972, Jan. 25.
Training device, Gunnery. R. B. Buchanan. 2,459,867, Jan. 25.
Transformer spark plug. A. C. Wall. 2,459,856, Jan. 25.
Translating device, Electrical. G. C. Southworth. 2,460,109, Jan. 25.
Translator, Telegraph signal code. E. F. Watson. 2,459,904, Jan. 25.
Transmission. H. E. Churchill. 2,459,793, Jan. 25.
Transmission, Auxiliary. B. B. Bachman and D. J. Macklin. 2,459,911, Jan. 25.
Transmission control system. A. C. Dickieson. 2,460,075, Jan. 25.
Transmitting mechanism, Motion. N. J. Jones. 2,460,015, Jan. 25.
Traveling nut limit stop. W. S. Hall, Jr. 2,460,222, Jan. 25.
Trimming board. R. A. Webster. 2,460,205, Jan. 25.
Truck, Material lifting and transporting. H. A. and G. H. Wagner. 2,459,979, Jan. 25.
Truck, Scoop. H. A. and G. H. Wagner. 2,459,980, Jan. 25.
Truing apparatus for centerless machines. G. Crompton, Jr. 2,459,923, Jan. 25.
Truss, Adjustable. F. G. McCord. 2,460,100, Jan. 25.
Tube: *See*—
  Cathode beam transmitter tube. Indicating cathode-ray tube.
  Grid controlled electron tube. Vacuum tube.
Tube expander with expansible ball drift removable by its expansion. G. A. Geyer. 2,459,808, Jan. 25.
Tungsten values from ore, Recovering. B. Burwell and J. H. Brennan. 2,459,868, Jan. 25.
Turbine apparatus. S. S. Stine. 2,459,850, Jan. 25.
2-(4′ carboxy-butyl)-3:4-di((acylamido)-4:5 dihydrothiophene and its esters. S. A. Harris and G. E. Arth. 2,459,817, Jan. 25.
Utility garment hanger. H. G. Alfos. 2,459,909, Jan. 25.
Vacuum chamber evacuation. H. L. Smith, Jr. 2,460,197, Jan. 25.
Vacuum tube. P. G. Chevigny and C. M. Wheeler. 2,459,791, Jan. 25.
Valve: *See*—
  Balanced fluid motor valve. Mixing valve.
Valve for internal-combustion engines, Rotary. R. H. Hasler and H. P. Stevens. 2,459,936, Jan. 25.
Valve with grid mounted on divided anode insulator, Electric. O. K. Marti and E. B. Steinberg. 2,459,828, Jan. 25.
Valve with vitreous enamel seals, Electric. O. K. Marti. 2,459,827, Jan. 25.
Vapor outlet for truck tanks. L. J. White. 2,460,159, Jan. 25.
Variable capacity rotary pump. P. M. Diaz. 2,460,251, Jan. 25.
Vibrator circuit. H. J. Brown and J. A. Mas. 2,459,866, Jan. 25.
Vise, Quick-acting lever actuated pipe. L. J. Ferree. 2,460,079, Jan. 25.
Vitamin compositions. W. Huber and W. R. Boehme. 2,460,009, Jan. 25.
Water treating apparatus. J. F. Sebald. 2,460,036, Jan. 25.
Water treating equipment, Base exchange. C. Hungerford, Jr., and J. G. Reutter. 2,460,011, Jan. 25.
Welding apparatus. T. W. Griffiths. 2,459,812, Jan. 25.
Welding system. J. W. Dawson. 2,459,796, Jan. 25.
Wheel for motor vehicles, Steering. F. Den. 2,459,797, Jan. 25.
Wheel hub cap structure. G. A. Lyon. 2,459,890, Jan. 25.
Wheels for endless track vehicles and mounting same. B. A. Swennes, L. E. Shelton, and C. E. Swenson. 2,459,975, Jan. 25.
Windshield cleaner. A. Rappl. 2,460,147, Jan. 25.
Wire recorder indicator. M. O. Petroff and W. F. Straub. 2,460,190, Jan. 25.
Wire twisting apparatus. J. A. Openshaw. 2,460,235, Jan. 25.
Wrench: *See*—
  Swinging jaw adjustable wrench.

CLASSIFICATION OF PATENTS

ISSUED JANUARY 25, 1949

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

2— 19: 2,460,387
21: 2,460,155
106: 2,460,253
161: 2,460,955
4— 57: 2,460,114
191: 2,460,006
5— 263: 2,459,880
8— 55: 2,459,831
94.11: 2,460,077
149.1: 2,460,306
15— 33: 2,460,153
16— 34: 2,460,094
135: 2,460,171
18— 5.1: 2,459,925
42: 2,460,102
48: 2,459,927
58: 2,460,242
59: 2,460,166
20— 56.4: 2,460,185
67.5: 2,459,953
22— 70: 2,459,892
111: 2,460,216
167: 2,460,213
23— 1: 2,459,836
16: 2,459,895
24: 2,459,856
252: 2,460,052
255: 2,460,083
288: 2,460,151
301: 2,459,889
24— 40: 2,460,089
73: 2,460,228
187: 2,460,152
205.11: 2,460,124
263: 2,458,840
25— 41: 2,460,167
2,460,220
29— 67: 2,460,001
282: 2,459,954
30— 134: 2,459,864
31— 61: 2,460,040

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE YOUNT

No. 5504. Decided December 7, 1948

[— F.2d —; — USPQ —]

1. PATENTABILITY—INVENTION—CHANGE IN SIZE.
Mere size is not ordinarily a matter of invention.

2. SAME—SAME—SAME.
Where there is nothing in the appealed claims specifying a large bag, and where appellant by his own specification teaches that small bags are the equivalent of large bags, *Held* that he is not in a favorable position to argue for invention in one as distinguished from the other.

3. SAME—SAME—COMMERCIAL SUCCESS.
Where an appellant contends that the device defined by his claims solves a problem long existent in the art, with wide commercial success indicating its supposed merit as an invention, and the record remains silent as to the factual data required to support such a contention, *Held* the court will not consider or rely upon such contention or statement.

4. SAME—SAME—BAG CONSTRUCTION.
Certain claims to a multi-walled gusset type bag *Held* non-inventive over the disclosures of the prior art.

APPEAL from the Patent Office. Serial No. 497,157.

AFFIRMED.

Huebner, Maltby & Beehler (*Vernon D. Beehler* and *Herbert A. Huebner* of counsel) for Yount.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

JOHNSON, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming that of the Primary Examiner rejecting all the claims (Nos. 22 to 25, inclusive) of appellant's application for a patent for an alleged invention for paper bag construction.

The claims read as follows:

22. A multi-walled gusset type bag comprising nested tubes united together by a closing seam at the bottom and formed with a gusset at each side, the front and back walls each consisting of a plurality of seamless sheets arranged in horisontally offset relationship forming vertically extending steps and the sheets of such wall being folded along one side to form one of the side gussets with a marginal stepped extension, said extension being folded along the complementary edge of the opposite wall and interfitting with the complementary steps of said opposite wall, the overlapping contiguous steps being adhered together to form a seam all of which is located in the corner region of the front and back wall immediately adjacent the corner fold and such seams being diagonally opposed.

23. In a bag construction, a structure comprising nested tubes formed with a gusset at each side, the front and back walls being flat and seamless except at diagonally opposite corners, such front and back walls each consisting of a plurality of seamless sheets arranged in laterally offset relationship forming longitudinally extending steps and the sheets of such wall being folded to form one of the side gussets with a marginal stepped extension, said extension being folded along the complementary edge of the opposite wall and interfitting with the complementary steps of said opposite wall, the overlapping contiguous steps being adhered together to form a seam one such seam being located in the corner region of the front wall and the other such seam being located in the corner region of the back wall immediately adjacent the corner folds, and such seams being at diagonally opposed corners.

24. In a bag construction, a structure comprising a tube formed with a gusset at each side, the front and back walls being flat and seamless except at diagonally opposite corners, such front and back walls each consisting of a seamless sheet folded at one edge portion forming one of the side gussets with a marginal extension, said extension being folded along the complementary edge of the opposite wall and having a surface in contact with the surface of such wall sheet and adhered thereto forming a seam one such seam being located in the corner region of the front wall and the other such seam being located in the corner region of the back wall immediately adjacent the corner folds, and such seams being diagonally opposed.

25. A multi-walled paper bag comprising nested tubes each formed of two sheets joined by longitudinal seams each seam formed by creasing and overlapping the marginal edge portion of one sheet over the adjacent uncreased edge portion of a second sheet corresponding in stratum position to the first sheet, such longitudinal seams in each layer being offset laterally from the seams in the next layer and the adjacent seams forming a series of interfitting steps, the total thickness of such adjacent stepped seams only one layer greater than the total thickness of the wall, and the two series of interfitting steps being located at opposite creased corners of the tubes.

The references relied upon are: Hartmann, 1,549,832, August 18, 1925; Abramson, 2,316,385, April 13, 1943.

The alleged invention may be well understood from a reading of the claims.

Appellant's application discloses a method of making a paper bag; however, the claims here involved relate only to the structure of a bag.

The Hartmann patent, *supra*, shows a bag constructed of two sheets of paper having marginal portions along the edges overlapping and secured together to form seams extending from the top to the bottom of the bag and located on opposite sides of the bag adjacent its edges. The construction of the Hartmann bag leads to the same manufacturing advantages as claimed by appellant.

The Abramson patent, *supra*, shows the practice of folding the bag at the edges along three lines to designate portions of the bag wall that are referred to as gussets. It also shows a bag made of several plies of sheet stock with the seams in the plies formed and offset from each other as claimed by appellant.

The use of several plies of paper, the offset positions of the seams, and the folds designating the gussets at the edge of Abramson's bag can be applied to Hartmann's bag in the same way they are applied to Abramson's bag. Such a modification of Hartmann's bag in view of Abramson's disclosure does not involve invention.

Vol. 619 • No. 1 Tuesday, February 1, 1949 Price $17.50 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $17.50 per annum, including annual index, $21.00; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

Appellant contends that the paper bags are of extremely large size. However, there is nothing in any of the appealed claims specifying a large bag, the court "a comprehensive picture of the paper bag industry reflecting the problems and limitations confronting inventors in that field." However, this

Appellant contends that the paper bags are of extremely large size. However, there is nothing in any of the appealed claims specifying a large bag, and appellant's specification states, "the invention is also applicable to the fabrication of relatively smaller bags."

[1] It was held in the case of *In re Kirke*, 17 CCPA (Patents) 1121, 40 F.2d 765, 5 USPQ 539, 398 O. G. 358, that mere size is not ordinarily a matter of invention. [2] Where appellant by his own specification teaches that small bags are the equivalent of large bags, he is not in a favorable position to argue for any invention in one as distinguished from the other. *In re Ayres*, 28 CCPA (Patents) 1118, 83 F.2d 297, 29 USPQ 424, 471 O. G. 247; *In re Withington*, 26 CCPA (Patents) 1290, 104 F.2d 192, 41 USPQ 742, 508 O. G. 296.

[3] Appellant also contends that he has given the court "a comprehensive picture of the paper bag industry reflecting the problems and limitations confronting inventors in that field." However, this court has held that where an appellant contends that the device defined by his claims solves a problem long existent in the art, with wide commercial success indicating its supposed merit as an invention, and the record remains silent as to the factual data required to support such a contention, the court will not consider or rely on such contention or statement. *In re Casey*, 35 CCPA (Patents) 869, 165 F.2d 1019, 76 USPQ 463, 609 O. G. 252.

[4] We agree with the finding of the Board that the cited patents of Hartmann, supra, and Abramson, supra, disclose all the features of construction of the bag defined in the claims.

The decision of the Board of Appeals is affirmed.
AFFIRMED.

NOTICES

Erratum

The notice of republication under section 12(c) of the Trade-Mark Act of 1946 of registration No. 70,024, registered July 21, 1908, Class 23, by The Oster Manufacturing Company, Cleveland, Ohio, appearing in the OFFICIAL GAZETTE of September 28, 1948, page 891, was inadvertent and is vacated.

Adjudicated Patents

(D. C. Tex.) Fletcher patent, No. 1,856,627, for cutter for earth boring tools. *Held* valid and infringed. *Hughes Tool Co. v. Robertson Rock Bit Co.*, 80 F. Supp. 809, 80 USPQ —.

(D. C. Tex.) Scott & Garfield patent, No. 1,983,316, for a three-cone bit, *Held* valid and infringed. *Id.*

(D. C. Tex.) Scott patent, No. 2,011,084, for a mounting for drill cutters, *Held* valid and infringed. *Id.*

(D. C. Tex.) Garfield & Scott patent, No. 2,030,442, for a roller bearing bit, *Held* valid and infringed. *Id.*

Rule 72

RULE 72. After the completion of the application the Office will not return the specification for any purpose whatever. If applicants have not preserved copies of the paper which they wish to amend, the Office will furnish them on the usual terms.

The drawing may be withdrawn only for such corrections as cannot be made by the Office; but a drawing cannot be withdrawn unless a photographic copy has been filed and accepted by the Examiner as a part of the application. Permissible changes in the construction shown in any drawing may be made only by the Office and after an approved photographic copy has been filed. Sketches filed to show proposed changes in construction must be in permanent ink. (See Rule 30.) Substitute drawings will not be admitted in any case unless required by the Office.

Photostat Copies

In ordering photostat copies of United States and foreign patents, when only the number of the patent is given, the whole patent, comprising specification and drawing, will be furnished, unless the order specifically states that the "specification only" or "drawing only" is required. Care should be taken in making out orders for foreign patents to give the year of the patent, as in old French and British patents the same number may appear in different years.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Owens-Corning Fiberglas Corporation, Toledo 1, Ohio, has placed on the Register of Patents the following 11 patents in List A and 3 patents in List B, supplementing former patents which appeared in the OFFICIAL GAZETTE of Oct. 1, 1946, and Apr. 8, 1947.

List A

Patents Available for Licensing on Reasonable Terms

Pat. 2,418,873. APPARATUS FOR ATTENUATING THERMOPLASTIC MATERIALS. Patented Apr. 15, 1947. Equipment for producing crimped fibrous glass in which streams of molten glass are attenuated into fibers by intermeshing gear-shaped rotors and the fibers leaving the rotors are engaged by blasts from blowers directed along the fibers. Group 35—59. Reg. No. 18,142.

Pat. 2,428,302. COLORED GLASS FIBER PRODUCT. Patented Sept. 30, 1947. A glass fiber textile colored by having its fibers coated with the reaction product of formaldehyde with gelatin and a direct formaldehyde setting dye. Groups 22—99; 32—29. Reg. No. 18,143.

Pat. 2,428,591. INSULATING FABRIC. Patented Oct. 7, 1947. An acoustical blanket having as a base a mat of haphazardly arranged fine glass fibers, the base having adhered thereto a layer of fine fibers arranged to form a nap or pile. Groups 22—99; 32—29—74. Reg. No. 18,144.

Pat. 2,428,653. APPARATUS FOR MAKING TUBULAR FIBROUS PRODUCTS. Patented Oct. 7, 1947. A machine for manufacturing tubular fibrous products such as pipe insulating sections by rolling and heating a mass of fibrous material wrapped on a mandrel. Group 35—59. Reg. No. 18,145.

Pat. 2,431,205. APPARATUS FOR MANUFACTURING FIBROUS GLASS. Patented Nov. 18, 1947. A rotary glass-melting unit that melts and collects molten glass therein and discharges the molten glass and converts it to fibers by centrifugal force. Group 35—59. Reg. No. 18,146.

Pat. 2,433,271. METHOD OF FORMING PARALLEL GLASS FIBER FILTER UNITS. Patented Dec. 23, 1947. Making filter units for liquids in which a multiplicity of glass fibers are arranged in parallel side-by-side relation and extend in the direction of the flow of the filtrate. Groups 22—99; 32—29. Reg. No. 18,147.

Pat. 2,433,292. COLORED FIBROUS GLASS AND METHOD OF MAKING SAME. Patented Dec. 23, 1947. Colored glass fiber products in which a coloring agent is incorporated in a film of colloidal inorganic material on the fiber surfaces. Groups 22—99; 32—29. Reg. No. 18,148.

Pat. 2,433,304. TRAVERSING MECHANISM. Patented Dec. 23, 1947. An improvement in traversing means for guiding a strand back and forth along a spool as it is wound thereon. Group 35—52. Reg. No. 18,149.

Pat. 2,446,119. GLASS FIBER REINFORCED PLASTICS. Patented July 27, 1948. Treating glass fibers to increase the adhesion between the fibers and coating materials (such as synthetic resins) by heating a dextrinized starch on the fiber surfaces to fix the starch to the fibers so that it forms an intermediate bond between the fibers and subsequently applied coating materials. Groups 22—99; 28—83; 32—29. Reg. No. 18,150.

Pat. 2,448,499. METHOD OF PRODUCING STRANDS OF INTERTWISTED GLASS FIBERS. Patented Aug. 31, 1948. Making glass fibers and intertwisting them into strands in a single operation by collecting the fibers as they are attenuated and winding the strand thus formed onto a support held against rotation while the strand is revolved around the support. Groups 22—99; 35—59. Reg. No. 18,151.

Pat. 2,450,363. METHOD AND APPARATUS FOR MAKING FINE GLASS FIBERS. Patented Sept. 28, 1948. Making glass fibers by engaging a stream of molten glass with an attenuating blast and then engaging the filament thus formed with a second blast having a temperature sufficient to soften the filament and a velocity sufficient to attenuate the softened filament into fine fibers. Groups 22—99; 32—29; 35—59. Reg. No. 18,152.

List B

Patents Available for Royalty-Free Licensing Upon Payment of a $5.00 Application Fee for Each Patent

Pat. 2,428,325. REINFORCED PLYWOOD. Patented Sept. 30, 1947. Reinforced plywood in which at least one layer of glass fiber strands is bonded between the wood plies. Groups 24—32; 32—29—74. Reg. No. 18,153.

Pat. 2,428,654. REINFORCED PLASTICS. Patented Oct. 7, 1947. A plastic article containing a glass fabric as a reinforcement and other glass fibers distributed throughout the plastic to reinforce the article in directions transverse to the plane of the fabric. Groups 22—99; 28—83; 32—29. Reg. No. 18,154.

Pat. 2,441,097. PLASTICS MOLDING APPARATUS. Patented May 4, 1948. Apparatus for molding plastics in which the mold that receives the material to be molded is covered with a flexible blanket pressed by atmospheric pressure against the material in the mold, the blanket being provided with means at its edges responsive to the evacuation of the mold to seal automatically the edge of the blanket to the periphery of the mold. Groups 32—29; 35—59; 39—81. Reg. No. 18,155.

Pat. 2,449,177. TILT-ACTUATED SWITCH. Patented Sept. 14, 1948. An automatic pilot for installation on the instrument panel of an airplane to control power-actuated flying control surfaces such as the trim tabs of the ailerons and elevators of the plane. A gravity-controlled float device operates in a body of liquid such as mercury or hydraulic-brake fluid and is associated with switch mechanisms of servo-motors for the aileron and elevator trim tabs to effect the necessary actuation of the tabs to correct any deviation of the aircraft from level flight. (Owner) Leslie K. Perry, 2718 South Redondo Blvd., Los Angeles 16, Calif. Groups 36—41; 39—11. Reg. No. 18,156.

Pat. 2,449,343. REFRIGERATION APPARATUS. Sept. 14, 1948. Evaporator unit surrounding the refrigeration vessel in a "deep freeze" type refrigerator is so constructed

tached to one end and halters for feet are connected to slots in handles at other end of stretcher. Patent 2,367,167 shows canvas folded about the two rails with its

Patents Relating to Azo Dyes

Pat. 1,906,754. Trisazo Dye and Process of Preparing the Same. May 2, 1933. Process of preparing a trisazo

ing, and coupling to a 2-amino-5-naphthol-7-sulfonic acid compound.

Pat. 1,914,549. Azo Dyestuffs and Their Production. June 20, 1933. A disazo of the formula:

Pat. 2,449,343. REFRIGERATION APPARATUS. Sept. 14, 1948. Evaporator unit surrounding the refrigeration vessel in a "deep freeze" type refrigerator is so constructed that the thin wall of the deep vessel forms the inner walls of a continuous spiral evaporator coil extending from top to bottom of vessel. The horizontal and outer walls of the coil are formed by continuously arranging a thin sheet metal member, which is L-shaped in cross section, spirally around the outer surface of the vessel wall. Thereafter, a band of steel is spirally wound tightly around the L-shaped member and adjacent convolutions of band welded together at intervals. (Owner) Gertrude S. Torbensen, 1932 East 116th St., Cleveland 6, Ohio. Group 35—84. Reg. No. 18,157.

Pat. 2,423,711. BALL-BEARING FOOT FOR FURNITURE AND THE LIKE. Patented July 8, 1947. A series of ball bearings held in a retainer contact a larger ball enclosed in a housing. By attaching these feet to the legs of furniture, appliances, trunks, etc., to replace conventional caster wheels, articles may be readily wheeled or rolled on the floor without requiring any swiveling action. (Owner) Roy R. Knox, 1407 Prytania St., New Orleans 13, La. Groups 33—59; 35—66. Reg. No. 18,158.

Pat. 2,448,168. WRENCH KIT. Patented Aug. 31, 1948. Wrench is capable of adaptation for use upon a wide variety of different sized screws formed with socketed heads. Several block-like tool carriers and numerous wrench bits of graduated size are provided. Two or more of the bits are slidably retained in axial openings in each carrier in retracted position with their outer ends flush with outer end of carrier. When a carrier is inserted in socket in head of wrench, a stop in the socket strikes inner end of a selected bit and projects it outwardly into position for use. One of the carriers has six of the smallest wrench bits of graduated size grouped about a longitudinal axis. The handle of wrench is hollow to provide storage space for carriers. (Owner) Roland S. Banister, 132 Buckworth Drive, Kokomo, Ind. Group 33—52. Reg. No. 18,159.

Pat. 2,446,993. DEVICE FOR FACILITATING CIRCUIT DESIGN. Patented Aug. 17, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) An electronic circuit measuring device for determining the optimum value of circuit elements at audio and radio frequencies. The construction is similar to a commercial tube tester but differs in method of operation and final results. The device contains valve sockets to accommodate any of the commercial type electronic discharge valves, together with circuit means for applying the required type and values of voltage to an electronic discharge valve. (Owner) Joseph Alter, 1429 48th St., Brooklyn, N. Y., % Sontag. Group 36—19. Reg. No. 18,160.

Pat. 2,333,062. FOLDING STRETCHER. Patented Oct. 26, 1943. Reg. No. 18,161.

Pat. 2,367,167. STRETCHER. Patented Jan. 9, 1945. Reg. No. 18,162.

Pat. 2,449,767. STRETCHER WITH SKELETAL TRACTION FACILITIES. Patented Sept. 21, 1948. Reg. No. 18,163.

These three patents relate to collapsible canvas stretchers having hinged or pivoted two-section side rails with traction facilities to prevent injury to patient in carrying. Spreader bars and collapsible legs are provided for converting into a cot. Patent 2,333,062 shows spaced loops along sides to support straps for holding injured members in position. A strap to pass under patient's arms is attached to one end and halters for feet are connected to slots in handles at other end of stretcher. Patent 2,367,167 shows canvas folded about the two rails with its side margins laced to flaps sewed to the canvas. Upper edges of side rails taper downwardly to facilitate rolling a patient onto stretcher. Stretcher is adjustable to a straight or angular position. Patent 2,449,767 shows spaced anchoring loops down the sides and adjacent ends of stretcher to apply straight-line traction stresses for various fractures. Legs of stretcher may be erected at one end to incline it for sliding patient thereon. Additional details are disclosed in patents. (Owner) Charles C. Carpenter, 409 South 4th St., Grand Forks, N. Dak. Group 25—32.

Pat. 2,446,713. HAND RIVETER. Patented Aug. 10, 1948. Plier-like hand tool provides powerful leverage with little effort by operator to clinch hollow rivets having flanged heads. When jaws of tool are closed, two sets of toggles between jaws force a thrust member outwardly against head of rivet and retract a stem in bore of thrust member so that enlarged ball-shaped outer end of stem will upset and clinch opposite end of rivet. The stem is longitudinally slitted inwardly through its ball end to render stem and ball radially collapsible to reduce their diameter so that ball may be projected through bore of rivet preparatory to clinching operation. A plunger is slid along stem to hold stem and ball expanded. Stem is adjustable for rivets of different length. (Owner) W. E. Melick, 50 North 11th St., Newark, Ohio. Groups 33—52; 35—79. Reg. No. 18,164.

Pat. 2,446,629. PASTRY LIFTER AND CONTAINER. Patented Aug. 10, 1948. Pastry lifter is a thin flat triangular base for slipping under a slice of cake or other pastry, with a finger hold for lifting and carrying. A box-like container of same shape and slightly larger, having a removable ventilated cover, is provided for carrying the pastry on the lifter in lunch boxes, etc. The rear wall of container has a notch to receive the finger hold which is on the lifter. (Co-owner) Harry W. Brown, 7000 Spruce Ave., Kansas City, Mo. Groups 34—41; 39—81; 40. Reg. No. 18,165.

Pat. 2,439,137. LAMINATED PLASTIC ARTICLE. Patented Apr. 6, 1948. A laminated plastic material for molded articles such as rifle barrel supports, firing mechanism handles, insulating moldings for refrigerator housings, radios, etc. Layers of resin-impregnated fibrous material have different resin content in each layer, to provide layers of varied density and heat conductivity. Layers are assembled in the successive order of their heat conductivity to provide a layer of low conductivity at one side and a layer of high conductivity at the opposite side of article. Heat-conducting metallic layers are placed between and bonded to adjacent layers of the fibrous material by heat and pressure. (Owner) Richard P. Schulze, Washington Loan and Trust Building, Washington 4, D. C. Group 39—81. Reg. No. 18,166.

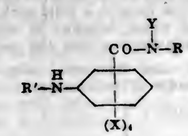
E. I. du Pont de Nemours and Company has placed more than 4,000 of its patents on the Register of Patents as available for license on reasonable terms. The index to these patents was published in the OFFICIAL GAZETTE, November 2, 1948. Abstracts of the patents are being published in the Official Gazette beginning November 9, 1948. The following patents (Reg. Nos. 18,167 through 18,499), are part of Schedule 10, Groups 22; 27—71; 28.

Inquiries concerning these patents should be addressed to Patent Division, E. I. du Pont de Nemours and Company, Wilmington 98, Del.

Patents Relating to Azo Dyes

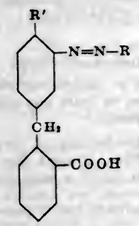
Pat. 1,906,754. Trisazo Dye and Process of Preparing the Same. May 2, 1933. Process of preparing a trisazo dye by diazotizing an aromatic amino compound of the benzene or naphthalene series having at least one group capable of forming a salt, coupling the diazo compound with an alpha-naphthylamine-beta-sulfonic acid in which the substituents are on different rings, diazotizing the resultant aminoazo compound, coupling the resultant with 2-amino-5-naphthol-7-sulfonic acid, diazotizing the resultant disazo compound and coupling with 1-amino-8-naphthol-disulfonic acid.

Pat. 1,909,960. Intermediate for Azo Dyes. May 23, 1933. Hydroxynaphthanilides of the formula:



R—aliphatic or aromatic radical, R'—3-hydroxy-2-naphthoyl, X—H, alkyl, alkoxy, or halogen, and Y—H, aromatic, or aliphatic radical.

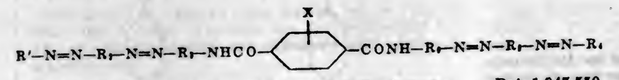
Pat. 1,910,690. Azo Dyestuffs and Process of Preparing the Same. May 23, 1933. An azo dye of the formula:



R—radical of any coupling component, and R'—H, CH_3, SO_3H, halogen, or alkoxy.

Pat. 1,913,382. Trisazo Dyestuffs and Process of Preparing the Same. June 13, 1933. Process of preparing azo dyes by diazotizing an aryl-amine of the benzene or naphthalene series having no phenolic groups, coupling to a component of the group consisting of dialkoxy-aniline having a free para position and Cleve's acid, rediazotizing, coupling to the second member of the group or again to dialkoxy-aniline, rediazotizing and coupling to an acidyl-2-amino-8-naphthol-6-sulfonic acid compound.

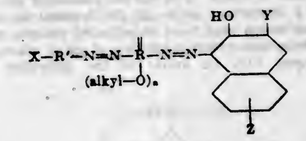
Pat. 1,913,383. Azo Dyestuff and Process of Preparing the Same. June 13, 1933. Polyazo dyes of the formula:



X—H or halogen, all R's—aryl radicals of the benzene or naphthalene series, R_3 and R_4 are free from auxochromic groups, and R' and R_4 may be azo chains of aryl bodies.

Pat. 1,913,384. Trisazo Dyestuff and Process of Preparing the Same. June 13, 1933. Process of preparing azo dyes by diazotizing an aryl-amine of the benzene or naphthalene series, coupling to a component of the group consisting of dialkoxy-aniline having a free para position and Cleve's acid, rediazotising, coupling to the second member of the group or again to dialkoxy-aniline, rediazotising, and coupling to a 2-amino-5-naphthol-7-sulfonic acid compound.

Pat. 1,914,549. Azo Dyestuffs and Their Production. June 20, 1933. A disazo of the formula:



R' and R''—a phenyl or naphthyl radical free from COOH and SO_3H, X—R, —OR, $—CH_2NR_2$, $—OC_2H_4NR_2$, or H, R—alkyl, Y—H, —$CONR_2$, —CONHR, —CONR-aryl, or —CON— in which the two valences are part of a heterocyclic ring, Z—H or NH_2, n—0, 1, or 2.

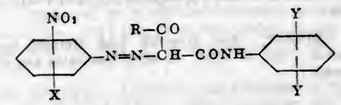
Pat. 1,918,997. Purification of Arylamines. July 18, 1933. Purification of volatile aryl amines having a high solubility in hot water by passing a condensable vapor through the molten amine above 150° C. Example: m-phenylenediamine + superheated steam.

Pat. 1,934,216. Sulphonation of Beta-Naphthol. Nov. 7, 1933. 2-Naphthol-1-sulfonic acid is made by passing SO_3 gas into B-naphthol in an inert organic gas.

Pat. 1,938,182. Trisazo Dyestuff. Dec. 5, 1933. Trisazo dyes represented by: arylamine→1-amino-2-naphthol-ether-sulfonic acid→sulfonated peri-amino-naphthol→an acetoacetarylide, aryl-alkyl-pyrazolone, or alkyl ketole.

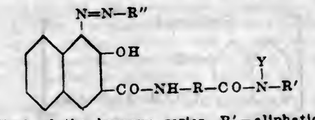
Pat. 1,947,027. Azo Dyes. Feb. 13, 1934. Disazo dyes for coloring hydrocarbons are made by diazotizing an amino-aryl-carbamide or sulfonamide containing no free acid groups, coupling with a phenyl or naphthyl amine, diazotising, and coupling with a naphthol having no free acid groups. Example: p-amino-dibutylbenzamide→amino-hydroquinone dimethyl ether→beta-naphthol.

Pat. 1,947,028. Azo Dyes and Methods for Their Preparation. Feb. 13, 1934. Insoluble azo dyes of the formula:



R—alkyl, phenyl, or benzyl, X—halogen, alkoxy, or benzyloxy, and Y—alkoxy, benzyloxy, or benzyl.

Pat. 1,947,550. Azo Dyes. Feb. 20, 1934. An azo dye, free from COOH and SO_3H groups, of the formula:



R—radical of the benzene series, R'—aliphatic or aromatic radical, R''—aromatic radical, and Y—H or aliphatic or aromatic radical.

Pat. 1,962,226. Azo Dyes, and Method for Their Preparation. June 12, 1934. An azo dye is made by diazotis-

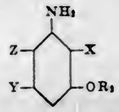
Pat. 1,976,644. Azo Dye and Method for Its Preparation. Oct. 9, 1934. A polyazo dye of the formula:

Pat. 1,994,845. Preparation of Amines of the Benzene Series. Mar. 19, 1935. Manufacture of amines of the ben-

Pat. 2,023,591. Azo Dyes and Methods for Their Preparation. Dec. 10, 1935. Insoluble azo dyes of the for-

Pat. 1,963,226. Azo Dyes, and Method for Their Preparation. June 12, 1934. An azo dye is made by diazotising an o-amino-benzenesulfonic acid and coupling to a phenyl-alkyl-pyrosolone which may be substituted on the phenyl nucleus by halogen, alkyl, or alkoxy groups.

Pat. 1,963,133. Azo Dye and Process of Preparing Same. June 19, 1934. Process for producing azo dyes by coupling a diazotised amine of the benzene or naphthalene series which may have subetituted thereon members selected from the groups consisting of alkyl, alkoxy, nitro, and halogen, with an amine of the following general formula:



in which R_2 is an alkyl group, and X, Y and Z are hydrogen, halogen, alkyl or alkoxy groups.

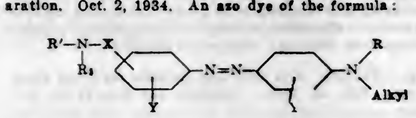
Pat. 1,963,597. Nitration of N-Acetyl-P-Toluidine. June 19, 1934. m-Nitro-p-toluidine is made by treating N-acetyl-p-toluidine with HNO_3 in H_2SO_4 of less strength than 60° Bé.

Pat. 1,963,598. Manufacture of 5-Nitro-2-Amino-Anisole. June 19, 1934. Preparation of 5-nitro-2-amino-anisole by reacting upon N-acetyl-o-anisidine with nitric acid in a medium of sulfuric acid of less strength than 60° Bé.

Pat. 1,969,189. Sulphonation of Beta-Naphthyl-Amine. Aug. 7, 1934. 2-Naphthylamine-1-sulfonic acid is made by passing not over an equimolemlor proportion of sulfur trioxide into β-naphthylamine in a dry inert organic solvent.

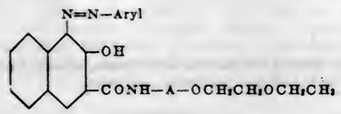
Pat. 1,972,873. Azo Dye and Method for Its Preparation. Sept. 11, 1934. An insoluble azo dye represented by: an amino-bensene→m-4-xylidide of 3-hydroxy-2-naphthoic acid.

Pat. 1,975,160. Azo Dyes and Method for Their Preparation. Oct. 2, 1934. An azo dye of the formula:



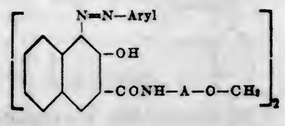
R, R', and R_2 = H or alkyl, X = CO or SO_2, and Y = H, alkyl, or alkoxy.

Pat. 1,975,830. Azo Dyestuff and Method for Its Preparation. Oct. 9, 1934. A water-insoluble azo dye of the formula:



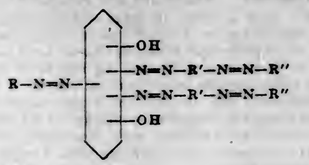
A = a benzene nucleus.

Pat. 1,976,010. Azo Dye and Method for Its Preparation. Oct. 9, 1934. Water-insoluble azo dyes of the formula:



A = a benzene nucleus.

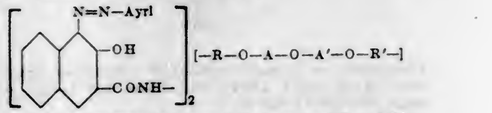
Pat. 1,976,644. Azo Dye and Method for Its Preparation. Oct. 9, 1934. A polyazo dye of the formula:



R, R', and R'' = aryl groups.

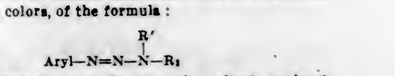
Pat. 1,977,266. Manufacture of Amino-Azobensenes. Oct. 16, 1934. Production of amino-azobenzenes and salts thereof by the reaction of an amine-hydrochloride of the benzene series in the form of a solid with sodium nitrite in the presence of water, followed by conversion of the resultant diazo-aminobenzene into the amino-azobenzene.

Pat. 1,978,783. Azo Dyestuffs. Oct. 30, 1934. A water-insoluble azo dye of the formula:



A and A' = alkylene of at least 2 C atoms, and R and R' = a benzene nucleus.

Pat. 1,979,327. Water-Soluble Azo Dye Intermediate. Nov. 6, 1934. Water-soluble diazoimino compounds, useful for making ice colors, of the formula:



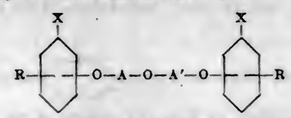
R' and R_2 = aliphatic or hydroaromatic radical, at least one of which contains at least one OH and at least one COOH and/or SO_3H group.

Pat. 1,981,311. Production of Organic Nitro Compounds. Nov. 20, 1934. Process for the production of nitrochlorobensenes in which a mixture of p-nitro-chloro- and O-nitro-chlorobensene are treated with a nitrating agent to partially dinitrate the O-derivative.

Pat. 1,982,661. Fluorinated Arylamides. Dec. 4, 1934 Amides of fluorinated anilines and naphthylamines with 2,3-hydroxynaphthoic acid.

Pat. 1,985,601. Arylamine and Method for Its Production. Dec. 25, 1934. Process for making organic compounds by reacting the halide of a hydro-aromatic-carboxylic acid having the following general formula: X–COZ in which X represents a hydroaromatic nucleus, and Z represents a halogen atom, with a member selected from the group consisting of nitro-aryl-amines, aryl-aso-arylene-amines, and mono-sulfaminic acids of arylene diamines, and forming the amine from the resulting product.

Pat. 1,987,669. Naphthoic Acid Derivative. Jan. 15, 1935. Naphthanilide ethers of the formula:



A and A' = alkylene, R = 3-hydroxy-2-naphthamido, and X = H, alkyl, or halogen.

Pat. 1,991,505. Disazo Dye and Method for Its Preparation. Feb. 19, 1935. Disazo dyes of the formula: An arylamine→a 1-amino-2-naphthol-alkyl-ether-sulfonic acid→an aminobenzoyl-1-amino-8-naphthol-sulfonic acid.

Pat. 1,992,185. Azo Dyes. Feb. 26, 1935. Relatively hard shiny flakes of an azo dye are formed by slurrying the relatively pure dye in water with triethanolamine and drying.

Pat. 1,994,845. Preparation of Amines of the Benzene Series. Mar. 19, 1935. Manufacture of amines of the benzene series by heating a halogenated benzene with aqueous NH_3 in a closed vessel in the presence of one or more inorganic oxidants.

Pat. 1,996,488. Hydraso Compounds and Inversion Thereof. Apr. 2, 1935. Benzidines are made by treating O-nitrobensenes with Zn and alkali metal hydroxide, treating the resulting azo with soap, Zn, and hydroxide to give the hydraso, and treating with HCl.

Pat. 1,998,507. Azo Dye and Method for Its Preparation. Apr. 23, 1935. Azo dyes are produced by coupling a diazotized amino-benzamide to a 2-(benzamido-benzamido)-5-naphthol-7-sulfonic acid.

Pat. 1,998,794. Process for Producing P-Nitro-O-Anisidine. Apr. 23, 1935. In a process for preparing 4-nitro-2-amino-anisole the steps which comprise dissolving o-anisidine in sulfuric acid, reacting upon the solution with a nitrating agent containing nitric acid under mononitrating conditions, diluting the reaction mass, reacting upon the latter with an aryl sulfonic acid compound, and recovering the aryl sulfonate of 4-nitro-2-amino-anisole.

Pat. 1,998,795. Process for Recovering 4-Nitro-2-Amino-Toluene From Its Nitration Mixture. Apr. 23, 1935. 4-Nitro-2-aminotoluene is made by nitrating o-toluidine in concentrated H_2SO_4, precipitating it with an aryl sulfonic acid, and hydrolyzing the aryl sulfonate.

Pat. 1,999,955. Production of Resorcinol and Mixtures Thereof With Phenol. Apr. 30, 1935. In the preparation of resorcinol, the steps of monosulfonating benzene with SO_3 in an inert solvent, removing the solvent, and further reacting with SO_3 to form the m-disulfonic acid.

Pat. 2,001,526. Azo Dyes and Method for Their Preparation. May 14, 1935. Insoluble azo dyes are made by coupling tetrazotised

$$H_2N—A—NHCO—X—CONH—A—NH_2$$

A = m-benzene or m-naphtholene radical, X = nucleus of bensene, naphthalene, diphenyl or diphenyl ether series, with an ice color coupling component.

Pat. 2,007,327. Process for the Preparation of Phenol. July 9, 1935. Manufacture of phenol comprising simultaneously adding solutions of benzene in liquid SO_3 and SO_3 in SO_3 to a large amount of liquid SO_3 to obtain benzene monosulfonate.

Pat. 2,008,750. Water Soluble Diazoimino Compounds. July 23, 1935. Diazoimino compounds of the formula:

$$Aryl—N=N—R$$

R = radical of a pyrrolidine compound having a solubilizing group in B-position, e. g., pyrrolidine-B-carboxylic acid.

Pat. 2,013,723. Azo Dyes and Methods for Their Preparation. Sept. 10, 1935. Insoluble azo dyes represented by: Aniline→o-alkyl- or o-alkoxy-anilides of 2,3-hydroxy-naphthoic acid.

Pat. 2,015,743. Azo Dye and Method for Its Preparation. Oct. 1, 1935. Insoluble azo dyes represented by: An amino-bensotrifluoride→an arylamide of 2,3-hydroxy-naphthoic acid.

Pat. 2,018,234. Azo Dye and Method for Its Preparation. Oct. 22, 1935. Azo dyes of the formula:

$$R—N=N—R'—N=N—R''—N=N—R'''$$

R and R''' = aromatic nuclei, R' = nucleus of a dihydroxy-benzene, and R'' = a benzene nucleus.

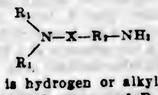
Pat. 2,023,590. Azo Dye and Method for Its Preparation. Dec. 10, 1935. Azo dyes represented by: arylamine→fluorinated arylamide of 2,3-hydroxynaphthoic acid.

Pat. 2,023,591. Azo Dyes and Methods for Their Preparation. Dec. 10, 1935. Insoluble azo dyes of the formula:

$$R—N=N—A$$

A = radical of an ice color coupling component, and R = radical of a fluorinated arylamine.

Pat. 2,024,368. Monoazo Dyes and Their Production. Dec. 17, 1935. Production of water-insoluble monoazo dyes which comprises diazotising an amine of the formula:



where R_1 and R_2 is hydrogen or alkyl groups when X is CO, and R_1 is an alkyl group and R_2 is hydrogen or an alkyl group when X is SO_2 and R_2 represents a phenylene radical, and coupling it with an amine of the bensene or naphthalene series having a free para position to the amino group.

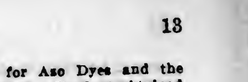
Pat. 2,025,094. Azo Dye and Method for Its Preparation. Dec. 24, 1935. Water-insoluble azo dyes represented by: An arylamine→a 3,4,5-trialkoxyanilide of 2,3-hydroxynaphthoic acid.

Pat. 2,025,095. Water-Soluble Diazoimino Compounds and Their Production. Dec. 24, 1935. The diazoimino compound made by coupling diazotized 4-chloro-2-amino-anisole through the azo group to the nitrogen of iso-indoline-mono- or di-sulfonic acid.

Pat. 2,025,116. Arylamide and Method for Its Production. Dec. 24, 1935. Water-insoluble compounds of the formula:

$$HO—aryl—CONH—aryl—S—alkyl$$

Pat. 2,025,117. Azo Dyes and Methods for Their Preparation. Dec. 24, 1935. Azo dyes of the formula:



R = aryl, and A = an aryl radical having at least one alkyl-mercapto group.

Pat. 2,027,031. Oxazoline Compound. Jan. 7, 1936. 2-Arylimino-dihydro-oxazoles wherein the aryl group is of the benzene series, e. g., 2-p-ethoxyphenyl-dihydro-oxazole.

Pat. 2,027,206. Azo Dye and Method for Its Preparation. Jan. 7, 1936. Production of azo dyes by coupling 2 equivalents of a monoacyldiamino or nitro-amino aromatic compound to a dihydroxybenzene, converting the acylamino or nitro groups to free amino groups, tetrazotizing and coupling to 2 equivalents of an aromatic coupler.

Pat. 2,030,970. Azo Dyes and Methods for Their Production. Feb. 18, 1936. Water-insoluble azo dyes obtained by coupling an ice color coupling component with tetrazotized

$$H_2N—A—NH—CO—X—CO—NH—A—NH_2$$

A and X = arylene free from water-solubilising groups.

Pat. 2,030,991. Azo Dyes and Methods for Their Production. Feb. 18, 1936. Production of difficultly soluble azo dyes by coupling a diazotized aminoazo compound of the benzene series free from solubilizing groups with an N-benzoyl derivative of 2-amino-5-naphthol-7-sulfonic acid free from further solubilising groups.

Pat. 2,031,634. Water-Soluble Diazoining Compounds. Feb. 25, 1936. A diazotized arylamine stabilized against reaction in alkaline medium with a coupling component by coupling the diazotized amine to the N of an ac-tetrahydro (quinoline or quinaldine) sulfonic acid.

Pat. 2,031,651. Azo Dyes and Methods for Their Preparation. Feb. 25, 1936. Coupling a diazotized arylamine to a trifluormethyl primary arylamide of 2,3-hydroxy-naphthoic acid.

Pat. 2,117,859. New Azo Dye and Color Lakes and

Pat. 2,148,252. Intermediate for Azo Dyes and the

Pat. 2,032,093. Monoazo Dyes and Methods for Their Preparation. Feb. 25, 1936. A cellulose ester dyed with Z—N=N—B—X—NYW, Z=residue of developing agent, B=benzene free from free acid groups, X=CO or SO_2 and Y and W=H or alkyl.

Pat. 2,035,518. Process for Coloring Materials. Mar. 31, 1936. Solution for developing ice color printings and dyeings comprising a hydrolysing agent for converting derivatives of diazotized aromatic amines to diazo salts, the solution being saturated with an inert salt.

Pat. 2,036,661. Separation of 1,8 and 1,5 Naphthyl-Amine-Sulphonic Acids. Apr. 7, 1936. Separation of 1,8-naphthylamine sulfonic acid from its isomers as soluble salts by acidifying in the presence of a bisulfite to precipitate the 1,8-naphthylamine sulfonic acid.

Pat. 2,039,391. Process for Partial Dialkylation of Dialkyl Aromatic Amines. May 5, 1936. Heating a dialkylnaphthylamine with HCl until evolution of alkyl halide has ceased to obtain monoalkylnaphthylamine.

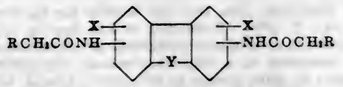
Pat. 2,040,473. Azo Dyestuffs and Process of Preparing the Same. May 12, 1936. Azo dyes of the formula: XO—CO—NH—arylene—N=N—A, X=alkyl, aryl, aralykyl or hydroaryl, A=nucleus of ice color coupling component of the o-hydroxy-carboxylic acid arylamide series, the dye containing no COOH or SO_3H groups.

Pat. 2,048,844. Azo Dyes and Method for Their Preparation. July 28, 1936. Production of alkali-insoluble azo dyes by coupling an ice color coupling component with a diazotized aromatic amine having the following general formula: X—CONH—arylene—NH_2, X=a hydroaromatic nucleus, and arylene=an arylene nucleus.

Pat. 2,049,286. Azo Dyes and Methods for Their Preparation. July 28, 1936. Coupling diazotized picramic acid to resorcin and coupling the product to diazotized amino-salicylic acid or diazotized picramic acid.

Pat. 2,058,419. Diazoimino Compounds and Their Production. Oct. 27, 1936. Mono and di diazoimino compounds in which the imino group is attached to a heterocyclic compound having at least one water solubilizing group.

Pat. 2,059,852. Azo Dyes and Method for Their Preparation. Nov. 3, 1936. Water-insoluble azo dyes by coupling a diazotized ice color base to:



R=acyl, X=H or an N-auxochrome and Y=bivalent bridge radical.

Pat. 2,062,349. Process of Making Arylamines. Dec. 1, 1936. Production of aromatic amines from an aromatic halide and aqueous ammonia in the presence of a copper compound soluble in aqueous ammonia and in a stainless steel vessel.

Pat. 2,063,151. Process of Producing N-Aralkyl-Amino-Phenols. Dec. 8, 1936. Hydrogenation of an N-aralkylidene aminophenol to an N-aralkylaminophenol in the presence of a base metal catalyst in a liquid aromatic hydrocarbon at elevated temperature and pressure insufficient to hydrogenate the aromatic hydrocarbon.

Pat. 2,063,589. Water-Insoluble Azo Dyes and Their Production. Dec. 8, 1936. Azo dye by coupling a diazotized arylamine to a 3,5-dimethylanilide of 2,3-hydroxynaphthoic acid.

Pat. 2,063,590. Naphthoic Acid Xylidides and Their Production. Dec. 8, 1936. Product obtained by reacting 2,3-hydroxynaphthoic acid with halogenated 3,5-dialkylaniline in the presence of a dehydrating agent.

Pat. 2,064,331. Arylamides of Furoyl-Acetic Acid. Dec. 15, 1936. A furoyl-acetyl derivative of an arylamine.

Pat. 2,064,332. Ice Colors. Dec. 15, 1936. A diazotised arylamine coupled to a furoyl-acetyl-arylamide and process of dyeing therewith.

Pat. 2,065,593. Water-Soluble Diazoimino Compounds and Their Production. Dec. 29, 1936. Product obtained by coupling diazotized 3-chloro-6-methoxy-aniline to the nitrogen of ac-beta-(ethylamino)-tetrahydronaphthalene-ar-mono-sulfonic acid.

Pat. 2,078,387. Diazo Amino Compounds. Apr. 27, 1937. Diazoamino compounds of the formula:

aryl—N=N—NR_1R_2

R_1=H, alkyl, hydroxyalkyl or polyhydroxyalkyl and R_2=hydroxyalkyl or polyhydroxyalkyl.

Pat. 2,092,796. Azo Dyes and Pigments Derived Therefrom. Sept. 14, 1937. Dye obtained by coupling a diazotised aniline containing at least one halogen, NO_2, COOH or SO_3H group to acetoacetylanthranilic acid and optionally converting to an alkaline earth metal salt.

Pat. 2,097,915. Ice Color Intermediates. Nov. 2, 1937. An arylamide of 2,3-naphthoic acid in which the arylamide group is obtained from a 2,4,5-trimethyl-aniline which may be substituted in 3 and/or 6-position by halogen or methyl.

Pat. 2,098,861. Nitrogen Containing Organic Compounds. Nov. 9, 1937. Furane compound of the formula:

R—CH_2NH—R'—COOX

R=furyl or hydrofuryl, R'=1-3 C atom alkylene, and X=H or alkali metal.

Pat. 2,100,378. Azo Dyes. Nov. 30, 1937. Dye obtained by diazotising an aromatic mono or diamine which may be further substituted except by solubilising groups and coupling it to an acetoacet-nitro-arylamide containing only 1 aryl nucleus.

Pat. 2,101,870. Para-Hydroxy-Para-Ethoxy-Diphenylamine. Dec. 14, 1937. Para-hydroxy-para'-ethoxy diphenylamine and production thereof.

Pat. 2,112,764. Insoluble Azo Compounds. Mar. 29, 1938. A textile fabric dyed with the coupling product of a diazotized aniline, e. g., 4-benzo-trifluoraniline, and a non-substantive acetoacetyl anilide.

Pat. 2,115,412. Reddish Yellow Insoluble Monoazo Dyes. Apr. 26, 1938. Reddish yellow dye formed by reacting a diazotized arylamine to CH_3COCH_2CONH—aryl—NR_1R_2, aryl may be substituted by auxochrome groups, R_1=H, alkyl, aryl or aralkyl and R_2=alkyl, aryl, aralkyl or acyl incapable of coupling with diazo salts.

Pat. 2,115,413. Acyl Aryl Compounds. Apr. 26, 1938. Product obtained by heating acetoacetic ester with o-aminoacetanilide.

Pat. 2,115,852. Azo Dyes. May 3, 1938. Blue to violet tetrakisazo dyes obtained by developing on the fiber a trisazo dye obtained by coupling a diazotized 1-amino-8-naphthol-disulfonic acid which may be further substituted to an arylamine, diazotizing and coupling to an amine which may be diazotized on the fiber and coupled to a suitable coupler. Also claim process of dyeing.

Pat. 2,117,425. Azo Dyes. May 17, 1938. Process comprising diazotizing an arylamine, coupling to 2-aminobenzidine, condensing with a nitrobenzoyl chloride and reducing. Claims azo dyes formed thereby.

Pat. 2,117,426. Azo Dyes. May 17, 1938. Polyazo dyes obtained by reacting coupling components with diazotised aminobenzoylated 2-aminobenzidine.

Pat. 2,117,707. Azo Dye. May 17, 1938. Dye produced by coupling diazotized 4-nitro-2-aminophenol with resorcin in alkaline medium, and coupling the product in alkaline medium to diazotized 1-naphthylamine-5-sulfonic acid.

Pat. 2,117,859. New Azo Dye and Color Lakes and Their Production. May 17, 1938. Process of coupling diazotised 2-chlor-4-amino-toluene-5-sulfonic acid to 2-naphthol-3,6-disulfonic acid and optionally reacting with a soluble salt of an alkaline earth metal to form a lake.

Pat. 2,123,710. Purification of 3:3'-Dichlorobenzidine Mineral Acid Salts. July 12, 1938. Purification of 3,3'-dichlorbenzidine mineral acid salt by heating to 90° C. in a mineral acid solution of their concentration in which the salt is most soluble and flooding the solution with water.

Pat. 2,132,846. Water-Insoluble Monoazo Dye. Oct. 11, 1938. 4-Chloro-2-amino-anisole diazotized and coupled to the 2,3-hydroxynaphthyol derivative of 2,4,5-trimethyl-aniline, and fibers dyed therewith.

Pat. 2,135,866. Naphthazarine Intermediate-Aromatic Amine Condensation Products. Nov. 1, 1938. Condensation products of equal molecular quantities of naphthazarine intermediate and an amine of the benzene series.

Pat. 2,135,964. Azo Dyestuffs and Fiber Dyed Therewith. Nov. 8, 1938. Azo dye obtained by coupling a diazotized arylamine to an arylazo-acylamino-naphthol in which the acylamino and the arylazo groups are on one benzene ring of the naphthalene nucleus and the OH on the other ring.

Pat. 2,137,810. Direct Dyes, Process, and Product. Nov. 22, 1938. Tetrakisazo urea dye which may be prepared by impregnating cellulose with a diaminodiphenyl urea which has been tetrazotized and coupled to 2 mols of an (aminobenzoylamino) naphthol sulfonic acid, rinsing, diazotizing a reacting with a coupler.

Pat. 2,143,152. Manufacture of Aromatic Amines. Jan. 10, 1939. Reduction of an aromatic nitro compound to an amine with iron and acid in which the reduction mass is extracted with aqueous HCl in an amount insufficient to dissolve all the iron sludge, filtering, and recovering amine from the filtrate.

Pat. 2,144,219. Azo Dyes and Methods for Their Preparation. Jan. 17, 1939. Dye of the formula:

B—CONH—aryl—N=N—A

B=radical of a furane or thiophene compound free of solubilizing groups and A=radical of an ice color coupling component.

Pat. 2,144,220. Aromatic Amines and Methods for Their Preparation. Jan. 17, 1939. Compound, suitable as ice color component, of the formula:

Z—CONH—arylene—NH_2

Z=radical of furane or thiophene series.

Pat. 2,144,463. Azo Dyes and Process for Their Application. Jan. 17, 1939. Polyazo dye developed on the fiber having a plurality of amide linkages. Also claims process of applying dye to fiber.

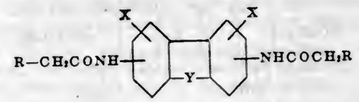
Pat. 2,145,398. Yellow Azo Pigment Composition. Jan. 31, 1939. Pigment dye composition comprising the product of joint precipitation of the products of coupling acetoacetanilide with diazotized o-nitraniline and diazotized m-nitro-p-toluidine.

Pat. 2,148,185. Dye. Feb. 21, 1939. Dye obtained by tetrazotising di(p-aminobenzoyl)-1,3-diaminobenzene which may be sulfonated in 4-position and coupling to an aminonaphthol sulfonic acid or 1-m-amino-phenyl-5-pyrazolone-3-(methyl or carboxyl).

Pat. 2,148,146. Diazo Compounds. Feb. 21, 1939. Disazo or tetrakisazo dyes containing one or two arylazo-hydroxy-benzeneaminonaphthol nuclei, and textiles dyed therewith.

Pat. 2,148,252. Intermediate for Azo Dyes and the Manufacture Thereof. Feb. 21, 1939. Product obtained by coupling an aminonaphthol to a diazotised substituted arylamine and heating the product in a nonreactive dehydrating bath at condensation temperatures in the presence of a dihydroxy benzene.

Pat. 2,149,335. Azo Dye Intermediates and Methods of Preparing Them. Mar. 7, 1939. Compound useful as an azo dye intermediate of the formula:



R=acyl, X=H, alkyl, alkoxy, halogen or nitro and Y=bivalent bridge radical.

Pat. 2,153,200. Diazo Compounds. Apr. 4, 1939. The compound prepared by: a nitro aminobenzene→1,6 or 1,7-naphthylamine sulfonic acid→1,6 or 1,7-naphthylamine sulfonic acid→arylamine having a free 4-position, and reducing the nitro group of the nitroaminobenzene residue.

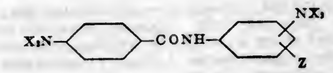
Pat. 2,153,201. Fast Polyazo Dyes. Apr. 4, 1939. Ice color prepared by treating textiles with a dye prepared by: a (nitro or acylamino) aminobensene→naphthylaminesulfonic acid→naphthylamine-sulfonic acid→arylamine having a free 4-position, reduced; tetrazotizing and treating with an ice color coupling component.

Pat. 2,155,685. Azo Dyes. Apr. 25, 1939. A polyazo dye containing a di(arylazobenzoylamino) benzoylaminonaphthol sulfonic acid group having an arylazo group attached to the naphthalene nucleus.

Pat. 2,158,306. Direct Dyes, Process and Product. May 16, 1939. Disazo urea dye obtained by tetrazotizing a diamino diphenyl urea and coupling to an aminonaphtholsulfonic acid substituted on the amino group by aminobenzoyl or aminobenzoylaminobenzoyl.

Pat. 2,160,882. Process of Making Azo Dyes. June 6, 1939. Process of diazotizing a primary arylamine, admixing sulfamic acid with the diazotized amine, and coupling the diazotized amine with an azo coupling component.

Pat. 2,161,638. Azo Dyes. June 6, 1939. Compound of the formula:



X=H or O and Z=halogen, oxyacetic acid, alkyl and alkoxy or 2 alkoxy groups.

Pat. 2,164,524. Azo Dye. July 4, 1939. Azo dyes of the formula: aryl—N=N—aryl—NH_2→arylamine→2-aminobensidine, in which at least one aryl group contains a water-solubilizing group.

Pat. 2,164,785. Azo Dyes. July 4, 1939. Azo dye obtained by tetrazotizing H_2N—R—CONH—alkylene—NHCO—R—NH_2, R=divalent benzene radical, and coupling to known azo dye couplers.

Pat. 2,164,786. Developable Azo Dyes and Process of Producing the Same on the Fiber. July 4, 1939. Azo dye obtained by tetrazotizing a di(aminobenzoyl)-alkylene diamine, coupling to known couplers containing free amino groups and water solubilizing groups, tetrazotizing on the fiber and coupling to couplers having no solubilizing groups.

Pat. 2,164,787. Di(Amino-Aroyl) Alkylene Diamines. July 4, 1939. An azo dye intermediate of the formula:

H_2N—R—CONH—R'—NHCO—R—NH_2

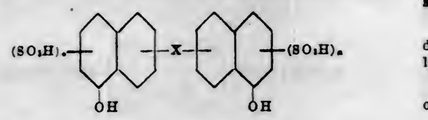
R=arylene of the benzene or naphthalene series and R'=bivalent saturated nonaromatic hydrocarbon radical.

Pat. 2,244,539. Disazo Dyes for Cellulose Esters and

Pat. 2,274,387. Azo Dye. Feb. 24, 1942. The process

Pat. 2,167,779. Dyeings With Polyazo Dyes. Aug. 1, 1939. Tetrakisazo dye obtained by coupling a compound comprising 2-naphthol sulfonic acid nuclei connected by an imide or urea bridge to a diazotized nitroacetylphenylenediamine, reducing, tetrazotising and coupling to a known coupler devoid of solubilizing groups.

Pat. 2,167,780. Diazo Dyestuffs. Aug. 1, 1939. Disazo compounds obtained by coupling:



X—NH or NHCONH, n—1 or 2, to 2 mols of a nitroacroylphenylene diamine, and reducing the end nitro groups.

Pat. 2,171,364. Azo Dyes. Aug. 29, 1939. Dye of the formula: 8-amino-1-naphthol-3,6-disulfonic acid→arylamine→naphthylamine sulfonic acid→an aminobenzene, which may be in the form of its sodium salt.

Pat. 2,171,976. Process of Manufacturing Stabilized Diazo Salts. Sept. 5, 1939. Preparation of a stabilized composition of a diazo salt complex by adding to an aqueous acid salt thereof a precipitant for the diazo salt and removing tarry material by extraction with acetone.

Pat. 2,172,753. Diazo Dyes for Cellulose Esters. Sept. 12, 1939. Blue and black disazo dyes for cellulose esters.

Pat. 2,173,052. Monazo Dyes. Sept. 12, 1939. Monoazo dyes having as one component a tertiary arylamine having an alkyl group and a polyhydroxyalkyl group on the amino group.

Pat. 2,173,053. Dye for Cellulose Esters and Ethers. Sept. 12, 1939. Monoazo dye for cellulose esters and ethers in which one component is an N-polyhydroxyalkylarylamine.

Pat. 2,173,054. Monazo Dyes for Cellulose Esters and Ethers. Sept. 12, 1939. Monazo dyes for cellulose ethers and esters having on one or both components a secondary or tertiary amino group having a polyhydroxy alkyl radical.

Pat. 2,173,055. Monazo Dyes for Cellulose Esters and Ethers. Sept. 12, 1939. Monoazo dyes for cellulose esters and ethers in which the coupling component is a secondary naphthylamine having a polyhydroxyalkyl group on the amino nitrogen.

Pat. 2,173,056. Dyes for Cellulose Esters and Ethers. Sept. 12, 1939. Monoazo dyes for cellulose esters and ethers having N-polyhydroxy radicals in one or both components.

Pat. 2,174,998. Azo Dyes From Ring Acylated Phenols. Oct. 3, 1939. Azo dyes produced by coupling diazotized arylamines to hydroxyarylketone, e. g., a hydroxyphenone.

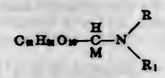
Pat. 2,175,244. Reduction of Aryl Nitro-Bodies. Oct. 10, 1939. Reducing nitroaryl compounds with iron in aqueous alkali in a ball mill.

Pat. 2,175,370. Azo Dyestuffs. Oct. 10, 1939. Azo and azoic colors in which the coupling component is meta-chloro-para-ethoxy-acetoacetanilide.

Pat. 2,175,371. Meta-Halo-P-Ethoxy-Acetoacetanilides and Method of Manufacturing the Same. Oct. 10, 1939. Meta-halo-para-ethoxy-acetoacetanilide and the preparation.

Pat. 2,178,757. Azo Dyes. Nov. 7, 1939. Brown hexakisazo dyes for cellulosic material in which a diazotized disazo dye is coupled to 2-aminobenzidine and the 3 amino groups thereof diazotized and coupled on the fiber.

Pat. 2,181,929. Maltosamine and Process for Preparing It. Dec. 5, 1939. Maltosamines of the formula:



where M—H or OH, R—H or aliphatic, R_1—aliphatic, which may be used as stabilisers for diazo compounds, and as textile assistants.

Pat. 2,182,347. Azo Compound. Dec. 5, 1939. Azo dyes containing aroylamino groups which may be hydrolysed off to give diazotisable end groups.

Pat. 2,182,348. Polyazo Dye. Dec. 5, 1939. Brown to orange and red black polyazo dyes for cellulosic material.

Pat. 2,186,722. Diazonium Compounds and Process of Manufacturing the Same. Jan. 9, 1940. Nitration at 0° to 25° C. in 75 to 100% sulfuric or hydrofluoric acid of the compound X—Aryl—N_2—R, X—H, halogen or saturated alkyl or alkoxy of 1 to 5 C atoms, Aryl—benzene or naphthalene, R—anion of HF, or mono-, di-, or tri-sulfonic acid of benzene naphthalene or anthraquinone.

Pat. 2,191,800. Azo Compounds. Feb. 27, 1940. Substantive azo dyes for cellulosic material which can be developed on the fiber, having a diaryl-diazo bridging group coupled to two phenyl-azo-pyrazolone groups which are coupled to primary arylamines as end groups.

Pat. 2,191,801. Polyazo Dye Compounds. Feb. 27, 1940. Polyazo yellow, brown and orange dyes for cellulosic material containing 1-m-aminophenylpyrazolone nuclei.

Pat. 2,193,553. Insoluble Azo Dye Containing Aromatic Nucleus of the Diphenyl Series. Mar. 12, 1940. Azo dye comprising a diazotized arylamine coupled to the radical of an acylated acetoacetyl diphenyl compound in which the acyl is devoid of groups which couple with diazo salts.

Pat. 2,193,996. Dye Intermediate. Mar. 19, 1940. Azo compounds obtained by diazotising certain aromatic monoamines or diamines and coupling to an amino-naphthol.

Pat. 2,193,997. Ice Color. Mar. 19, 1940. Brown water-insoluble polyazo or azoic dyes for cellulosic material.

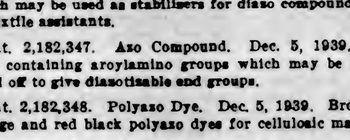
Pat. 2,193,998. Diazonium Compound. Mar. 19, 1940. Air-stable soluble aryl-azo-naphthol-diazonium compounds.

Pat. 2,204,230. Azo Dyes. June 11, 1940. Direct pentakisazo dyes which may be after treated with formaldehyde or metallizing agents.

Pat. 2,209,985. Diazo Composition. Aug. 6, 1940. Diazo solutions in which the diazotized arylamine which is devoid of solubilizing groups is dissolved in a water soluble mono-carboxylic aliphatic acid amide.

Pat. 2,228,416. Azo Dyes. Jan. 14, 1941. Tetrakisazo dyes which may be after treated with formaldehyde.

Pat. 2,230,099. Azo Dyes. Jan. 28, 1941. Reddish brown disazo dye of the formula:



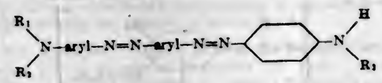
Pat. 2,236,236. Direct Brown Azo Dyes and Processes of Manufacturing the Same. Mar. 25, 1941. Direct brown tetrakisazo dyes for cotton.

Pat. 2,238,938. Process for the Preparation of Naphthazarin Intermediate. Apr. 22, 1941. Claims the process of purifying the crude sodium salt of naphthazarin intermediate by crystallizing the crude product from water, and separating from impurities.

Pat. 2,351,247. Amino-Substituted Compound of the

Pat. 2,416,187. Printing Pastes Containing New Diazo-

Pat. 2,244,839. Disazo Dyes for Cellulose Esters and Ethers. June 3, 1941. Blue disazo dyes for cellulose esters and ethers, such as



where R_1 and R_2—alkyl, R_3—mono or polyhydroxyalkyl.

Pat. 2,244,840. Disazo Dyes. June 3, 1941. Disazo dyes devoid of SO_3H and COOH groups containing at least one polyhydroxyalkyl group connected to an amino nitrogen.

Pat. 2,249,314. Azo Colored Composition. July 15, 1941. A mixture of alkali metal and alkaline earth metal salts of 2-hydroxy-naphthalene-1-azo-(3-methyl-4-chlorobenzene-6-sulfonic acid) are precipitated in alkaline medium and heated to about 60 to 90° C. until a product of uniform soft texture is produced. Product is orange in shade and is claimed to have a high tinting strength.

Pat. 2,254,372. Azo Dye Wood Stain. Sept. 2, 1941. Method of staining wood by impregnating it with a composition comprising an organic solvent and an azo dye soluble in the solvent having a sulfonic group in the form of its free acid. Example: The acid form of amino azo benzene→2-naphthol-6,8-disulfonic acid is dissolved in a mixture of methyl alcohol, toluene and diethylene glycol, producing a bright scarlet wood stain.

Pat. 2,255,090. Inhibiting the Gas Fading of Dyed Acetate Silk. Sept. 9, 1941. Process of inhibiting the action of gases which are deleterious to dyeings on cellulose acetate fibers by wetting the fibers with an aqueous fluid containing aryl biguanides.

Pat. 2,257,091. Solubilization of Diazoimino Compounds. Sept. 30, 1941. Diazoimino compounds in which the stabiliser is a secondary alkylol amine, e. g. methyl glucamine or diethanolamine, are reacted with ethylene oxide. Increased solubility in water is claimed.

Pat. 2,257,788. Blue Monazo Dye. Oct. 7, 1941. Water soluble blue monoazo dyes for cellulose acetate.

Pat. 2,263,597. Derivatives of 4-(4'-Nitro-2'-Sulphophenyl-Amino) Amino Benzenes and Processes of Making the Same. Nov. 25, 1941. Acyl derivatives of 4-(4'-nitro-2'-sulfophenyl-amino) aminobenzenes.

Pat. 2,263,616. Composition Comprising Ice Color Coupling Components. Nov. 25, 1941. Dispersible solubilized compositions containing azo dye intermediates which are devoid of SO_3H and COOH groups and a salt of Turkey Red Oil.

Pat. 2,264,681. Azo Dyes. Dec. 2, 1941. Tetrakisazo dyes which may be direct, after treated with formaldehyde or metallized.

Pat. 2,264,682. Reddish-Violet Substantive Azo Dye. Dec. 2, 1941. Substantive reddish violet tetrakisazo dye for cellulosic fibers.

Pat. 2,266,822. Disazo Dyes. Dec. 23, 1941. Claims dyes of the type: $X{\rightleftarrows}(Y)_2$, X is an aminophenoxy-acyl-arylene-diamine and Y is an amino-naphthol-sulfonic acid, a substituted amino-naphthol sulfonic acid, an amino-phenyl-pyrazolone, etc. The products are to be tetrazotized and developed with β-naphthol on cellulose fibers.

Pat. 2,266,824. Insoluble Azo Dye. Dec. 23, 1941. Claims dyes of the type: $X{\rightleftarrows}(Y)_2{\rightleftarrows}(\beta\text{-naphthol})_2$, X is an aminophenoxy acyl-arylenediamine, and Y is an amino naphthol-sulfonic acid, a substituted amino-naphthol-sulfonic acid, an amino-phenyl-pyrazolone, etc. The disazo dyes are tetrazotized and coupled to β-naphthol on cellulose fibers.

Pat. 2,274,387. Azo Dye. Feb. 24, 1942. The process of dyeing union textiles containing cellulose acetate fibers without imparting substantial stain to the acetate, and with the production of color having good discharge properties by applying a composition containing a direct cotton azo dye, activated carbon, and water to the textiles.

Pat. 2,275,124. Azo Dye. Mar. 3, 1942. Reacting diazotized 2,5-dimethoxy aniline with 3'-nitroanilide of 2,3-hydroxynaphthoic acid.

Pat. 2,278,492. Pentakisazo Dye. Apr. 7, 1942. Brown pentakisazo dyes and formaldehyde complexes thereof.

Pat. 2,286,390. Phenoxyacylamino Derivatives. June 16, 1942. Phenoxyacyl derivatives of polymethylene diamines having NH_2 or NO_2 on the phenyl group.

Pat. 2,286,391. Azo Dye. June 16, 1942. Azo dyes containing as first components di(amino-phenoxyalkyl-acylamino) alkanes.

Pat. 2,286,392. Azo Dye. June 16, 1942. Azo dyes containing as first components di(amino-phenoxyalkyl-acylamino) alkanes are diazotized on cellulose fibers and subsequently developed with a suitable water-insoluble coupling component, e. g. β-naphthos, pyrazolones. The resulting dyeings have excellent fastness to washing.

Pat. 2,295,050. Azo Dye. Sept. 8, 1942. Disazo dyes prepared from disulfanilamide tetrazo.

Pat. 2,296,925. Black Trisazo Dye. Sept. 29, 1942. Black trisazo dye for animal and vegetable fibers.

Pat. 2,297,801. Azo Dyes. Oct. 6, 1942. Brown trisazo dyes in which the last component is a 3,3'-diamino-sym, diphenyl urea and which are tetrazotised and developed on the fiber to pentakisazo dyes.

Pat. 2,314,212. Nitration of Cyclic Organic Compounds. Mar. 16, 1943. Nitration of aromatic organic compounds with nitric acid using BF_3 as an assistant. Higher efficiencies and lower temperatures are claimed.

Pat. 2,317,387. Dispersible Disazo Dye. Apr. 27, 1943. Secondary disazo dyes of the type: $H_2NO_2SRNH_2{\rightarrow}M{\rightarrow}$a phenol, M is a middle component, e. g. meta-toluidine, α-naphthylamine, 1-(amino phenyl)-3-methyl-pyrazolone, R is a nucleus of the benzene or naphthalene series. The products in dispersed form, dye cellulose acetate. Shades vary from yellow to red.

Pat. 2,322,746. Soluble Trisazo Dyes for Cellulosic Fibers. June 29, 1943. Claims direct dyes of the type: X→Y→Z→C, X and Y are primary aryl amines, Z is an amino benzyl-amino naphthol sulfonic acid and C is resorcin. Dyes are aftertreated with formaldehyde to improve fastness to washing.

Pat. 2,322,750. Trisazo Dye. June 29, 1943. Claims dyes of the type: X→Y→Z→C, X and Y are arylamines, Z is an amino sulfophenyl amino naphthol sulfonic acid and C is resorcin. Dyes are aftertreated with formaldehyde to improve washing fastness.

Pat. 2,336,521. Dioxazine-Type Dyestuffs and Process for Preparing the Same. Dec. 14, 1943. Blue dioxazine dyes.

Pat. 2,344,244. Catalytic Hydrogenation of Nitro Compounds. Mar. 14, 1944. Catalytic hydrogenation of aromatic nitro compounds to azo compounds in the liquid phase in the presence of an alkali and a sulfactive hydrogenation catalyst.

Pat. 2,346,599. Azo Dye Intermediates. Apr. 11, 1944. Di-(aminoaroylamino)-aroylamino-naphtholsulfonic acids.

Pat. 2,346,790. Azo Dyestuff. Apr. 18, 1944. Stabilization of printing pastes containing acid-reacting aryldiazo salts by the addition of picolinic acid.

Pat. 2,346,922. Metallisable Azo Dye. Apr. 18, 1944. Metallisable azo dye containing an anthraquinone nucleus.

Patents Relating to Miscellaneous Dyes

Pat. 1,968,895. Sulphur Dye and Method for Its Prep-

Pat. 2,351,247. Amino-Substituted Compound of the Benzene Series and Method of Making the Same. June 13, 1944. Claims primary amino benzenes in which a substituent group meta to —NH_2 is a chloro-aliphatic group having 2 nuclear C atoms both of which are substituted by chloro the chloro-aliphatic group having 2 nuclear C atoms both of which are substituted by chloro the chloro-aliphatic groups containing 3 to 5 Cl substituents. Example: 1',2',2'-trichloro-meta-amino styrene. Products are intermediates of azo dyes and are prepared by reducing the corresponding meta nitro compound.

Pat. 2,355,496. Dioxazine-Type Dyestuffs and Process for Preparing the Same. Aug. 8, 1944. Blue dioxazine dyes for cotton.

Pat. 2,355,497. Dioxazine Coloring Matters and Process for Preparing the Same. Aug. 8, 1944. Blue dioxazine dyes having sulfonamide radicals in the structural formula.

Pat. 2,356,618. Stabilized Diazo Printing Paste. Aug. 22, 1944. A printing paste comprising water, the reaction product of a diazonium halide with a metallic halide, and a non-coupling member comprising an aryl carboxylic acid, their insoluble metallic salts or their anhydrides. Example: complex diazo salt from diazotised 2,5-dichloro aniline and zinc chloride + bensoic acid. Printing pastes so stabilized do not deteriorate so rapidly and keep their strength longer.

Pat. 2,357,977. Azo Dyes. Sept. 12, 1944. Polyazo dyes obtained by coupling a di(aminoacylamino) aroylamino-naphthol sulfonic acid to a diazotized arylamine and developing this product on the fiber.

Pat. 2,361,327. Aryloxy-Alkacyl-Arylenes. Oct. 24, 1944. Para-phenoxyacetyl-meta-phenylene diamine.

Pat. 2,362,477. Azo Dyestuffs. Nov. 14, 1944. Process of preparing a scarlet dye, 3-aminotoluene-6-sulfonic acid→o-anisidine→m-aminophenyl - pyrazolone - carboxylic acid→m-aminobenzoyl-J-acid. Also claims is exceptionally fast to washing.

Pat. 2,370,339. Intermediate for Azo Dyes. Feb. 27, 1945. Claims preparation of pseudocumidene by heating N-N-dimethyl-meta-toluidine with $ZnCl_2$ to 300° C. The product is used as an azo dye intermediate.

Pat. 2,370,500. Direct Blue Azo Dyes. Feb. 27, 1945. Claims azo dyes of the formula: Y→Dianisidine→A→Resorcin, Y=1,8-dihydroxy-naphthalene-3,6-disulfonic acid; 1,8-dihydroxy naphthalene-4-sulfonic acid and 1-hydroxy naphthalene-4-sulfonic acid and A=1-naphthylamine 6- and 7-sulfonic acids. Products dye cellulosic fibers in deep bright blue shades which when aftertreated with formaldehyde show excellent washing fastness.

Pat. 2,373,438. Manufacture of 3,4-Xylidene. Apr. 10, 1945. Manufacture of 3,4-xylidene by hydrogenating a carboxylic acid ester of 2-methyl-5-nitrobensyl alcohol.

Pat. 2,373,926. Azo Dyestuffs. Apr. 17, 1945. Azo dyes containing a benzacridine nucleus which may be applied as ice colors or in stabilized printing compositions.

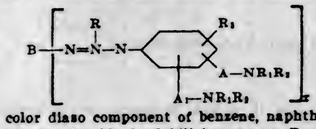
Pat. 2,374,064. Azo Pigments. Apr. 17, 1945. Monoazo yellow pigments of the type, p-chloro-o-nitraniline→2-methyl-3-chloro-acetoacetanilide.

Pat. 2,374,157. Red Monoazo Wool Dyes. Apr. 17, 1945. Red monoazo dye for wool.

Pat. 2,390,629. Method for Preparing Phenyl-Pentachloro-Ethane. Dec. 11, 1945. Phenylpentachloroethane is made by heating α-trichloroacetophenone with PCl_5 at 120 to 180° C.

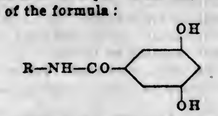
Pat. 2,396,357. Diazoamino Compounds and Printing Pastes. Mar. 12, 1946. Stabilisation of diazoe, diazoamino compounds and printing pastes containing them with a 6-sulfotetrahydroquinoline-8-carboxylic acid.

Pat. 2,416,187. Printing Pastes Containing New Diazoamino Compounds. Feb. 18, 1947. A hydrous alkaline printing paste comprising a coupling component, a thickener, and a diazoamino component of the formula:



B=ice color diazo component of benzene, naphthalene, or diphenyl series devoid of solubilising groups, R=H, alkyl, or hydroxy-alkyl, R_1=H or alkylol, R_2=alkylol, R_3=H, NO_2, Cl, Br, —CH_2OH, alkyl, or alkoxy, A and A_1=SO_3 or CO, x=1 or 2.

Pat. 2,416,547. Direct Azo Dyes Containing 3,5-Dihydroxy Benzoylamino Groups. Feb. 25, 1947. A direct cotton azo dye of the formula:



R=radical containing at least one aryl and one azo group, in which at least one m,m'-dihydroxy-bensoylamino group is attached to an aryl group and the compound contains sufficient water-solubilising groups to make it water-soluble.

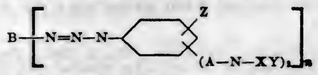
Pat. 2,416,549. Azo Printing Composition. Feb. 25, 1947. Cellulosic textile fiber is dyed by development on the fiber of a disazo compound of the formula:

R—N=N—D—N=N—R

D=radical of dianisidine, R=mixed radicals of beta-hydroxynaphthoic acid and the anilide thereof in the ratio in the range of 1:19 to 1:2. Resulting shades are greener than those obtained in the absence of the beta-hydroxy-naphthoic acid.

Pat. 2,418,416. Manufacture of Azo Lakes. Apr. 1, 1947. Manufacture of an azo lake of improved fastness by dissolving an amine of the benzene, biphenyl or naphthalene series and a coupling component of the benzene or naphthalene series containing an OH group, a solubilising group, and no NH_2 groups in an aqueous non-oxidising mineral acid solution of pH value to allow diazotization of the amine but not coupling of the components when a diazotising agent is added, diazotizing the amine, increasing the pH to allow coupling and adding a salt of a laking metal. Example: ortho-aminobensoic acid→2-naphthol-3,6-disulfonic acid, laked with $BaCl_2$.

Pat. 2,422,359. Diazoamino Compounds. June 17, 1947. Diazoamino compounds of the formula:



B=radical of ice color diazo component devoid of water-solubilizing groups, R=H, alkyl or 1–4 C atoms, hydroxyethyl or tris-(hydroxymethyl) methyl, A=CO or SO_2, X=H, ethylol or methylol, Y=alkylol of 1 to 4 C atoms and 1 to 4 hydroxyl groups, Z=H, NO_2, Cl, Br, CH_2OH, 1 to 4 atom alkyl, methoxy or ethoxy and n=1 or 2. The two (A—N—XY) groups are preferably one alkylol carbonamide and one alkylol sulfonamide.

Re. Pat. 21,476. Azo Dyes. Reissued June 4, 1940 (reissue of 2,148,134 originally issued Feb. 21, 1939). Dye obtained by tetrazotising di(p-aminobensoyl)-1,3-diaminobensene, which may be sulfonated in 4-position, coupling to an amine, tetrazotising and coupling in substance or on the fiber to a known coupler.

Re. Pat. 22,133. Azo Dyes. Reissued July 14, 1942 (reissue of 2,167,142 originally issued July 25, 1939). Azo dyes of the formula: 2-amino-4-methylanisole→anilide of 2,3-hydroxynaphthoic acid in which the anilide nucleus may be substituted by alkyl, alkoxy, nitro or halogen.

Patents Relating to Miscellaneous Dyes

Pat. 1,896,076. Sulphur Black and Preparation of the Same. Feb. 21, 1933. Manufacture of sulfur black by thionating a nitrophenol, precipitating in non-acid medium and acidifying the precipitate before drying.

Pat. 1,904,366. Organic Acid of the Diphenyl-Methane Series and a Process of Preparing the Same. Apr. 18, 1933. 3-Amino-4-(hydroxy or alkoxy)-2'-carboxy-diphenyl-methane in which the amino group may carry hydrolyzable substituents.

Pat. 1,906,580. Organic Acids of the Diphenylmethane Series and a Process of Preparing the Same. May 2, 1933. 2-(Chloro or bromo)-4-(alkyl, alkoxy, halogen, carboxy or sulfo)-5-amino-2'-carboxy-diphenylmethane in which the amino group may be substituted by acyl or the diacyl radical of a dibasic organic acid.

Pat. 1,908,099. Dye of the Naphtho-Phenazine Series and Process of Making It. May 9, 1933. A naphthophenazine compound having morpholine as a substituent in 3-position.

Pat. 1,910,489. Process for the Preparation of Amino-Thiazoles. May 23, 1933. Process of preparing p-ethoxy-amino-bensothiazol by adding sulfuryl chloride to p-ethoxy-phenyl thiourea suspended in chlorbensene, agitating the suspension, filtering off the precipitate formed and treating the precipitate with an aqueous alkaline solution.

Pat. 1,911,084. Process of Manufacturing Amino-Aryl-Thioglycollic Intermediates. May 23, 1933. Process of making amino-aryl-thioglycollic intermediates which comprises reacting an aryl substituted thiourea with a halogen, heating the product formed by the reaction with an alkaline substance and condensing the product formed thereby with a compound of the group consisting of chloracetic acid and alkali metal salts thereof.

Pat. 1,911,085. Process of Manufacturing Thiazoles. May 23, 1933. Process for producing amino-thiazole-compounds of the general formula:

where X means hydrogen or an alkyl or aryl-group, and R hydrogen or an aryl radical, which process comprises acting with chlorine on thiourea-derivatives of the general formula: aryl—NX—CS—NHR, where X and R have the aforesaid signification.

Pat. 1,916,215. Compound of the Diphenyl-Methane Series and Process of Preparing the Same. July 4, 1933. 3'-Aminobensyl-o-bensoic acids which may be substituted in 4-position by alkyl, halogen or carboxy and on the amino group by an acyl or divalent acyl radical.

Pat. 1,931,077. 1-Amino-5-Methoxy-Benzo-Thiazole. Oct. 17, 1933. 1-Amino-5-methoxybensothiazole.

Pat. 1,934,727. Safranine Dyestuff Intermediates and Process of Preparing the Same. Nov. 14, 1933. Preparation of a dye intermediate by condensing cresidine with p-nitro-chloro-bensene-o-sulfonic acid in the presence of an alkaline reacting substance. Claims also the reduction of the intermediates to the corresponding amine. The dyes produced from the products have greenish-blue shades and are fast to light and washing.

Pat. 1,954,484. Process of Producing Derivatives of Diphenylmethane. Apr. 10, 1934. Process for producing derivatives of methane which comprises heating a solution of formaldehyde and a member selected from the group consisting of mono- and di-alkyl anilines, mono-alkyl-o-toluidine, mono-alkyl-α-naphthylamine, and mono- and di-alkyl-β-naphthylamines, in the presence of a member selected from the group consisting of ammonium salts and alkyl-ammonium compounds.

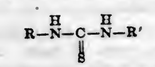
Pat. 1,968,895. Sulphur Dye and Method for Its Preparation. Aug. 7, 1934. Sulfur dye obtained by thionating the reaction product of p-amino-phenyl-morpholine and phenol with an alkaline polysulfide solution.

Pat. 1,981,055. Sulphur Colors. Nov. 20, 1934. Sulfur dyes produced by heating meta-toluylene-diamine, sulfur, a dibasic carboxylic acid and an amine of the diphenyl series.

Pat. 1,984,885. 1-Amino-Arylene Thiazoles and Their Production. Dec. 18, 1934. Production of amino thiazoles by chlorinating thioureas having one or 2 H atoms replaced by aryl groups.

Pat. 1,984,886. 1-Amino-Arylene Thiazoles and Their Production. Dec. 18, 1934. Production of a nuclearly chlorinated aryl thiazole by treating RNH—CS—NHR', R and R'=radicals of benzene or naphthalene series having at least 1 position adjacent to the NH free, with a chlorinating agent.

Pat. 1,987,614. Thiazole and Process of Production. Jan. 15, 1935. Process of preparing amino-aryl-thiazoles by treating a substance of the class:



where R is a benzene nucleus having one position ortho to the —NH group free and R' is a member of the group consisting of hydrogen, alkyl and phenyl radicals with a mixture of bromine and sulfuryl-chloride, in the presence of a solvent which does not readily react with the other ingredients.

Pat. 1,988,501. Preparation of Aryl Thioglycollic Acids. Jan. 22, 1935. Preparation of aryl thioglycollic acid comprising hydrolyzing a water-insoluble aryl-alkyl-xanthate in the presence of a monohalogen acetic acid in an organic solvent for the xanthate.

Pat. 1,991,482. Rhodamine Dyes. Feb. 19, 1935. Production of rhodamine dyes by condensing a halogenated primary amine of the benzene series with fluorescein dichloride and sulfonating. Product and animal fibers dyed therewith also claimed.

Pat. 1,996,005. Nitrate Compound of 2-Chloro-6-Nitrobenzaldimercurioxide. Mar. 26, 1935. Reaction of 2-chloro-6-nitrobenzaldimercurioxide with nitrous acid.

Pat. 1,996,006. 2-Chloro-6-Nitrobenzaldimercurioxide. Mar. 26, 1935. 2-Chloro-6-nitrobenzaldimercurioxide.

Pat. 1,996,007. Preparation of 2-Chloro-6-Nitrobenzaldoxime. Mar. 26, 1935. 2-Chloro-6-nitrobensaldoxime.

Pat. 1,999,395. Color Lake. Apr. 30, 1935. Color lakes are prepared by combining a complex inorganic acid of tungsten and/or molybdenum with a solution of a basic dye and an alkylamine. Also claims the lakes.

Pat. 2,004,763. N(P-Amino-Phenyl) Morpholine and Method of Preparing the Same. June 11, 1935. N-(para-amino-phenyl) morpholine and production thereof.

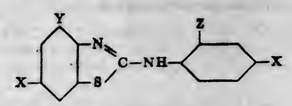
Pat. 2,004,764. Preparation of N-(P-Amino-Phenyl) Morpholine. June 11, 1935. Preparation of N(p-amino-phenyl) morpholine by reducing the corresponding nitro or nitroso compound as its hydrohalide by means of an inorganic water-soluble sulfide having reducing properties.

Pat. 2,005,571. N(Para-(Beta-Naphthyl-Amino) Phenyl) Morpholine and Its Production. June 18, 1935. N(para(beta-naphthyl-amino)phenyl) morpholine.

Pat. 2,007,335. Process of Producing O-Amino-Aryl Mercaptans and Derivatives Thereof. July 9, 1935. Arylaminothiazoles are heated with sodium hydroxide to obtain o-amino-aryl mercaptans.

Pat. 2,019,529. Aminobenzothiazole Compound. Nov. 5, 1935. 2-Aminobensthiazoles having an alkoxy or cycloalkoxy of at least 3 C atoms on the benzene ring, and salts thereof.

Pat. 2,025,876. Preparation of Aryl-Amines. Dec. 31, 1935. Process of hydrolysing under alkaline conditions:



X—halogen, Y—H or alkyl and Z—halogen or alkyl.

Pat. 2,027,144. Formation of Leuco Compounds. Jan. 7, 1936. Process of reducing a vat color to its leuco which comprises mixing the vat color with metallic zinc and an amount of sulfur dioxide in water insufficient to interact with all the zinc present, and during the reaction continuously adding an amount of sulfuric acid to form and maintain the presence of zinc hydrosulfite from the zinc bisulfite formed. U. S. patent has one claim to reduction of organic compounds.

Pat. 2,040,928. Alkoxy, Alkyl-Amino-Benzothiazoles and Their Production. May 19, 1936. 6-n-Butyloxy-2-methylimino-benzothiazole.

Pat. 2,051,145. Chlorinated Aryl-Thiazoles and Process for Their Production. Aug. 18, 1936. 1-p-chloro-o-toluidino-3-methyl-5-chlorobenzothiazole and salts thereof.

Pat. 2,052,716. Compounds of Basic Dyestuffs With Sulphuric Acid Ester Salts. Sept. 1, 1936. Compound formed by reacting a basic dye with a sulfuric acid ester salt of an 8–18 C atom normal straight chain primary aliphatic alcohol.

Pat. 2,055,608. Ar. Tetrahydro-Naphthyl Thioureas. Sept. 29, 1936. An unsubstituted ar. tetrahydro naphthyl thiourea.

Pat. 2,055,609. Ar. Tetrahydro-Naphthothiazoles. Sept. 29, 1936. A β-amino ar-tetrahydro-naphthothiazole.

Pat. 2,061,200. Indigoid Compounds Containing Fluorine. Nov. 17, 1936. An indigoid dye having an F or a CF_3 group attached to an aromatic C atom thereof.

Pat. 2,061,243. Unsymmetrical Fluoro-Phenyl-Thioureas and Process of Preparing Same. Nov. 17, 1936. Preparation of p-fluorophenyl thioureas by reacting p-fluoroaniline with an alkali metal thiocyanate or lower alkyl or aryl isothiocyanates.

Pat. 2,062,443. Improved 4:4'-Dimethyl-6:6'-Dihalogen Thioindigo. Dec. 1, 1936. Method of improving 4,4'-dimethyl-6,6'-dihalogen thioindigos.

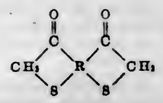
Pat. 2,063,161. Asymmetric Indigoid-Thioindigoid Colors. Dec. 8, 1936. Preparation of asymmetric thionaphthene-indolindigo dyes by condensing an isatin with an aluminum compound of thioindoxyl.

Pat. 2,063,191. Hydroxy Phenyl Morpholines. Dec. 8, 1936. 2-Methyl or 3-methyl-4-hydroxy-N-phenyl-morpholine.

Pat. 2,085,736. Compounds of the Triphenylmethane Series. July 6, 1937. Dyes of the triphenyl methane series containing nuclearly substituted fluorine.

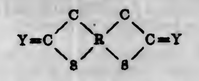
Pat. 2,089,006. Preparation of Nitro-Bensaldimercuric Oxides. Aug. 3, 1937. Preparation of an o-nitrobensaldimercurioxide by reacting an o-nitrotoluene with mercuric oxide in alkaline solution.

Pat. 2,094,595. Chemical Compounds. Oct. 5, 1937. claims bis-thioindoxyls having the general formula:



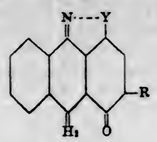
wherein both thiophene nuclei are condensed on the same benzene nucleus of an aromatic radical R.

Pat. 2,094,596. Indigoid Dyes and a Process for the Preparation Thereof. Oct. 5, 1937. Indigoid dyes of the formula:



R—aromatic nucleus in which both thiophene nuclei are attached to the same benzene nucleus, Y—thionaphthene radical.

Pat. 2,113,236. Dyestuffs of the Alisarine Indigo Type. Apr. 5, 1938. Alisarine indigo type dyes of the formula:



Y—S or Se, and R—isatin radical linked in 2-position.

Pat. 2,127,483. Thioindoxyl-Anil and Process of Making the Same. Aug. 16, 1938. Compound obtainable by condensing 6-ethoxythioindoxyl, in alkaline aqueous alcoholic medium, with p-nitrosophenol and methylating the product.

Pat. 2,127,484. Thioindoxyl Derivative and Process of Making the Same. Aug. 16, 1938. Compound obtained by condensing 6-methyl-thioindoxyl with p-nitroso phenol in alkaline aqueous alcoholic medium.

Pat. 2,136,427. Indigoid Dye Reduction Products and Processes for Making the Same. Nov. 15, 1938. Preparation of a reduction product of a thioindigo dye by heating in aqueous alkali metal hydrosulfite until a stable leuco of the dye is formed.

Pat. 2,136,428. Unsymmetrical Modified Leuco Derivatives of Indigoid Dyes. Nov. 15, 1938. Indigoid dyes are made by reducing a thionaphthene indolindigoid dye substituted in the aryl ring with a halogen, alkyl, or alkoxy radical, with an aqueous alkali metal hydrosulfite.

Pat. 2,148,106. Process of Preparing Aryl Mercaptans. Feb. 21, 1939. Aryl mercaptans are prepared by reacting an aryl compound with aluminum chloride and sulfur dioxide and then reducing the sulfinates thus formed. For example, chlor-para-xylene mercaptan is prepared from chlor-para-xylene.

Pat. 2,151,114. Sulphurised Indophenol Dyestuffs and Process of Producing the Same. Mar. 21, 1939. Green sulfur dyes obtained by thionating 1-p-alkoxy-phenylamino-4-p-hydroxy phenylaminonaphthalene-6-, -7-, or -8-sulfonic acid.

Pat. 2,153,300. Manufacture of Metal-Phthalocyanines. Apr. 4, 1939. Production of copper phthalocyanine by heating phthalonitrile and copper in a limited quantity to control temperature, adding phthalonitrile, repeating the cycle until the apparatus is filled and baking at 220–250° C.

Pat. 2,160,837. Manufacture of Copper Phthalocyanine. June 6, 1939. Production of copper phthalocyanine by heating metallic copper with an o-arylene dicyanide in the presence of NH_4Cl, $SnCl_4$, $SbCl_5$, $SnCl_2$, $AlCl_3$, or CuCl.

Pat. 2,163,768. Chemical Process. June 27, 1939. Method of treating a massive body having a surface of a structurally useful divalent base metal with a porphyrazinogenic substance in fluid form at elevated temperature.

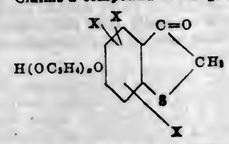
Pat. 2,192,704. Phthalocyanine Pigment. Mar. 5, 1940. Method of improving a phthalocyanine pigment by dissolving it in an acid solvent with a small amount of a different phthalocyanine pigment and precipitating by adding water.

Pat. 2,212,056. 6-Chloro-Diphenyl-Methane-2-Carboxylic Acid Compounds and a Process for Preparing the Same. Aug. 20, 1940. 6-Chlorodiphenyl-2-carboxylic acid which may be substituted by halogen, methyl or methoxy.

Pat. 2,213,204. Catalytic Production of Aryl-Naphthyl Amines. Sept. 3, 1940. Process of heating at 150–350° C., a naphthol with an aminobenzene in the presence of sulfanilic acid.

Pat. 2,227,628. Fluorination of Phthalocyanines. Jan. 7, 1941. Production of a novel coloring matter, by reacting with fluorine upon a phthalocyanine compound in liquid hydrogen fluoride.

Pat. 2,228,753. Intermediates for Indigoid Dyestuffs. Jan. 14, 1941. Claims a compound of the general formula:



and its tautomeric form, wherein the X's are hydrogen or mono-valent auxochromic substituents, while s represents an integer not greater than 5. Products are intermediates for thioindigo dyes.

Pat. 2,234,018. Sulphur Color Derived From Substituted Aryl Carbamic Esters. Mar. 4, 1941. New sulfur colors are prepared by the thionation of aryl carbamic acid esters. Novel shades and improved fastness properties are claimed.

Pat. 2,238,242. Aromatic Fluorine Compounds. Apr. 15, 1941. Diphenyl difluoro methane, sym. diphenyl difluoro ethene, sym. diphenyl difluoro-dichloro ethane, and nuclearly alkylated derivatives thereof.

Pat. 2,238,243. Liquid Coating Composition. Apr. 15, 1941. Claims a can-stable, non-bronzing, non-aqueous liquid coating composition containing as principal color constituent the lake obtained by precipitating with barium chloride and in the presence of alumina hydrate, sulfonated copper phthalocyanine containing from 1.34 to 3.45 sulfo groups per molecule.

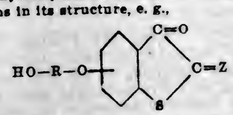
Pat. 2,238,275. Method of Flushing Water Wet Pigments in Oil. Apr. 15, 1941. Process of converting an aqueous pigment paste into an oily pigment paste.

Pat. 2,253,166. Hydroxyalkyl Mono Ethers of P,P'-Dihydroxy Diphenyl Amines and Process for Making Same. Aug. 19, 1941. 4-(ω-Hydroxy-alkoxy)-4'-hydroxy-diphenyl-amines are prepared by the condensation of a 4-(ω-hydroxy-alkoxy)-aniline with hydroquinone. The products are intermediates for the manufacture of sulfur colors.

Pat. 2,253,167. Sulphur Dyestuff. Aug. 19, 1941. Brown to red-brown sulfur colors are prepared by the thionation with sodium polysulfide of 4-(ω-hydroxy-alkoxy)-4'-hydroxy-diaryl-amines.

Pat. 2,257,868. Trifluoroacetyl Halide and a Process of Making It. Oct. 7, 1941. Trifluoro acetyl chloride and bromide are prepared by heating trifluoro acetic acid with bensoyl chloride or bromide. Both process and products are claimed.

Pat. 2,259,618. Indigoid Dye and Process of Making the Same. Oct. 21, 1941. Claims a vat dye of the indigoid series possessing at least one 3-hydroxy-thionaphthene component which in turn possesses in the aryl nucleus at least one hydroxy-alkoxy group having not more than 4 carbon atoms in its structure, e. g.,



Z is an indigoid coupling component and R is alkyl and hydroxy-alkyl.

Pat. 2,263,562. Sulphur Dyes Derived From Aromatic Biguanides. Nov. 25, 1941. Sulfur colors are prepared by the thionation of aromatic biguanides or di-biguanides, with or without bensidine or m-toluylene diamine.

Pat. 2,285,243. Nuclear Alkylation of Amino Substituted Aromatic Ethers. June 2, 1942. Process for the nuclear alkylation of amino phenol ethers using sulfuric, hydrofluoric, or phosphoric acid as the condensing agent.

Pat. 2,335,137. Diamino Diphenyl Methanes. Nov. 23, 1943. Bisymmetrical 4,4'-diaminodiphenylmethanes in which each phenyl group contains at least one SO_3H group and the amine groups may be monoalkylated.

Pat. 2,335,381. Sulphur Dye Derived From 1-(ω-Sulpho-Alkylamino)-Naphthalenes. Nov. 30, 1943. Blue and green sulfur dyes of increased solubility and good fastness properties are prepared by thionating leuco indo phenols derived from 1-(ω-sulfo-alkyl)-naphthylamines, either with or without copper salts.

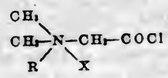
Pat. 2,344,624. Sulphur Dyes of the Hydroxy-Anilino-Naphthalene-Sulphonamide Type. Mar. 21, 1944. Sulfur dye produced by thionating a 1-amino-4-(4'-hydroxy-anilino)-naphthalene sulfonamide which may contain halogen and methyl groups and metallized complexes thereof.

Pat. 2,344,625. New Hydroxy-Anilido-Naphthalene-Sulphonamides. Mar. 21, 1944. Production of hydroxy aniline aminonaphthalene sulfonamides by reacting a para aminophenol with 1-aminonaphthalene-6(-7 or -8) sulfonamide. Example: p-aminophenol + 1-aminonaphthalene-6-sulfon-methyl-amide → 1-amino-4(p'-hydroxy anilino)-naphthalene-6-sulfon methylamide. Products are used as intermediates for sulfur dyes.

Pat. 2,356,823. Organic Dyestuffs of the Thionaphthenone Series and Process of Making the Same. Aug. 29, 1944. Thionaphthenone dyes obtainable by condensing a thioindoxyl compound with a benzenoid compound having a reactive 0 atom.

Pat. 2,356,824. Organic Dyestuffs of the Thionaphthenone Series and Process of Making the Same. Aug. 29, 1944. Mono- or di-(acyloxyalkyloxy) derivative of a dye obtainable by condensing a thioindoxyl compound with a benzenoid compound having a reactive 0 atom.

Pat. 2,359,862. Quaternary Ammonium Derivatives. Oct. 10, 1944. Process for producing betaine esters by reacting a compound of the formula:



R—hydrocarbon, X—an anion of a strong acid with an organic hydroxyl-containing esterifying agent in a liquid diluent medium. Example: N-chloro-betainyl chloride + 2-hydroxy-3-naphthanilide → 2-(N-chloro-betainoxy)-3-naphthanilide. Water-insoluble hydroxy-containing compounds can be solubilised by the process.

Dyeing and Printing Chemicals and Processes

Pat. 1,914,536. Discharge Dyeing. June 20, 1933. A dischargeable dye mixed with a non-dischargeable blue or green naphthophenazine dye and production of white discharge effects on silk.

Pat. 1,931,108. Discharge Printing. Oct. 17, 1933. Production of discharge effects on cellulose ethers and esters including treating with guanidine thiocyanate.

Pat. 1,941,991. Method of Treating Textile Material and Product. Jan. 2, 1934. Use of aminoarylthioglycollic acid metal salts as assistants in dyeing with sulfur dyes.

Pat. 1,946,079. Alkylolamine Derivatives of Aliphatic Acids. Feb. 6, 1934. Claims a product resulting from the chemical combination of an acid taken from the group consisting of oleic, stearic and ricinoleic acids with an alkylolamine containing a plurality of alkyl groups.

Pat. 1,946,080. Alkylolamine Derivatives of Aliphatic Acids. Feb. 6, 1934. Claims a product resulting from the chemical combination of oleic acid and an alkylolamine containing a plurality of alkyl groups.

Pat. 1,967,569. Printing. July 24, 1934. A dye paste comprising a water-insoluble vat dye and a formate or material which will yield a formate under conditions of printing as printing assistants.

Pat. 1,981,907. Discharge Printing. Nov. 27, 1934. Production of discharge effects on dyed cellulose ethers and esters with a composition comprising zinc thiocyanate and a sulfoxylate capable of discharging the color.

Pat. 1,985,602. Nondyeing Sulphurized Phenol. Dec. 25, 1934. Production of sulfurized derivatives of phenols by reacting a monohydric phenol with an amount of sulfur insufficient to react with all the phenol present in the presence of an alkali metal hydroxide, and subsequently removing the unreacted phenol.

Pat. 2,000,689. Wood Staining. May 7, 1935. Staining wood with an organic solution of an arylene diamine, aminophenol or aminoanisole and $CuCl_2$ and exposing the treated wood to air.

Pat. 2,006,303. Dyeing of Cellulose Derivatives. June 18, 1935. Cellulose esters are dyed with 1-nitroacridone which may be further substituted by halogen, nitro, alkyl, alkoxy or hydroxy.

Pat. 2,021,911. Process for Dyeing and Printing Textile Material. Nov. 26, 1935. Composition comprising an ice color coupling component and a diazoimino compound from a diazotized arylamine free of COOH and SO_3H groups and a pyrrolidine having a water solubilising group in beta-position.

Pat. 2,021,932. Process of Dyeing. Nov. 26, 1935. Process of dyeing fibers with vat dyes by applying the dye solution to the fiber in the presence of a cellulose ether which is adapted to be dispersed in alkaline solution.

Pat. 2,024,973. Textile Printing. Dec. 17, 1935. Vat dye printing paste comprising an unsubstituted alkali-metal anthraquinone sulfonate used as a printing assistant.

Pat. 2,024,974. Printing. Dec. 17, 1935. Vat dye printing paste comprising an alkali-metal anthraquinone sulfonate used as a printing assistant.

Pat. 2,046,263. Production of Cellulose-Coated Pigment. June 30, 1936. Hydrolysis of an alkali salt of a cellulose monoester of a dicarboxylic acid in the presence of an aqueous suspension of stable solid material subdivided to pigment size.

Pat. 2,046,267. Pigments. June 30, 1936. Production of finely divided, amorphous, regenerated cellulose pigments by heating an alkaline aqueous solution of an alkali salt of a cellulose monoester of a dicarboxylic acid and a dye for cellulose which can be applied from alkaline solution to hydrolyze the monoester.

Pat. 2,058,418. Dyeing Process. Oct. 27, 1936. Dyeing and printing compositions comprising an ice color coupling component and a diazoimino compound from a mono or diaminoaryl compound and a heterocyclic imino compound containing a water-solubilising group.

Pat. 2,069,215. Printing Process and Composition Therefor. Feb. 2, 1937. Process of printing textile fibers with vat dyes by applying the dye to the fiber in the presence of an alkali-soluble salt of a branched-chain aliphatic carboxylic acid containing not less than 6 and not more than 12 carbon atoms.

Pat. 2,070,467. Printing Composition and Process. Feb. 9, 1937. Printing paste comprising a dispersion of a white, water-insoluble organic pigment which is an organic ether containing more than one closed chain connected by an ether linkage or S, Se, Te or NH analogues thereof, e. g., ethylene glycol di-β-naphthyl ether.

Pat. 2,074,031. Continuous Dyeing Process. Mar. 16, 1937. Cotton and regenerated cellulose are dyed by passing the material with a diazotisable amine through a diazotising bath at about 140° F. and then through a couple bath.

Pat. 2,078,388. Dyeing Process and Composition. Apr. 27, 1937. Composition comprising a coupling component and aryl—N=N—NR_1R_2, aryl—residue suitable for use in azo dyes, R_1—H, alkyl, hydroaryl, alkylol or hydroarylol and R_2—alkylol or hydroarylol or R_1 and R_2 together—tetramethylene or pentamethylene substituted by at least 1 OH group.

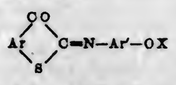
Pat. 2,079,788. Process and Composition for Printing Textile Fiber. May 11, 1937. Printing composition comprising a vat dye and a water soluble alcohol sulfate of 6–12 C atoms so arranged that the radical next to the sulfate group does not form a straight chain of more than 6 CH_2 groups.

Pat. 2,085,145. Vat Dye Compositions. June 29, 1937. Claims a non-aqueous dye composition comprising an intimate mixture of a water-insoluble metal leuco derivative of a vat dye and a water-soluble metal salt which yields an anion and which forms a salt with the metal of the leuco derivatives by double decomposition in the presence of water which is more insoluble than the metal leuco derivative, also claims coloring therewith.

Pat. 2,088,506. Process and Composition for Applying and Fixing Diazoimino Dyestuffs. July 27, 1937. Dye composition comprising a water-soluble diazoimino compound hydrolysable in acid solution, an ice color coupling component and a compound hydrolysable to acid at elevated temperature in the presence of water, but not readily hydrolysable at ordinary temperatures.

Pat. 2,093,402. Printing and Dyeing Compositions and Processes. Sept. 21, 1937. Process of impregnating organic fibers with a primary aryl nitrosamine or a primary aryl diazoimino compound and with an arylazo compound in stabilising medium and coupling the diazotised amine to the arylazo compound, the final dye being free from solubilising groups.

Pat. 2,094,597. Process for Dyeing Cellulose Esters and Ethers. Oct. 5, 1937. Dyeing cellulose ethers and esters comprising applying thereto



Ar—orthoarylene, Ar'—aryl, X—H or lower alkyl and Ar and Ar' are free from basic and solubilising substituents.

Pat. 2,097,754. Stencil Sheet. Nov. 2, 1937. Stencil sheet comprising an ink permeable base sheet coated with plasticiser and methyl methacrylate.

Pat. 2,107,159. Improved Coloring Material. Feb. 1, 1938. Producing water-insoluble pigment by mixing two aqueous solutions which react without oxidation to form the pigment, one solution containing a water soluble sulfate of an acetylated unsaturated normal primary alcohol of 12–18 C atoms, both solutions being free from emulsified oils.

Pat. 2,123,740. Coloration of Materials Comprising Cellulose Derivatives. July 12, 1938. Dyeing preparation for cellulose acetate dispersible in water comprising a substantially insoluble coloring compound and a surface active ammonium, sulfonium or phosphonium compound having an alkyl group of at least 6 C atoms in the positive ion thereof.

Pat. 2,138,572. Dyeing and Printing Compositions. Nov. 29, 1938. Method of preventing premature reaction in a composition containing an azo dye coupling component containing an active methylene group and a potentially reactive diazotised arylamine by adding urea, an ethanol amine and a base to render the composition non-acidic.

Pat. 2,147,635. Dyestuff Pastes and Process for Applying the Same. Feb. 21, 1939. Printing paste comprising the stable leuco derivative of an alkyl ether of Bz-2, Bz-2'-dihydroxydibenzanthrone, an alkyl or alkylol amine, and a reducing salt.

Pat. 2,164,930. Process for Reducing Vat Dyestuffs. July 4, 1939. Vat color preparation comprising a vat dye and formamidine sulfinic acid as the reducing agent.

Pat. 2,173,824. Composition for Printing Textile Fibers. Sept. 19, 1939. Printing composition containing a vat dye, benzyl alcohol, and at least one textile assistant selected from Turkey red oil and water-soluble sulfates of 6 to 12 C aliphatic alcohols.

Pat. 2,174,005. Vat Color Printing Paste. Sept. 26, 1939. Use of acetaldol in vat printing pastes.

Pat. 2,174,486. Textile Printing Pastes Containing Penetrating Agents and Processes of Printing Therewith. Sept. 26, 1939. Printing composition containing a penetrating agent, RXA, R—hydrocarbon or benzthiazole joined to X by an acyclic C atom, X—O or S, and A—organic or inorganic acidyl radical, and R or A may contain substituents.

Pat. 2,189,807. Washing of Discharged Prints. Feb. 13, 1940. Process for coloring a fabric with a water-soluble azo dye, discharging selected portions, and scouring with an aqueous alkaline solution of a long chain aliphatic hydrocarbon sulfate or a higher hydrocarbon substituted betaine derivative.

Pat. 2,200,069. Spirit Printing Inks and Process of Making Same. May 7, 1940. Spirit printing ink comprising a low boiling alcohol, a finely divided spirit insoluble pigment and an alkyl ether of cellulose.

Pat. 2,205,032. Dye Compositions. June 18, 1940. Printing fabric with a paste comprising a vat dye and $(R(OOC)_n—R—(COOM)_n$. R—aromatic hydrocarbon radical, n—1–3 and M—H or water soluble salt forming group.

Pat. 2,206,535. Stripping Dyed Textile. July 2, 1940. Textile material dyed with vat or azoic dyes are stripped with an aqueous bath of formamidine-sulfinic acid and alkali near the boiling point.

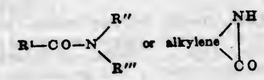
Pat. 2,210,461. Synthetic Resin Printing Ink. Aug. 6, 1940. A rotogravure printing ink containing as binder a resinous polymer of dihydronaphthalene or dihydroacenaphthene.

Pat. 2,225,604. Coloring Composition. Dec. 17, 1940. A coloring composition comprising a pigment of the group consisting of azo pigment dyes, acid dye metal salts, basic dye pigments and nitroso pigments dissolved in a normally liquid N-aliphatic substituted amide of a monocarboxylic aliphatic acid which amide is free of acidic substituents. Method of coloring leather, textile, textile fibers, and paper with the above coloring composition.

Pat. 2,228,033. Sympathetic Ink. Jan. 7, 1941. A sympathetic printing ink normally invisible when applied to paper consisting of a readily volatile alcohol taken from the group consisting of methyl and ethyl alcohols having dissolved therein sufficient alcohol soluble cellulose ether to render the ink of a viscosity suitable for printing purposes.

Pat. 2,274,544. Printing of Textile Fabrics. Feb. 24, 1942. Pastes of water-soluble condensation products of water-insoluble dye which contain, as assistants, mono-nitro-hydroxy saturated aliphatic hydrocarbons. The presence of the assistants causes the production of bright dyeings when the insoluble dye is reformed upon the fiber by the de-acylation of the water-soluble condensation product.

Pat. 2,290,945. Printing of Textile Fabrics. July 28, 1942. A hydrous printing paste comprising a water-soluble condensation product of an insoluble dye: R—M, R—a radical of an insoluble dye which contains at least one condensable group, e. g. OHR—NH, M—an acyl radical; and 1% of



R'—OH, CH_3, C_2H_5 or OH or Hl derivatives, R'' and R'''—H, alkyl, hydroxy alkyl or jointly—piperidine or morpholine.

Pat. 2,291,052. Printing Cellulose Acetate. July 28, 1942. Printing cellulose acetate with acid and direct dyes in an aqueous medium containing zinc thiocyanate and a hydrotropical agent, e. g. urea, thiourea, soluble metal salts of aliphatic sulfuric acids, aliphatic and aromatic sulfonic acids having up to 12 C atoms, of thioglycolic acids, and of dicarboxylic acid mono esters.

Pat. 2,294,246. Printing Paste for Textile Printing. Aug. 25, 1942. A hydrous printing paste containing a thickener, a water-soluble condensation product of a substantially insoluble dye, an alkaline buffer and an ester of ammono-hydroxy aliphatic carboxylic acid, e. g. ethylene glycol-mono-glycolic acid ester, ethylene glycol-diglycolic acid ester, glycerol-mono-glycolic acid ester.

Pat. 2,297,701. Process of Dyeing Animal Fibers. Oct. 6, 1942. Dyeing wool fiber with vat dyes by first treating the fiber in an aqueous bath containing a sulfur-containing vat-reducing agent but no added alkali and no vat color, heating the impregnated fiber, and then subjecting the same to vat dyeing in a bath containing the chosen vat color, alkaline agents and reducing agents.

Pat. 2,297,702. Process of Treating Animal Fibers. Oct. 6, 1942. Treating animal fiber whereby to increase its affinity for organic compounds which dissolve in water only after transformation into an OM-type compound wherein M stands for an alkali-metal, impregnating with a sulfur-containing vat-reducing agent and subjecting the fiber to heat at a temperature between 160 and 300° F.

Pat. 2,297,703. Process of Treating Animal Fibers. Oct. 6, 1942. Treating animal fiber whereby to increase its affinity for organic compounds which dissolve in water only after transformation into an OM-type compound, wherein M stands for an alkali-metal, by impregnating with a reagent selected from the group consisting of the water-soluble bisulfites and water-soluble hydrosulfites, and drying the fiber at a temperature not less than 160° F.

Pat. 2,298,147. Textile Printing Process. Oct. 6, 1942. Production of resist designs under vat color dyeings by printing with an emulsion containing wax and a hydrolysable aluminum salt, drying the printed fabric to obtain a temporary water repellency in the printed portions of the fabric, and then dyeing the printed fabric with a vat dye to provide a ground color.

Pat. 2,321,501. Printing Viscose Process Rayon With Acid and Direct Colors. June 8, 1943. A printing paste comprising a direct or acid color, a hydrous thickening agent and as an assistant, an alkali metal salt of benzyl- or a 1 to 12 C alkyl-thioglycolic acid.

Pat. 2,322,837. Printing Composition. June 29, 1943. A printing composition for printing textiles being an emulsion consisting essentially of an interpolymer of one of the group of compounds consisting of styrene, vinyl acetate, and esters of methacrylic acid with a drying oil in which the drying oil is present in an amount not greater than the other component, a solvent therefor being insoluble in water, an insoluble pigment, e. g., copper phthalocyanine, and water.

Pat. 2,335,905. Printing Composition for Fabrics and the Resulting Printed Fabric. Dec. 7, 1943. Composition for printing comprising water, a film-forming material, a sulfur color pigment being in its oxidised water-insoluble, non-substantive form and substantially free from sulfur and sulfides, and containing only minor amounts of inorganic salts.

Pat. 2,336,365. Textile Printing Process. Dec. 7, 1943. Printing cotton to obtain sharply registered colored designs comprising applying a permanent finishing and sizing agent and then printing with an alkaline type printing paste.

Pat. 2,343,781. Spirit Printing Composition. Mar. 7, 1944. A spirit printing ink comprising a solution of a basic dye and a powdered wood rosin in an oxygenated organic solvent.

Pat. 2,346,473. Dyeing of Wool With Nonmetallised Acid Colors. Apr. 11, 1944. Dyebath for dyeing wool comprising essentially a water solution of a nonmetallised acid wool dye and sufficient hydroxy-acetic acid to give the bath a pH value of about 3 to about 3.5.

Pat. 2,353,411. Textile Printing Composition. July 11, 1944. A printing composition for textile fabric, comprising a thickening agent, water, an unmetallised mordant-acid azo dye, a water-soluble compound of a metal whose atomic weight is not less than 52 and not greater than 64, and triethanolamine in quantity corresponding to between 5 and 15%.

Pat. 2,391,613. Process of Coloring Wood. Dec. 25, 1945. Process of coloring wood throughout interior portions thereof by immersing it in an alkaline solution not above a pH of 11.4 and containing a stabilised diazotised aryl amine and an azo pigment coupling component which is devoid of solubilising groups, heating to 63°–93° C., applying pressure, and thereafter impregnating the interior portions of the wood with an acid, until a colored substance is formed.

Pat. 2,369,696. Continuous Piece Goods Processing Machine. Feb. 20, 1945. Dyeing machine wherein loose folds of piece goods are fed continuously onto and taken off the reels.

Pat. 2,370,341. Pigmented Coating Compositions. Feb. 27, 1945. A pigmented protective coating composition comprising a red pigment, which is 6-chloro-2-amino-toluene→2-hydroxy-3-naphthoic acid anilide, and a non-volatile film-forming vehicle, such as (1) a drying oil and a thinner, (2) a lacquer resin and a volatile thinner, or (3) a lithograph varnish. These coatings have good light fastness, and non-bleeding and strength properties.

Pat. 2,377,709. Pigmenting Compositions for Textile Fabric. June 5, 1945. A textile pigmenting composition of increased uniformity comprising water; a water-insoluble organic pigment, e. g., a phthalocyanine pigment; a water-insoluble, heat-convertible partially-esterified starch forming a water-resistant film on drying; and a capillary active agent consisting at least mainly of ligninsulfonic acid or its water-soluble salts.

Pat. 2,415,379. Process for Dyeing Textile Fibers With Vat Dyes. Feb. 4, 1947. A process which comprises padding the fiber, which has been impregnated with unreduced dye in the pigment form, with a caustic alkali solution of a reducing agent under conditions which do not immediately reduce the vat color on the fiber, and then alternately subjecting the padded fiber to the action of steam and an alkali solution of a reducing agent, in the absence of air until substantially all the color has been reduced and fixed on the fiber.

Pat. 2,416,884. Methylated Methylolmelamine as a Fixing Agent for Dyed Cotton Textiles. Mar. 4, 1947. A process of treating cotton textile material, dyed with blue dye Color Index No. 406, by heating the dyed material with monomeric N,N',N''-tris-(methoxy-methyl) melamine.

[VOL. 619. No. 1]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 521,919. MILLDEBURG TANNING CORPORATION, Philadelphia, Pa. Filed May 5, 1947.

Aristocrat

FOR SOLE LEATHER.
Claims use since January 1941.

Ser. No. 524,625. ST. REGIS PAPER COMPANY, New York, N. Y. Filed June 21, 1947.

PANELYTE

FOR RESINOUS PLASTIC MATERIALS IN THE FORM OF RODS, TUBES, SLABS, SLATS, PANELS, STRIPS, AND FRAMES, AND THERMOPLASTIC MATERIALS IN THE FORM OF SHEETS, STRIPS AND FILMS, ALL INTENDED FOR USE IN THE INDUSTRIAL ARTS AND FOR FURTHER MANUFACTURE.
Claims use since on or about May 1, 1923.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 463,933. ALBERT WILLIAM MOELLER, doing business as Loo Loo, Des Moines, Iowa. Filed Oct. 6, 1943.

Here Comes

LOO LOO

FOR CLEANER FOR REMOVING GREASE AND DIRT FROM THE SKIN AND CLOTHING, FOR CLEANING GLASS, WINDOWS, FLOORS, FURNITURE, WOODWORK, CARPETS, RUGS, AND SIMILAR ARTICLES OF MATERIAL.
Claims use since June 1940.

Ser. No. 517,668. RINSHED-MASON COMPANY, Detroit, Mich. Filed Feb. 17, 1947.

R-M

FOR (1) LIQUID CLEANER FOR LACQUERED OR ENAMEL SURFACES; (2) SYNTHETIC ENAMEL CLEANER; (3) CLEANING MATERIAL IN PASTE FORM FOR REMOVING GREASE SPOTS, WATER MARKS, INSECT STAINS FROM AUTOMOBILE BODIES; (4) CLEANING MATERIAL FOR REMOVING RUST AND FILM FROM CHROME FINISHES AND OTHER METAL SURFACES; (5) UPHOLSTERY CLEANER; (6) SYNTHETIC ENAMEL BUFFING LIQUID CONTAINING MILD SOFT ABRASIVE; (7) RUBBING COMPOUND FOR RUBBING SURFACES TO PRODUCE A BRIGHT LUSTROUS APPEARANCE; (8) POLISHING COMPOUND APPLICABLE TO ROTARY POLISHING WHEELS; (9) A PREPARATION FOR THE REMOVAL OF WAX AND OTHER FOREIGN SUBSTANCES PRELIMINARY TO REFINISHING THE SURFACE.
Claims use since February 1945 for the items 1 to 8 as listed above; and since February 1936 for the item number 9 listed above.

Ser. No. 522,563. ECONOMICS LABORATORY, INC., St. Paul, Minn. Filed May 17, 1947.

VITRESAN

FOR WATER SOLUBLE GLASS, OR WATERGLASS USED AS DETERGENTS.
Claims use since Aug. 1, 1946.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 490,728. WETHERHOLT'S PERFUME CO., Chicago, Ill. Filed Oct. 29, 1945.

PIGTAIL

PARADE

FOR PERFUME, COLOGNE, BUBBLE BATH COMPRISING LIQUID TO BE ADDED TO BATH WATER FOR FORMING BUBBLES AND POWDER MITT COMPRISING A POROUS BAG CONTAINING POWDER.
Claims use since Apr. 26, 1945.

Ser. No. 511,122. WILLIAM R. WARNER & CO., INC., New York, N. Y. Filed Oct. 18, 1946.

Thera-Vita

Registration rights in the word "Vita" apart from the mark as shown, are disclaimed.
FOR A VITAMIN COMPOSITION.
Claims use since Apr. 30, 1946.

Ser. No. 514,606. INTERVINE & CO., INC., Weehawken, N. J. Filed Dec. 20, 1946.

inter*X

FOR A PREPARATION FOR THE TREATMENT OF DERMATOPHYTOSIS, ECZEMA, SIMPLE RINGWORM, AND COMMON SKIN CONDITIONS WHERE A FUNGICIDE IS INDICATED.
Claims use since Mar. 1, 1945.

Ser. No. 518,774. NATIONAL EQUIPMENT CO., INC., Indianapolis, Ind. Filed Mar. 10, 1947.

WORMSGALORE

FOR PREPARATION TO BE APPLIED TO SOIL TO BRING EARTHWORMS TO THE SURFACE.
Claims use since Jan. 8, 1947.

Ser. No. 521,693. JOSEPH W. SIMONEAU, doing business as J. W. Simoneau & Sons and White Mountain Perfumers, Nashua, N. H. Filed May 1, 1947.

Simoneau Terrifik

FOR PERFUME.
Claims use since Apr. 2, 1947.

Ser. No. 522,779. GEIGY COMPANY, INC., New York, N. Y. Filed May 21, 1947.

SIOGEN

FOR A MEDICAL PREPARATION IN THE FORM OF SOLUBLE POWDER FOR TREATMENT OF INFECTIONS OF THE MOUTH AND THROAT—NAMELY, STOMATITIS, GINGIVITIS, SORE THROAT, AND TONSILLITIS.
Claims use since Apr. 25, 1947.

Ser. No. 523,930. HAROLD W. TINKER, doing business as Tinker Products, Aurora, Ill. Filed June 10, 1947.

TI-LO

FOR ANTISEPTIC LOTION FOR EXTERNAL APPLICATION TO THE SKIN.
Claims use since Mar. 22, 1945.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 523,534. THE WM. POWELL COMPANY, Cincinnati, Ohio. Filed June 4, 1947.

MALGATE

FOR GATE VALVES AND GLOBE VALVES.
Claims use since May 1, 1937.

Ser. No. 523,535. THE WM. POWELL COMPANY, Cincinnati, Ohio. Filed June 4, 1947.

MALRENEW

FOR GATE VALVES AND GLOBE VALVES.
Claims use since June 1, 1937.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 523,422. R. E. C. SALES COMPANY, Hollywood, Calif., assignor to R E C Sales Company, Los Angeles, Calif., a partnership composed of Charles Epstein and Doris Pauly. Filed June 2, 1947.

Cinemasign

FOR ELECTRICALLY ILLUMINATED ADVERTISING SIGN HAVING INTERCHANGEABLE LETTERS AND NUMERALS.
Claims use since May 3, 1947.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 495,901. THE MAXIM GAMES CO., New York, N. Y. Filed Feb. 2, 1946.

TALLYIT

FOR GAME OF ARITHMETIC CARDS.
Claims use since Dec. 15, 1945.

Ser. No. 510,285. SUPER-CYCLONE, INC., Glendale, Calif. Filed Oct. 4, 1946.

SUPER Cyclone

The word "Super" is disclaimed separate and apart from the mark as shown.
FOR TOYS—NAMELY, MINIATURE AIRPLANE ENGINES, MINIATURE AIRPLANE PARTS, AND OTHER MINIATURE AIRPLANE MACHINERY; EQUIPMENT, AND ACCESSORIES.
Claims use since Jan. 10, 1940.

Ser. No. 520,772. CHARLES W. SCOTT, doing business as S. K. S. Products, Butte, Mont. Filed Apr. 15, 1947.

S. K. S.

FOR FISHING TACKLE—NAMELY, ARTIFICIAL FLIES, LURES, RODS, AND REELS.
Claims use since Mar. 5, 1946.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 505,740. ESTATE OF HAROLD L. DELISLE, doing business as Engineering Manufacturing Company, Sheboygan, Wis., assignor by court order and mesne assignments to Engineering Manufacturing Co., Sheboygan, Wis., a corporation of Wisconsin. Filed July 17, 1946.

The representation of a drawing board is disclaimed apart from the mark.
FOR PARALLEL RULERS, STRAIGHTEDGES, T-SQUARES, PARALLEL RULING ATTACHMENTS, CABLES FOR PARALLEL RULING ATTACHMENTS, DRAWING TABLES, TOOL TRAYS AND DRAWERS FOR DRAWING TABLES, DRAWING KITS, DRAFTING STOOLS, DRAFTING BENCHES, DRAFTING CHAIRS, BACK RESTS FOR DRAFTING STOOLS AND DRAFTING CHAIRS, DRAWING BOARDS, COMPASSES, AND DIVIDERS.
Claims use since April 1937.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Ser. No. 523,389. JOSEF L. KAROL, doing business as J. L. Karol Sheet Metal Co., Van Nuys, Calif. Filed June 2, 1947.

KAROL-AIR EVER-PULL

The name Karol is disclaimed apart from the mark as shown.
FOR AIR DRAFT VENTILATORS NOT POWER DRIVEN OR FAN OPERATED.
Claims use since Jan. 2, 1946.

CLASS 35

BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES

Ser. No. 519,748. THE B. F. GOODRICH COMPANY, New York, N. Y., and Akron, Ohio. Filed Mar. 26, 1947.

FORESTER

FOR PNEUMATIC TIRES.
Claims use since Jan. 31, 1947.

CLASS 39

CLASS 46

Ser. No. 516,519. LOWA SEED COMPANY, Aroma Park, Ill. Filed Feb. 20, 1946; originally filed, act of 1905, Jan.

Ser. No. 529,054. J. GREENEBAUM TANNING CO., Chicago, Ill. Filed July 21, 1947.

CLASS 39

CLOTHING

Ser. No. 500,858. CARWOOD MANUFACTURING COMPANY, Winder, Ga. Filed Apr. 25, 1946.

HI-STEPPER

FOR MEN'S AND BOYS' OVERALLS.
Claims use since June 1, 1935.

Ser. No. 525,798. DIXIE SHIRT COMPANY, INC., Spartanburg, S. C. Filed July 3, 1947.

CSP

FOR OUTER SHIRTS.
Claims use since Oct. 1, 1946.

CLASS 44

DENTAL, MEDICAL, AND SURGICAL APPLIANCES

Ser. No. 492,326. F. LONGDON & COMPANY LIMITED, Derby, England. Filed Nov. 28, 1945.

ELINSTAR

FOR HERNIA TRUSSES; ELASTIC HOSIERY; ABDOMINAL BELTS USED FOR THERAPEUTIC PURPOSES; SUSPENSORY BANDAGES; JOCK STRAPS; AND SURGICAL BANDAGES INCORPORATING ELASTIC.
Claims use since 1918.

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Ser. No. 521,854. CHOCOLATS DE LA COUPE D'OR, MAISON L. VELUT ROARD & COMPAGNIE, SOCIETE A RESPONSABILITE LIMITEE, Paris, France. Filed May 5, 1947.

A LA COUPE D'OR

FOR CANDIES, CHOCOLATE, GINGER BREAD, HONEY, CAKES, AND PASTRY.
Claims use since 1931.

Ser. No. 523,651. DU-BAL PACKING COMPANY, Salinas, Calif. Filed June 6, 1947.

Grand Duke

FOR FRESH LETTUCE.
Claims use since Oct. 25, 1943.

ACT OF 1946

The following trade-marks are published in compliance with section 12(a) of the Trade-Mark Act of 1946. Notice of opposition under section 13 may be filed within thirty days of this publication. See Rules 20.1 to 20.5.

As provided by section 31 of said act, a fee of twenty-five dollars must accompany each notice of opposition.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 493,970. ALEXANDER N. LEVIN, Chattanooga, Tenn. Filed Sept. 26, 1947; originally filed, act of 1905, Dec. 28, 1945. Under section 2f of the act of 1946.

SEALED TAG BRAND QUALITY SEEDS

No claim is made to the words "Brand, Quality Seeds" or to the representation of a tag apart from the mark as shown.
FOR GARDEN AND FIELD SEEDS.
Claims use since Sept. 15, 1940.

Ser. No. 498,447. A. F. PARMELEE, doing business as United States Safety Service Company, Kansas City, Mo. Filed Mar. 6, 1948; originally filed, act of 1905, Mar. 18, 1946.

OPTILITE

FOR TRANSPARENT AND TRANSLUCENT PLASTIC MATERIAL IN SHEET AND INGOT FORM CAPABLE OF BEING MOLDED IN THE PRESENCE OF HEAT.
Claims use since January 1946.

Ser. No. 513,966. CALIFORNIA NURSERY COMPANY, Niles, Calif. Filed Feb. 16, 1948; originally filed, act of 1905, Dec. 10, 1946. Under section 2f of the act of 1946.

ROEDING'S QUALITY

The word "Quality" is disclaimed.
FOR FRUIT TREES, ROSE PLANTS, AND ORNAMENTAL TREES AND PLANTS.
Claims use since Aug. 1, 1920.

Ser. No. 516,519. LOWE SEED COMPANY, Aroma Park, Ill. Filed Feb. 20, 1948; originally filed, act of 1905, Jan. 20, 1947.

FOR HYBRID SEED CORN.
Claims use since Mar. 10, 1937.

Ser. No. 521,300. WHITE BROS. ROSE CORP., Medina, N. Y. Filed June 23, 1948; originally filed, act of 1905, Apr. 24, 1947.

PIC-PAC

The syllable "Pac" is disclaimed apart from the mark shown.
FOR FRESH CUT FLOWERS.
Claims use since Mar. 20, 1947.

Ser. No. 527,188. FOUKE FUR COMPANY, St. Louis, Mo. Filed July 5, 1947.

MATARA

Applicant claims ownership of registration No. 373,769.
FOR FUR SKINS, HIDES, AND PELTS.
Claims use since Aug. 22, 1939.

Ser. No. 527,189. FOUKE FUR COMPANY, St. Louis, Mo. Filed July 5, 1947.

SAFARI

Applicant claims ownership of registrations Nos. 321,309 and 414,446.
FOR FUR SKINS, HIDES, AND PELTS.
Claims use since Aug. 16, 1934.

Ser. No. 528,597. HUBERT D. WILSON, doing business as Wilson Bulb Farms, Albany, Ga. Filed July 14, 1947. Under section 2f of the act of 1946.

WILSON'S MULTIFLORA LILLIES

The word "Lillies" is disclaimed apart from the mark shown.
FOR BULBS AND CUT FLOWERS.
Claims use since 1933.

Ser. No. 529,054. J. GREENEBAUM TANNING CO., Chicago, Ill. Filed July 21, 1947.

RITE-LEFT

BARKROM

Applicant disclaims the words "Rite-Left" except as shown in the mark. Applicant claims ownership of registrations Nos. 231,537 and 218,506.
FOR LEATHER FOR SHOE SOLES.
Claims use since July 1926.

Ser. No. 529,347. JOSEPH BANCROFT & SONS CO., Rockford, Wilmington, Del. Filed July 24, 1947.

BAN-RON

FOR COTTON AND RAYON FIBRES.
Claims use since Apr. 30, 1947.

Ser. No. 529,461. THE HARWID COMPANY, Boston, Mass. Filed July 25, 1947.

DURA-CLEAR

The word "Clear" is disclaimed.
FOR SYNTHETIC RESINOUS PLASTIC COMPOSITION IN SHEET FORM USED FOR VARIOUS MANUFACTURING PURPOSES IN THE ARTS.
Claims use since Mar. 1, 1947.

Ser. No. 540,799. DUSSI-WALLACE AND COMPANY, New York, N. Y. Filed Nov. 12, 1947.

DW

FOR PLASTIC MOLDING POWDERS; LIQUID PLASTIC COMPOUNDS AND DOUGHS READY FOR EXTRUSION AND CALENDERING; SHEETS, RODS, AND TUBES OF PLASTIC STOCK—NAMELY, RIGID AND SEMI-RIGID SHEETS, CONTINUOUS EXTRUSION RODS AND TUBING FOR FABRICATION INTO VARIOUS MANUFACTURED ARTICLES; AND SYNTHETIC RESIN.
Claims use since Apr. 25, 1947.

Ser. No. 541,260. CENTURY FABRICS COMPANY INC., Chicago, Ill. Filed Nov. 15, 1947.

DURA-LATEX

No claim is made to the word "Latex" apart from the mark as shown.
FOR SHREDDED FOAM RUBBER.
Claims use since Aug. 14, 1947.

Ser. No. 541,648. COURTAULDS, LIMITED, London, England, Filed Nov. 19, 1947.

FIBROLANE

Applicant claims ownership of British registration No. 641,261 dated Oct. 24, 1945.
FOR STAPLE FIBRE MANUFACTURED FROM CASEIN FOR USE IN THE MANUFACTURE OF TEXTILE YARNS OR THREADS.

Ser. No. 546,607. THE RELIANCE COAL AND COKE CO., Cincinnati, Ohio. Filed Jan. 9, 1948.

BATTLESHIP

Applicant claims ownership of registration No. 171,941.
FOR COAL.
Claims use since January 1915.

Ser. No. 546,695. THE GLIDDEN COMPANY, Cleveland, Ohio. Filed Jan. 10, 1948.

LO-OX

FOR STABILIZED ROSIN.
Claims use since May 15, 1947.

CLASS 2

RECEPTACLES

Ser. No. 523,672. HUMMEL AND DOWNING COMPANY, Milwaukee, Wis. Filed Aug. 15, 1947; originally filed, act of 1905, June 6, 1947.

HUM-DRUM

The word "Drum" is disclaimed apart from the mark as shown.
FOR FIBER BOARD CARTONS.
Claims use since May 2, 1947.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 554,720. D. A. SCHULTE, INC., New York, N. Y. Filed Apr. 15, 1948. Under section 2f of the act of 1946.

Leeds

FOR WALLETS.
Claims use since Mar. 28, 1938.

Ser. No. 558,217. CASTLE PURSES, New York, N. Y. Filed June 1, 1948.

doetelope

FOR WOMEN'S PURSES.
Claims use since Mar. 1, 1948.

Ser. No. 558,472. LOUIS S. DAVID CO., INC., New York, N. Y. Filed June 4, 1948.

Dalón

FOR LADIES' HANDBAGS AND PURSES.
Claims use since Feb. 1, 1945.

Ser. No. 558,990. ARISTOCRAT LEATHER PRODUCTS, INC., New York, N. Y. Filed June 11, 1948.

AUTOCRAT

Applicant claims ownership of registrations Nos. 335,030 and 427,504.
FOR WALLETS, BILL FOLDS, POCKETBOOKS, AND LADIES' HANDBAGS.
Claims use since June 7, 1948.

Ser. No. 559,198. E. J. WILKINS COMPANY, Gloversville, N. Y. Filed June 14, 1948.

Cal-Oak

FOR BILLFOLDS, POCKETBOOKS, AND KEY CASES.
Claims use since Apr. 1, 1947.

Ser. No. 559,507. FRIEDMAN-LOEBL, INC., New York, N. Y. Filed June 17, 1948.

PENNY PINCHER

FOR LADIES' AND GIRLS' HANDBAGS AND PURSES, OF LEATHER, FABRIC, PLASTIC, AND COMBINATIONS THEREOF.
Claims use since Mar. 17, 1947.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 534,348. ROCKWELL MANUFACTURING COMPANY, Pittsburgh, Pa. Sept. 12, 1947.

Applicant claims ownership of registrations Nos. 428,477, 428,478, and 428,699.
FOR SANDING KITS CONTAINING INDIVIDUAL CONTAINERS OF CEMENT AND ASSORTED GRADES OF ABRASIVE GRIT FOR PRODUCING SANDING BLOCKS.
Claims use since Dec. 13, 1945.

Ser. No. 534,353. ROCKWELL MANUFACTURING COMPANY, Pittsburgh, Pa. Filed Sept. 12, 1947.

Applicant claims ownership of registrations Nos. 428,477, 428,478, and 428,699.
FOR SANDING KITS CONTAINING INDIVIDUAL CONTAINERS OF CEMENT AND ASSORTED GRADES OF ABRASIVE GRIT FOR PRODUCING SANDING BLOCKS.
Claims use since Dec. 13, 1945.

Ser. No. 540,954. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich. Filed Nov. 12, 1947.

PORENAC

FOR DETERGENT COMPOUND FOR INDUSTRIAL AND HOUSEHOLD CLEANING.
Claims use since July 30, 1946.

Ser. No. 542,320. ANTONIO LOPEZ JIMENES, Almeria, Spain. Filed Nov. 25, 1947.

The drawing is lined for the color blue. Applicant claims ownership of Spanish registration No. 155,560 dated Feb. 9, 1946.
FOR SOAP.

Ser. No. 544,751. MORTON MANUFACTURING CORPORATION, doing business as Snow White Products Company, Lynchburg, Va. Filed Dec. 18, 1947. Under section 2f of the act of 1946.

SNOW WHITE

Applicant claims ownership of registration No. 417,276.
FOR TOILET SOAP.
Claims use since July 1, 1931.

Ser. No. 553,792. UNIVERSAL LABORATORIES, INC., East Orange, N. J. Filed Apr. 3, 1948.

Beauty in the Morning

Applicant claims ownership of registration No. 112,957.
FOR SOAPS.
Claims use since Mar. 22, 1948.

Ser. No. 555,533. JEWEL TEA CO., INC., Barrington, Ill. Filed Apr. 24, 1948.

METEOR

FOR DETERGENT, WHICH IS USED FOR WASHING DISHES, SMALL ITEMS OF CLOTHING, AND OTHER GENERAL HOUSEHOLD PURPOSES.
Claims use since Dec. 10, 1942.

Ser. No. 559,509. FRIEDMAN-LOEBL, INC., New York, N. Y. Filed June 17, 1948.

PENNY PINCHER

FOR LADIES' AND GIRLS' HANDBAGS AND PURSES, OF LEATHER, FABRIC, PLASTIC, AND COMBINATIONS THEREOF.
Claims use since Mar. 17, 1947.

Ser. No. 559,511. FRIEDMAN-LOEBL, INC., New York, N. Y. Filed June 17, 1948.

PENNY PINCHER

FOR LADIES' AND GIRLS' HANDBAGS AND PURSES, OF LEATHER, FABRIC, PLASTIC, AND COMBINATIONS THEREOF.
Claims use since Mar. 17, 1947.

Ser. No. 559,512. FRIEDMAN-LOEBL, INC., New York, N. Y. Filed June 17, 1948.

PENNY PINCHER

FOR LADIES' AND GIRLS' HANDBAGS AND PURSES, OF LEATHER, FABRIC, PLASTIC, AND COMBINATIONS THEREOF.
Claims use since Mar. 17, 1947.

Ser. No. 559,513. FRIEDMAN-LOEBL, INC., New York, N. Y. Filed June 17, 1948.

PENNY PINCHER

FOR LADIES' AND GIRLS' HANDBAGS AND PURSES, OF LEATHER, FABRIC, PLASTIC, AND COMBINATIONS THEREOF.
Claims use since Mar. 17, 1947.

Ser. No. 559,514. FRIEDMAN-LOEBL, INC., New York, N. Y. Filed June 17, 1948.

PENNY PINCHER

FOR LADIES' AND GIRLS' HANDBAGS AND PURSES, OF LEATHER, FABRIC, PLASTIC, AND COMBINATIONS THEREOF.
Claims use since Mar. 17, 1947.

Ser. No. 559,515. FRIEDMAN-LOEBL, INC., New York, N. Y. Filed June 17, 1948.

PENNY PINCHER

FOR LADIES' AND GIRLS' HANDBAGS AND PURSES, OF LEATHER, FABRIC, PLASTIC, AND COMBINATIONS THEREOF.
Claims use since Mar. 17, 1947.

Ser. No. 559,516. FRIEDMAN-LOEBL, INC., New York, N. Y. Filed June 17, 1948.

PENNY PINCHER

FOR LADIES' AND GIRLS' HANDBAGS AND PURSES, OF LEATHER, FABRIC, PLASTIC, AND COMBINATIONS THEREOF.
Claims use since Mar. 17, 1947.

Ser. No. 559,517. FRIEDMAN-LOEBL, INC., New York, N. Y. Filed June 17, 1948.

PENNY PINCHER

FOR LADIES' AND GIRLS' HANDBAGS AND PURSES, OF LEATHER, FABRIC, PLASTIC, AND COMBINATIONS THEREOF.
Claims use since Mar. 17, 1947.

Ser. No. 559,518. FRIEDMAN-LOEBL, INC., New York, N. Y. Filed June 17, 1948.

PENNY PINCHER

FOR LADIES' AND GIRLS' HANDBAGS AND PURSES, OF LEATHER, FABRIC, PLASTIC, AND COMBINATIONS THEREOF.
Claims use since Mar. 17, 1947.

Ser. No. 559,519. FRIEDMAN-LOEBL, INC., New York, N. Y. Filed June 17, 1948.

PENNY PINCHER

FOR LADIES' AND GIRLS' HANDBAGS AND PURSES, OF LEATHER, FABRIC, PLASTIC, AND COMBINATIONS THEREOF.
Claims use since Mar. 17, 1947.

Ser. No. 555,782. TAKAMINE LABORATORY, INC., Clifton, N. J. Filed Apr. 28, 1948.

TAKIMERSE

FOR PREPARATION FOR THE REMOVAL OF STAINS FROM FABRICS.
Claims use since Feb. 19, 1948.

Ser. No. 558,362. THE CUDAHY PACKING COMPANY, Chicago, Ill. Filed June 3, 1948.

METEOR

FOR HEAVY DEGREASING AND BOTTLE WASHING COMPOUND CONTAINING CAUSTIC SODA.
Claims use since Feb. 9, 1938.

Ser. No. 562,061. HYSAN PRODUCTS COMPANY, Chicago, Ill. Filed July 23, 1948.

Skroot

FOR CHEMICAL CLEANING FLUID FOR REMOVING SURFACE STAINS, RUST, INCRUSTATIONS, AND DISCOLORATIONS FROM TOILET BOWLS AND URINALS.
Claims use since Jan. 23, 1936.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 508,731. FREDDIE HAYES ISAACS, doing business as Mark Isaacs Co., Jacksonville, Fla. Filed Sept. 9, 1948; originally filed, act of 1905, Sept. 9, 1946.

TET-R-KIL

FOR PREPARATION USED IN THE TREATMENT OF MINOR SKIN IRRITATIONS.
Claims use since 1922.

Ser. No. 521,423. AMERICAN CHEMICAL PAINT COMPANY, Ambler, Pa. Filed Mar. 4, 1948; originally filed, act of 1905, Apr. 28, 1947.

DURIDINE

Applicant claims ownership of registrations Nos. 415,656 and 429,036.
FOR CHEMICAL PREPARATION OF ACIDIC REACTION APPLIED TO METALS IN SURFACE FINISHING PROCESSES.
Claims use since Mar. 29, 1946.

Ser. No. 524,077. PACIFIC CHEMICAL COMPANY, Los Angeles, Calif. Filed Dec. 18, 1947; originally filed, act of 1905, June 12, 1947.

QET

FOR SURFACE ACTIVE AGENT FOR ADDITION TO BLEACHING AND CLEANING PREPARATIONS FOR THE PURPOSE OF DECREASING SURFACE TENSION, INTERFACIAL TENSION, AND TO PROMOTE PENETRATION OF AQUEOUS SOLUTIONS.
Claims use since May 5, 1947.

Ser. No. 526,658. WALTER KIDDE & COMPANY, INC., Belleville, N. J. Filed July 5, 1947.

K Kidde

Applicant claims ownership of registration No. 334,376.
FOR CARBON DIOXIDE, OXYGEN, AND CHEMICAL PREPARATIONS USED IN THE TREATMENT OF FIBROUS MATERIALS.
Claims use since Dec. 1, 1941.

Ser. No. 529,649. A. C. HYND CORP., Tipp City, Ohio. Filed July 26, 1947. Under section 2f of the act of 1946.

"Hairlife"

FOR LOTION FOR THE HAIR.
Claims use since 1922.

Ser. No. 529,650. A. C. HYND CORP., Tipp City, Ohio. Filed July 26, 1947. Under section 2f of the act of 1946.

"Hair She-en"

FOR LOTION FOR THE HAIR.
Claims use since 1922.

Ser. No. 531,791. GRIFFIN CHEMICAL COMPANY, San Francisco, Calif. Filed Aug. 19, 1947.

TREX

FOR EMULSIFIERS FOR INSECTICIDAL MATERIALS.
Claims use since Apr. 11, 1947.

Ser. No. 540,026. BONNE BELL, INC., Lakewood, Ohio. Filed Nov. 4, 1947.

DOUBLE FEATURE

FOR SHAMPOO IN CREAM FORM.
Claims use since Oct. 11, 1947.

Ser. No. 541,765. O-CEDAR CORP'N, Chicago, Ill. Filed July 24, 1947.

MOTH-AWAY

No claim is made to the word "Moth" as shown in the drawing apart from the mark. Applicant claims ownership of registration No. 387,954.
FOR INSECTICIDES.
Claims use since Mar. 4, 1940.

Ser. No. 541,949. MILES LABORATORIES, INC., Elkhart, Ind. Filed Nov. 21, 1947. Under section 2f of the act of 1946.

Alka-Seltzer

Applicant claims ownership of registrations Nos. 283,831, 342,743, and 373,801.
FOR ANTI-ACID EFFERVESCENT PREPARATIONS.
Claims use since Dec. 20, 1930.

Ser. No. 544,652. MADELEINE LABORATORIES, INC., Wilmington, Del. Filed Oct. 21, 1947.

Klirzol

FOR SKIN OINTMENT FOR PIMPLES, ACNE, ECZEMA, POISON IVY, PSORIASIS, AND SIMILAR SKIN AND SCALP AILMENTS.
Claims use since June 1, 1936.

Ser. No. 545,346. CONSOLIDATED ROYAL CHEMICAL CORPORATION, Chicago, Ill. Filed Dec. 24, 1947.

Toots

Applicant claims ownership of registration No. 195,222.
FOR LEG MAKE-UP.
Claims use since Apr. 23, 1943.

Ser. No. 547,888. BENGUE INC., Union City, N. J. Filed Jan. 24, 1948. Under section 2f of the act of 1946.

Dr. Bengué

The mark is the name of Dr. Jules Bernard Bengué, now deceased. Applicant claims ownership of registration No. 66,633.
FOR MEDICINAL PREPARATION TO BE APPLIED EXTERNALLY FOR USE IN THE TREATMENT OF RHEUMATISM, MUSCULAR ACHES AND PAINS, NEURALGIA, MINOR BRONCHIAL IRRITATIONS, COUGHS AND THROAT IRRITATIONS DUE TO COLDS, BURNING, TIRED FEET AND BUNIONS, AND INSECT BITES AND STINGS.
Claims use since Jan. 4, 1933.

Ser. No. 548,425. STANDARD PHARMACEUTICAL CO., INC., New York, N. Y. Filed Jan. 30, 1948. Under section 2f of the act of 1946.

KOLA PEPS

Applicant claims ownership of registration No. 412,893.
FOR COLA TABLETS USED AS A TONIC AND COMPRISING COLA AND PEPSIN BUT CONTAINING NO ESSENTIAL OILS.
Claims use since Sept. 1, 1942.

Ser. No. 549,425. VIRGINIA M. DEWERTH, doing business as Calvital Company, Mt. Vernon, N. Y. Filed Feb. 11, 1948.

Cellulac

FOR A PHARMACEUTICAL PREPARATION TO PROVIDE A CORRECTIVE THERAPY FOR TRUE AND ALLEGED CONSTIPATION.
Claims use since Oct. 20, 1947.

Ser. No. 554,140. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa. Filed May 17, 1948. Under section 2f of the act of 1946.

Ser. No. 560,107. HAAS-MILLER CORPORATION, Philadelphia, Pa. Filed June 24, 1948. Under section 2f of

Ser. No. 550,173. SAN ANTONIO DRUG COMPANY, San Antonio, Tex. Filed Feb. 19, 1948.

SanAnco

Applicant claims ownership of registrations Nos. 93,911 and 104,577.
FOR MEDICINAL WHITE MINERAL OIL, RUBBING ALCOHOL, CITRATE OF MAGNESIA, DDT INSECTICIDES, AND EPSOM SALTS.
Claims use since Feb. 1, 1910.

Ser. No. 550,443. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Feb. 24, 1948.

HOMART

FOR GROUP A—WATER SOFTENER SALTS OF THE BASE EXCHANGE TYPE; GROUP B—DEODORANT AND SEWAGE DISPOSAL CHEMICALS, PIPE SOLVENT (CAUSTIC COMPOUND); GROUP C—AIR DRIERS (DEHUMIDIFYING COMPOUND), SOOT REMOVER (CHEMICAL); GROUP D—STOP LEAK COMPOUND, BOILER CLEANING COMPOUND.
Claims use on Group A since Jan. 15, 1946; on Group B since July 15, 1946; on Group C since Jan. 15, 1947; and on Group D since July 15, 1947.

Ser. No. 550,822. WILLIAM R. WARNER & CO., INC., New York, N. Y. Filed Feb. 26, 1948.

DIATRINA

Applicant claims ownership of registration No. 336,147.
FOR ANTI-HISTAMINIC PREPARATIONS.
Claims use since Feb. 9, 1948.

Ser. No. 551,065. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed Mar. 2, 1948.

Sidofolin

FOR MEDICINAL PREPARATION FOR THE TREATMENT OF NUTRITIONAL DEFICIENCIES AND DISORDERS.
Claims use since Dec. 10, 1947.

Ser. No. 552,924. WILLIAM H. ROHRER, INC., Philadelphia, Pa. Filed Mar. 10, 1948. Under section 2f of the act of 1946, as to "Rorer."

CARFUSIN-RORER

Applicant claims ownership of registration No. 167,403.
FOR LIQUID PREPARATION FOR USE IN THE TREATMENT OF EPIDERMOPHYTOSIS.
Claims use since Feb. 2, 1948.

Ser. No. 553,567. AYERST, MCKENNA & HARRISON LIMITED, Rouses Point, N. Y. Filed Apr. 1, 1948.

LINGUSORBS

FOR TABLETS OF TESTOSTERONE FOR SUBLINGUAL OR BUCCAL CAVITY USES FOR THE PREVENTION OF TESTOSTERONE DEFICIENCY.
Claims use since Mar. 18, 1948.

Ser. No. 553,646. GEORGE D. STANLEY, Salisbury, Md. Filed Apr. 1, 1948.

BE-GONE

FOR ATHLETE'S FOOT OINTMENT.
Claims use since Feb. 12, 1948.

Ser. No. 553,669. BRAY CHEMICAL CO., Chicago, Ill., assignor to Mathieson Chemical Corporation, New York, N. Y., a corporation of Virginia. Filed Apr. 2, 1948.

BURRO

FOR CAUSTIC SODA.
Claims use since Jan. 21, 1948.

Ser. No. 553,779. MERVIN L. JORDAHL, doing business as Fluor-Amm-Ine Co., Minneapolis and Olivia, Minn. Filed Apr. 3, 1948.

Fluor-ammine

FOR DENTIFRICE.
Claims use since Mar. 10, 1948.

Ser. No. 553,935. WALLERSTEIN COMPANY, INC., New York, N. Y. Filed Apr. 5, 1948.

ZYMEX

FOR PREPARATIONS IN DRY POWDER FORM FOR USE IN THE PROCESSING OF TEXTILES, SPECIFICALLY FOR THE REMOVAL OF SIZINGS FROM TEXTILES.
Claims use since Mar. 26, 1948.

Ser. No. 554,149. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa. Filed Apr. 8, 1948.

STARSO

FOR SILICATES OF SODA.
Claims use since Mar. 23, 1948.

Ser. No. 554,906. JOHN L. MICHAEL, INC., Flushing, N. Y. Filed Apr. 17, 1948.

TRU-VAL

FOR FACE POWDER, ROUGE, LIPSTICK, EYE SHADOW, AND MASCARA.
Claims use since Feb. 10, 1948.

Ser. No. 555,411. HOFFMANN-LA ROCHE INC., Nutley, N. J. Filed Apr. 23, 1948.

SOLUCYCLAN

FOR CHEMO-THERAPEUTIC AGENT FOR THE TREATMENT OF INTERNAL BACTERIAL INFECTIONS.
Claims use since Apr. 12, 1948.

Ser. No. 555,551. ANN MILLER, doing business as Line-No-Mor Co., New York, N. Y. Filed Apr. 24, 1948.

LINE-NO-MOR

FOR COSMETIC ASTRINGENT PREPARATION IN LIQUID FORM.
Claims use since Jan. 2, 1947.

Ser. No. 557,880. WELCH INDUSTRIES, INCORPORATED, Colorado Springs, Colo. Filed May 26, 1948.

Beaumonde

FOR HAND LOTION.
Claims use since July 15, 1947.

Ser. No. 559,995. CORTUNON CO., INC., New York, N. Y. Filed June 23, 1948.

REFRANON

FOR MEDICINAL PREPARATION FOR USE IN THE SYMPTOMATIC RELIEF OF BRONCHIAL ASTHMA AND HAY FEVER.
Claims use since June 2, 1948.

619 O. G.—3

Ser. No. 560,107. HAAS-MILLER CORPORATION, Philadelphia, Pa. Filed June 24, 1948. Under section 2f of the act of 1946.

STEELGARD

FOR OLEAGINOUS MATERIAL APPLIED STRAIGHT OR IN ADMIXTURE WITH WATER TO METAL SURFACES FOR PURPOSES OF PROTECTING METAL AGAINST RUSTING.
Claims use since Jan. 28, 1936.

Ser. No. 560,216. WALTER PIERSCHALSKI, doing business as Greenbrook Chemical Co., Manville, N. J. Filed June 25, 1948.

PETROLEO

FOR OINTMENT PREPARATIONS.
Claims use since June 10, 1948.

Ser. No. 560,293. ROBINSON-WAGNER CO. INC., New York, N. Y. Filed June 26, 1948.

STEROLAN

FOR CHOLESTEROL/LANOSTEROL.
Claims use since Mar. 22, 1948.

Ser. No. 560,417. LENTHERIC INCORPORATED, New York, N. Y. Filed June 29, 1948.

STEPPING OUT

FOR TOILET WATER AND TALCUM AND SACHET POWDERS.
Claims use since June 15, 1948.

CLASS 7
CORDAGE

Ser. No. 558,264. FRANK W. WINNE & SON, INC., Philadelphia, Pa. Filed June 1, 1948.

IRONCLAD

FOR SASH CORD, AWNING CORD, AND CLOTHESLINES.
Claims use since May 1926.

CLASS 8
SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 542,591. THE IMCO MANUFACTURING CORPORATION, New York, N. Y. Filed Nov. 28, 1947.

TOP-HAT

FOR PYROPHORIC LIGHTERS FOR CIGARS, CIGARETTES, AND PIPES; FLINT FOR LIGHTERS; WICKS FOR LIGHTERS.
Claims use since July 3, 1947.

CLASS 9

Ser. No. 551,852. GORDON CALLESCK, Denver, Colo. Filed Mar. 13, 1948.

CLASS 12

Ser. No. 537,975. BOYLE-MIDWAY INC., Jersey City, N. J. Filed Oct. 16, 1947. Under section 2f of the act of 1946. Applicant claims ownership of registration No. 265,597.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Ser. No. 554,221. FEDERAL CARTRIDGE CORPORATION, Minneapolis, Minn. Filed Apr. 9, 1948.

MONARK

FOR CARTRIDGES AND SHOTGUN SHELLS.
Claims use since Sept. 15, 1925.

CLASS 10

FERTILIZERS

Ser. No. 536,253. A. H. HOFFMAN, INC., Landisville, Pa. Filed Sept. 30, 1947. Under section 2f of the act of 1946.

Hoffman

FOR PLANT FOOD, BONE MEAL, DEHYDRATED MANURE, AGRICULTURAL LIME, AND PEAT MOSS USED AS A SOIL CONDITIONER.
Claims use since 1934.

Ser. No. 539,669. DANT & RUSSELL, INC., Portland, Oreg. Filed Oct. 31, 1947.

Flowerite

FOR EXPANDED PERLITE FOR USE AS A SOIL CONDITIONER.
Claims use since July 1947.

Ser. No. 551,253. EASTERN STATES FARMERS' EXCHANGE, West Springfield, Mass. Filed Mar. 5, 1948. Under section 2f of the act of 1946.

EASTERN STATES

Applicant claims ownership of registrations Nos. 186,714 and 326,035.
FOR FERTILIZERS.
Claims use since Aug. 1, 1923.

Ser. No. 551,852. GORDON CALLESCK, Denver, Colo. Filed Mar. 13, 1948.

BO-PEEP

FOR FERTILIZERS.
Claims use since Aug. 4, 1947.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 547,173. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Jan. 15, 1948.

Electric Eradicator

FOR PRINTING INK.
Claims use since 1910.

Ser. No. 547,181. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Jan. 15, 1948. Under section 2f of the act of 1946.

QUICKSET

FOR PRINTING INK.
Claims use since 1937.

Ser. No. 547,186. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Jan. 15, 1948. Under section 2f of the act of 1946.

SUPERSET

FOR PRINTING INK.
Claims use since Apr. 5, 1939.

Ser. No. 552,194. F. S. WEBSTER COMPANY, Cambridge, Mass. Filed Mar. 17, 1948.

MULTI KOPY

Applicant claims ownership of registrations Nos. 29,776, 30,260, and 290,409.
FOR TYPEWRITER RIBBONS, DUPLICATING FLUID, AND METAL STAMP INK.
Claims use on metal stamp ink since 1900; on typewriter ribbons since Nov. 23, 1943; and on duplicating fluid since June 27, 1945.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 529,828. TASCO CORPORATION, doing business as Outside Venetian Blind Company, Dallas, Tex., assignor to J. E. Bush, Dallas, Tex., doing business as Outside Venetian Blind Company. Filed July 28, 1947. Under section 2f of the act of 1946.

CLEARVIEW

Applicant claims ownership of registration No. 374,385.
FOR METALLIC SHUTTERS—NAMELY, VENETIAN BLINDS MOUNTED EXTERNALLY ON OPENINGS OF BUILDINGS, SUCH AS WINDOWS, DOORS, AND PORCHES.
Claims use since June 1, 1938.

Ser. No. 534,692. THE CHAS. TAYLOR'S SONS COMPANY, Cincinnati, Ohio. Filed Sept. 16, 1947. Under section 2f of the act of 1946.

TAYLOR ZIRCON

Applicant disclaims the term "Zircon," except in connection with the remaining portion of the mark. Applicant claims ownership of registrations Nos. 407,172 and 412,917.
FOR REFRACTORY CEMENTS, REFRACTORY RAMMING MIXES, REFRACTORY BRICKS, AND REFRACTORY BLOCKS.
Claims use since January 1934.

Ser. No. 537,459. THE KINNEAR MANUFACTURING COMPANY, Columbus, Ohio. Filed Oct. 10, 1947. Under section 2f of the act of 1946.

KINNEAR

Applicant claims ownership of registration No. 181,024.
FOR ROLLING DOORS.
Claims use since December 1938.

Ser. No. 537,473. MULTIFLEX CONCRETE CO., INC., East Orange, N. J. Filed Oct. 10, 1947.

The mark is a blue streak of paint applied to the goods. The drawing is lined for the color blue.
FOR CONCRETE PRODUCTS—NAMELY, BLOCKS, BRICKS, AND TILES, MADE WITH CEMENT AND SAND, CINDERS, AND OTHER AGGREGATES.
Claims use since July 18, 1929.

Ser. No. 537,975. BOYLE-MIDWAY INC., Jersey City, N. J. Filed Oct. 16, 1947. Under section 2f of the act of 1946. Applicant claims ownership of registration No. 265,597.

WOOD DOUGH

FOR PLASTIC, SELF-HARDENING MATERIAL IN THE NATURE OF PUTTY AND COMPOSED OF GROUND WOOD AND AN ADHESIVE BINDER FOR REPAIRING WOOD OR FILLING RECESSES THEREIN AND SIMILAR PURPOSES.
Claims use since Sept. 18, 1928.

Ser. No. 538,182. HUBERT E. SCHMID, doing business as Tufcrete Company, Des Moines, Iowa. Filed Oct. 17, 1947.

Tufcrete

Applicant claims ownership of registration No. 408,956.
FOR BITUMINOUS EMULSION COMPOSITION FOR APPLICATION TO FLOORING AND SURFACING, EITHER ALONE OR WHEN MIXED WITH CEMENT, SAND, OR BOTH, OR OTHER INGREDIENTS.
Claims use since Sept. 13, 1940.

Ser. No. 539,087. HUBERT E. SCHMID, doing business as Tufcrete Company, Des Moines, Iowa. Filed Oct. 25, 1947.

Tufdense

FOR CLEAR LIQUID USED IN HARDENING CONCRETE.
Claims use since Aug. 23, 1944.

Ser. No. 541,862. MEXICO REFRACTORIES COMPANY, Mexico, Mo. Filed Nov. 20, 1947.

ALUMEX

FOR FIREBRICK.
Claims use since Jan. 31, 1931.

Ser. No. 541,945. MEXICO REFRACTORIES COMPANY, Mexico, Mo. Filed Nov. 21, 1947.

Ser. No. 553,277. A. P. GREEN FIRE BRICK COMPANY, Mexico, Mo. Filed Mar. 29, 1948.

BOWLS AND FILTERS, STRAINERS, COVERS, AND HANDLES THEREFOR; COFFEE DISPENSERS; AND

Ser. No. 533,255. AMERICAN BRAKE SHOE COMPANY, New York, N. Y. Filed Sept. 4, 1947.

Ser. No. 541,945. MEXICO REFRACTORIES COMPANY, Mexico, Mo. Filed Nov. 21, 1947.

M-5

The drawing is lined for shading only.
FOR INSULATING FIREBRICK CEMENT.
Claims use since Aug. 19, 1938.

Ser. No. 544,167. IDEAL CEMENT COMPANY, Denver, Colo. Filed Dec. 12, 1947. Under section 2f of the act of 1946.

HANOVER

FOR GYPSUM PLASTER, IN VARIOUS FORMS—NAMELY, HAIR FIBERED, SISAL FIBERED, WOOD FIBERED, AND UNFIBERED, AND ON FINISHING PLASTER, GAUGING PLASTER, MOULDING PLASTER, INSULATING PLASTER, CASTING PLASTER, AND PLASTER OF PARIS.
Claims use since Oct. 25, 1916.

Ser. No. 545,292. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio. Filed Dec. 23, 1947. Under section 2f of the act of 1946.

GLAZ-KALK

Applicant claims ownership of registration No. 306,825.
FOR CAULKING COMPOUNDS.
Claims use since July 7, 1932.

Ser. No. 551,923. UNITED STATES GYPSUM COMPANY, Chicago, Ill. Filed Mar. 13, 1948.

STRUCTOBOARD

FOR VEGETABLE FIBER HARD BOARD.
Claims use since November 1934.

Ser. No. 553,277. A. P. GREEN FIRE BRICK COMPANY, Mexico, Mo. Filed Mar. 29, 1948.

EMPIRE

FOR FIRE BRICK.
Claims use since 1910.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 520,688. ALBERT A. DURANT, Honolulu, Territory of Hawaii. Filed Oct. 20, 1947; originally filed, act of 1905, Apr. 15, 1947. Under section 2f of the act of 1946.

DURANT

FOR THERMALLY INSULATED METAL PIPE.
Claims use since Apr. 23, 1929.

Ser. No. 529,413. HOWARD SMITH CO., Houston, Tex. Filed July 24, 1947. Under section 2f of the act of 1946.

Stancliff

FOR WELL SCREENS.
Claims use since the fall of 1920.

Ser. No. 530,004. THE H. B. IVES COMPANY, New Haven, Conn. Filed July 30, 1947. Under section 2f of the act of 1946.

IVES

Applicant claims ownership of registration No. 68,206.
FOR CASEMENT WINDOW ADJUSTERS, WINDOW CATCHES, HAND RAIL BRACKETS, CUPBOARD AND TRANSOM CATCHES, DOOR CLOSERS, SASH FASTENERS, SASH CORD AND WEIGHT FASTENERS, CRANK HANDLES FOR CASEMENT WINDOW OPERATORS, EXTENSION HINGES, DOOR HOLDERS, COAT AND HAT HOOKS, WARDROBE HOOKS, DOOR KNOBS, DOOR KNOCKERS, SASH LIFTS, SASH PULL PLATES, DRAWER PULLS, SASH SOCKETS, AND DOOR STOPS.
Claims use since Jan. 1, 1901.

Ser. No. 534,090. CORY CORPORATION, Chicago, Ill. Filed Sept. 11, 1947. Under section 2f of the act of 1946.

CORY

Applicant claims ownership of registration No. 331,919.
FOR COFFEE MAKING APPARATUS—VIZ., GLASS COFFEE BREWERS AND PARTS THEREOF, I. E. UPPER BOWLS AND HOLDERS THEREFOR; LOWER BOWLS AND FILTERS, STRAINERS, COVERS, AND HANDLES THEREFOR; COFFEE DISPENSERS; AND COFFEE TRAY SETS, I. E. COFFEE BREWERS, CREAMERS, SUGARS, AND TRAYS IN MATCHING SETS.
Claims use since May 20, 1934, on coffee making apparatus; since June 1936 on coffee dispensers; and since Apr. 1, 1938, on coffee tray sets.

Ser. No. 535,802. W. A. CASE AND SON MANUFACTURING COMPANY, Buffalo, N. Y. Filed Sept. 26, 1947. Under section 2f of the act of 1946.

AQUA-CHROME

FOR PLUMBING FIXTURES—NAMELY, VITREOUS CHINA LAVATORIES.
Claims use since April 1933.

Ser. No. 535,808. W. A. CASE AND SON MANUFACTURING COMPANY, Buffalo, N. Y. Filed Sept. 26, 1947.

COSMETTE

FOR PLUMBING FIXTURES—NAMELY, VITREOUS CHINA LAVATORIES.
Claims use since December 1937.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 493,207. MULTICORE SOLDERS LIMITED, London, England. Filed June 29, 1948; originally filed, act of 1905, Dec. 13, 1945. Under section 2f of the act of 1946.

ERSIN Multicore THREE CORE SOLDER

The words "Three Core Solder" are disclaimed. Applicant claims ownership of British registration No. B. 638,615, dated July 13, 1945.
FOR SOLDERING METALS CONTAINING A CORE OR CORES OF FLUX.
Claims use since 1939.

Ser. No. 507,077. THE RIEHL GALLEY LOCK COMPANY, Cleveland, Ohio. Filed May 29, 1948; originally filed, act of 1905, Aug. 8, 1946. Under section 2f of the act of 1946.

"RIEHLOCK"

FOR PRINTERS' TYPE, GALLEY LOCKS, AND TYPE TIE-UPS.
Claims use since June 1, 1940.

Ser. No. 533,255. AMERICAN BRAKE SHOE COMPANY, New York, N. Y. Filed Sept. 4, 1947.

MACHINE-FACE

FOR COATED METAL WELDING RODS.
Claims use since June 5, 1947.

Ser. No. 537,108. VULCAN MOLD & IRON COMPANY, Latrobe, Pa. Filed Oct. 7, 1947.

V

FOR CAST IRON METAL MOLDS USED FOR CASTING FERROUS AND NON-FERROUS METALS AND CAST IRON METAL MOLD ACCESSORIES—NAMELY, CAST IRON STOOLS, CAST IRON INSERTS, AND CAST IRON PLUGS.
Claims use since Jan. 1, 1937.

Ser. No. 542,901. AMERICAN CHEMICAL PAINT COMPANY, Ambler, Pa. Filed Dec. 2, 1947. CERTIFICATION MARK.

METAL PROTECTED
ALODIZED
"Durability Certified"
ALODINE ANCHORS THE FINISH

All wording on the design, with the exception of the mark "Alodized" is disclaimed. Applicant claims ownership of registration No. 420,005.
FOR ALUMINUM AND ALUMINUM ALLOYS CHEMICALLY COATED AND WITH OR WITHOUT SUBSEQUENT APPLICATION OF SICCATIVE COATING.
Claims use since Oct. 22, 1947.

Ser. No. 555,646. AMERICAN CAR AND FOUNDRY COMPANY, New York, N. Y. Filed Apr. 27, 1948.

RESISTO

Applicant claims ownership of registrations Nos. 206,185 and 439,727.
FOR METAL CASTINGS.
Claims use since Dec. 1, 1924.

Ser. No. 557,781. SHOPNER IRON AND STEEL WORKS, Portland, Oreg. Filed May 25, 1948.

Ser. No. 543,492. I. LEWIS CIGAR MANUFACTURING COMPANY, Newark, N. J. Filed Dec. 5, 1947.

Ser. No. 550,585. CLOVER TOBACCO CO., INC., Irvington, N. Y. Filed Feb. 26, 1948.

CLASS 20

LINOLEUM AND OILED CLOTH

Ser. No. 557,781. SHOFNER IRON AND STEEL WORKS, Portland, Oreg. Filed May 25, 1948.

A-F-E

FOR FERROUS ALLOY METALS.
Claims use since Aug. 15, 1947.

Ser. No. 558,019. HUNTER DOUGLAS CORPORATION, New York, N. Y., assignor to Hunter Douglas Corporation, New York, N. Y., a corporation of New York. Filed May 28, 1948.

PERMALUME

FOR METAL STOCK IN BOTH COIL AND FLAT FORM FROM WHICH VENETIAN BLIND SLATS ARE MADE.
Claims use since May 4, 1948.

CLASS 17
TOBACCO PRODUCTS

Ser. No. 536,924. P. LORILLARD COMPANY, New York, N. Y. Filed Oct. 6, 1947.

HEADLINE

The drawing is lined for the color gold.
FOR CIGARS.
Claims use since 1890.

Ser. No. 543,488. I. LEWIS CIGAR MANUFACTURING COMPANY, Newark, N. J. Filed Dec. 5, 1947.

LA ARMELINA

FOR CIGARS.
Claims use since 1893.

Ser. No. 543,489. I. LEWIS CIGAR MANUFACTURING COMPANY, Newark, N. J. Filed Dec. 5, 1947.

LA JUANOS

FOR CIGARS.
Claims use since Dec. 28, 1901.

Ser. No. 543,492. I. LEWIS CIGAR MANUFACTURING COMPANY, Newark, N. J. Filed Dec. 5, 1947.

METROPOLITAN

FOR CIGARS.
Claims use since 1866.

Ser. No. 543,493. I. LEWIS CIGAR MANUFACTURING COMPANY, Newark, N. J. Filed Dec. 5, 1947.

PIRAMIDO

FOR CIGARS.
Claims use since Jan. 13, 1900.

Ser. No. 543,494. I. LEWIS CIGAR MANUFACTURING COMPANY, Newark, N. J. Filed Dec. 5, 1947.

Rodena

FOR CIGARS.
Claims use since January 1904.

Ser. No. 543,496. I. LEWIS CIGAR MANUFACTURING COMPANY, Newark, N. J. Filed Dec. 5, 1947.

Roymont

FOR CIGARS.
Claims use since Feb. 6, 1911.

Ser. No. 543,499. I. LEWIS CIGAR MANUFACTURING COMPANY, Newark, N. J. Filed Dec. 5, 1947.

SUBWAY

FOR CIGARS.
Claims use since Apr. 4, 1904.

Ser. No. 550,482. BROWN & WILLIAMSON TOBACCO CORPORATION, Louisville, Ky. Filed Feb. 25, 1948.

Sincere

FOR CIGARETTES, SMOKING TOBACCO, CHEWING TOBACCO, AND SNUFF.
Claims use since Feb. 6, 1948.

Ser. No. 550,585. CLOVER TOBACCO CO., INC., Irvington, N. Y. Filed Feb. 26, 1948.

PETS

FOR LITTLE CIGARS.
Claims use since Sept. 17, 1947.

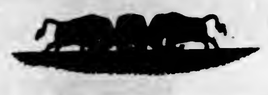
The letters "E. U. B." are disclaimed apart from the mark as shown.
FOR PAINT OIL.
Claims use since Dec. 10, 1934.

Reg. No. 340,931. Registered Nov. 24, 1936. PERMATEX COMPANY, INC., Brooklyn, N. Y., a corporation of New York, Republished by registrant.

PERMA-LUSTRE

The word "Lustre" is disclaimed apart from the mark as shown.
FOR POLISHES AND CLEANERS FOR AUTOMOBILES, PIANOS, PHONOGRAPHS, FURNITURE, FLOORS, AND WOODWORK.
Claims use since Dec. 19, 1925.

Reg. No. 414,806. Registered June 5, 1945. J. WARREN BULLEN, doing business as The Bullen Chemical Co., Folcroft, Pa. Republished by The Bullen Chemical Company, Inc., Folcroft, Pa., a corporation of Pennsylvania.



FOR LIQUID COMPOUNDS USED AS FLOOR OILS, SEALERS FOR WOODEN SURFACES, FLOOR FINISHES, AND FLOOR WAXES.
Claims use since Apr. 7, 1919.

CLASS 17

TOBACCO PRODUCTS

Reg. No. 329,998. Registered Nov. 19, 1935. CHARLES P. LANDAU, New York, N. Y. Republished by Fleming-Hall Tobacco Co., Inc., New York, N. Y., a corporation of Delaware.

BOWL 'n ROSES

FOR SMOKING TOBACCO.
Claims use since about July 11, 1935.

Reg. No. 370,621. Registered Aug. 29, 1939. A. SENSENBRENNER SONS, Los Angeles, Calif., a firm. Republished by registrant.

The drawing is lined to show red.
FOR CIGARS.
Claims use since Nov. 24, 1937.

CLASS 19

VEHICLES

Reg. No. 255,582. Registered Apr. 23, 1929. GREAT LAKES DREDGE & DOCK COMPANY, Chicago, Ill., a corporation of New Jersey. Republished by registrant.

The vertical shade lines indicate the color red. The words "River and Harbor Improvements" are disclaimed apart from the mark as shown.
FOR DRILL BOATS, DERRICK BOATS, DYNAMITE BOATS, MOTOR AND STEAM TUGS AND VESSELS, DUMP SCOWS, DECK SCOWS, BARGES, LAUNCHES, DIVING SCOWS, DRY DOCKS, AND RAILROAD CARS, EMPLOYED IN RIVER AND HARBOR IMPROVEMENTS.
Claims use since Mar. 9, 1925.

Reg. No. 363,646. Registered Jan. 3, 1939. TROPIC-AIRE, INCORPORATED, Chicago, Ill., a corporation of Delaware. Republished by registrant.

TROPIC-AIRE CONDITIONED

The words "Aire-Conditioned" are disclaimed apart from the mark as shown.
FOR AIR HEATING, AIR COOLING, AND VENTILATING UNITS FOR MOTOR VEHICLES.
Claims use since July 14, 1938.

Reg. No. 415,487. Registered Aug. 7, 1945. BUDD WHEEL COMPANY, Philadelphia, Pa. Republished by The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania.

ROLOKRON

FOR BRAKE CONTROL DEVICES FOR AUTOMATICALLY ARRESTING WHEEL SLIDE.
Claims use since about Aug. 16, 1942.

CLASS 20

LINOLEUM AND OILED CLOTH

Reg. No. 252,677. Registered Feb. 12, 1929. THE PARAFFINE COMPANIES, INC., San Francisco, Calif., a corporation of Delaware. Republished by registrant.

PABCO

FOR PREPARED FLOOR COVERINGS COMPRISING A BODY OF FIBROUS MATERIAL SATURATED WITH BITUMINOUS OR ASPHALTIC MATERIAL AND HAVING A PAINTED OR PRINTED SURFACE.
Clamis use since 1917.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND

Reg. No. 282,564. Registered Apr. 21, 1931. THE SUPERIOR MANUFACTURING COMPANY, Fitchburg, MASS., a corporation of Massachusetts. Republished by regis-

Reg. No. 397,785. Registered Sept. 22, 1942. P. R. MALLORY & CO., INC., Indianapolis, Ind., a corporation of Delaware. Republished by registrant.

Reg. No. 426,921. Registered Jan. 21, 1947. P. R. MALLORY & CO., INC., Indianapolis, Ind., a corporation of Delaware. Republished by registrant.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 102,033. Registered Jan. 26, 1915. BRIGGS & STRATTON Co., Milwaukee, Wis. Republished by Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware.

BASCO

FOR ELECTRICAL EQUIPMENT FOR GASOLENE AND ELECTRIC MOTOR-CARS, MOTOR-BOATS, AND GASOLENE-ENGINES, CONSISTING OF IGNITION TIMERS, IGNITION SWITCHES, LIGHTING SWITCHES, IGNITERS, REVERSE CURRENT CUT-OUTS, STARTING SWITCHES, MASTER VIBRATORS, AND DYNAMO REGULATORS.
Claims use since Dec. 1, 1913.

Reg. No. 184,010. Registered May 13, 1924. BRIGGS & STRATTON COMPANY, Milwaukee, Wis. Republished by Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware.

A BASCO PRODUCT

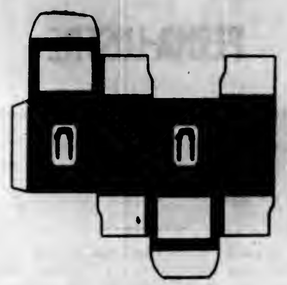
The words "A Product" are disclaimed apart from the mark as shown.
FOR ELECTRICAL EQUIPMENT FOR GASOLINE AND ELECTRIC MOTOR CARS, MOTOR BOATS AND GASOLINE ENGINES, CONSISTING OF IGNITION TIMERS, IGNITION SWITCHES, LIGHTING SWITCHES, IGNITERS, REVERSE-CURRENT CUT-OUTS, STARTING SWITCHES, MASTER VIBRATORS, AND DYNAMO REGULATORS; RADIO APPARATUS—NAMELY, DETECTORS, TUNERS, RECEIVERS, AMPLIFIERS, RHEOSTATS, CONDENSERS, AUDION-TUBE SOCKETS, VARIABLE AIR CONDENSERS, GRID CONDENSERS AND LEAKS, TELEPHONE CONDENSERS, TELEPHONE HEAD SETS, CRYSTAL MOUNTINGS, VARIOCOUPLERS, TRANSFORMERS, TICKLERS, BINDER POSTS, SWITCHES AND SWITCH PARTS; AUTOMOBILE ELECTRIC HORNS.
Claims use since April 1922.

Reg. No. 218,871. Registered Oct. 5, 1926. ELKON WORKS, INC., Weehawken, N. J. Republished by P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware.

ELKON

FOR ELECTRIC-CURRENT RECTIFIERS, ELECTRIC-CURRENT RECTIFIER UNITS, ELECTRIC-CURRENT BATTERY ELIMINATORS AND ASYMMETRIC CELLS.
Claims use since Dec. 7, 1925.

Reg. No. 282,564. Registered Apr. 21, 1931. THE SUPERIOR MANUFACTURING COMPANY, Fitchburg, Mass., a corporation of Massachusetts. Republished by registrant.



The vertical lining on drawing represents the color red. The words "Insulated Saddle Staples" and "Superior" and the representation of the insulated staple are disclaimed apart from the mark as shown.
FOR INSULATED STAPLES.
Claims use since Aug. 26, 1930.

Reg. No. 359,145. Registered Aug. 9, 1938. P. R. MALLORY & Co., INC., Indianapolis, Ind., a corporation of Delaware. Republished by registrant.

Vibrapack

FOR ELECTRIC POWER SUPPLY DEVICES OF THE TYPE USING A VIBRATORY SWITCH CURRENT INTERRUPTER TOGETHER WITH VOLTAGE TRANSFORMING MEANS TO CONVERT ELECTRIC ENERGY OF ONE VOLTAGE INTO ELECTRIC ENERGY OF ANOTHER VOLTAGE.
Claims use since Apr. 21, 1937.

Reg. No. 362,617. Registered Nov. 22, 1938. P. R. MALLORY & Co., INC., Indianapolis, Ind., a corporation of Delaware. Republished by registrant.

RECTOPLATER

FOR ELECTRIC CURRENT RECTIFIERS, ELECTRO-PLATING POWER SUPPLY DEVICES, RECTIFIER-TYPE ELECTRO-PLATING UNITS.
Claims use since June 21, 1938.

Reg. No. 370,327. Registered Aug. 22, 1939. P. R. MALLORY & Co., INC., Indianapolis, Ind., a corporation of Delaware. Republished by registrant.

INDUCTUNER

FOR VARIABLE INDUCTANCE DEVICES, INDUCTIVE TUNING DEVICES, VARIABLE INDUCTANCE TUNING DEVICES, CONTINUOUSLY VARIABLE SLIDE WIRE INDUCTIVE TUNING DEVICES.
Claims use since Apr. 14, 1939.

Reg. No. 397,785. Registered Sept. 22, 1942. P. R. MALLORY & Co., INC., Indianapolis, Ind., a corporation of Delaware. Republished by registrant.

RECTOSTARTER

FOR RECTIFIER UNIT FOR USE IN STARTING INTERNAL COMBUSTION ENGINES FROM A. C. POWER SUPPLY SOURCES, PORTABLE ELECTRIC POWER CONVERSION UNIT FOR USE IN STARTING AIRCRAFT AND OTHER INTERNAL COMBUSTION ENGINES.
Claims use since Sept. 8, 1941.

Reg. No. 399,945. Registered Feb. 9, 1943. P. R. MALLORY & Co., INC., Indianapolis, Ind., a corporation of Delaware. Republished by registrant.

ELKONITE

FOR ELECTRIC CONTACTING ELEMENTS—NAMELY, ELECTRIC CONTACTS AND CONTACT MAKING ELECTRODES INCLUDING SPOT WELDING ELECTRODES, RESISTANCE WELDING ELECTRODES, AND ELECTRIC UPSETTING DIES.
Claims use since December 1925.

Reg. No. 405,926. Registered Feb. 29, 1944. P. R. MALLORY & Co., INC., Indianapolis, Ind., a corporation of Delaware. Republished by registrant.

RECTOPOWER

FOR RECTIFIER POWER SUPPLY UNITS.
Claims use since Sept. 6, 1943.

Reg. No. 408,003. Registered July 11, 1944. P. R. MALLORY & Co., INC., Indianapolis, Ind., a corporation of Delaware. Republished by registrant.

ELKALOY

FOR ELECTRIC CONTACTING ELEMENTS—NAMELY, ELECTRIC MAKE-AND-BREAK CONTACTS, SLIDING ELECTRIC CONTACTS, AND PRESSURE EXERTING WELDING ELECTRODES.
Claims use since Oct. 21, 1930.

Reg. No. 413,408. Registered Apr. 24, 1945. P. R. MALLORY & Co., INC., Indianapolis, Ind., a corporation of Delaware. Republished by registrant.

HP

FOR ELECTRICAL CONTACT ELEMENTS, NOT INCLUDING ELECTRICAL EQUIPMENT OR ASSEMBLIES EMBODYING ELECTRIC CONTACT ELEMENTS.
Claims use since July 6, 1944.

Reg. No. 426,921. Registered Jan. 21, 1947. P. R. MALLORY & Co., INC., Indianapolis, Ind., a corporation of Delaware. Republished by registrant.

D-54

FOR ELECTRICAL CONTACTS.
Claims use since May 30, 1945.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 179,877. Registered Feb. 19, 1924. THE KILGORE MANUFACTURING COMPANY, Westerville, Ohio, a corporation of Ohio. Republished by registrant.

K

FOR TOY PISTOLS.
Claims use since July 1, 1912.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 112,347. Registered Sept. 5, 1916. AUTOMATIC TICKET SELLING & CASH REGISTER COMPANY, New York, N. Y. Republished by General Register Corporation, Long Island City, N. Y., a corporation of New York.

AUTOMATICKET

The word "Ticket" is disclaimed apart from the mark as shown.
FOR TICKET-SELLING MACHINES.
Claims use since Feb. 15, 1916.

Reg. No. 238,169. Registered Jan. 31, 1928. THE NASH Engineering Company, South Norwalk, Conn., a corporation of Connecticut. Republished by registrant.

JENNINGS

FOR SEWAGE EJECTORS, BILGE PUMPS, SUMP PUMPS, TURBINES, TURBINE ENGINES, BOILER FEED PUMPS, VACUUM HEATING PUMPS, CONDENSATION PUMPS, CHECK VALVES USED AS A PART OF THE PUMP UNIT, CENTRIFUGAL PUMPS, AND FLAT BOX PUMPS.
Claims use since May 1, 1918.

Reg. No. 248,305. Registered Oct. 16, 1928. HUDSON MANUFACTURING CO., Minneapolis, Minn. Republished by New Jersey Machine Corporation, Hoboken, N. J., a corporation of New Jersey.

Reg. No. 283,340. Registered May 26, 1931. GENERAL REGISTER CORPORATION, Brooklyn, N. Y. Republished by General Register Corporation, Long Island City, N. Y., a corporation of New York.

Reg. No. 359,817. Registered Aug. 30, 1938. THE S. U. CARBURETTER COMPANY LIMITED, Birmingham, England, a corporation of Great Britain. Republished by registrant.

Reg. No. 415,111. Registered July 10, 1945. DRITZ-TRAUM COMPANY, INC., New York, N. Y. Republished by David Traum Company, Incorporated, New York, N. Y., a corporation of New York.

Reg. No. 248,305. Registered Oct. 16, 1928. HUDSON MANUFACTURING CO., Minneapolis, Minn. Republished by New Jersey Machine Corporation, Hoboken, N. J., a corporation of New Jersey.

MOTO-AIR

FOR SPRAYERS AND SPRAYING ATTACHMENTS FOR HOUSEHOLD, INDUSTRIAL, AND AGRICULTURAL USES.
Claims use since May 16, 1928.

Reg. No. 248,738. Registered Oct. 30, 1928. GREAT LAKES DREDGE & DOCK COMPANY, Chicago, Ill., a corporation of New Jersey. Republished by registrant.

The words "river and harbor improvements" are disclaimed apart from the mark as shown. The drawing is lined for red.
FOR PILE DRIVERS, LOCOMOTIVE CRANES, CRAWLER CRANES, CONCRETE MIXERS, SHOVELS, CONVEYOR CABLEWAYS, TRACTOR CRANES, DIVING OUTFITS EXCEPT THE SUITS, HOSE LINES, AND CABLE LINES THEREOF; LOCOMOTIVES, DIPPER DREDGES, HYDRAULIC DREDGES, AND CLAMSHELL DREDGES, ALL EMPLOYED IN RIVER AND HARBOR IMPROVEMENTS.
Claims use since Mar. 9, 1925.

Reg. No. 283,339. Registered May 26, 1931. GENERAL REGISTER CORPORATION, Brooklyn, N. Y. Republished by General Register Corporation, Long Island City, N. Y., a corporation of New York.

FOR TICKET-ISSUING MACHINES, TICKET PRINTING AND ISSUING MACHINES, AND TICKET-PUNCHING MACHINES AND PARTS THEREOF.
Claims use since Dec. 3, 1930.

Reg. No. 283,340. Registered May 26, 1931. GENERAL REGISTER CORPORATION, Brooklyn, N. Y. Republished by General Register Corporation, Long Island City, N. Y., a corporation of New York.

.GRC.

FOR TICKET-ISSUING MACHINES, TICKET PRINTING AND ISSUING MACHINES, AND TICKET-PUNCHING MACHINES AND PARTS THEREOF.
Claims use since Dec. 3, 1930.

Reg. No. 329,392. Registered Oct. 29, 1935. ACME STEEL COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Doc. Steelstrap

FOR SEALERS, STRETCHERS, COIL HOLDERS, REELS, AND SNIPS EMPLOYED IN REENFORCING BOXES, CRATES, BALES, AND PACKAGES, AND IN LOADING FREIGHT CARS AND OTHER CARRIERS.
Claims use since Feb. 28, 1934.

Reg. No. 334,705. Registered May 12, 1936. LEWIS BOLT & NUT COMPANY, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

MACER

FOR JOURNAL AND BEARING PROTECTORS.
Claims use since Aug. 27, 1935.

Reg. No. 335,751. Registered June 16, 1936. TRANSPARENT-WRAP MACHINE CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

TRANSWRAP

FOR PACKAGING MACHINES.
Claims use since Nov. 27, 1935.

Reg. No. 352,421. Registered Nov. 30, 1937. TOBACCO BY-PRODUCTS AND CHEMICAL CORPORATION, Louisville, Ky., a corporation of Delaware. Republished by registrant.

VAPO-FUMER

FOR MACHINES FOR VAPORIZING AND APPLYING INSECTICIDAL SPRAYS.
Claims use since Nov. 14, 1936.

Reg. No. 359,817. Registered Aug. 30, 1938. THE S. U. CARBURETTER COMPANY LIMITED, Birmingham, England, a corporation of Great Britain. Republished by registrant.

S.U

FOR CARBURETTERS AND FUEL PUMPS FOR ENGINES.
Claims use since August 1910.

Reg. No. 387,962. Registered June 10, 1941. ACME STEEL COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

SilverStitcher

The word "Stitcher" is disclaimed apart from the mark as shown.
FOR WIRE STITCHING MACHINES.
Claims use since May 13, 1940.

Reg. No. 388,084. Registered June 10, 1941. GENERAL REGISTER CORPORATION, New York, N. Y. Republished by General Register Corporation, Long Island City, N. Y., a corporation of New York.

GENISTER

FOR TICKET AND COUPON ISSUING MACHINES, SLOT VENDING MACHINES.
Claims use since Dec. 26, 1940.

Reg. No. 404,353. Registered Nov. 23, 1943. HUDSON MOTOR CAR COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

DRIVE-MASTER

FOR TRANSMISSIONS FOR MOTOR VEHICLES.
Claims use since July 31, 1941.

Reg. No. 431,226. Registered July 15, 1947. ALVEY CONVEYOR MANUFACTURING CO., St. Louis, Mo., a corporation of Missouri. Republished by registrant.

ALVEYORS

FOR CONVEYORS OF THE PULLEY TYPE, ROLLER TYPE, INCLINED AND VERTICAL LIFT TYPE, PUSHER-BAR TYPE, GRAVITY SLIDES, AND SPIRAL CHUTES.
Claims use since June 15, 1946.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Reg. No. 405,042. Registered Jan. 4, 1944. DRITS-TRAUM COMPANY, INC., New York, N. Y. Republished by David Traum Company, Incorporated, New York, N. Y., a corporation of New York.

GLIDE-TEX

FOR IRONING PRESS CLOTHS.
Claims use since July 28, 1943.

Reg. No. 415,111. Registered July 10, 1945. DRITS-TRAUM COMPANY, INC., New York, N. Y. Republished by David Traum Company, Incorporated, New York, N. Y., a corporation of New York.

DTC

FOR IRONING PRESS CLOTHS.
Claims use since Jan. 25, 1945.

CLASS 25

LOCKS AND SAFES

Reg. No. 195,003. Registered Feb. 17, 1925. BRIGGS & STRATTON COMPANY, Milwaukee, Wis. Republished by Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware.

BISCO

FOR AUTOMOBILE LOCKS, COMPARTMENT LOCKS, AND LOCKING DOOR HANDLES.
Claims use since July 1921.

Reg. No. 199,693. Registered June 16, 1925. BRIGGS & STRATTON COMPANY, Milwaukee, Wis., assignor to Briggs & Stratton Corporation. Republished by Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware.

A BASCO PRODUCT

The words "A Product" are disclaimed apart from the mark as shown.
FOR AUTOMOBILE LOCKS, COMPARTMENT LOCKS, AND LOCKING DOOR HANDLES.
Claims use since April 1922.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Reg. No. 361,767. Registered Nov. 1, 1938. GENERAL REGISTER CORPORATION, New York, N. Y. Republished by General Register Corporation, Long Island City, N. Y., a corporation of New York.

"PLUS"

FOR ADDING MACHINES.
Claims use since Nov. 1, 1935.

Reg. No. 391,452. Registered Nov. 11, 1941. GENERAL REGISTER CORPORATION, New York, N. Y. Republished

Reg. No. 433,330. Registered Oct. 7, 1947. TERRYTOONS, INC., New Rochelle, N. Y., a corporation of New

Reg. No. 409,360. Registered Oct. 3, 1944. MOVADO WATCH AGENCY, INC., New York, N. Y., a corporation

CLASS 29

Reg. No. 391,452. Registered Nov. 11, 1941. GENERAL REGISTER CORPORATION, New York, N. Y. Republished by General Register Corporation, Long Island City, N. Y., a corporation of New York.

GENISTER

FOR ADDING MACHINES, TAXIMETERS, CALCULATING MACHINES, CASH REGISTERS.
Claims use since Dec. 26, 1940.

Reg. No. 394,470. Registered Apr. 7, 1942. THE TITAN VALVE AND MANUFACTURING COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

POLYSTAT

FOR THERMOSTATIC VALVES FOR HOT WATER HEATERS AND THE LIKE.
Claims use since Sept. 4, 1941.

Reg. No. 423,448. Registered Sept. 3, 1946. THE DI-NOC COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

DINOLOFT

FOR PHOTOSENSITIVE TRANSFERS, COMPRISING BACKING SHEETS HAVING PHOTOSENSITIVE COATINGS DETACHABLY MOUNTED THEREON AND ADAPTED TO BE TRANSFERRED TO OTHER SURFACES.
Claims use since Feb. 10, 1945.

Reg. No. 425,600. Registered Nov. 26, 1946. TERRYTOONS, INC., New Rochelle, N. Y., a corporation of New York. Republished by registrant.

TERRYTOONS

The surname "Terry" is disclaimed apart from the mark as shown.
FOR MOTION PICTURE FILMS OF ANIMATED CARTOONS WITH SYNCHRONIZED SOUND TRACK THEREON.
Claims use since Feb. 23, 1930.

Reg. No. 428,177. Registered Mar. 11, 1947. THE DI-NOC COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

DI-NOC

FOR TRANSLUCENT DRAFTING MATERIAL SUITABLE FOR USE IN THE PRODUCTION OF TEMPLATES BY PHOTOGRAPHIC PROCESSES, AND SENSITIZED PHOTOGRAPHIC MATERIALS—NAMELY, SENSITIZED PHOTOGRAPHIC FILM, SENSITIZED PHOTOGRAPHIC PAPER, PHOTOSENSITIVE TRACING CLOTH, PHOTOSENSITIVE TRANSFERS COMPRISING BACKING SHEETS HAVING PHOTOSENSITIVE COATINGS DETACHABLY MOUNTED THEREON AND ADAPTED TO BE TRANSFERRED TO OTHER SURFACES, AND METALLIC SHEETS HAVING A PHOTOSENSITIVE COATING THEREON.
Claims use since Oct. 4, 1942.

Reg. No. 433,330. Registered Oct. 7, 1947. TERRYTOONS, INC., New Rochelle, N. Y., a corporation of New York. Republished by registrant.

HECKLE AND JECKLE

The word "Talking" is disclaimed apart from the mark as shown.
FOR MOTION PICTURE FILMS.
Claims use since July 22, 1946.

CLASS 27

HOROLOGICAL INSTRUMENTS

Reg. No. 394,067. Registered Mar. 17, 1942. MOVADO WATCH AGENCY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

RALCO

FOR WATCHES.
Claims use since January 1930.

Reg. No. 394,192. Registered Mar. 24, 1942. MOVADO WATCH AGENCY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

The representation of the goods is disclaimed apart from the mark as shown.
FOR WATCHES.
Claims use since Feb. 25, 1927.

Reg. No. 404,432. Registered Nov. 23, 1943. MOVADO WATCH AGENCY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

ASTRONIC

FOR WATCHES.
Claims use since June 22, 1943.

Reg. No. 409,360. Registered Oct. 3, 1944. MOVADO WATCH AGENCY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

CALENDETTE

FOR WATCHES.
Claims use since Apr. 28, 1944.

Reg. No. 415,227. Registered July 31, 1945. MOVADO WATCH AGENCY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

TEMPOGRAPH

FOR WATCHES.
Claims use since Jan. 12, 1944.

Reg. No. 425,560. Registered Nov. 26, 1946. MOVADO WATCH AGENCY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

TEMPOMATIC

FOR WATCHES.
Claims use since Oct. 9, 1945.

Reg. No. 426,028. Registered Dec. 10, 1946. MOVADO WATCH AGENCY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

CALENDOMATIC

FOR WATCHES.
Claims use since Mar. 1, 1946.

Reg. No. 434,844. Registered Dec. 9, 1947. ARMAND J. LEMIEUX CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

L

FOR WATCH CASES.
Claims use since June 10, 1946.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Reg. No. 418,249. Registered Dec. 11, 1945. ZELL BROS., Portland, Oreg., a firm. Republished by registrant.

LIFETIME

FOR STERLING SILVER KNIVES, FORKS, SPOONS, TRAYS, TEA SETS, GOBLETS, AND SUGAR AND CREAMERS, AND ALSO FOR THE SAME GOODS IN PLATED WARE.
Claims use since Mar. 15, 1945.

CLASS 29

BROOMS, BRUSHES, AND DUSTERS

Reg. No. 222,636. Registered Jan. 4, 1927. THE WOOSTER BRUSH COMPANY, Wooster, Ohio, a corporation of Ohio. Republished by registrant.

M. P. FAVORITE

FOR PAINTBRUSHES.
Claims use since about Jan. 1, 1922.

Reg. No. 299,320. Registered Nov. 29, 1932. THE WOOSTER BRUSH COMPANY, Wooster, Ohio, a corporation of Ohio. Republished by registrant.

"SHASTETTE"

FOR PAINT AND VARNISH BRUSHES.
Claims use since 1930.

Reg. No. 483,607. Registered Oct. 21, 1947. DELTA BRUSH MFG. CORP., New York, N. Y., a corporation of New York. Republished by registrant.

EL GRECO

FOR ARTISTS' BRUSHES.
Claims use since Oct. 1, 1946.

CLASS 31

FILTERS AND REFRIGERATORS

Reg. No. 222,612. Registered Jan. 4, 1927. AUGUST A. METER, doing business as Universal Water Softener Co., Maywood, Ill. Republished by registrant.

"VERSALITE"

FOR SOFTENING MATERIAL WHICH IS A MANUFACTURED MINERAL USED AS A WATER SOFTENER.
Claims use since Feb. 1, 1926.

CLASS 32

FURNITURE AND UPHOLSTERY

Reg. No. 332,140. Registered Feb. 4, 1936. CRAWFORD MANUFACTURING CO., INC., Richmond, Va., a corporation of Virginia. Republished by registrant.

KOZY-NOOK

FOR HASSOCKS.
Claims use since Aug. 31, 1935.

Reg. No. 352,378. Registered Nov. 30, 1937. THE PHARIS TIRE AND RUBBER COMPANY, Newark, Ohio, a corpora-

Reg. No. 416,781. Registered Sept. 25, 1945. THE PHARIS TIRE AND RUBBER COMPANY, Newark, Ohio, a corpora-

Reg. No. 366,313. Registered June 13, 1939. JOHN WANAMAKER PHILADELPHIA, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

The representation of the goods is disclaimed apart from the mark as shown.

FOR BENCHES, DESKS, CHESTS, DRESSERS, CABINETS, BOOK CASES, BOOK CASE DOORS, WALL RACKS, BED ENDS, COUCH FRAMES, COUCH ENDS, TABLES OF ALL SORTS, STUDIO FRAMES, CHAIRS, BUFFETS.

Claims use since May 2, 1938.

Reg. No. 392,267. Registered Dec. 16, 1941. THE PHARIS TIRE AND RUBBER COMPANY, Newark, Ohio, a corporation of Ohio. Republished by registrant.

AUTOSALER

FOR MERCHANDISE DISPLAY STANDS, RACKS, COUNTERS, SHELVING, AND BRACKETS.

Claims use since Aug. 1, 1941.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Reg. No. 99,501. Registered Sept. 1, 1914. RUUD MANUFACTURING COMPANY, Pittsburgh, Pa. Republished by Ruud Manufacturing Company, Pittsburgh, Pa., a corporation of Delaware.

RUUD

FOR INSTANTANEOUS AUTOMATIC WATER HEATERS AND STORAGE SYSTEMS.

Claims use since 1897.

CLASS 35

BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES

Reg. No. 190,296. Registered Oct. 14, 1924. THE PHARIS TIRE AND RUBBER COMPANY, Newark, Ohio, a corporation of Ohio. Republished by registrant.

ROADGRIPPER

FOR TIRES COMPOSED WHOLLY OR PARTIALLY OF RUBBER.

Claims use since October, 1919.

Reg. No. 290,525. Registered Jan. 5, 1932. THE PHARIS TIRE AND RUBBER COMPANY, Newark, Ohio, a corporation of Ohio. Republished by registrant.

COMRADE

FOR PNEUMATIC RUBBER TIRES FOR VEHICLES.

Claims use since Sept. 1, 1930.

Reg. No. 298,779. Registered Nov. 8, 1932. THE PHARIS TIRE AND RUBBER COMPANY, Newark, Ohio, a corporation of Ohio. Republished by registrant.

The word "Certificate" is disclaimed apart from the mark as shown.

FOR PNEUMATIC RUBBER TIRES FOR VEHICLES.

Claims use since April 1929.

Reg. No. 318,731. Registered Oct. 30, 1934. THE PHARIS TIRE AND RUBBER COMPANY, Newark, Ohio, a corporation of Ohio. Republished by registrant.

ROADGRIPPER
FIRST LINE

The words "First Line" are disclaimed apart from the mark as shown.

FOR WINE.
Claims use since May 1, 1933.

Reg. No. 313,154. Registered May 15, 1934. EHRMAN BROS., HORN & CO., San Francisco, Calif. Republished by Montebello Wine Co. of California, San Francisco, Calif., a corporation of California.

VISTA DE ORO

FOR WINES.
Claims use since Dec. 22, 1933.

Reg. No. 370,402. Registered Aug. 29, 1939. ELLENA BROTHERS, Etiwanda, Calif. Republished by Ellena Brothers, Etiwanda, Calif., a corporation of California.

PINK CHEVRON

FOR CHAMPAGNE.
Claims use since Apr. 8, 1938.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 322,845. Registered Mar. 19, 1935. JOS. S. FINCH & COMPANY, New York, N. Y., a corporation of Pennsylvania. Republished by registrant.

GOLDEN WEDDING

FOR WHISKEY.
Claims use since 1869.

Reg. No. 326,396. Registered July 23, 1935. ELLENA BROS., Cucamonga and Etiwanda, Calif. Republished by Ellena Brothers, Etiwanda, Calif., a corporation of California.

REGINA

FOR BRANDY, GIN, AND WHISKEY.
Claims use since Mar. 25, 1935.

Reg. No. 430,950. Registered July 1, 1947. WESTERN UNITED DISTRIBUTORS, San Francisco, Calif., a corporation of California. Republished by registrant.

Grape Gold

The word "Grape" is disclaimed apart from the mark as shown.
FOR BRANDY.
Claims use since Jan. 31, 1946.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 323,930. Registered May 7, 1935. CRAWFORD MANUFACTURING CO. INC., Richmond, Va., a corporation of Virginia. Republished by registrant.

SHADY-NOOK

FOR AWNINGS.
Claims use since Dec. 1, 1934.

GRANTED FEBRUARY 1, 1949

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

821
PEACH TREE
Jesse A. Wickersham, Yakima County, Wash.
Application July 1, 1947, Serial No. 758,331
1 Claim. (Cl. 47—62)

The new and distinct variety of peach tree of the Elberta type as herein disclosed, characterized particularly by its blocky, highly colored fruit having a distinctive mild flavor, very high sugar content, and unusually good keeping qualities.

822
ROSE PLANT
Thomas J. Andre, Doylestown, Pa., assignor to Andre Greenhouses, Inc., Doylestown, Pa., a corporation of Pennsylvania
Application February 14, 1947, Serial No. 728,465
1 Claim. (Cl. 47—61)

The new and distinct variety of hybrid tea rose plant of the general Talisman type, substantially as herein shown and described, characterised particularly by its strong and free growth habits and continuous blooming habits; its need for warmer temperatures to secure best blooming results; its larger, heavier and darker foliage for Talisman type rose; its strong stems; its large, long, tapering bud almost uniformly deep orange in color; and its flowers of pink and orange tones which last unusually well without fading.

PATENTS

GRANTED FEBRUARY 1, 1949

2,460,266
MANUFACTURE OF PLASTER OF PARIS
Cuthbert Leslie Haddon, Newark-on-Trent, England
No Drawing. Application November 4, 1944, Serial No. 562,043. In Great Britain December 17, 1942
1 Claim. (Cl. 106—112)

A process of producing plaster of Paris comprising mixing ground gypsum with water and substantially one part per thousand of keratin, heating the mixture thus obtained with agitation in a closed vessel at a temperature between 125° C. and 160° C. until the gypsum is converted into plaster of Paris consisting mainly of hemihydrate crystals of squat shape, the proportion of water being sufficient to maintain a liquid phase throughout the treatment.

2,460,267
MANUFACTURE OF PLASTER OF PARIS
Cuthbert Leslie Haddon, Newark-on-Trent, England
No Drawing. Application November 4, 1944, Serial No. 562,044. In Great Britain December 17, 1942
4 Claims. (Cl. 106—111)

1. A process of producing plaster of Paris comprising mixing ground gypsum with water and substantially one part per thousand of a water-soluble salt of a water-insoluble fatty acid having in its molecule only one carboxyl group, heating the mixture thus obtained with agitation in a closed vessel at a temperature between 125° C. and 160° C. until the gypsum is converted into plaster of Paris consisting mainly of hemihydrate crystals of squat shape, the proportion of water being sufficient to maintain a liquid phase throughout the treatment.

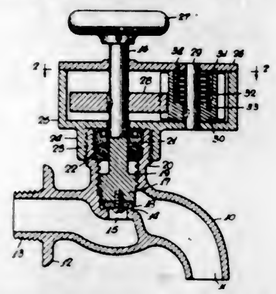
2,460,268
REFRACTORY COMPOSITION AND METHOD OF PRODUCING SAME
Theodore Kauffman, Jr., and Louis J. Jacobs, Chicago, Ill., assignors to The S. Obermayer Co., Chicago, Ill., a corporation of Ohio
No Drawing. Application November 14, 1945, Serial No. 628,662
3 Claims. (Cl. 106—67)

1. A method of making a refractory composition that is intermediate to a loose mixture of the dry ingredients and a ready to use plastic refractory, that is capable of being handled and shipped without segregation of the heavy coarse particles from the fine light particles to any substantial extent, which comprises subjecting a mixture of substantially 65% to 90% refractory grog particles and 35% to 10% plastic fire clay, by weight, to a mulling and kneading action with a quantity of water, approximately 4% by weight, sufficient to give the plastic fire clay optimum stickiness and substantially less than that necessary to produce a plastic refractory of a consistency suitable for monolithic refractory construction, until the grog particles are individually coated with the clay and the coated particles are in agglomerates that, upon drying, are easily friable, and drying the agglomerates.

2,460,269
PERSONAL BODY AIR CONDITIONING DEVICE
William B. Appeldoorn, Detroit, Mich.
Application March 16, 1945, Serial No. 583,133
5 Claims. (Cl. 4—160)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

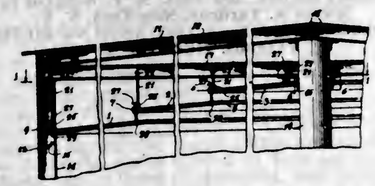
1. A body conditioning device comprising, in combination, a plurality of interconnected flexible air conduits conformable generally to the contours of the body of a person and disposable on the surface of the latter, said conduits having a multiplicity of apertures therein spaced on the inner side surfaces of said conduits throughout a major portion of the lengths thereof to disperse tempered air from a source of such air throughout the surface area of the body covered by said conduits, and a separate removable cover member of relatively slight porosity for enclosing the air conduits and the portion of the body aerated by said conduits.

2,460,270
VALVE
Donald S. Ashley, Cleverdale, and William H. Weaver, Glen Falls, N. Y.; said Weaver assignor to said Ashley
Application April 9, 1946, Serial No. 660,690
9 Claims. (Cl. 251—141)



1. Operating mechanism comprising, in combination, a moving member, a mutilated gear on said moving member and adapted to be moved in one direction on actuation of said moving member, said mutilated gear being movable through a path including a predetermined point, a second mutilated gear arranged to mesh with said first-mentioned mutilated gear, spring means associated with said second mutilated gear adapted to be placed under tension on actuation of said second mutilated gear, said mutilated gears and spring means being constructed and arranged so that unless said first-mentioned mutilated gear is moved beyond said predetermined point by said moving member, upon interruption of the actuation of said moving member the spring means causes the second mutilated gear to actuate the first-mentioned mutilated gear to restore the moving member to its original position, and upon movement of said first-mentioned mutilated gear beyond said predetermined point, the spring means becomes ineffective to cause the second mutilated gear to effect actuation of the first-mentioned mutilated gear.

2,460,271
APPARATUS FOR DEHYDRATING PETROLEUM PRODUCTS IN SITU IN TANK STORAGE
Edward P. Baker, New York, N. Y.
Application July 12, 1945, Serial No. 604,570
9 Claims. (Cl. 196—5)



1. In a storage tank for heavy liquids such as petroleum products of low volatility having an enclosing wall and a metal roof structure separating the atmospheric air from the space within the tank, the combination therewith of a plurality of sheets of heat conducting material of predetermined maximum length supported within said space beneath said roof structure with their lengths inclined to the horizontal and with the lower edge portions thereof in overlapping and vertically spaced relation to the upper edge portions of the sheets subjacent thereto to provide a condensation-inducing and conducting structure extending generally horizontally substantially completely across the internal cross section of said tank, means providing a heat conducting connection from said sheets to the tank structure to maintain said sheets at a temperature inducing condensation thereon of water vapor present in said space when condensation of such vapor occurs on said roof, the inclination of said sheets being sufficient to cause the water condensed on the under surface thereof to run on said under surface toward the lower edges thereof while clinging to said under surface by surface tension, said sheets providing at their undersurface thereof a plurality of downwardly projecting rounded ridges each running in the direction of the inclination of the sheets and spaced apart transversely of said direction of inclination, said spacing and the length of the sheets being predetermined in relation to the inclination of said sheets to provide for accumulating and conducting to said lower edge of each sheet an amount of condensed water which will run upon the undersurface of each ridge and cling thereto by surface tension without dropping therefrom before reaching said lower edge of the sheets and will drip from said lower edge upon the upper surface of the subjacent sheet, each of said sheets having its upper surface formed so as to conduct to its lower edge the water condensed on or falling thereon, and means for collecting and conducting to a place of disposal the water dripping from the lower edge of the lowermost sheet.

2,460,272
CARBINE TOOL
Joseph J. Bartolat, Fort Lewis, Wash.
Application February 8, 1945, Serial No. 576,869
1 Claim. (Cl. 29—240)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A tool device for a carbine comprising a support; means on said support constructed to detachably secure said support in predetermined fixed relation to, and with its axis rigidly oriented and parallel to the axis of a carbine; a hollow guide sleeve integral with and extending from said support and open only at the end remote from said support, the axis of said sleeve being offset from and parallel with said support axis; a removable work-engaging element rotatably and slidably mounted in said guide sleeve and freely removable through said open end; resilient means in said guide sleeve biased to urge said work-engaging element toward the work to be engaged, said work-engaging element having a transverse perforation; a lever constructed at one end to engage either end of said transverse perforation for rotating said work-engaging element; and chain means connecting the other end of said lever with said support.

2,460,273
METHOD OF PRODUCING CAN BODIES HAVING VENTED SIDE SEAMS
Thomas Begg, Nutley, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application March 27, 1947, Serial No. 737,556
2 Claims. (Cl. 113—120)

1. The method of producing sheet metal can bodies having vent channels formed in the side seams thereof to facilitate soldering, comprising

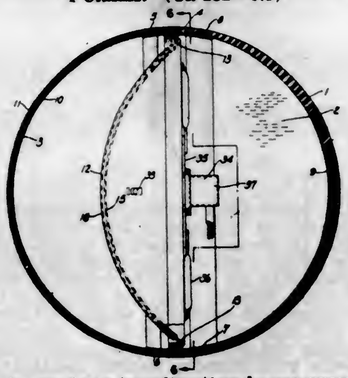
impressing corrugations in a blank extending inwardly from a marginal side seam edge portion thereof, forming said blank into a substantially tubular can body, bending said corrugated side seam portion of the blank along a fold line extending longitudinally of the blank and transversely across said corrugations to produce a side seam hook having spaced vent channels of substantial U-shape extending around the bend of the hook, bending the opposite marginal side seam edge portion of the blank into a cooperating uncorrugated hook, loosely interengaging said hooks, and finally bumping said interengaged hooks together without flattening said corrugations, to produce an interlocked transversely corrugated side seam including said spaced vent channels therein for a subsequent soldering operation.

2,460,274

SUBMARINE SIGNALING APPARATUS

Hugo Benioff, Pasadena, Calif., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware

Application December 9, 1942, Serial No. 468,435
4 Claims. (Cl. 181—0.5)



1. An underwater directional, compressional wave signaling device adapted to be projected into the water comprising, in combination, a hollow spherical shell adapted to be filled with a wave transmitting medium and having a front half formed of a wave transmitting material and a rear half formed of a wave reflecting material, a concave wave reflector shaped to bring incident plane waves to a focus substantially at a point, positioned within said shell with its outer circumference bounded substantially at the junction of the two halves thereof and with the concave face facing toward said wave transmitting half, said point being sufficiently close to said reflector to be contained within said shell whereby a wave transducer may be placed within said shell at said point of focus.

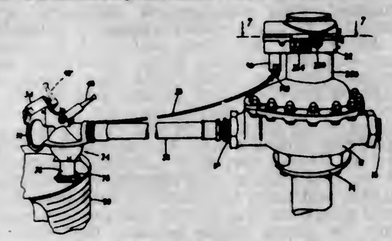
2,460,275

PREDETERMINING DISPENSING SYSTEM

Charles P. Bergman, Brooklyn, N. Y., and Mead Cornell, Cleveland, Ohio, assignors to Rockwell Manufacturing Company, a corporation of Pennsylvania

Original application February 2, 1940, Serial No. 316,888. Divided and this application May 27, 1942, Serial No. 444,696
10 Claims. (Cl. 222—20)

1. Measuring apparatus comprising a meter, a register driven thereby and provided with trip mechanism, a pipe connected to said meter, a valve in said pipe, means to close said valve, detent means holding said valve open, and motion transmitting mechanism between the valve



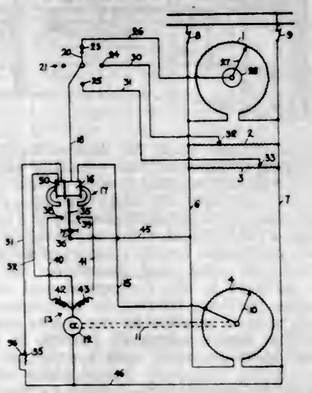
detent and the register trip mechanism, said motion transmitting mechanism including a bellows at the valve detent, a bellows at the register trip, a tube extending between said bellows, and fluid sealed in said connected bellows and tube.

2,460,276

ELECTRIC MOTOR CONTROL APPARATUS WITH AUTOMATIC "Z" EFFECT

Robert Bernas, New York, N. Y., assignor to Michel N. Yardeny, New York, N. Y.

Application October 9, 1945, Serial No. 621,346
5 Claims. (Cl. 318—29)



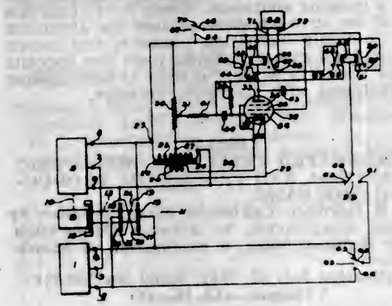
1. An electrical remote control apparatus for placing a load in a selected position, comprising a load motor for operating the load; a transmitter and a receiver, each comprising two control members, one of the members being movable and operatively connected with the load motor; circuit means including the transmitter and receiver; a relay means included in said circuit for energizing the motor for causing the movable member of the receiver to be placed in a position corresponding to the position of one of the control members of the transmitter, the said position being a deenergizing position for the relay means; and a second circuit means connecting the relay means with the motor armature for deenergizing the relay means, thereby deenergizing the motor in advance of the movable element reaching the said deenergizing position when the motor rotates in a predetermined direction and for maintaining the relay means energized when the motor rotates in the opposite direction, thereby causing the motor to be stopped always after rotation in the predetermined direction.

2,460,277

ELECTRONIC TIMING DEVICE

Phillip J. Cade, Sharon, Mass., assignor to Photoswitch, Incorporated, Cambridge, Mass., a corporation of Massachusetts

Application November 1, 1946, Serial No. 707,167
7 Claims. (Cl. 318—283)



7. An electronic timing device for use with a machine having an oscillating work table operated by a three phase reversible motor, which comprises: first and second source terminals connected to a source of 3 phase electric power; first and second motor terminals connected to said motor; a reversing switch, actuated by said table and adapted to make and maintain connections between said source and motor terminals and to reverse said connections upon said table reaching either of its extreme positions; a voltage divider connected across said motor terminals; an electron discharge device having at least an anode, cathode, and a control electrode, said cathode being connected to said first motor terminal; an energy storage and dissipation means connected between said control electrode and a point on said voltage divider; a first current responsive operator means, bridged by a capacitor, connected between said anode and a terminal point; a second current responsive operator means connected between said terminal point and a first hand-operated switch adapted to make connection with said first motor terminal or with a second hand-operated switch to make contact to either of said source terminals; a first relay switch adapted to maintain connection between said second motor terminal and said terminal point, except when said first operator means is energized, and then to make connections between said second motor terminal and a second relay switch adapted to make a connection with said energy storage and dissipation means when said second operator means is energized; a third relay switch adapted to make a connection between said second motor terminal and said terminal point when said second operator means is energized; a third hand-operated switch adapted to make a connection between said second motor terminal and said terminal point; and control means actuated by said first operator means.

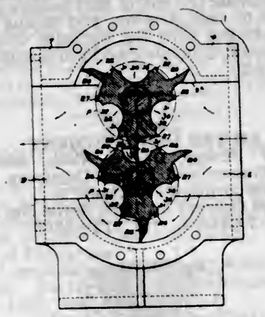
2,460,278

ROTARY PUMP FOR THICK FIBROUS SUSPENSIONS

Ernest P. Cook, Berlin, N. H., assignor to Improved Paper Machinery Corporation, Nashua, N. H., a corporation of Maine

Application February 4, 1944, Serial No. 521,109
36 Claims. (Cl. 103—126)

2. A rotary-piston pump characterized by a controlled displacement, comprising, in combination: a casing defining a rotor chamber; a plurality of interacting rotors therein on parallel axes transverse to the path of flow; each rotor having a circumferential series of alternated projective elements and valley elements; each projective element having a central radial thrust flank, an angular rearwardly relieved tip, and each valley element including rounded bottom and flaring side walls; said projective elements



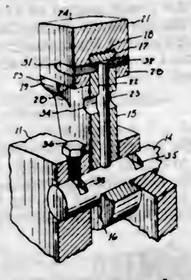
adapted for rotative passage through the valley elements with the projective tips in a clearant relation and angular presentation to the valley walls selected to afford during each such passage an initial shearing and subsequent scuffing separant action upon any adjacent fibrous mass of a fibre suspension to be pumped and simultaneously throughout said actions to effect a single lineal seal at the tip advancing through a valley.

2,460,279

HAMMER FOR IMPACT CRUSHERS WITH DETACHABLE AND REVERSIBLE HAMMER HEAD

Leslie G. Ehmann, Portland, Oreg., assignor to Electric Steel Foundry, Portland, Oreg., a corporation of Oregon

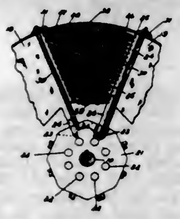
Application December 10, 1943, Serial No. 513,759
10 Claims. (Cl. 241—194)



1. A hammer for impact crushers comprising a shank, a hammer head replaceably mounted on the end of said shank, said shank comprising an inner end having an eye therethrough for mounting said shank on the pivot shaft of a rotor element in a rotary crusher and an outer end having a slot extending therethrough, a bore extending longitudinally of said shank and opening into said slot, a locking pin disposed in said bore and having free movement longitudinally thereof, the head comprising a work performing portion positioned away from the shank, a shank end receiving portion positioned toward the shank, a central open recess within said latter

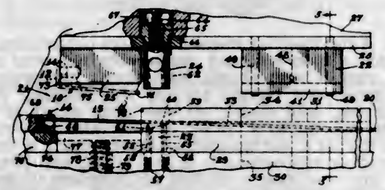
portion of such size as to receive therein the outer end of said shank, said recess having opposite wall portions, aligned slots extending through said wall portions, the slot in the outer end of said shank being in alignment with the slots in said walls when said shank and head are in assembled relation, a key insertable into the opening formed by said slots for locking said head on said shank, a through hole in said key for receiving the end of said locking pin when said key is in said opening, and means movable into engagement with the opposite end of said pin for releasably holding said pin in engagement with said key.

2,460,280
FILTER DISK SEGMENT
John H. V. Finney, Denver, Colo., assignor to Mining Process and Patent Company, Denver, Colo., a corporation of Delaware
Application October 22, 1943, Serial No. 507,256
7 Claims. (Cl. 210—201)



1. In a filter, a circular disk secured to a rotatable axial member, said disk being built up of similar aligned segments each including an effluent conduit member extending radially from the axial member, an imperforate support of impervious material disposed in the plane of the conduit and secured thereto, said conduit projecting inwardly beyond the support into the axial member, the support having a plurality of straight parallel grooves formed therein substantially perpendicular to the conduit and communicating at one end only directly with perforations formed only through the trailing side of the conduit, the other end of the grooves being blocked to the passage of liquid and a filter medium enveloping the support and the portion of the conduit abutting the support.

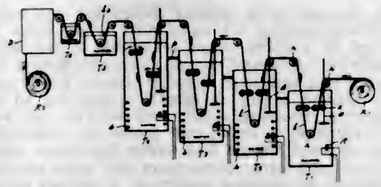
2,460,281
METHOD OF AND MEANS FOR MAKING METAL ARTICLES
Waldo L. Garberding, Chicago, Ill.
Application June 18, 1942, Serial No. 447,505
15 Claims. (Cl. 153—2)



1. The method of making a finger stop which comprises striking an integral spring-supporting tongue to extend angularly from one end portion of a relatively soft elongated sheet metal blank, bending said end portion into right-angular relation to the remainder of the blank and with the tongue overlying said remainder of the blank, and hardening the formed blank.

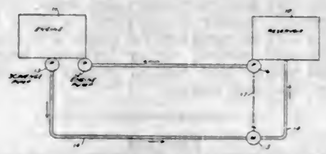
2. Apparatus for making articles from a sheet metal strip comprising, in combination, a base, means for holding the strip down against the base, a gauging abutment, means for forcing one side of the strip edgewise against the abutment with gradually increasing pressure, and means for trimming excess material from the opposite side of the strip while the strip is held against the abutment with maximum pressure.

2,460,282
REGENERATED CELLULOSE DIELECTRIC MATERIAL AND PROCESS OF PRODUCING THE SAME
Guy B. Gardner, Fairhaven, Mass., assignor, by mesne assignments, to Aerovox Corporation, New Bedford, Mass., a corporation of Massachusetts
Application July 22, 1941, Serial No. 403,551
7 Claims. (Cl. 18—48)



4. The process of treating commercial "Cellophane" sheets that are substantially free of waterproof coating and of air voids and contain residues of acid bath, alkaline solvent and glycerol softener to convert the same into a dielectric for electrostatic condensers, which consists in passing the same successively through a bath of mono-hydric alcohol miscible with water, through a series of distilled water baths and finally through a second bath of mono-hydric alcohol miscible with water and then drying the sheet, with resultant substantial elimination of the residues of the acid bath, alkaline solvent, and the glycerol softener otherwise present in the "Cellophane."

2,460,283
LUBRICATING SYSTEM FOR MOTORS
Fred P. Gooch, Swarthmore, Pa., assignor to The Sharples Corporation, a corporation of Delaware
Application May 16, 1946, Serial No. 670,246
3 Claims. (Cl. 184—6)



1. In a circulating lubricating system for engines, the combination comprising a lubricant reservoir, an engine, an engine pump for impelling lubricant under pressure to the engine bearings, a second pump for impelling lubricant from the engine to the reservoir, an hydraulic-type motor mounted in the line of flow of said lubricant from said second pump to said reservoir, a booster pump for impelling lubricant from said reservoir to said engine pump, and an operating connection between said hydraulic-type motor and said booster pump to drive said booster pump by energy derived by said hydraulic-type motor from passage of lubricant from said second pump to said reservoir.

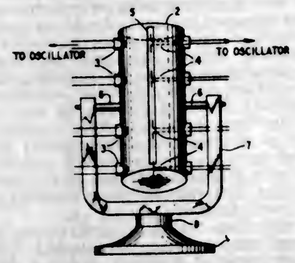
2,460,284
TOBACCO COMPOSITION AND METHOD OF MAKING IT
William J. Hale, Midland, Mich., assignor to The National Agrol Company, Inc., Washington, D. C., a corporation of Delaware
No Drawing. Application August 1, 1944, Serial No. 547,627
6 Claims. (Cl. 131—17)

2. An article of manufacture comprising cured tobacco having therein a uniform dispersion of solubilized chlorophyll-carotenoids in the proportion of not more than substantially 3% on the dry weight of the tobacco.

2,460,285
TOBACCO PRODUCTS AND METHOD OF MAKING THEM
William J. Hale, Midland, Mich., assignor to The National Agrol Company, Inc., Washington, D. C., a corporation of Delaware
No Drawing. Application August 1, 1944, Serial No. 547,628
8 Claims. (Cl. 131—15)

5. As an article of manufacture thin cellulosic sheets for cigarette paper, in which is intimately incorporated solubilized chlorophyll in an amount sufficient to induce the oxidation of aldehydic and other irritating vapors arising from the partial combustion of said paper during the course of the passage of said vapors over the chlorophyllized paper, the chlorophyll being utilized in an amount not more than substantially 3% on the dry weight of the paper.

2,460,286
RADIATING ELECTROMAGNETIC RESONATOR
William W. Hansen and Russell H. Varian, Stanford University, Calif., assignors to The Board of Trustees of the Leland Stanford Junior University, Stanford University, Calif., a corporation of California
Original application January 17, 1938, Serial No. 185,382, now Patent No. 2,415,094, dated February 4, 1947. Divided and this application November 13, 1940, Serial No. 365,450
10 Claims. (Cl. 250—33.63)

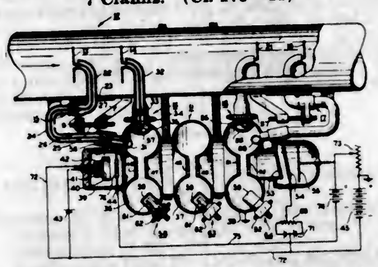


4. A high frequency antenna having a fan-shaped directivity pattern comprising a hollow conducting enclosed resonator adapted to contain standing electromagnetic waves therein resonant at a natural frequency thereof, electromagnetic coupling means within said resonator for coupling to said standing electromagnetic waves, said resonator having a major axis of a length materially longer than the wavelength in free space of said standing waves, said coupling means being relatively short compared to the length of said major axis, said resonator being apertured along said major axis to provide an electromagnetic wave translating area for translating waves between the interior and exterior of said resonator, said area being relatively small compared to the total wave-reflecting area within said resonator.

2,460,287
RADIATING ELECTROMAGNETIC RESONATOR
William W. Hansen, Garden City, and Russell H. Varian, Wantagh, N. Y., assignors to The Board of Trustees of the Leland Stanford Junior University, Stanford University, Calif., a corporate body of California
Original application January 17, 1938, Serial No. 185,382. Divided and this application November 5, 1942, Serial No. 464,614
9 Claims. (Cl. 250—33.63)

1. A columnar radiator of electromagnetic energy consisting of an enclosed prismal hollow conductor having in one end face apertures of dimensions comprising but a fraction of a wavelength of the radiated electromagnetic energy, said apertures being distributed over an area greater in extent than a wavelength, and means for producing within the conductor electromagnetic waves whose electric vector is parallel to the face containing said apertures.

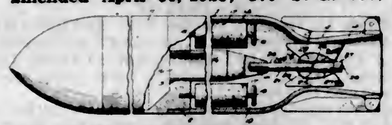
2,460,288
RESONATOR APPARATUS
William W. Hansen and Russell H. Varian, Garden City, N. Y., assignors to The Board of Trustees of the Leland Stanford Junior University, Stanford University, Calif., a legal entity of California
Original application August 24, 1939, Serial No. 291,652. Divided and this application December 6, 1943, Serial No. 513,002
7 Claims. (Cl. 178—44)



4. In signalling apparatus of the type embodying a single continuous high frequency energy conductor for conveying electromagnetic wave signals, the combination comprising an

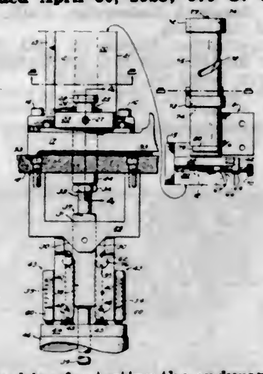
input resonator, an output resonator, means for producing an electron stream in energy-exchanging relation to both said resonators and means coupling said resonators to said conductor at respectively different points thereof, whereby said resonators and stream-producing means may serve to amplify energy flowing along said conductor.

2,460,289
ROCKET PROJECTILE
Clarence N. Hickman, Jackson Heights, N. Y., assignor to the United States of America as represented by the Secretary of War
Application March 16, 1945, Serial No. 583,140
9 Claims. (Cl. 102—49)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In combination, a rocket motor chamber adapted to contain a propellent material combustible to generate a propellent fluid under pressure, said chamber having a constricted exit orifice communicating with an outwardly flaring passage, a generally conical member supported within said constriction to form an annular jet of increasing cross-sectional area away from said chamber, and non-oscillatory, energy absorbing means opposing movement of said member by said fluid pressure in a direction to increase the discharge area of said annular jet, whereby said member will be displaced within said constriction only when the force of the propellent fluid on said member exceeds the opposing force of said non-oscillatory means.

2,460,290
CARTRIDGE EXTRACTOR TESTING MACHINE
Normand P. Holcomb, Warehouse Point, Conn., assignor to the United States of America as represented by the Secretary of War
Application February 24, 1947, Serial No. 730,577
12 Claims. (Cl. 73—167)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

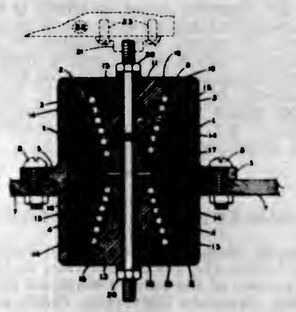


1. A machine for testing the endurance of firearm cartridge case extractors, comprising, means for holding a firearm bolt having an extractor assembled thereto, an adapter shaped to simulate a firearm cartridge case, said adapter arranged to reciprocate vertically and be engaged by said extractor on the upward stroke for an interval of time, a weight depending from said bolt holding means and arranged to be pulled upwardly along with said firearm bolt and extractor, means for releasing said weight after movement thereof has begun, and means for disengaging the extractor from said adapter.

2,460,291
PROCESS FOR PREPARATION OF TERPENE ALCOHOLS
Madison Hunt, Claymont, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 2, 1944, Serial No. 552,566
11 Claims. (Cl. 260—631.5)

1. A process for the preparation of terpene alcohols having a plurality of C_5H_8 units in the molecule which comprises treating isoprene at 25° C. for six hours with one and one-half times its weight of dichloroacetic acid.

2,460,292
VIBRATION INSULATING MOUNTING
Nicholas Ivanovic, Philadelphia, Pa.
Application August 1, 1945, Serial No. 608,341
14 Claims. (Cl. 248—358)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

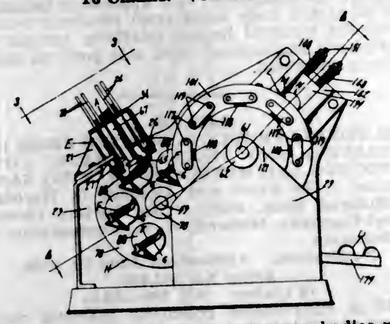


1. A vibration insulator comprising an annular fixed support structure having interiorly thereof an annular resilient member provided with angularly disposed annular surfaces extending in respectively opposite directions outwardly endwise of said fixed support structure, a plurality of non-resilient race members secured lengthwise of the angularly disposed surfaces of said resilient member, a floating support assembly disposed substantially coaxial within the said annular fixed support structure and having angularly disposed annular surfaces correspondingly associated with said angularly disposed surfaces of said annular resilient member of the said fixed support structure, and a plurality of non-resilient elements interposed between and in rolling contact with the angularly disposed surfaces of the float support and the non-resilient race members of the fixed support structure.

11. A vibration insulator comprising an annular fixed support structure having interiorly thereof an annular resilient member provided with angularly disposed annular surfaces extending in respectively opposite directions outwardly endwise of said fixed support structure, a plurality

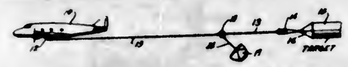
of non-resilient race members secured lengthwise of the angularly disposed surfaces of the said resilient member in substantially contiguous independent relation with respect to one another to provide substantially continuous non-resilient angular surfaces circumferentially of the angularly disposed surfaces of said resilient member, a floating support assembly disposed substantially coaxial within said annular fixed support structure and including members providing angularly disposed annular surfaces correspondingly associated with said angularly disposed surfaces provided by said non-resilient race members fixed to the angularly disposed surfaces of said resilient member, a plurality of non-resilient elements interposed between and in both lengthwise and circumferential rolling contact with the angularly disposed surfaces provided by the members of the floating support assembly and the non-resilient race members of the fixed support structure, a spacer sleeve having openings receiving said non-resilient elements and operable to maintain the same in predetermined spaced relation with respect to one another both lengthwise and circumferentially of the fixed and floating supports, and means to vary the spacing between the angularly surfaced members of the floating support assembly in an axial direction to vary a static compression exerted thereby through said non-resilient elements and race members upon the annular resilient member of the fixed support structure.

2,460,293
REFORMING MACHINE
Samuel S. Jacobs, San Mateo, and Howard B. Peterson, San Francisco, Calif., assignors to American Can Company, New York, N. Y., a corporation of New Jersey
Application January 3, 1946, Serial No. 638,854
16 Claims. (Cl. 153—32)



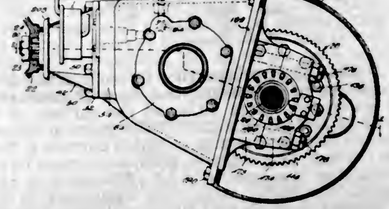
2. In a machine for reforming can bodies provided with relatively flat side parts joined by sharply curved connecting eyes, the combination of spreader devices for partially separating the side parts of a can body to initially open the body, a rotatable transfer turret disposed adjacent said spreader devices, means on said turret for receiving an opened can body from said spreader devices and for holding it in predetermined position during the rotation of said turret, a mandrel movable into position adjacent said transfer means, a body shifting device for transferring the initially opened body onto said mandrel, ironing elements engageable with the can body on said mandrel, and means for producing relative movement between said mandrel and said ironing elements for ironing out the eyes of the body to reform the body to a desired shape.

2,460,294
TARGET EXCHANGER
Le Roy S. Jessen, Dayton, Ohio
Application June 24, 1944, Serial No. 541,979
5 Claims. (Cl. 273—105.3)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In combination, a tow cable having one end adapted to be secured to an airplane, a terminal member secured to the other end of said cable, an anvil on the forward end of said terminal member, a tow target, a target lead cable secured to the tow target and being connected with said terminal member by extending transversely across the forward face of said anvil, and rearwardly directed cutting means mounted on and movable rearwardly along the tow cable and engageable with the forward face of said anvil to sever the lead cable where it extends transversely across said anvil and release said target.

2,460,295
DRIVE AXLE
Beverly W. Keese, Oshkosh, Wis., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a corporation of Ohio
Application March 11, 1944, Serial No. 526,044
4 Claims. (Cl. 74—327)



1. In a drive axle, an axle housing, a pair of axle shafts rotatably mounted in said axle housing, an auxiliary housing secured to said axle housing, a countershaft in said auxiliary housing parallel to and above said axle shafts, gear means and shiftable clutch means for transmitting power at different speed ratios from said countershaft to said axle shafts, the axis of said countershaft being displaced from a vertical plane containing the axis of said axle shafts, an engine driven shaft perpendicular to said axle shafts rotatably mounted in said auxiliary housing at a higher level than said countershaft, and gear means comprising meshed hypoid bevel gears for transmitting power from said driven shaft to said countershaft.

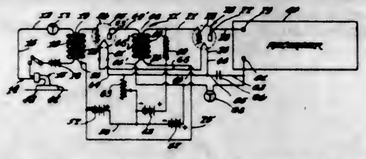
2,460,296
MECHANISM FOR FORMING VENTED CAN END SEAMS
William F. Kinney, Maywood, Ill., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application June 27, 1946, Serial No. 679,830
3 Claims. (Cl. 113—19)

1. In a mechanism for securing a flanged end closure member to a flanged container body in a vented double seam end joint adapted to be sub-

sequently soldered, the combination of a chuck insertable into an end closure member assembled with a container body, said chuck having sharp cornered recesses extending transversely across its seam engaging peripheral surface, and a smooth-surfaced seaming roller adjacent said

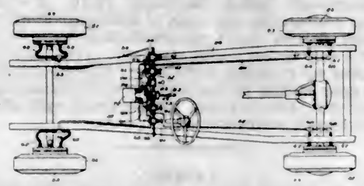
chuck for pressing the seam parts against said chuck surface to form the double seam, the chuck recesses having sufficient width that the action of the roller against the double seam at the recessed portions of the chuck will disturb the normal relative position of the inner layers of the seam to provide vent sections for subsequent soldering of the seam.

2,460,297
METHOD FOR GEOPHYSICAL PROSPECTING
Leicester F. Kitto, Glendale, Calif., assignor of one-half to Roderic Crandall, Roswell, N. Mex.
Application January 31, 1945, Serial No. 575,472
6 Claims. (Cl. 181—0.5)



1. Method of prospecting for subsurface accumulations of petroleum, the steps of detonating an explosive charge adjacent the surface of the earth, maintaining adjacent the point of detonation an electrical circuit in which current is flowing through non-metallic solid conductors lightly contacting one another and unshielded in relation to the earth, amplifying variations in flow of current through said circuit following immediately and within not exceeding 0.5 second.

2,460,298
WHEEL LOCK AND HYDRAULIC RELEASE
Joseph Kraus, Chicago, Ill.
Application July 10, 1947, Serial No. 759,957
3 Claims. (Cl. 301—9)



1. A wheel lock and hydraulic release comprising a plate having a plurality of bolts connected thereto at circumferentially spaced locations thereon, said bolts adapted to extend through a wheel plate, a wheel having recesses for receiving plates fixed to the bolts, said recesses being adapted when the wheel is rotated to one position to retain the wheel in locked engagement with the wheel plate and when rotated to an angular position adapted to permit the wheel to be removed from the bolts, and an actuating device adapted to apply pressure to the plates having the bolts to effect their outward movement, and spring means reacting between the plates to normally retain the bolts in locked engagement with the wheel recesses.

2,460,299
LIP ROUGE DISPENSER APPLICATOR
Ralph E. Kruck, Longmeadow, Mass.
Application April 27, 1946, Serial No. 665,435
7 Claims. (Cl. 132—88.7)

1. A device for dispensing and applying lip rouge comprising in combination, a container for lip rouge, an applicator at one end of the container having a longitudinal dispensing passageway therethrough, and means for forcing rouge in the container into and through the passageway of the applicator, said applicator including an elongated body made from relatively porous yieldable material having relatively non-porous peripheral longitudinal outer side portions and a porous outer end.

2,460,300
POLYMERIC PRODUCTS DERIVED FROM DIOLEFINS AND VINYL AROMATIC COMPOUNDS AND METHOD OF MAKING SAME
Walter J. Le Fevre and Kenneth G. Harding, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application June 29, 1944, Serial No. 542,818
18 Claims. (Cl. 260—86.5)

15. A vulcanizable polymeric material composed of a monovinyl aromatic compound of the benzene series having the vinyl radical attached to a carbon atom of the benzene nucleus, and a conjugated aliphatic diolefine, each in chemically combined form, the diolefine being in amount corresponding to between 37.5 and 94.5 mole per cent of the total amount of the diolefine and vinyl aromatic compound of which said product is composed, the polymeric product being one which is prepared by alternately emulsifying with water and polymerizing the monovinyl aromatic compound and the conjugated aliphatic diolefine, the compound last to be polymerized being added to the aqueous colloidal solution of the polymer formed in the preceding polymerization reaction, and in one such polymerization reaction the diolefine in amount corresponding to at least 37.5 mole per cent of the

polymerizable starting materials being polymerized in the absence of the monomeric vinyl aromatic compound and in the presence of hydrogen peroxide in amount corresponding to between 0.2 and 5 per cent of the weight of the diolefine, a ferric salt of an inorganic acid in amount such as to contain between 1 and 500 parts by weight of iron per million parts of the diolefine, and an inorganic acid in amount sufficient to give the emulsion a pH value between 1.5 and 3.

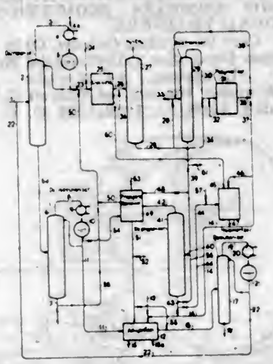
2,460,301
LUBRICATING OILS
Bert H. Lincoln, Ponca City, Okla., and Gordon D. Byrkit, Niagara Falls, N. Y., assignors, by mesne assignments, to The Lubrizol Development Corporation, a corporation of Delaware
No Drawing. Application March 30, 1945, Serial No. 585,806
12 Claims. (Cl. 252—49.9)

1. A lubricant comprising in combination a major proportion of an oil of lubricating viscosity and a minor proportion sufficient to stabilize the oil against oxidation of an oil-soluble halogen-containing organic phosphorus compound having the general formula R_n—N:P(Q)$_n$ where R is an organic radical containing a benzenoid ring structure; N is trivalent nitrogen; Q is a halogen radical, and n is a small whole number selected from the numerical group consisting of the numbers 1 and three.

2,460,302
HAND-PIECE CHUCK
Milton S. Lundsten, United States Navy
Application August 20, 1945, Serial No. 611,675
6 Claims. (Cl. 279—52)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

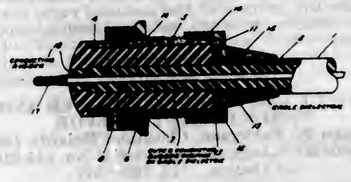
2. In a handpiece chuck, a housing, a collet-supporting splined rotatable shaft secured in said housing, an extensible headpiece detachably secured to said housing so that the outer surface of said headpiece is continuous with the outer surface of said housing, locking means slidably mounted on said splined shaft, resilient means for urging said locking means onto said splines so as to prevent rotation of said shaft with respect to said housing, a collet collar engaging the forward tip of said collet supporting shaft, means on said extensible headpiece for disengaging said shaft from its locked engagement with said housing, and further means on said extensible headpiece for positioning said collet collar onto or removing said collet collar from said shaft.

2,460,303
GASOLINE MANUFACTURE
Sumner H. McAllister, Lafayette, and John Anderson and Walter H. Peterson, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application January 29, 1942, Serial No. 428,656
13 Claims. (Cl. 260—683.4)



2. A process of producing motor fuel components from normally gaseous hydrocarbons which comprises cracking propane to produce a mixture of ethylene, propylene and unreacted propane, separating the ethylene from the propylene and propane, converting the separated ethylene substantially to a mixture of alpha and beta butylenes by contact with a metal of the eighth group of the periodic table at between 30° C. and 150° C. substantially isomerizing the alpha butylene content of said mixture to beta butylene, and alkylating an isoparaffin with the resulting beta butylene.

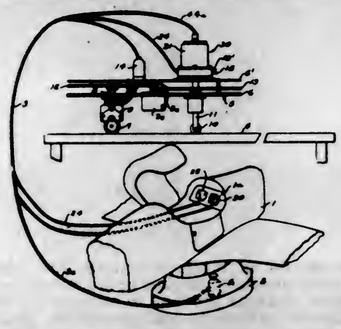
2,460,304
CONNECTOR
Kenneth McGee, Dayton, and Harold D. Vanderpool, Springfield, Ohio, assignors to the United States of America as represented by the Secretary of War
Application July 29, 1944, Serial No. 547,244
2 Claims. (Cl. 173—361)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In an electrical cable connector, a substantially cylindrical outer shell having an inner peripheral shoulder intermediate its length, the internal diameter of said shell being reduced forward of said shoulder, a removable compressible resilient dielectric body seated within said shell under compression by the shell wall throughout the length of the shell, said dielectric body closely fitting the internal wall of said shell and in manually yieldable locking engagement with the aforementioned shoulder, said di-

electric body being formed with a central longitudinal bore for slidably receiving the cable conductor, and means for releasably attaching the outer braid of said cable to said outer shell.

2,460,305
DEVICE FOR SIMULATING AUTOMATIC RADIO COMPASS INDICATIONS IN GROUND TRAINERS
Carl W. Muller, Osborn, Ohio
Application December 9, 1940, Serial No. 369,275
14 Claims. (Cl. 35—10)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

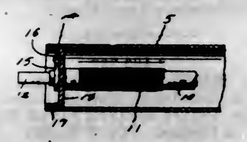


1. A device for aviation ground trainers for simulating the indications of a radio compass of the continuous bearing indicating type, comprising an indicator including a pointer and a reference dial, an electrical self-synchronous receiver for actuating said pointer and including two relatively angularly displaceable elements, a corresponding electrical self-synchronous transmitter including two rotatable elements, each electrically connected to a respective one of said receiver elements, means for rotatably positioning one of said transmitter elements in accordance with the instant heading of the associated ground trainer and means for rotatably positioning the other of said transmitter elements in accordance with the assumed position of said trainer relative to an assumed radio station point, relative rotation of said transmitter elements causing a corresponding angular displacement of said receiver elements to cause a displacement of the pointer of said indicator to continuously indicate the bearing of the assumed radio station point relative to the instant heading of the trainer.

2,460,306
TISSUE DISPENSING CONTAINER AND TISSUE PACKS THEREFOR
Herman W. Patterson, Cleveland Heights, Ohio
Application July 15, 1944, Serial No. 545,038
10 Claims. (Cl. 206—37)

7. As an article of manufacture: a pocketsized container for a package of interfolded tissue comprising a first major face portion having four edge faces each extending substantially at right angles to plane of the major face, a second major face portion having four edge faces three of which extend substantially at right angles to the plane of the major face and the fourth of which extends at an angle greater than 90 degrees to the plane of the major face, hinge means connecting said two portions together with the major faces extending substantially parallel to each other and the edges of the said three edge faces of the second major face portion substantially in engagement with and conforming to the edges of three of the said four edge faces of the first major portion for establishing three substantially closed side walls of said container, catch means connected to one of said side walls for displaceably holding said two major face portions together, the fourth edge face of said second major face portion lying outside and spaced from the corresponding edge of said first major face portion whereby a sheet of tissue may be drawn between them, and said corresponding edge extending from said first major face portion to a point close to said second major face portion for substantially closing the said container yet permitting withdrawal of sheets of tissue.

2,460,307
SHADE ROLLER
Elmer F. Pidgeon, Spiceland, Ind.
Application April 25, 1945, Serial No. 590,192
1 Claim. (Cl. 160—313)



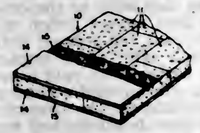
A shade roller comprising a roller shell, a shaft extending into the shell, a bracket engaging key at one end of the shaft, spring means between the shaft and the shell, a closure member for the shell at the keyed end of the shaft, said closure member being readily removable to permit access to the shaft and spring, said member being provided with peripheral threads, said shell being provided with internal threads to accommodate the first-mentioned threads.

2,460,308
DEVICE FOR SUPPORTING INFANTS WHILE BATHING
Victor Pribil, Floral Park, N. Y.
Application October 17, 1946, Serial No. 703,775
3 Claims. (Cl. 4—185)

1. An infant's support adapted for use in supporting an infant while bathing, comprising a frame consisting of a pair of straps disposed in spaced relationship, each strap comprising a lower section lying in a horizontal plane, a short connecting section at an obtuse angle to the lower section and an upper section longer than the lower section, inclined upwardly from the lower section and providing a flexible support,

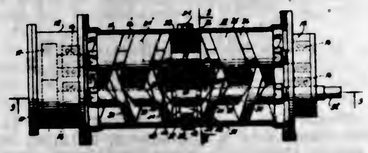
a cross bar connecting the lower sections to maintain them in fixed spaced position relative to each other, suction cups near the opposite ends of the lower sections, a body supporting apron extending between the upper section, detachably secured thereto and bridging the space therebetween to provide a support for the body of the infant, tapes extending from the opposite sides of said body supporting apron near the upper end thereof and adapted to be secured about the body of the infant beneath the arms, a member extending from the lower end of said apron adapted to be folded between the legs of an infant and having tapes thereon and tapes extending from the opposite sides of the apron near the lower end thereof and adapted to be secured to said tapes on said member to maintain the lower portion of the body of the infant on said apron.

2,460,309
PANEL STRUCTURAL UNIT
George M. Rapp, New Haven, Conn., assignor to John B. Pierce Foundation, New York, N. Y., a corporation of New York
Application November 19, 1942, Serial No. 466,123
5 Claims. (Cl. 154—45.9)



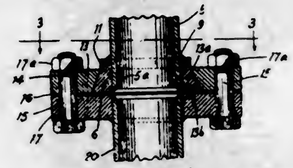
1. Structural sandwich panel material for use in building construction, comprising in combination a low-density core of panel formation composed of a plurality of highly porous, frangible blocks arranged side-by-side and end-to-end and firmly united by a bonding agent; and dense, rigid sheet surfacing possessing high tensile strength and high modulus of elasticity bonded to opposite panel faces of said core, substantially coextensively therewith so that the sandwich panel material exists as a continuously integrated and unitary structural entity in which both core and surfacings are adapted to participate and interact in carrying loads.

2,460,310
SCREW PUMP
Gilbert Rathman, Union, N. J., assignor to Roots-Connersville Blower Corporation, Connersville, Ind., a corporation of Indiana
Application November 20, 1943, Serial No. 511,083
9 Claims. (Cl. 230—143)



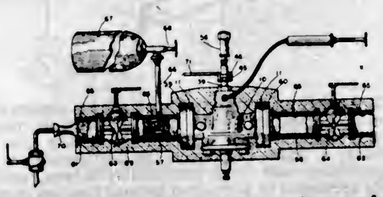
9. In a device of the class described, the combination of a casing provided with an inlet port and an outlet port, a pair of intermeshing screws fitted for free rotary movement in the casing and coacting to advance a fluid from the inlet port through the casing and out through the outlet port, means for driving one screw from the other at a one-to-one ratio, a partition fixed in the casing against movement axially of the screws and against which the discharge ends of both screws abut, the opposite or intake ends of the screws being wide open to the inlet port, said partition forming a barrier to close completely the discharge end of one of the screws and means controlled by the rotation of the other screw for opening communication between the discharge end of the said other screw and the outlet port once for each rotation of the screws.

2,460,311
TWO-PIECE WELDING PIPE FLANGE
Neil J. Riley, Lyndhurst, N. J.
Application August 11, 1945, Serial No. 610,286
1 Claim. (Cl. 285—1.0)



A pipe coupling, comprising in combination, a pair of pipe ends, a flange ring mounted concentrically on one of the pipe ends and projecting outwardly thereof and welded directly to the pipe end and also welded to the side of the pipe on opposite sides of said flange ring, a conical collar mounted concentrically on the other pipe end and projecting outwardly thereof and welded directly to the end engaged on one side of the conical collar and welded directly to the engaged pipe end on the other side of the flange collar, the wider end of said conical collar being disposed outwardly of the engaged pipe end, a flange forming ring having a conical bore having a matching fit with the conical collar, said first-named flange ring and said flange forming ring having registerable bolt holes, a gasket disposed between the outer end of the first-named flange ring and the outer end of the flange forming ring and engaged by both said rings, bolts extending through the bolt holes and nuts threaded on the bolts to clamp said rings against the gasket and to hold the confronting ends of said first-named flange ring and the conical collar under pressure engagement with the opposite faces of the gasket.

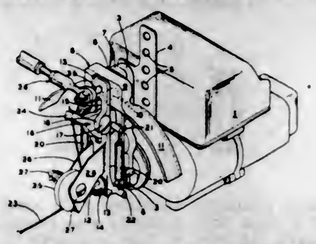
2,460,312
METHOD AND APPARATUS FOR LAPPING VALVES
George F. Scherer, San Francisco, Calif., assignor to Rockwell Manufacturing Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application February 6, 1945, Serial No. 576,391
14 Claims. (Cl. 51—281)



4. The method of lapping the seating surfaces of valves which comprises first, assembling the valve closure member on its seat in the valve body, then heating the valve member and the body to approximately the working temperature

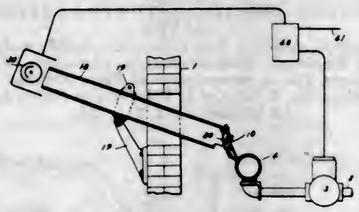
of the valve, and then introducing under pressure an abrasive lapping compound over the entire area of the seating surfaces while relatively moving said closure member and valve body to eliminate mechanical distortions thereof incident to assembly and heating of the valve parts.

2,460,313
CLUTCH DEVICE
Moulton B. Taylor, United States Navy
Application August 8, 1945, Serial No. 609,702
12 Claims. (Cl. 74—469)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



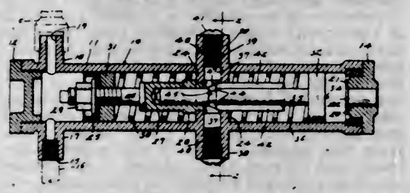
1. A clutch for servo-motors and the like having a shaft adapted to be rotatably driven thereby in opposite directions within the limits of an arc of predetermined length, a crank assembly fixedly mounted on said shaft for rotational movement therewith and extending radially of said shaft, a radial arm rotatably mounted on said crank assembly for rotational movement independently thereof about an axis disposed in coaxial relation with respect to the axis of said shaft, a latch member pivotally carried by said radial arm and arranged when pivoted in one direction to engage a slot in said crank assembly, and spring means directly connected to and normally tending to maintain said latch member free of engagement with said slot.

2,460,314
APPARATUS FOR SUPERVISING HEAT GENERATING MEANS
E. Craig Thomson, Boston, Mass., assignor to Combustion Control Corporation, Cambridge, Mass., a corporation of Massachusetts
Application March 15, 1944, Serial No. 526,637
5 Claims. (Cl. 158—117.1)



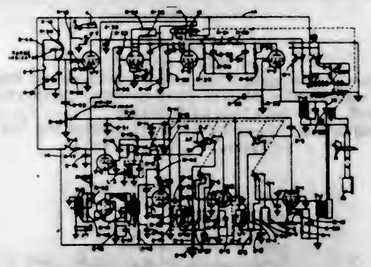
2. Apparatus for supervising a heat generating means, comprising said heat generating means which radiates light of a comparatively low intensity, a light responsive device arranged for supervising said heat generating means, and a body arranged to be heated by said heating means and adapted to radiate light of a comparatively high intensity when heated by said heating means, the said body comprising an incandescible member imbedded in a transparent heat conducting envelope located in said energy source.

2,460,315
TIRE PRESSURE ALARM
William Torrance, Calgary, Alberta, Canada
Application July 14, 1947, Serial No. 760,735
4 Claims. (Cl. 116—34)



1. A tire pressure alarm comprising a tubular body, a piston slidable in one end of said body, a tubular shaft carried by said piston and extending longitudinally of said body, said body formed at said one end with an air inlet opening for attachment to a tire, said shaft formed with a longitudinal slot therethrough at the end opposite from said piston, a spring-pressed retaining pin carried by said body radially thereof and extending through said slot, a second piston slidable in said body at the other end thereof, a rod on said second piston slidable in said tubular shaft, said rod formed with an annular recess in which said pin is engageable, means supporting a cartridge in said other end of said body, a firing pin on said second piston, spring means biasing said pistons toward their respective ends of said housing, and correlated cam means carried by said shaft and said retaining pin for disengaging said pin from said rod upon sliding of said shaft, whereupon said cartridge may be fired upon decrease of tire pressure.

2,460,316
ECHO RANGING AND LISTENING GEAR
Horace M. Trent and Thomas F. Jones, Alexandria, Va.
Application July 31, 1944, Serial No. 547,470
9 Claims. (Cl. 177—386)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



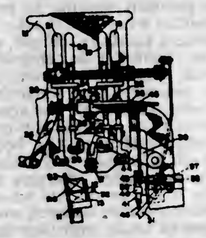
1. Means for measuring the distance to an object comprising a transducer, a tuned exciting circuit therefor, a plurality of electron tubes normally in a non-conducting state and connected in multiple to said transducer exciting circuit whereby flow of current through either tube will energize said exciting circuit, pulse control means alternately rendering said tubes conducting in rapid succession to produce a series of successive pulses, means determining the number of pulses in a group, means intermittently operating the pulse number-determining means, means varying the frequency of said intermittent operation, receiving means connected with the transducer for receiving echoes of said pulses, and means inhibiting reception of both incident and echo pulses during excitation of the transducer.

2,460,317
EYELASH CURLER
William R. Tuttle and William J. Beldue, Rochester, N. Y., assignors to The Kurlash Company, Inc., Rochester, N. Y., a corporation of New York
Application March 18, 1946, Serial No. 655,152
3 Claims. (Cl. 132—32)

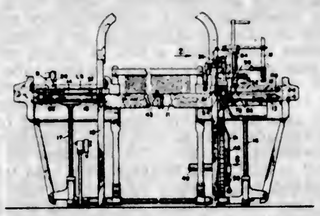
2. In an eyelash curling device, a stationary handle having a yoke portion, a fixed jaw mounted at the end of the yoke, a channel-shaped lever pivoted in the stationary handle, a movable handle pivoted in the stationary handle and between the walls of the lever, said movable handle being provided with a part fitting between the walls of the lever, said movable handle being capable of pivotal movement to enable it to be swung to a position within the yoke, and co-operating locking elements on the lever and the movable handle whereby the part of the movable handle which fits within the lever can be locked therein and the movable handle thus arranged to constitute a rigid extension of the lever, a movable jaw, and a connection between said movable jaw and the lever, the movable handle being capable of movement to its folded position within the yoke only when the movable jaw is located adjacent to the fixed jaw.

2,460,318
WEFT REPLENISHING PICK AND PICK LOOM
Walter H. Wakefield, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application November 2, 1946, Serial No. 707,362
6 Claims. (Cl. 139—232)

1. In a weft replenishing pick and pick loom operating in a replenishing sequence of four successive picks and having a lay with a gang of shifting shuttle boxes at each end thereof, the lay having a weft detector thereon adjacent to one of said gangs to detect weft in a shuttle in said one gang during the first pick of the sequence and the loom having a reserve bobbin magazine adjacent to the other gang provided with a bobbin releaser which when reciprocated releases a reserve bobbin for transfer and is effective during the fourth pick of the sequence to set normally inactive transfer mechanism for subsequent operation by the lay to transfer the released bobbin into the shuttle when the latter is in said other gang, the lay during each pick of the four-pick sequence being successively in bottom, front, top and back center positions, said one gang moving the shuttle into detecting position relatively to the detector when the lay is in the top center position thereof during the first pick of the sequence and holding the shuttle in detecting position until after the third pick of the sequence starts, actuator means for the bobbin releaser, operating means for the actuator means giving the latter a succession of motions in each of two successive two-pick cycles, each succession of motions beginning when the lay is substantially in the bottom center position thereof at the beginning of the first and third picks of the sequence, said operating means causing the actuator means to move in one direction from its neutral position prior to arrival of the lay at the top center position thereof during the first and third picks of the sequence and return to neutral position, and then move in the opposite direction and return to neutral position, a controller normally in noncontrolling position with respect to the actuator, the detector indicating weft exhaustion as long as the shuttle is in detecting position, provided the shuttle is depleted of weft, and means effective to hold the controller in controlling position with respect to the actuator only so long as the detector indicates exhaustion, the controller and actuator means cooperating at the beginning of the second two-pick cycle when the actuator means moves in said one direction to initiate a reciprocation of the bobbin releaser which is completed during the fourth pick of the sequence to effect release of a bobbin from the magazine and setting of the transfer mechanism for operation by the lay.



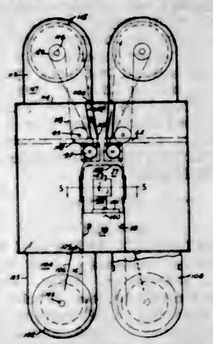
2,460,319
AUTOMATIC PICK AND PICK LOOM
Carl P. Bergstrom, Millbury, and Archibald J. Herard, Jr., Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application November 2, 1946, Serial No. 707,426
7 Claims. (Cl. 139—232)



1. In a weft replenishing pick and pick loom operating with shifting shuttle boxes at each end thereof and in which a shuttle moves to weft detecting position on one side of the loom at the beginning of a four-pick sequence and

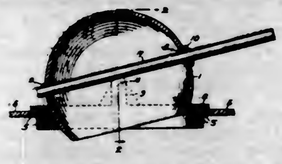
is in transfer position on the opposite side of the loom during the last pick of the sequence, the shuttle moving away from detecting position during the third pick of the sequence, a reserve bobbin magazine at said opposite side of the loom, bobbin release means on said magazine which when reciprocated releases a reserve bobbin for transfer into the shuttle when the latter is in transfer position, actuator means for the bobbin release means operating in a two-pick cycle, a controller for the actuator normally in non-controlling position but moved to controlling position if the shuttle when in detecting position indicates weft exhaustion, said controller if in controlling position tending to move to non-controlling position when the shuttle moves away from the detecting position thereof, a lock effective to hold the controller in controlling position upon movement thereof to controlling position, said controller when held in controlling position by said lock cooperating with the actuator means during the latter part of said four-pick sequence to effect a reciprocation of the bobbin release means to release a bobbin from the magazine, transfer means thereafter effective to move the released bobbin into the shuttle when the latter is in the transfer position thereof, and unlocking means operative to cause said lock to unlock the controller during the latter part of said four-pick sequence, whereupon the controller returns to non-controlling position.

2,460,320
MOTION-PICTURE COMBINATION
Carl Waldeyer, San Francisco, Calif.
Application September 11, 1944, Serial No. 553,629
18 Claims. (Cl. 88—16.6)



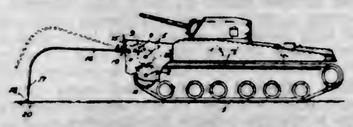
1. Means for photographing views on a plurality of alternately and intermittently moving films and means for actuating said films, the combination comprising a bed, a casing with a front orifice adapted to contain a lens tube with lens and shutter inserted therein, said shutter adapted to have a trigger attached thereto and releasing and interposing means adapted to admit and exclude light to said films, respectively; a reciprocating rod movably disposed on said front wall in operative contact with said trigger and extending to the top of said wall, a cam, with opposed lugs thereon fixed on a cross shaft located in bearings on top of said casing, the respective lugs on said cam caused to be in operative contact, alternately, with the said rod, the contact of the said rod with the said shutter trigger causing the said lens shutter to open for a predetermined exposure period for regulating the admission of light from objects in front of said lens tube to said casing; means, including actuating means for transversely deflecting light, alternately, to said respective films, said deflecting means adapted to be in axial alinement with said lens tube and said exposure-positioned films, and adapted to operate in synchronous accord with said films, respectively, and said respective releasing and interposing means and said reciprocating member comprising a prism or reflector mounted on a circular surface so as to be capable of oscillating about an axis; vertical channel guides on said respective side walls of said casing adapted for the threading of films through said device and adapted to exclude light from said films except at exposure openings respectively provided therein; focusing apertures in axial alinement with said exposure openings and adapted to be fitted with closures when not in use; whereby objects in front of said lens tube by cooperative agreement between the said films and the said film shutters and the said lens shutter and the said oscillating reflecting device are photographed on said films in alternate sequence, thereby adapting the images of the pictures on said films, after processing, to be alternately projected on a screen and the said films to be threaded in a suitable projection device.

2,460,321
APPARATUS FOR LAUNCHING ROCKETS FROM TURRETS
Brooks Walker, Piedmont, Calif.
Application November 12, 1942, Serial No. 465,814
7 Claims. (Cl. 89—1.7)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. The combination with a turret which is rotatable about a vertical axis, of a rocket tube passing through the turret at two openings, supported at both of said openings and longitudinally moveable therethrough with its muzzle and breech projecting outside of the turret through said openings.

2,460,322
MINE EXPLODER
Brooks Walker, Piedmont, Calif.
Application May 26, 1945, Serial No. 596,071
2 Claims. (Cl. 89—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



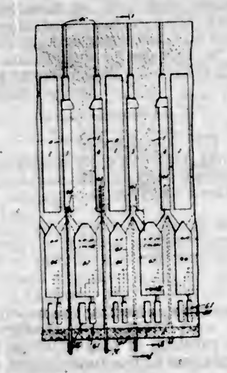
1. In combination with a vehicle having a driven tractive member at each side, mine exploder apparatus comprising a series of resilient tamping arms extending forwardly from the front of said vehicle and spaced transversely across the latter, each of said arms being pivotally supported at its rearward portion on a horizontal axis by said front of said vehicle for vertical pivotal movement, each of said arms having a forward portion bent downwardly at a substantial angle to the remainder of the respective arm, said forward portion terminating in a downwardly extending free end engageable in a lowered position with the ground and simultaneously yieldable rearwardly on forward progression of the vehicle, means to accelerate downward movement of said forward portion of each of said arms when released from an elevated position in said vertical pivotal movement, and mechanism operably providing said vertical pivotal movement of said arms, said mechanism including a rotatable cam engaging said rearward portion of each of said arms to alternately lift said forward portion thereof to said elevated position and release it therefrom, whereby upon said release said downwardly extending free end will impact the ground with mine detonating force, and operating means connecting said cam with said driven tractive member at each side of said vehicle.

2,460,323
MECHANICAL PENCIL
Charles E. Wehn, Alameda, Calif.
Application July 6, 1946, Serial No. 681,644
6 Claims. (Cl. 120—18)

1. In a pencil having a barrel section and a point section at its forward end with a lead-receiving passage formed therein, an anchor member secured in the rear end of the barrel, a nut within the barrel, a tubular extension on the nut extending through the anchor member and being rotatable therein, a threaded rod extending through the nut and into the tubular extension, cooperating means on said threaded rod and the barrel securing the threaded rod against rotation with relation to the barrel, a pusher rod forming an extension of the threaded rod and extending into the lead-receiving passage, and means fixed on the outer end of the tubular extension to rotate the tubular extension and the nut to advance or retract the threaded rod and the pusher rod.

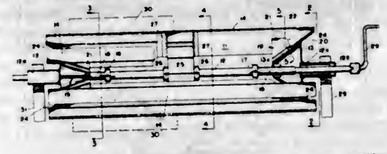
2,460,324
COMBINATION VERTICAL FLUED COKE-OVEN BATTERY ADAPTED TO COKE SWELLING COALS
Frans Wethly, Manhasset, N. Y., assignor to Allied Chemical & Dye Corporation, a corporation of New York
Application March 28, 1945, Serial No. 585,236
7 Claims. (Cl. 202—143)

1. A coke oven battery adapted to coke low volatile coals comprising, in combination, a plurality of horizontal coking chambers, each pair of adjacent coking chambers being separated by a heating wall, each heating wall comprising a heat transmitting wall on each side of said heating wall, two rows of vertical flues and a massive refractory wall extending crosswise of the battery between said two rows of flues, said massive wall being devoid of openings and of a thickness at least four times the thickness of said heat transmitting wall, a plurality of regenerators located at a level beneath said coking chambers and heating walls and extending crosswise of said battery, alternate regenerators lengthwise of the battery being located directly beneath said coking chambers and the intervening regenerators being located directly beneath said massive walls,



said regenerators communicating directly with the bases of said vertical flues for supplying air to said flues to support combustion of fuel gas fed to said flues.

2,460,325
EXPANSIBLE MANDREL
Mercer L. Whitson, Norfolk, and Harry H. Harcum, Portsmouth, Va.
Application June 23, 1945, Serial No. 601,275
5 Claims. (Cl. 29—284)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

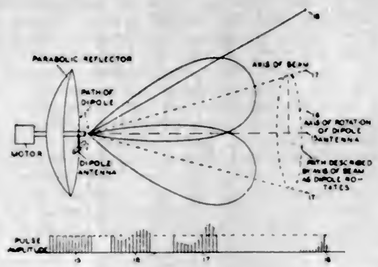


1. A work support comprising a plurality of radially movable members substantially defining an elongated cylinder, a shaft, means comprising a plurality of truncated cones interposed between said members and said shaft adapted to move axially along said shaft when said shaft is rotated relative to said members to insure radial movement of said members toward or away from said shaft, and guide means associated with said shaft comprising a spool associated with and adapted to be adjusted axially of said shaft for restricting movement of said members in a radial direction with respect to said shaft.

2,460,326
TRANSMITTER
Clarence M. Woodruff, Dayton, Ohio
Application February 17, 1945, Serial No. 578,422
3 Claims. (Cl. 343—100)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

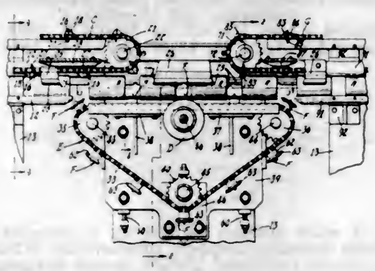
1. Testing means comprising, a transmitter, stationary electronic means in said transmitter selectively adjustable to produce a modulation wave having an intensity fluctuation reproducing the fluctuation of field intensity at a stationary point in the field of a lobe of radiation rotating

about a non-axial ray of the lobe, means amplitude-modulating a train of pulsed oscillations in accordance with the modulation wave, a rotating



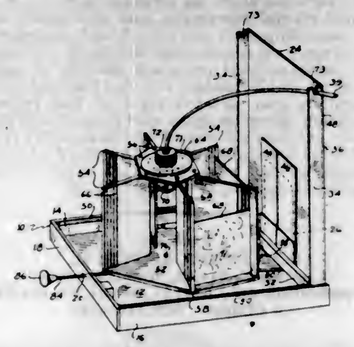
polarized antenna radiating the modulated pulsed oscillations, and means for synchronizing and phasing the rotation of said antenna with respect to the fluctuations of the modulation wave.

2,460,327
SOLDER WIPER MECHANISM WITH SHIELDING MEANS
Custis S. Woolford, South Orange, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application July 7, 1947, Serial No. 759,420
6 Claims. (Cl. 113—97)



1. A solder wiping mechanism for soldering machines, comprising means for supporting in spaced relation moving open end can bodies having freshly soldered side seams with said seams exposed along a longitudinal line, a wiper located adjacent said supporting means for wiping said soldered side means, a feed-in conveyor for feeding said can bodies longitudinally into said supporting means, a discharge conveyor for discharging said can bodies longitudinally from said supporting means, a shielding conveyor longitudinally disposed between said feed-in conveyor and said discharge conveyor, a plurality of shielding paddles carried on said shielding conveyor and interposable between said spaced bodies as received from said feed-in conveyor and for propelling them along said support and past said wiper and for simultaneously completely shielding the open ends of the said passing bodies against the entrance of solder into their interiors, said paddles delivering the wiped bodies to said discharge conveyor, and means on said feed-in conveyor and on said discharge conveyor for temporarily increasing the space between adjacent bodies during their transfer from one conveyor to the other to provide for the entrance and withdrawal of a paddle between its associated bodies.

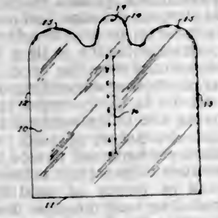
2,460,328
MINIATURE ROTATABLE STAGE OR EXHIBITING DEVICE
Graeme E. Young, Hollywood, Calif.
Application April 8, 1946, Serial No. 660,488
2 Claims. (Cl. 46—69)



1. A stage assembly including: a platform adapted for rotation, having upper and lower faces, a series of annularly disposed dependent lugs on said lower face, and a plurality of radially disposed display sections on said upper face; a base; a support for said platform slidably mounted on said base; a vertical shaft disposed between said support and said platform and adapted to support the latter for rotation; an actuating rod attached at one end to said support; guide elements disposed on said base on either side of said support to provide a guideway therefor; a front panel vertically mounted on said base and having a viewing aperture cut out therefrom; a wall adjacent said base and laterally spaced from the inner face of said front panel to define a channel therebetween; a pair of runners adapted to move toward and away from each other disposed in said channel; a vertical shutter carried by each runner, the two shutters being adapted jointly to close said viewing aperture when said runners are brought together in the channel adjacent said aperture; operative means connecting each runner with said slidable platform support whereby said runners are moved apart when said support is slid forward; and lever means operable by said sliding support and adapted to effect rotation of said platform by contact with said dependent lugs.

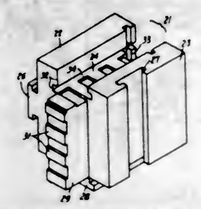
2,460,329
NURSING UNIT
Adda M. Allen, Arlington, Va., and Margaret L. Van Evera, Washington, D. C., assignors to Disposable Bottle Corp., Wilmington, Del., a corporation of Delaware
Application March 25, 1946, Serial No. 656,858
11 Claims. (Cl. 215—11)

1. A disposable nursing unit for feeding liquids to infants, said unit comprising a completely flexible container of sheet material, said container being flat before said liquids are placed therein, one edge of said container being open, the opposite edge of said container being of wavy contour forming a projecting nipple portion disposed between outwardly protruding curved shoulder portions, the shape of said nipple and



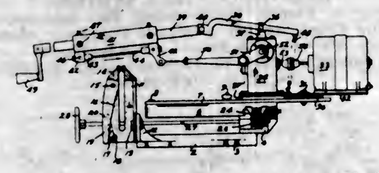
shoulder portions being such as to simulate a mother's nipple and breast during feeding.

2,460,330
BUILDING BLOCK
Frank P. Baccaro, San Francisco, Calif.
Application May 8, 1944, Serial No. 534,559
3 Claims. (Cl. 72—38)



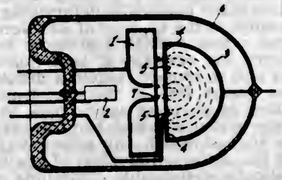
1. A building block comprising an essentially hexahedral body having tongues upon one of each pair of opposite sides and grooves upon the sides opposite said tongues, two of the tongues being T-shaped and the third having lugs spaced along the outer edge thereof, the grooves being complementary to the T-shaped tongues and two of the grooves having recesses in the backs thereof complementary to the lugs of the third tongue whereby the tongues of one block are interchangeably engageable with grooves of another block for locking the blocks against relative movement in at least two of the directions defined by their respective lengths, widths and heights, including the directions which are normal to the surfaces on which the T-shaped tongues are positioned.

2,460,331
SAW-FILING MACHINE
Elmar R. Beverleigh, Oakland, Calif., assignor to Albert W. Shaw, San Francisco, Calif.
Application December 4, 1945, Serial No. 632,703
4 Claims. (Cl. 76—33)



1. A saw filing machine comprising a bed plate, a carriage assembly slidably mounted on the bed plate and including a floor plate pivotally adjustable on the carriage about a vertical axis and a base plate mounted on the floor plate for limited free movement thereon about a vertical axis, means on the bed plate for holding a saw, an arm pivotally mounted on the base plate for free movement about a horizontal axis and extending transversely of the saw, a carrier for mounting a file slidably arranged on the arm, a shaft journaled on the base plate and connected to reciprocate the carrier, means for rotating the shaft, and means on the arm by which downward and lateral pressures of the file on the saw may be manually controlled during movement of the file carrier.

2,460,332
ELECTRON DISCHARGE DEVICE
Michael Bowman-Manifold, Ealing, London, England, assignor to Electric and Musical Industries Ltd.
Application May 29, 1944, Serial No. 537,856
In Great Britain March 29, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires March 29, 1961
4 Claims. (Cl. 250—27.5)



1. An electron discharge device including a cavity resonator having a passageway extending therethrough, and a gap surrounding said passageway, means adjacent said resonator for directing a stream of electrons through said passageway, and an electrode on the opposite side of said resonator and of concave form with the concavity facing the hollow resonator for providing reflecting equi-potential surfaces of concave form with the resonator, and an electrode positioned adjacent said resonator and having an aperture registering with the passageway through said resonator, said last electrode extending across the end of the reflecting electrode, and being adapted to be maintained at a potential intermediate that of the reflecting electrode and the resonator.

2,460,333
PREPARATION OF DEHYDROGENATION CATALYSTS
John George Mackay Bremner, Peter William Reynolds, and Arthur William Charles Taylor, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Original application June 18, 1941, Serial No. 398,680, now Patent No. 2,382,394, August 14, 1945. Divided and this application July 28, 1945, Serial No. 607,650. In Great Britain June 21, 1940
6 Claims. (Cl. 252—465)

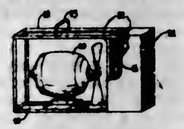
1. A process for the preparation of a dehydrogenation catalyst comprising adding to an aqueous solution containing an aluminium salt and a compound selected from the group consisting of: ammonium dichromate, ammonium chromate, chromium trioxide, a precipitant selected from the group consisting of: ammonia, ammonium bicarbonate, ammonium carbonate in an amount at least sufficient to give substantially complete precipitation of the aluminium, separating the resulting precipitate from the mother liquor, drying it in unwashed state at a temperature below 120° C., subjecting the dried product in

powdered form and in small portions to vigorous stirring and careful heating at about 120° C. in order to thermally decompose it, and then adding to the decomposed product from between 0.05% and 5%, based on its weight, of potassium chromate.

2,460,234
PROCESS OF MAKING BONDED STRUCTURES
Martin J. Buerger, Lincoln, and Edward Washken, Cambridge, Mass., assignors to Owens-Illinois Glass Company, a corporation of Ohio
No Drawing. Application March 27, 1946, Serial No. 657,628
8 Claims. (Cl. 18—59)

1. The process of forming a structure consisting of an inorganic non-metallic compound portion firmly bonded to a metallic portion, one portion being an insert in the other, which comprises pressing into intimate contact with each other a solid metal shape and a finely-divided non-metallic inorganic plastically deformable crystalline compound in the absence of additional binder material under sufficient pressure to plastically deform the crystals of said non-metallic compound and to impart thereto a density equal to at least about 75% of its true density, and then heating in an inert atmosphere to a temperature above that at which bonding takes place and below that at which any substantial crystal growth of the deformed crystals of the non-metallic plastically deformable crystalline material begins.

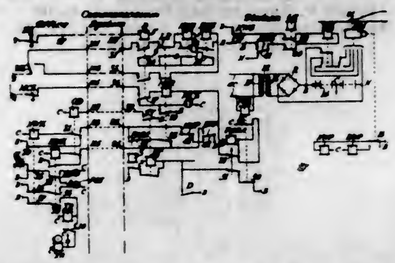
2,460,335
AIR PURIFYING DEVICE
William J. Buss, Norristown, Pa.
Application October 9, 1945, Serial No. 621,294
2 Claims. (Cl. 21—74)



1. An air purifying screen comprising a pair of inwardly facing vertical side frame members, a horizontal bottom pan secured to the lower ends of said side frame members, a horizontal top pan secured to the top ends of said side frame members, a vertical front brace member secured centrally between the front edges of said top and bottom pan, a vertical rear brace member secured centrally between the rear edges of said top and bottom pan, said vertical brace members being V-shaped in cross-section and facing inwardly, a plurality of sheets of wire mesh positioned between said vertical brace members and received within and perpendicular to the side frame members, and a filling of loosely packed deodorant material between adjacent sheets of wire mesh.

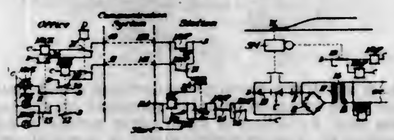
2,460,336
REMOTE-CONTROL SYSTEM
Ira F. Cadman, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application February 20, 1946, Serial No. 649,072
5 Claims. (Cl. 246—3)

1. In a remote control system, an office and a station, a movable device at said station, a communication system linking said station with said office and providing two indication channels over each of which code elements of one character or another may be transmitted, means for controlling said channels by said movable device so that the code element transmitted over one channel has one character or another depending upon whether or not said device is in a first position and that transmitted over the other channel has one character or another depending upon whether or not said device is in a second position, indication means at the office controlled in accordance with the characters of said two code elements to indicate when said device is in its first or second positions or in transit between said positions, a source of power at said field station, means for operating said movable device between its said first and second positions by power derived from said source, said operating means being manually controllable over said communication system from said office, a power-off relay at said station connected with said source to reflect presence or absence of power, means controlled



by said power-off relay when reflecting absence of power for causing the code elements transmitted over said two indication channels to each have said one character, indication means at said office controlled in accordance with the character of said two elements to indicate the power-off condition, a stick relay at said station having a pick-up circuit manually controllable from said office and a stick circuit completed over either a front or a back contact of said power-off relay when said stick relay picks up, said stick circuit being interrupted momentarily to release said stick relay when said power-off relay changes its condition to reflect a change in condition of said source, and means effective when said stick relay is picked up for rendering ineffective the control by said power-off relay over the characters of said two elements, whereby not more than one of said two elements is caused to have said one character depending upon the position of said device.

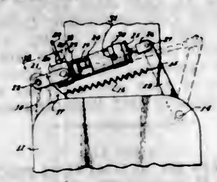
2,460,337
REMOTE-CONTROL SYSTEM
Henry S. Young, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application June 20, 1946, Serial No. 678,023
9 Claims. (Cl. 246—3)



1. In a remote control system, a first movable device having a first and a second and an intermediate position, a first relay picked up only

when said first device is in its said first position, a second relay picked up only when said first device is in its said second position, a third relay having a normal and an operated position, an office, a communication system linking said office with said relays and including two indication channels, indication means at said office controlled by said two channels for distinctively indicating the three positions of said first device and the operated position of said third relay, and means controlled by said first and second relays for controlling said indication channels to cause said indication means selectively to reflect the positions of said first device and additionally controlled by said third relay when and only when said first relay is picked up for controlling said indication channels to cause said indication means to indicate the position of said third relay as well as the position of said first device.

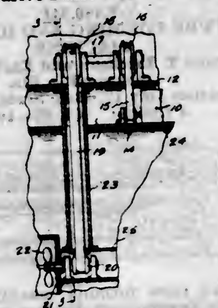
2,460,338
COMPRESSION RELIEF DEVICE FOR STARTING ENGINES
Chilo C. Castillo, Los Angeles, Calif.
Application April 22, 1947, Serial No. 743,022
6 Claims. (Cl. 123—182)



4. In a starting device for an internal combustion engine which includes a shiftable compression releasing arm and a movable starter operating member, a cylinder, means adapted to support the cylinder on an engine, a piston in the cylinder, means adapted to connect the piston to the compression releasing arm, a source of compressed air, a control valve, conduit means connecting the source of compressed air to the control valve, said conduit means including a check valve normally preventing flow from the source of compressed air to the control valve, means operable when the control valve is moved from "off" position to release said check valve to permit compressed air to pass to said control valve, means connecting said control valve to said cylinder, said control valve when in "on" position permitting flow from the source to the cylinder, means to bleed the cylinder to the atmosphere when the control valve is in the "off" position, a second cylinder adapted to be disposed adjacent to a starter operating member, a second piston in the second cylinder, said second piston being adapted to engage a starter operating member, conduit means to supply fluid to the second cylinder, means to connect the last mentioned conduit means to the first cylinder at a location to permit passage of compressed air to the last mentioned conduit when the first mentioned piston approaches the outer limit of its movement, and means adapted to normally urge the compression releasing arm to full compression position.

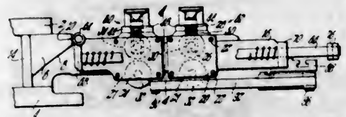
2,460,339
SHIP PROPULSION MEANS
Diamond Diamantides, Massillon, Ohio
Application March 28, 1945, Serial No. 585,323
1 Claim. (Cl. 115—34)

A ship of the class described comprising a stern having an upper deck, an engine-room located just below the upper deck, said ship having an intermediate compartment below the upper deck, and a lower deck below the intermediate compartment, a power plant located in the engine-room, a pulley driven by the power plant, a second pulley located above the first-mentioned pulley, a line shaft driven by the second pulley and located above the upper deck, a driving pulley carried by the line shaft and located above the upper deck, a propeller and drive shaft located directly below



the driving pulley, a pulley carried by the propeller shaft, the last-mentioned pulley and a portion of the shaft being enclosed within the ship below the lower deck, a belt passing over the driving pulley and the pulley carried by the propeller shaft, vertical encasing tubes enclosed within the ship and supporting the upper deck just below said engine room and resting on said lower deck, said belt passing through said tubes and being protected thereby, and a belt passing over the first and second pulleys for driving the line shaft.

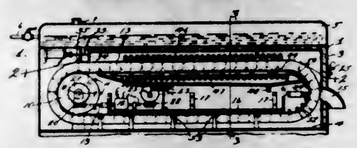
2,460,340
FEEDING MECHANISM
Hubert E. Dickerman, Springfield, Mass.
Application January 19, 1946, Serial No. 642,178
2 Claims. (Cl. 271—2.5)



1. Unitary strip feeding mechanism adapted for operation by the cam of a movable member of a die set comprising in combination, a base having longitudinal and transversely spaced side rails extending outwardly therefrom, an inner carriage and an outer carriage extending between and slidable in opposite directions on said rails, said inner carriage disposed adjacent said base and said outer carriage disposed outwardly of said inner carriage, spring means urging said inner carriage inwardly towards said base, said inner carriage provided with cam engaging means whereby it is moved outwardly against the action of said spring means by said cam, a transverse member fixed to outer ends of said side rails, a lever pivoted intermediate its ends to said member, a link having opposite ends pivoted to said outer carriage and to one end of said lever and a link having opposite ends pivoted to the inner carriage and an opposite end of said lever arranged whereby as the inner carriage moves towards and away from said base said outer carriage is moved away from and towards said inner carriage and base, spring pressed up-

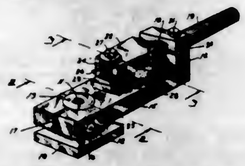
per and lower shafts in each said carriage, coacting strip engaging rolls on said shafts, and clutch means between each of said rolls and the shaft therefor permitting rotation of said rolls in one direction only and arranged whereby as the carriages are moved towards said base the rolls are held against rotation to grip a strip for feeding it inwardly.

2,460,341
ICE CUBE FORMING AND DISPENSING MACHINE
Vernon T. Erickson and Earl F. Davis, Jacksonville, Fla.
Application July 12, 1945, Serial No. 604,672
4 Claims. (Cl. 62—106)



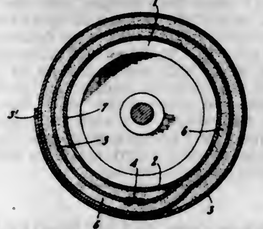
2. An ice cube forming machine comprising an endless flexible belt having water receiving pockets arranged in pairs therein, means for intermittently discharging water into the pockets, means for freezing the water in the upper flight of the belt as it is intermittently advanced, said means comprising a cooling coil transversely surrounding said flight of the belt, a drip pan beneath the upper flight of the belt, a roller carrying supporting frame carried by the drip pan and supporting the upper flight of the belt and rollers engaging the outer side of the lower side of the belt for preventing sagging of the belt.

2,460,342
TOOL POST AND TOOL FOR LATHES
Allen F. Feaster, Boulder, Colo.
Application July 9, 1945, Serial No. 603,762
2 Claims. (Cl. 82—36)



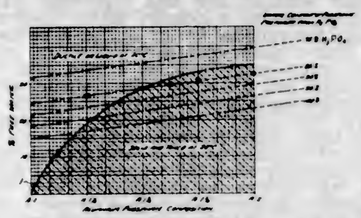
1. Means for adjustably supporting a cutting tool in a lathe tool post comprising: a metallic block; a vertical semi-cylindrical socket formed in the forward extremity of said block, said socket opening through said forward extremity and through the top of said block and having a closed bottom; a vertical, completely cylindrical, tool holding plug snugly and rotatably mounted in said socket; a tool receiving channel extending diametrically through said plug; a cutting tool in said channel; a set screw threaded axially downward into said tool holding plug into contact with said tool for locking the latter therein, said tool projecting forwardly from said plug through the open forward extremity of said block; an apron extending forwardly from said block and forming a bottom in said socket for supporting said plug; and oppositely acting set screws extending through the sides of said socket into contact with said plug for locking the latter in any desired rotative position.

2,460,343
PROTECTIVE ASSEMBLY FOR FLATWORK IRONER ROLLS
John W. Foster, Ridgewood, N. J., assignor to Tingue, Brown & Co., New York, N. Y., a corporation of New York
Application February 28, 1946, Serial No. 650,818
3 Claims. (Cl. 38—65)



2. In combination, an ironer roll, a binding strip attached to said roll, a covering strip having an end adjacent an end of said binding strip, said covering strip overlying said binding strip and extending at least once around the circumference of said roll, separable fastener means uniting said ends of said strips, and padding cooperating with said binder strip and said covering strip and extending at least once around the circumference of said roll with an end of said padding overlapping said fastening means.

2,460,344
PREPARATION OF ALUMINUM PHOSPHATES
Herbert H. Greger, Washington, D. C.
Application July 13, 1943, Serial No. 494,527
5 Claims. (Cl. 23—105)



1. A method of making water soluble aluminum phosphates up to di-aluminum phosphate solid at room temperatures comprising reacting relatively coarse aluminum hydrate with phosphoric acid in proportions to form $Al(H_2PO_4)_3$ and then reacting the $Al(H_2PO_4)_3$ with finely divided aluminum hydrate at a temperature of about 100° C. for several hours to form higher aluminum phosphates, and controlling the water content of the reactants and the reaction mass to form a solid water soluble compound having a water content ranging from zero for the 1:3 alumina to phosphate ratio to slightly over 25% for the 1½:3 alumina to phosphate ratio to about 35% for the 2:3 alumina to phosphate ratio.

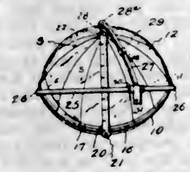
2,460,345
BALL POINT PEN
Francis E. Gruber, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn.
Application December 22, 1945, Serial No. 636,790
3 Claims. (Cl. 120—42.03)

1. A fountain pen comprising an ink unit formed of a hollow tube, a series of coils formed

in the body of said ink reservoir adapted to provide the main part of the reservoir, a tubular forward end projecting as a portion of said ink unit, a ball writing tip mounted in the forward end of said ink reservoir unit, a casing for enclosing said unit and adapted to support the same slid-

able therewithin, a rotatable cap for the rear of said casing, and a threaded core member operated by said cap to threadedly engage said ink unit to move the same longitudinally in said casing to conceal or expose said writing ball on the forward end of said ink reservoir unit.

2,460,346
STAR MATCHER AND SUN COMPASS
Frederick H. Hagner, San Antonio, Tex.
Application December 8, 1944, Serial No. 567,234
11 Claims. (Cl. 33—61)

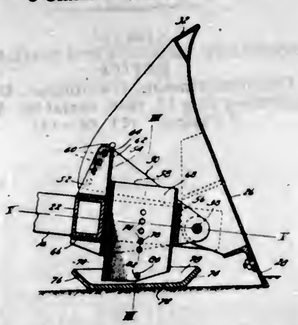


10. An instrument of the class described comprising, a time scale ring and a star calendar ring mounted in concentric and rotatable relation with respect to each other, a semi-spherical collapsible dome formed of a plurality of segments, each segment having an inner and an outer end, means connecting the inner ends of said segments, guiding means for the outer ends of said segments carried by the star calendar ring, the outer ends of said segments being adapted to spread apart radially as the dome is collapsed and thereby permit the dome to lie substantially flat relative to the support when the dome is in a collapsed position, and the dome being adapted to be extended to an approximate semi-spherical shape when in a set-up position.

2,460,347
PROTECTION OF FURNACES FROM SLAG
William E. Heller, Yeadon, Pa.
No Drawing. Application June 23, 1945, Serial No. 601,341
5 Claims. (Cl. 117—104)

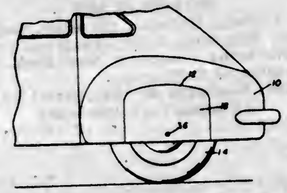
2. A method for protecting furnace combustion-zone surfaces against the deteriorating effects of slag depositions, consisting in projecting a stream of refractory chrome ore-calcium aluminate-ball clay mix on said surfaces under pneumatic pressure, said mix containing 80 to 95% chrome ore by weight, 2 to 5% calcium aluminate cement by weight and ball clay in an amount not greater than 10% by weight whereby said mix may be projected in dry form.

2,460,348
BLADE MOUNTING FOR GRADING MACHINES
Albert R. Henry, Salina, Kans., assignor to Henry Manufacturing Company, Inc., Topeka, Kans., a corporation of Kansas
Application November 27, 1944, Serial No. 565,260
5 Claims. (Cl. 37—144)



1. A scraper blade mounting comprising a pair of pusher arms joined together by a cross bar of rectangular cross section, a blade pivotally mounted on the front end of said pusher arms, a plate substantially the full vertical width of the blade extending rearwardly from said blade and having a series of holes concentric with the pivotal axis of said blade, an adjusting member provided at its rear edge with an open rectangular slot adapted to snugly engage said cross bar and secured at its front end to a pin in axial alignment with the pivot of said blade whereby it is carried in fixed relation to said arms and having a hole adapted to selectively register with the holes of said series, and means adapted to be extended through the registered holes to interconnect said plates with said adjusting member whereby to secure said blade at a predetermined angle relative to said push arms.

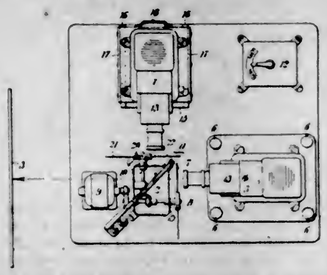
2,460,349
FENDER SKIRT
Reinhardt C. Hessler, Pontiac, Mich.
Application July 8, 1947, Serial No. 759,510
2 Claims. (Cl. 280—153)



1. A fender skirt comprising a closure, hinge means connecting the closure to the inner face of a fender, said hinge means including a first plate fixed to the inner surface of a fender, said first plate including a pair of spaced hook members having offset bite portions projecting inwardly of the inner face of a fender and including upper bearing faces and free extremities, the free extremities of said hook members being substantially coplanar with the inner face of a fender, and a second plate fixed to the inner face of the closure and movable with said closure, said second plate including an outwardly pro-

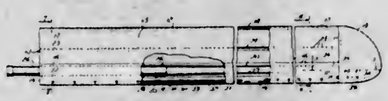
jecting reduced extension and a cross bar for engaging the bite portions of the hook members, the bearing faces of the bite portions limiting upward movement of the cross bar relative to hook members when the closure is in a closed position, and a pair of slidable locking bars carried by the closure for positioning behind a fender.

2,460,350
ALTERNATE PROJECTION COLLATING DEVICE
Charlton Hinman, Washington, D. C.
Application July 12, 1946, Serial No. 683,068
4 Claims. (Cl. 88—14)



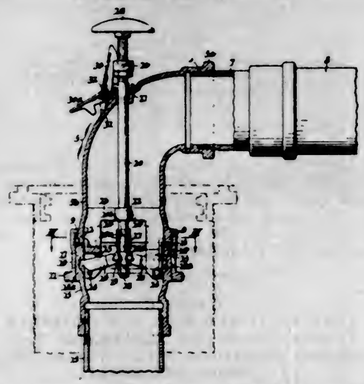
1. A collating device comprising a plurality of image projectors, a semi-transparent mirror positioned for passage of the image projected from one of said projectors through it and for reflecting the image from a second projector along a path and on a projection surface whereby exact superimposition of one of said images upon the other is attained, movable occulting elements constructed and arranged for alternately occulting the respective images, drive means for moving said occulting elements whereby said images are alternately viewable on said projection surface, and means for positioning said occulting elements in non-occulting positions with respect to each projection path thereby providing simultaneous projection for superimposition, whereby differences between the two images may be made apparent.

2,460,351
ROTOR BLADE
Francis Anthony Hoffman, Glendale, and Max B. Harlow, Pasadena, Calif., assignors to Rheem Manufacturing Company, New York, N. Y., a corporation of California
Application November 30, 1945, Serial No. 631,986
7 Claims. (Cl. 170—159)



1. A rotor blade for use in aircraft which comprises a hollow wing-like metallic member, a mounting element extending into the inner end of the member, supporting means in the member including a longitudinally extending sleeve encircling the mounting element and having outwardly projecting flanges arranged in pairs and secured to the walls of the member, and longitudinally adjustable weighting means mounted within and extending along the leading edge of the member for balancing the latter.

2,460,352
COUPLING FOR HOSES AND THE LIKE
James A. Jensen, Haverford, Pa., assignor to Philadelphia Valve Company, Philadelphia, Pa., a co-partnership
Application August 9, 1947, Serial No. 767,792
5 Claims. (Cl. 285—170)

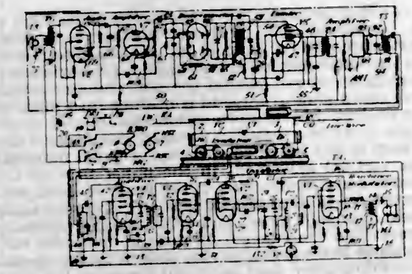


1. A coupling for a hose or the like comprising a hollow body; a rod constrained to endwise movement within the outlet end of the body; means externally of the body for manipulating the rod; a latch dog having a pivotal connection at one end with the rod and arranged for engagement of its free end behind a shoulder projection internally of a pipe or the like to which the hose is to be connected; means within the body to cooperate with the free end of the dog as and for the purpose set forth; spring means tending to urge the rod in a direction to withdraw the dog from beneath the shoulder projection; and retractable keeper means accessible at the exterior of the body and operative to lock the rod against movement in the direction aforesaid by the spring means with the dog engaged beneath said shoulder.

2,460,353
SHINGLE
Joseph L. Killingsworth, Des Moines, Iowa
Application May 9, 1946, Serial No. 668,519
5 Claims. (Cl. 108—7)

1. An interlocking shingle of substantially T shape cut without waste from a sheet of material of set width and providing double coverage at every point on a roof when laid comprising top, middle and bottom portions of substantially equal height, said bottom portion being of a narrower width than the middle and top portions, a locking tab extending from each side of the lower end of the bottom portion, said locking tabs having oblique top portions, said shingle being reduced in width between the top and bottom portions within the middle portion in a series of cuts, the cuts within the middle portions being vertical and oblique, one of the locking tabs with the oblique top portion of one shingle fitted under an oblique cut in the middle portion of another shingle when assembled on a roof, said oblique surfaces guiding the one shingle into place with respect to the other shingle until the edge of the lower portion of the shingle being assembled contacts the edge of the middle portion of the other shingle at the inner ends of the oblique cuts and the exposed area of the shingle when laid on a roof being within the middle and bottom portions of the shingle with the height of the exposed area being the height of the middle and bottom portions.

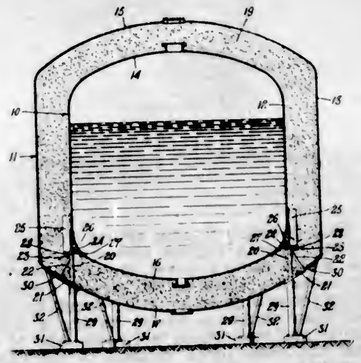
2,460,354
RAILWAY TRAIN COMMUNICATION SYSTEM
William L. Konrad, Pittsburgh, Paul N. Bossart, Cheswick, and Charles E. Leberknight, Emsworth, Pa., assignors to The Union Switch and Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application December 12, 1944, Serial No. 567,844
5 Claims. (Cl. 246—8)



1. In combination, a railway train vehicle having mounted thereon transmitting apparatus operable to supply a periodic current of a given frequency, a closed single turn secondary circuit on said vehicle connected to spaced pairs of wheels of the vehicle to include a portion of the track rails in the circuit and completed through capacitance to tune the circuit to the frequency of said periodic current, said secondary circuit being characterized by the impedance of the rails being a major part of the circuit impedance, and a primary circuit on the vehicle including an air core coil mounted within said secondary circuit for mutual inductance with said secondary circuit and connected to said transmitting apparatus to cause such periodic current to flow in the rails.

2,460,355
CONTAINER FOR LIQUEFIED GASES
Henry C. Kornemann, Kenmore, N. Y., assignor to The Linde Air Products Company, a corporation of Ohio
Original application July 11, 1942, Serial No. 450,644. Divided and this application November 4, 1944, Serial No. 561,869
2 Claims. (Cl. 220—15)

1. Apparatus for the storage of liquefied gas at temperatures below 233° K. comprising a closed inner vessel for holding the liquefied gas, a completely closed gas-tight outer shell around the inner vessel and spaced therefrom to provide an insulating space; supporting members spaced outwardly from the center of the bottom of said inner vessel and extending upwardly from the bottom or floor of the outer shell, said supporting members being provided with smooth, flat horizontal upper bearing surfaces; supports for holding said outer shell in upright position, said supports being positioned under said supporting members; horizontal flat bearing surfaces on said inner vessel positioned to rest on said upper surfaces of said supporting members, the construction and arrangement of said supporting members and horizontal surfaces being such as to support the inner vessel in desired spaced relation to the outer shell; movement-restraining means associated with said bearing surfaces on said inner

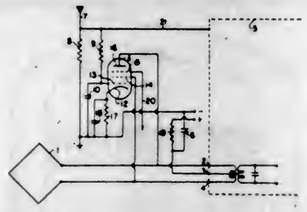


vessel and positioned to cooperate with said supporting members for substantially centering said inner vessel with respect to said outer vessel when said inner vessel has contracted a predetermined amount due to introduction of liquefied gas; and anti-friction means between the bearing surfaces of said inner vessel and the corresponding surfaces of said supporting members, said anti-friction means being of a character having adequate anti-friction properties at the temperature of said liquefied gas whereby said inner vessel may freely contract radially and be centered with respect to said outer shell.

2,460,356
PROCESS OF MAKING CERAMIC BODIES
Ekkehard L. Kreidl, Boston, and Joseph L. Utter, North Easton, Mass., assignors to Arthur D. Little, Inc., Cambridge, Mass., a corporation of Massachusetts
No Drawing. Application April 30, 1947, Serial No. 745,996
14 Claims. (Cl. 49—79)

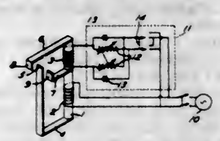
1. A process for forming strong molded ceramic products comprising the steps of compressing a mixture of finely divided inorganic refractory material and a finely divided glass to a pressure of at least about 5 tons per square inch, said refractory material having a fusing point above the melting point of the glass, firing the compressed mixture to a temperature above the softening point of the glass and below the fusing point of the refractory, to form a product having a porosity of between 0.5% and 25%, impregnating said product with a compound which is at least partially hydrolyzed and is in the form of an inorganic gel which will bond with glass on firing, and refiring the impregnated product to a temperature at least sufficient to melt the glass but below that which will fuse the refractory.

2,460,357
CIRCUIT ARRANGEMENT FOR COMPENSATING THE AERIAL EFFECT OF DIRECTIONAL ANTENNAE
Theodoor Willem La Riviere, Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application May 1, 1946, Serial No. 666,249
In the Netherlands November 20, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires November 20, 1961
5 Claims. (Cl. 343—113)



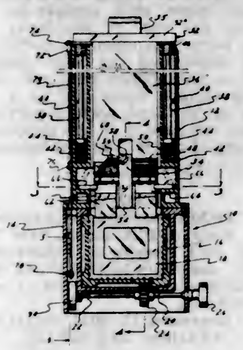
1. In a direction finding system having a directional antenna coupled across the input impedance of a radio receiver, an arrangement to compensate for aerial effect in said directional antenna comprising an amplifier circuit including an electron discharge device having a control electrode and two output electrodes, one of said output electrodes being coupled to one end of said impedance and the other output electrode being coupled to the other end of said impedance whereby the currents flowing at the two output electrodes are applied to the impedance in opposing senses, a non-directional antenna, a phase shifting network, means to impress signals derived from said non-directional antenna through said network onto said control electrode, and means to vary the current distribution between the two output electrodes.

2,460,358
SELF-STARTING SYNCHRONOUS HYSTERESIS MOTOR
Charles A. Packard, Welaka, Fla., assignor to Struthers-Dunn, Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application January 4, 1947, Serial No. 720,171
15 Claims. (Cl. 172—278)



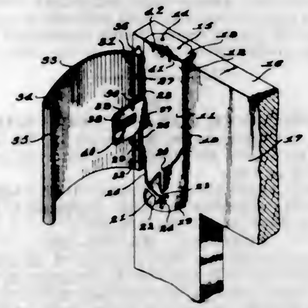
1. A single-phase self-starting synchronous motor comprising a field structure including a core member and a plurality of magnetic pole triads in circular array concentric with said core and having two poles of each triad extending from opposite ends of the core and on opposite sides of the third pole of the triad forming interdependent magnetic circuits, and means for effecting a substantially balanced three-phase distribution of flux between said poles comprising two separately energizable field coils disposed about said core respectively on opposite sides of the magnetic structure forming said third poles.

2,460,359
SLIDE PROJECTOR AND MAGAZINE THEREFOR
Herbert E. Page, Alhambra, Calif.
Application September 18, 1945, Serial No. 617,095
5 Claims. (Cl. 88—28)



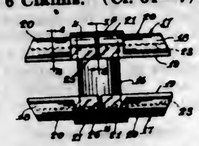
4. In a projector for transparent slides filed in a container, said projector having a housing structure with a passage for the slide container in the lower portion thereof and a projection system in an upper portion thereof, transfer means to raise a slide from said container into place to be projected by the projection system and to return it to the position in said container from which it was taken comprising: a panel mounted for vertical movement in the upper part of the housing across the path of the beam of light projected by said projection system; interengaging means on said panel and said housing normally preventing the panel from moving upwardly sufficiently to clear said beam; slide grasping means depending from said panel for grasping the slide to be projected when said panel is moved downwardly; and means actuated by a slide when held by said slide grasping means for releasing said interengaging means to permit the panel to be raised sufficiently to clear said beam.

2,460,360
WINDOW SHADE AND CURTAIN FIXTURE
Kenneth H. J. Paradis, Island Pond, Vt.
Application April 9, 1946, Serial No. 660,645
1 Claim. (Cl. 248—254)



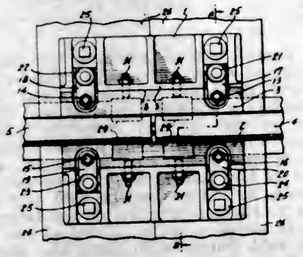
A window shade and curtain fixture comprising a substantially rectangular body member having a supporting flange on its upper end for positioning upon the upper edge of a window facing, spaced barrels formed on one edge of said body member, curtain supporting fixture members formed with supporting barrels adapted to be aligned with said first-mentioned spaced barrels, all of said barrels being substantially square in cross-section, a pin adapted to extend through said barrels, said fixture members being adapted to be supported for use either simultaneously or individually, and a shade and blind holder formed integrally upon the opposite edge of said body member.

2,460,361
SLIPPER BEARING
John A. Petho, Perkiomenville, Pa., assignor to Continental-Diamond Fibre Company, Newark, Del., a corporation of Delaware
Application September 22, 1943, Serial No. 503,431
6 Claims. (Cl. 64—7)



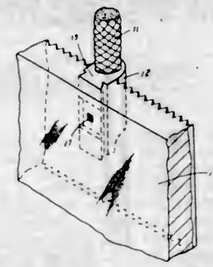
1. A slipper bearing composed of a cellulosic base impregnated with a heat-hardening resinous material, said bearing being chordally segmental in cross section and having a unitary flat flexible metal plate substantially co-extensive therewith embedded therein parallel to the flat face thereof, the bearing being transversely slotted to sever the same at opposite faces of said plate.

2,460,362
BRIDGE PLATE TYPE RAIL JOINT
Romualdo Premoli and Paul Corbat, Baden, Switzerland
Application August 26, 1947, Serial No. 770,690
In Switzerland August 27, 1946
3 Claims. (Cl. 238—205)



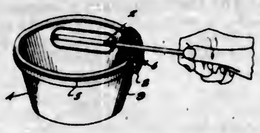
1. In a joint for connecting adjacent ends of rails of a railroad track, a bridge plate having an inside base surface spaced from the undersides of the rail ends to be joined and having an upright portion on either lateral side of said rail ends, the inner sides of said portions being inclined and upwardly sloping away from the lateral sides of the rail ends, an angle bar disposed alongside each lateral side of the rail ends and having three longitudinal face portions: one abutting the underside of the heads of the rail ends, one abutting the webs of the rail ends, and one abutting the inner side of one of said upright portions, hold down means connected with said bridge plate and bearing down individually on said angle bars, and wedge shaped members individually disposed between the underside of said angle bars and the upper surfaces of the feet of the rails.

2,460,363
CARRYING CORD CONNECTING MEANS
Russell E. Prentice, Dexter, Mich., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
Application January 26, 1946, Serial No. 643,809
3 Claims. (Cl. 224—5)



3. In combination, a camera case and carrying cord and connecting means for said cord and case which includes a lug having an opening in which a cord end is held, an indentation in the camera case formed as a slot for a dove-tailed projection and into which said lug may be inserted, a dovetailed projection on said lug engageable within said slot when the lug is assembled in the said indentation, and means to prevent displacement of the lug after insertion, said means including a depression in one face of the said lug and material from the said case caused to enter the depression after insertion of the lug.

2,460,364
MIXING BOWL GUARD
Layton S. Roesler, Claflin, Kans.
Application July 18, 1946, Serial No. 684,592
1 Claim. (Cl. 259—1)

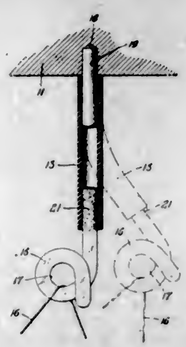


In combination with a mixing bowl, an inverted elongated U-shaped resilient guard therefor adapted to be clipped over the edge of said bowl for knocking the mixer paddle to remove excess batter therefrom, the legs of said guard being smooth on the inner surface and progressively thickening towards the outer free ends thereof and forming a central arcuate bowl edge engaging surface, and converging inner bowl side gripping surfaces.

2,460,365
PRODUCTION OF INSOLUBLE SULFUR
Alvin Schallis, Jersey City, N. J., assignor to Stauffer Chemical Company, a corporation of California
No Drawing. Application September 29, 1945, Serial No. 619,418
7 Claims. (Cl. 23—224)

1. A process for reducing the rate of reversion of that form of sulphur which is insoluble in carbon disulphide to that form which is soluble in carbon disulphide comprising incorporating, in preformed sulphur containing at least a third by weight of said insoluble sulphur, less than about 1% of a halogen on the weight of the sulphur.

2,460,366
SHOCK-RESISTANT FILAMENT GUIDE
Arthur K. Seemann, Manhasset, N. Y., assignor to The Linde Air Products Company, a corporation of Ohio
Application May 30, 1945, Serial No. 596,799
9 Claims. (Cl. 242—157)

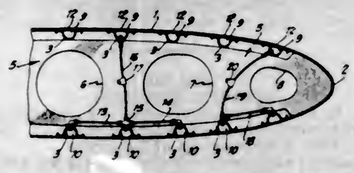


1. A filament guide comprising a support; a flexible coupler having one end secured to said support and an opposite end projecting therefrom, at least said opposite end being a sleeve; and a wear resistant filament guiding device having a portion fitting within said sleeve at said opposite end, said guiding device being freely movable with said coupler.

2,460,367
METHOD OF MAKING ABRASIVE ARTICLES
Donald B. Sharpe, North Tonawanda, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a corporation of Delaware
Application September 20, 1945, Serial No. 617,676
4 Claims. (Cl. 51—293)

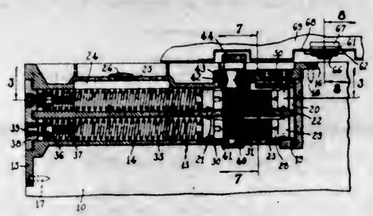
1. The method of making bonded abrasive articles which comprises milling a mass of rubber to plasticise it, adding to the plasticized mass granular abrasive and fibers in the form of a sheet material composed of abrasive grains, fibers and adhesive binder, continuing milling to break down said sheet material and uniformly blend it with the plasticized rubber, continuing the addition of the abrasive-fiber sheet material with further milling until the original rubber mass amounts to only about 5% of the total mass, removing the mixture from the mill and subjecting it to heat and pressure to form an abrasive article.

2,460,368
VENT CONSTRUCTION FOR AIRPLANE FUEL TANKS
Floyd E. Snow, Pasadena, Calif., assignor to Technical Coatings, Inc., Pasadena, Calif., a corporation of California
Application August 30, 1947, Serial No. 771,505
3 Claims. (Cl. 220—71)



1. In an airplane fuel tank; walls defining the tank structure; channel-like members secured on the interior of the walls for reinforcement and forming spaces between the walls and the members; at least some of the members being at the bottom wall; and means within the tank for venting the said spaces that are adjacent the bottom wall.

2,460,369
DOOR CHECK AND CLOSER
Rupert G. Stronach, Hamden, Conn., assignor to Sargent & Company, New Haven, Conn., a corporation of Connecticut
Application April 18, 1945, Serial No. 589,016
9 Claims. (Cl. 16—56)

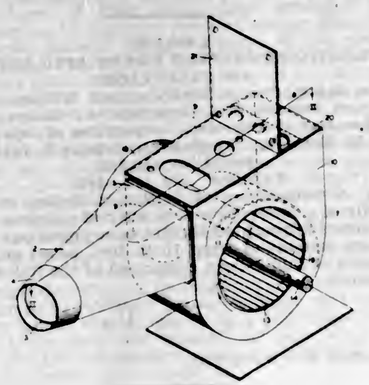


3. A door closer comprising an elongated casing having a pair of parallel cylinders therein, means providing communication between said cylinders, a plunger in each of said cylinders, the wall of one cylinder being provided with a passage to permit the fluid in said cylinders to by-pass around both of said plungers, an arm actuated by the door in its opening and closing movements, means connecting said arm to said plungers to effect movement of the latter when the arm is moved, a spring acting at one end on each of said plungers to urge the associated plunger in one direction, said springs extending lengthwise of the casing, a collar against which the other end of each spring reacts, and means extending through the end wall of the casing for adjusting said collars to adjust the tension of said springs.

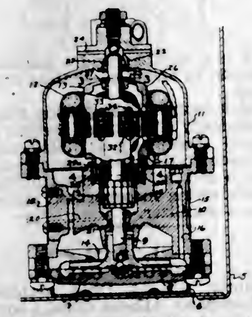
2,460,370
HOUSING FOR OIL BURNERS
Earl C. Stauffer, Lancaster, Pa.
Application October 24, 1946, Serial No. 705,468
4 Claims. (Cl. 230—133)

1. In an air supply system for a gun type fluid fuel burner, a tapered draft tube having a circular exhaust opening and a substantially rectilinear inlet opening, and a constricting plate disposed in the inlet opening, said plate having an

opening therein, the cross sectional area of which is greater than the cross sectional area of the exhaust opening and less than the cross sectional area of the inlet opening.



2,460,371
MOTOR COOLING MEANS
Alex N. Szwarguiski, St. Louis, Mo., assignor to Carter Carburetor Corporation, St. Louis, Mo., a corporation of Delaware
Application March 31, 1947, Serial No. 738,485
2 Claims. (Cl. 172—36)



1. An armature for an electric motor comprising a shaft having core structure projecting laterally therefrom and windings received about said shaft and core structure, a hollow casing enclosing said windings and core structure and having peripheral openings into which the extremities of said core structure project, there being openings in the end wall of said casing adjacent said armature and open space in said peripheral openings adjacent said core extremities for creating a cooling flow of ambient fluid through said armature by centrifugal force upon rotation thereof.

2,460,372
MANUFACTURE OF ARTIFICIAL PROTEIN FILAMENTS
Robin H. K. Thomson, Kilwinning, Scotland, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
Application August 21, 1944, Serial No. 550,487
In Great Britain October 20, 1943
12 Claims. (Cl. 18—54)

1. The process for obtaining an improved, crimped, protein filament, which comprises wet-stretching an insolubilized filament previously formed by wet-spinning a protein solution of the group consisting of vegetable globulin solutions and casein solutions, contacting the taut filament with formaldehyde, drying the taut filament at a temperature of at least 80° C., releasing the tension on the filament and thereafter contacting the filament in relaxed condition with boiling water.

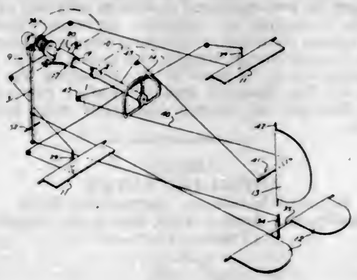
2,460,373
ANTIGLARE DEVICE
Bernard Waldman, Springfield, Mass.
Application April 1, 1947, Serial No. 738,688
1 Claim. (Cl. 2—14)

An anti-glare device adapted for shielding one eye only of the wearer comprising in combination, a head-band made from an elongated strip of a resilient material formed semi-circularly to extend upwardly at a side of the head of the wearer and inwardly and over the crown thereof adapted to yieldingly embrace the head, a shield formed from relatively thin and colored material to have integral side and forward eye portions disposed in relatively angular planes, said side portion having a relatively narrow rear end and upper and lower relatively diverging marginal edges extending forwardly from said rear end to a relatively wider forward end, a pivotal connection between said rear end of the side portion and an end of said band, said forward portion of the shield extending inwardly from the forward end of the side portion having an inner substantially vertical edge and having a width substantially equal to that of the outer end of the side portion, all adapted and arranged whereby with the head-band embracing the head of a wearer the side portion of the shield overlies a side of the head and extends forwardly towards the eye adjacent thereto and the forward eye portion is disposed in front of said eye while said shield may be swung up or down to adjust said forward eye portion relative to said eye.

2,460,374
AIRCRAFT FLIGHT CONTROL SYSTEM
Billy Walls, Colonie, Italy; C. M. Walls administrator of said Billy Walls, deceased
Application October 21, 1947, Serial No. 781,214
2 Claims. (Cl. 244—83)

1. A flight control system for an aircraft having ailerons, elevators and a rudder, said system

comprising a tubular sleeve, means securing said sleeve to the aircraft against movement relative thereto and in a substantially horizontal, fore and aft position, a tubular extension projection from the inner end of said sleeve, a pivotal connection securing said extension to the inner end of said sleeve for movement about a substantially vertical axis, a shaft slidable and rotatable in said extension, a hand wheel on the inner end of said shaft, a shaft slidable and rotatable in said sleeve and having a splined end portion remote from said tubular extension, a flexible connection between adjacent ends of said shafts extending past said pivotal connection between said sleeve and said extension, a drum journaled on the end of said sleeve opposite said extension and having an internally splined bore slidably receiving said



splined shaft for rotation thereof by said hand wheel, a cable wound on said drum and operatively connected with the ailerons of said aircraft, a vertical bar depending from the outer end of said splined shaft and pivotally secured adjacent its lower end to said aircraft for back and forward tilting movement upon movement of said hand wheel toward and away from said tubular extension, cables operatively connecting said bar to the elevators of said aircraft, and a pair of cables each connected at one end to said rudder and at its opposite end to said tubular extension intermediate the length of said extension to turn said rudder upon movement of said tubular extension by said hand wheel about the pivotal connection between said tubular extension and said sleeve.

2,460,375

GRANULAR OR POWDER EXPLOSIVES AND THEIR MANUFACTURE

John Whetstone, West Kilbride, Scotland, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application September 19, 1942, Serial No. 458,992. In Great Britain September 15, 1941

Section 1, Public Law 690, August 8, 1946
Patent expires September 15, 1961

9 Claims. (Cl. 52—21)

1. A process for the production of a detonating explosive suitable for commercial blasting purposes which comprises emulsifying a molten high explosive with the assistance of an emulsifying agent in a melt which comprises ammonium nitrate and at least one compound non-volatile at the temperature of the melt and adapted to lower the melting point of the ammonium nitrate, to give a resulting emulsion which congeals at a temperature above 46° C. and which is free from uncombined water, and congealing and granulating the resulting emulsion.

5. A process as claimed in claim 1 wherein the non-volatile compound adapted to lower the melting point of ammonium nitrate comprises a hydrated salt.

2,460,376

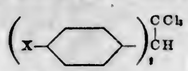
PLASTICIZED LOWER FATTY ACID ESTER OF CELLULOSE

Amerigo F. Caprio, Madison, and William Horback, Newark, N. J., assignors to Celanese Corporation of America, a corporation of Delaware

No Drawing. Application October 2, 1945, Serial No. 619,892

7 Claims. (Cl. 106—182)

1. A composition of matter consisting essentially of a lower fatty acid ester of cellulose and having incorporated therein as a plasticizer and in an amount of from 10 to 30% based on the weight of said ester a compound of the following formula



wherein X is a halogen.

2,460,377

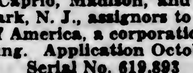
FILAMENTS OF PLASTICIZED LOWER FATTY ACID ESTERS OF CELLULOSE

Amerigo F. Caprio, Madison, and William Horback, Newark, N. J., assignors to Celanese Corporation of America, a corporation of Delaware

No Drawing. Application October 2, 1945, Serial No. 619,893

4 Claims. (Cl. 106—186)

1. A textile material comprising filaments consisting essentially of a lower fatty acid ester of cellulose and having incorporated therein as a plasticizer and in an amount of from 2 to 50%, based on the weight of said ester a compound of the formula



wherein X is a halogen, and a stabilizer imparting resistance to chemical change under the action of heat.

4. A textile material comprising filaments consisting essentially of cellulose acetate and having incorporated therein as a plasticizer dichlorodiphenyl-trichlorethane in an amount of from 2 to 50%, based on the weight of the cellulose acetate and having incorporated therein dicyandiamide as a stabilizer.

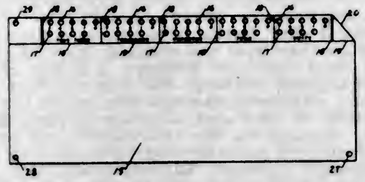
2,460,378

RECORD CARD

Roger Connor, Athens, Ohio, assignor to The McBee Company, Athens, Ohio, a corporation

Application April 24, 1944, Serial No. 532,525

2 Claims. (Cl. 129—16.1)



1. As an article of manufacture a card of the character described having formed therein

similar fields of perforations relative to one edge of the card, each field of perforations comprising an outer row of five perforations arranged adjacent and parallel to the edge of the card and an inner row of four perforations arranged in parallelism to the outer row at a spaced distance inwardly thereof, the perforations of the inner row being aligned with the four perforations at the left hand end of the outer row in a direction perpendicular to the adjacent card edge, the perforations of the rows being identified on the card by the numerals —0—1—2—4— and —7— commencing with the perforation at the right hand end of the outer row whereby the digits —0—1—2—4— and —7— will each identify a single classification by notching the perforation "0" to the card edge and by notching the perforations of both rows identified with each numeral —1—2—4— and —7— to the card edge, and the digits —3—5—6—8— and —9— will each identify a single classification by notching two perforations of the outer row only whose combined numerical value equals that of the selected digit classification to the card edge whereby the cards when so notched may be selectively sorted for digits "0" to "9" inclusive with a single sort.

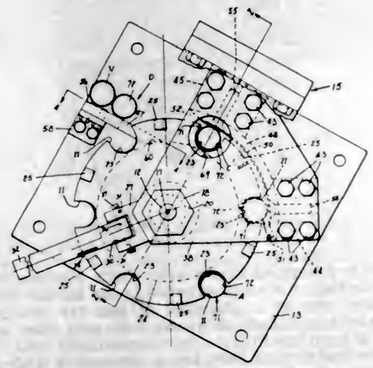
2,460,379

ARTICLE HANDLING APPARATUS

Sidney A. Corren, New York, N. Y., assignor to Nassau Smelting & Refining Company, Incorporated, New York, N. Y., a corporation of New York

Application January 13, 1944, Serial No. 518,090

8 Claims. (Cl. 29—283)



1. In an article handling apparatus, a carrier provided with a U-shaped recess formed in one edge thereof, and also provided with a groove extending along that edge, said carrier having fins thereon projecting into said recess, means for moving the carrier to move the recess along a predetermined path, a cam having ribs formed thereon extending along a portion of said edge with one end thereof closer to said edge than its other end for wedging an article carried in the recess between the ribs and the fins as the article is moved to a point opposite the cam, and a finger extending into the groove for engaging and withdrawing the article from the recess as it is moved beyond the cam.

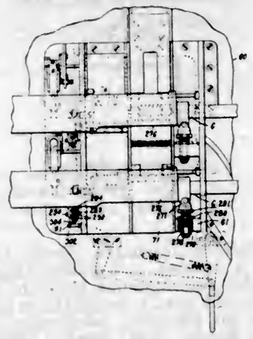
2,460,380

GUN MOUNT

David Edgar, Lynn, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey

Application October 30, 1945, Serial No. 625,528

2 Claims. (Cl. 89—37)



1. In a gun mounting means for connecting a gun to a support, a block rotatable about pivots on the gun, a link pivoted on the block, a member rotatable upon the link about an axis at right angles to said block pivots and pivoted to the support about an axis parallel to said block pivots, and means for moving said member longitudinally of its pivotal connection to the support to adjust the position of the gun.

2,460,381

MULTIPLIER UNIT AND SUPPORTING MEANS

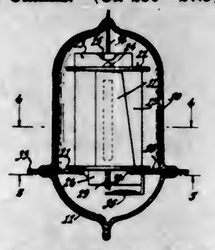
Stanley V. Forgue, Cranbury, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application February 7, 1946, Serial No. 646,075

6 Claims. (Cl. 250—175)

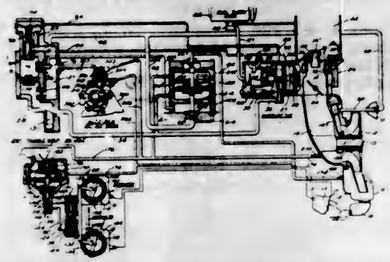
5. A multiplier unit for television transmitter tubes comprising a metal wheel having a peripheral member, a hub with a bore and spokes connecting said hub and member together, a fine mesh metal screen having an opening adjacent said bore, a ring pressing said screen against said peripheral member, and a bushing in said bore pressing said screen against the hub to hold said wheel and screen together.

2,460,382
MOUNT FOR ELECTRON DISCHARGE DEVICES
Oliver H. Fulton, Jr., Montclair, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application December 4, 1946, Serial No. 714,071
7 Claims. (Cl. 250—27.5)



1. An electron discharge device having an anode and a cathode, said anode having a surface for receiving impinging electrons from said cathode whereby heat is generated in said anode, and means for efficiently conducting said heat from said anode, said means comprising a progressively increased lateral extension of said anode from one end thereof to the other whereby one end of said anode is wider than the other end thereof, and a lead-in connected to said anode at said wider end thereof.

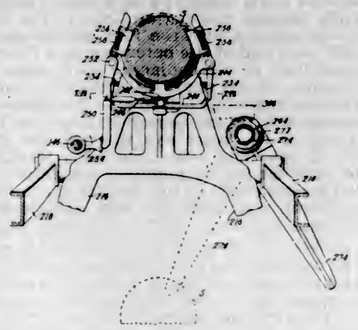
2,460,383
FUEL AND IGNITION CONTROL
Frank J. Hahn, Kansas City, Mo., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application June 25, 1945, Serial No. 601,439
5 Claims. (Cl. 123—117)



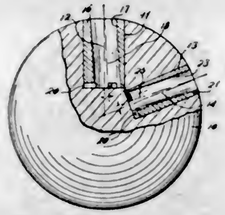
1. In combination with an internal combustion engine having a supercharger, a fuel-air ratio control including an intake airflow measuring device, an ignition timing control including a supercharger pressure rise actuated device, a pair of fuel metering jets connected in series, and means connected with said intake airflow measuring device and with said supercharger rise actuated device for controlling the flow of fuel through at least one of said jets.

2,460,384
GUN-LOADING MECHANISM
Otto R. Haas, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application May 25, 1944, Serial No. 537,267
13 Claims. (Cl. 89—33)

11. Gun-loading mechanism comprising a shell magazine, a transfer tray for transporting shells from the magazine into ramming position, said transfer tray being provided with a pair of doors arranged for engagement with opposite sides of a shell, means urging said doors into shell-engaging positions, and means for locking said doors in shell-engaging position after a shell has been received by the tray and prior to movement of the tray to carry the shell into ramming position.



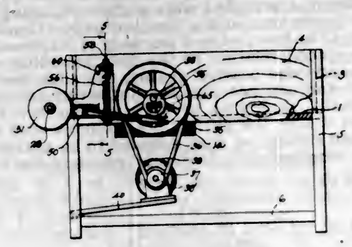
2,460,385
BOWLING BALL THUMB OR FINGER GRIPPING MEANS
Herbert H. Hausman, Lakewood, Ohio
Application February 21, 1948, Serial No. 10,030
2 Claims. (Cl. 273—63)



1. A thumb or finger grip for a bowling ball, consisting of a plug adapted to be tightly fitted in any one of a plurality of angular relations within a hole formed in the ball, said plug having a bore inclined to its longitudinal axis, the outer end of said bore being concentric with the outer end of the plug.

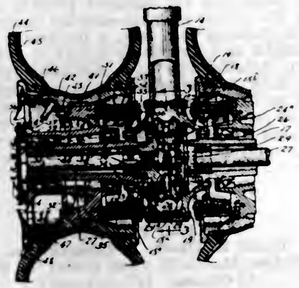
2,460,386
FEED MECHANISM FOR STONE CUTTING MACHINES
Karl J. Hillquist, Seattle, Wash.
Application March 7, 1947, Serial No. 733,089
5 Claims. (Cl. 125—13)

1. In a stone sawing machine, a saw driving shaft, a feed screw for advancing a stone against the saw, a cam rotatable with the saw shaft, a lever arm mounted for oscillation and adapted to be freely actuated to one of its limits of oscillation by said cam with each rotation thereof and a spring means acting against the lever arm to urge it toward its other limit as the cam recedes therefrom, and a one-way clutch mechanism operatively connecting the lever arm and feed screw for the rotatable advancement of the screw



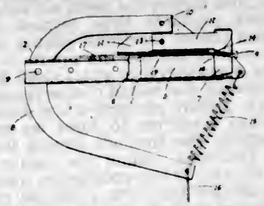
only in accordance with the extent of return movements of the lever arm by said spring.

2,460,387
LANDING GEAR
Willson H. Hunter, Lakewood, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application December 3, 1943, Serial No. 512,720
3 Claims. (Cl. 244—50)



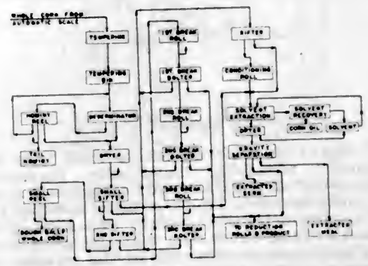
2. An aircraft dual wheel landing gear comprising a pair of landing wheels in close side-by-side relation and including axially aligned hubs, a supporting strut structure extending generally vertically between said wheels in the landing position, a housing at the lower end of the strut structure between said wheels and a pair of supporting tubular members united with and projecting laterally from said housing and constituting with said strut structure and housing a T-shaped support, said hubs being positioned in telescopic relation on said tubular members and terminating at their inner ends short of said housing providing spaces between the hubs and housing, rolling-contact bearings between each hub and tubular member at spaced-apart positions along the member, driving means in said housing and extending through said tubular members to the outer ends thereof, over-running clutch means at said outer ends for free-wheeling connection of said driving means with the respective wheel, and brake structures individual to said wheels and disposed in said spaces between said housing and said hub, each brake structure comprising brake elements one of which is mounted on said housing and the other brake element is mounted on the adjacent hub at said inner end thereof.

2,460,388
SAW SET
Albert M. Lezanski, Sacramento, Calif.
Application February 17, 1947, Serial No. 729,046
4 Claims. (Cl. 76—65)



1. A saw set comprising an open ended upwardly opening horizontal channel, means adapted to support the channel, a bar-like anvil engaged in the channel the surface of the anvil projecting just above the top edges of the sides of the channel, an upwardly exposed chamfered face on one side of the anvil at one end thereof, a vertically movable striker mounted above said anvil face in cooperating relation, hold-down means adapted to engage a saw from above and hold the same against the projecting top surfaces of the anvil with one tooth of the saw directly above said chamfered face and below the striker, and saw tooth locating means associated with the channel.

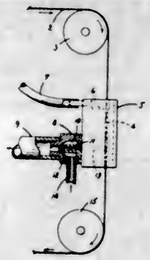
2,460,389
SOLVENT EXTRACTION AS STEP IN MILLING PROCESS
William R. Lloyd and Glen H. Schafer, Chicago, Ill., assignors, by mesne assignments, to Charles A. Krause, Jr., Milwaukee, Wis.
Application March 29, 1945, Serial No. 585,546
5 Claims. (Cl. 99—80)



1. The process of milling corn which comprises tempering corn kernels in a humid atmosphere, mechanically tearing the tempered kernels to loosen the germ from the endosperm, coarse screening the torn kernels to form a first side stream composed of the larger pieces of endosperm, germ, and whole corn kernels and a through stream composed of germ and finer particles of endosperm, reeling the first side stream to separate fine, medium and coarse fractions, returning the coarse fraction for further mechanical tearing, combining the fine fraction with the through stream, recovering a grit product from the medium fraction, drying the through stream, sifting the dried through stream to form a second side stream composed of the coarser particles, a sifted through stream composed of the medium particles, and a solvent extraction stream composed of the fine particles,

further sifting the second side stream into coarse and fines fractions, combining the fines fraction with the sifted through stream, reeling the coarse fraction to separate doughballs therefrom, rolling the reeled coarse fraction to further crack the endosperm and flatten the germ particles, bolting the cracked products thus formed into fine, medium and coarse fractions, rolling the bolted medium fraction, bolting the products from the last rolling operation into coarse and fines fractions, combining the bolted coarse fractions with the through stream, recovering the fines from all of the bolted fractions to form an endosperm product, sifting the through stream into coarse and fines fractions, rolling the coarse fraction to reduce the size of the endosperm particles and to further flatten the germ particles, combining the conditioned product and the sifted fines fractions with the solvent extraction stream, solvent extracting the oil from the concentrated mixture of germ and endosperm in said solvent extraction stream, separating corn oil from the solvent, drying the extracted solids, and gravity separating the dried extracted solids into an extracted meal fraction, an endosperm fraction, and a germ fraction.

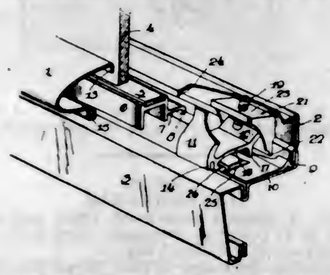
2,460,390
MEANS FOR REMOVING EXCESS LIQUID FROM FILAMENTARY MATERIAL
Henry J. McDermott, Prospect Park, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application March 7, 1945, Serial No. 581,475
10 Claims. (Cl. 91—18)



5. Means for removing excess liquid from continuously advancing liquid-laden filamentary material of indefinite length comprising a substantially enclosed thread-treating member having a thread-bearing surface extending therethrough along which the material advances, a bore extending transversely of the member and communicating with the thread-bearing surface, and suction means for continuously drawing air through the transverse bore and withdrawing the air and excess liquid removed from the material advancing along the thread-bearing surface thereby to the exterior of the thread-treating member.

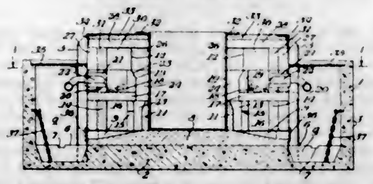
2,460,391
GLASS SETTING DEVICE
James T. Miller, Niles, Mich., assignor to The Kawneer Company, Niles, Mich., a corporation of Michigan
Application June 22, 1944, Serial No. 541,595
2 Claims. (Cl. 20—56.4)

1. A glass setting device for a window, store front and the like having an encompassing frame, comprising a gutter member provided with a glass engaging lip at its upper edge and a base having a longitudinally extending recess and spaced embossed loops, a face moulding adjustably and removably mounted with respect to the gutter member and provided with a glass engaging lip at its upper edge and a longitudinally extending groove at its lower edge, a plurality of lugs mounted in spaced relation in the face moulding and having an edge bearing against the glass engaging lip and another edge seating within the longitudinally extending groove, resilient brackets located within the gutter in alignment with the lugs and having an edge adapted to be anchored in the longitudinally extending recess in the base



and an edge bearing against the glass engaging lip of the gutter, a rearwardly extending leg on each of said lugs, each provided with a downwardly extending rib adapted to seat upon the base of the gutter member and an upwardly and inwardly inclined cam face, a projection on each lug adapted to be received within a loop in the base for holding the face moulding down into contact with an encompassing frame, and a screw carried by each resilient bracket and adjustable from the rear of the glass having its end seating against the cam face on the lugs for drawing the lugs and face moulding into glass holding position.

2,460,392
KETTLE FURNACE
Oscar R. Olson, Pittsburgh, Pa.
Application March 22, 1946, Serial No. 656,319
10 Claims. (Cl. 263—11)



5. In a kettle furnace the combination of a mat having a flat continuous surface, an open top tank supported on the mat, furnace end walls covering the end of the tank, a relatively low barrier wall on the mat along each side of the tank for boxing in the bottom thereof, furnace side walls connecting the end walls and spaced outwardly from the barrier walls, a row of fuel burners in each furnace side wall, a series of spaced piers extending laterally from each barrier wall but stopping short from their respective furnace side wall to provide a longitudinal flue space, a slab supported by the outer ends of the piers and the furnace side walls below the burners to form a ceiling for the flues and a fuel bed floor for the burners, an upwardly projecting bridge wall along the inner edge of the slabs and spaced

from the tank to shield it from the fire beds and to provide a downtake to the outlets between the piers to the flues, a roof supported above the bridge walls to provide combustion chambers connecting the fire beds with the downtake, a stack adjacent one end of the furnace, means connecting the ends of the flues to said stack, and means between adjacent piers to restrict the outlets progressively toward the stack end of the furnace.

2,460,393
VULCANIZATION OF RUBBER
Philip T. Paul, Naugatuck, Conn., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application June 23, 1945, Serial No. 601,313
14 Claims. (Cl. 260—79.5)

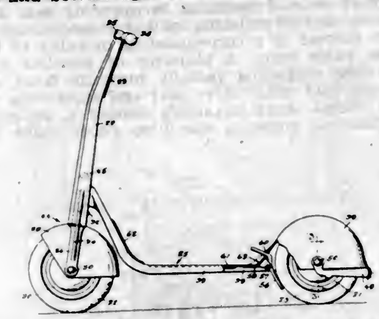
1. A method of vulcanizing a sulfur-vulcanizable rubber which comprises incorporating therein sulfur, a small amount of a primary organic rubber-vulcanization accelerator, and an activator having the general formula Aryl—S—NH—R where aryl represents a carbocyclic ring having a nuclear carbon atom directly bonded to the S, and which nucleus is further substituted by a group more electro-negative than hydrogen selected from the class consisting of halogen, nitro, acyl, carboxyl, carboxy ester, sulfonamide, and acylamide, and R is a member selected from the group consisting of aliphatic and aromatic hydrocarbon groups.

2,460,394
FENDER PROTECTOR
Erin B. Peatross, Washington, D. C.
Application January 13, 1947, Serial No. 721,835
1 Claim. (Cl. 280—150)

In combination, motor vehicle having an engine compartment, a fender extending outwardly from said engine compartment, a spring roller, roller supporting brackets fixed on said fender and extending inwardly of said engine compartment, an engine compartment hood for enclosing said roller and said roller supporting brackets, and a flexible fender covering member engaging about said roller whereby said fender covering member may be pulled outwardly for covering the fender in the raised position of said hood.

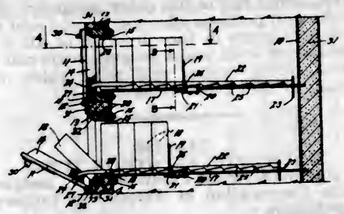
2,460,395
CHILD'S SCOOTER
George A. Reid, Seattle, Wash., assignor to Northwest Metal Products, Inc., Seattle, Wash., a corporation of Washington
Application April 27, 1946, Serial No. 665,573
11 Claims. (Cl. 280—87.04)

9. In a child's scooter employing a frame-piece and a fork, the mounting by which the front end of the frame-piece is suspended from the fork and which comprises vertically spaced cross-bars fixedly associated with the fork and providing vertically aligned apertures, a bushing carried by the front end of the frame-piece to occupy a vertical position, said bushing being formed at each of its two ends with enlarged heads and having the reduced neck between said heads caught by the frame-piece while the enlarged heads bear top and bottom against the frame-piece to im-



movably secure the bushing to the frame-piece, said bushing being adapted to be inserted between the cross-bars with its bore in alignment with the aligned apertures of the latter, and a swivel-pin arranged to be dropped through said aligned bore and apertures.

2,460,396
FROZEN FOOD DISPENSER
Milton Rifkin, Denver, Colo., assignor, by mesne assignments, to Frez-O-Mat Corporation, a corporation of Illinois
Application August 9, 1944, Serial No. 548,698
7 Claims. (Cl. 312—36)

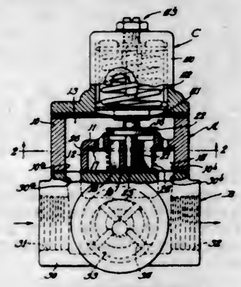


1. A dispensing device for frozen foods and the like comprising; an insulated cabinet; an opening in a wall of said cabinet; hinge means adjacent said opening; a door supported by said hinge means and closing the outer portion of said opening; a flexible sealing gasket completely surrounding said opening and projecting into the latter to restrict the size of the opening; rigid package supporting means extending into the cabinet from the opening and supporting a row of packages in alignment with said opening; and means operable by said door for sliding the row of packages forwardly along said supporting means into the embrace of said gasket.

2,460,397
PUMP, BY-PASS VALVE ASSEMBLY
Jay M. Roth, Euclid, Ohio, assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application July 22, 1944, Serial No. 546,100
3 Claims. (Cl. 277—61)

1. In a relief and by-pass valve assembly for a rotary-type fluid pump, said assembly comprising

a housing having a partition dividing the interior thereof into a first chamber and a second chamber, a generally centrally disposed orifice in said partition terminating on the first chamber side in a relief valve seat, a plurality of smaller orifices in said partition surrounding said first orifice and terminating on the second chamber side thereof in a corresponding plurality of by-pass valve seats, a plurality of web-like wall portions extending radially inwardly from adjacent said relief valve seat and supporting on the radial inner terminals thereof a generally cylindrical guide, a disc-type relief valve for

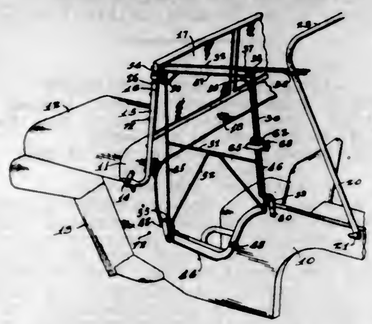


cooperation with said relief valve seat and having a coaxially extending cylindrical guide stem for cooperation with said guide, a single flat washer-like valve guidably embracing the outer radial extremity of said web-like walls and cooperating with all of said by-pass valve seats, a single coil compression spring embraceably and guidably received about the radial outer periphery of said web-like wall portions effective to urge said single washer-like valve in the direction of all of said by-pass valve seats and a second single coil compression spring urging said relief valve in the direction of said relief valve seat.

2,460,398
MOUNT FOR ELECTRON TUBES
Otto H. Schade, West Caldwell, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 11, 1947, Serial No. 721,503
20 Claims. (Cl. 250—27.5)

18. An electron discharge device having an electrode mount, an electrode assembly in said mount, a pair of insulating spacers defining extremities of said electrode assembly, at least one heat radiator supported axially of the mount, and a pair of insulating spacers for said radiator, one of said insulating spacers being common to said electrode assembly and said radiator.

2,460,399
VEHICLE CLOSURE
Norman A. Schassberger, Toledo, Ohio, assignor to Willys-Overland Motors, Inc., Toledo, Ohio, a corporation of Delaware
Application April 11, 1945, Serial No. 587,771
5 Claims. (Cl. 296—44)

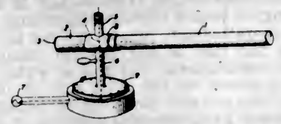


1. In combination; a vehicle body having a windshield frame; a vertical strut secured to the body; a substantially horizontal top rail disposed between said strut and the windshield frame; hinge sockets secured to said body and windshield frame; a removable door including a skeleton metallic frame; a plurality of hinge pins welded to the metallic door frame and adapted to be received in said hinge sockets; a flexible fabric covering secured to said door frame, and latch means pivotally secured to said strut for retaining said door in closed position.

2,460,400
METHODS FOR THE TREATMENT OF REGENERATED CELLULOSE THREAD
Carl Schlatter, Wilmington, Del., and Carl V. Holmberg, Crossett, Ark., assignors to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 13, 1944, Serial No. 544,824
4 Claims. (Cl. 117—139.5)

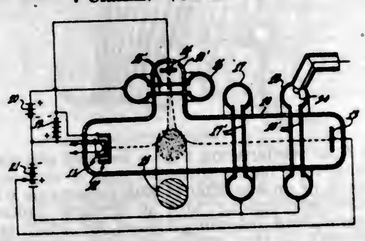
1. In the method of manufacturing artificial filaments of regenerated cellulose from viscose comprising spinning the filament-forming material into an aqueous coagulating medium and subjecting the filaments to aqueous after-treatment, including final washing, the step of continuously over a predetermined interval of time treating the filaments while still wet from the washing step and before any prior drying thereof, with a solution comprising a volatile hydrophobic hydrocarbon solvent and from about 1 to 10% of an organic compound capable of withdrawing water from the filamentary material and blending the withdrawn water with the hydrocarbon solvent into a substantially single phase system, said organic compound being soluble in the hydrocarbon solvent, containing at least one hydrophobic group and at least one hydrophilic group, and comprising a substance selected from the group consisting of partial esters of polyhydric alcohols with fatty acids having from 12 to 18 carbon atoms, and ethylene oxide condensates of such esters containing from 6 to 20 ethylene oxide units, such treatment being performed at a temperature below the boiling points of water and the solvent under the conditions of application, and continuously removing the resulting blended system from the filamentary material thereby leaving the material in a predetermined state of dryness.

2,460,401
DIRECTIVE MICROWAVE RADIO ANTENNA
George C. Southworth, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Original application November 28, 1941, Serial No. 420,747. Divided and this application April 1, 1943, Serial No. 481,390
37 Claims. (Cl. 250—33.63)



1. An antenna system comprising as the wave radiating or intercepting element a rod of dielectric material having a dielectric constant substantially greater than unity, and means at one end of said rod for launching into said rod or for receiving therefrom only electromagnetic waves of a predetermined operating frequency, the transmission cut-off frequency of said rod being not substantially greater than the said operating frequency, the length of said rod being at least several wave-length at the operating frequency.

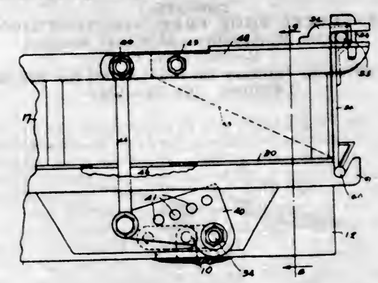
2,460,402
ELECTRON DISCHARGE DEVICE
George C. Sziklai, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application September 6, 1945, Serial No. 614,692
7 Claims. (Cl. 315—6)



1. An electron discharge device having cathode means for directing a stream of electrons along a beam path, an electrode in said path toward which said electrons are directed, means for deflecting said stream at an angle to said path, means for velocity modulating said deflected electrons and returning said electrons along said first path toward said electrode, means for further velocity modulating said returned electrons, and means for extracting energy from said velocity modulated electron stream.

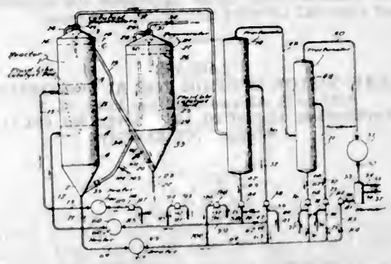
2,460,403
AUTOMATIC DUMP BODY
Maurice E. Teague, Cheney, Wash.
Application May 8, 1945, Serial No. 592,673
2 Claims. (Cl. 298—23)

1. In a dump body that is pivotally mounted upon a frame and swings to inclined position relative thereto, tail gate elevating means, comprising: a tail gate to close said body at the rear when in the normal horizontal position, a lever connected to each upper corner of said body and extending forward alongside said dump body and having pivotal connection therewith intermediate its ends, a link depending from each said lever forward of its pivotal connection to said body, a guide plate depending from said lever



within said body along the side wall thereof, said guide plate extending forward from the rear end of said lever, a cross shaft lateral of said body therebelow and having a crank plate on each end, each said link and the adjacent crank plate being pivotally interconnected and crank means between said cross shaft and said frame.

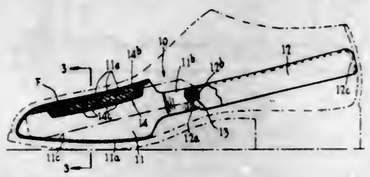
2,460,404
CATALYTIC CONVERSION OF HYDROCARBONS
John W. Ward, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application September 30, 1943, Serial No. 504,460
7 Claims. (Cl. 196—52)



1. A catalytic cracking process which comprises introducing relatively clean and active subdivided solid cracking catalyst to the first of a series of at least three reaction zones maintained under cracking conditions, passing catalyst from the first to the second and from the second to the third zone of the series whereby to maintain a continuous flow of catalyst through said series of zones, introducing to said third zone a hydrocarbon charging oil heavier than gasoline and therein cracking a substantial portion thereof in contact with used catalyst from said second zone, removing cracked vapors and catalyst from the third zone and fractionating the vapors to condense and separate hydrocarbons heavier than gasoline, introducing at least a portion of the last-named hydrocarbons to said second zone and therein subjecting the same to further cracking in contact with used catalyst from said first zone, passing resultant cracked vapors from the

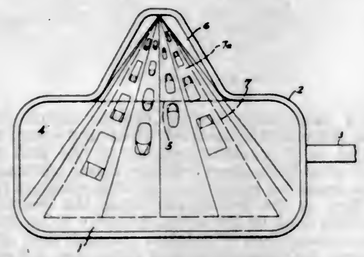
second zone to the third zone for further treatment therein, and passing an olefinic gasoline fraction serially through said first, second and third zones in the order named under conditions to reduce the olefin content thereof.

2,460,405
SANITATED SHOE TREE CONSTRUCTION
Samuel M. Abrams and Albert Abrams, Brooklyn, N. Y.
Application January 18, 1946, Serial No. 642,001
2 Claims. (Cl. 12—128)



1. A shoe tree comprising a hollow shoe-shaped toe retaining portion, a collapsible extension movably supported from said toe portion for adjustment in and out of said hollow toe portion, a porous member secured to an interior wall of said hollow shoe shaped portion and so located as to be free from interference with the movement of said collapsible extension when positioned in said toe portion and forming with the toe portion a compartment adapted to receive an odor neutralizing means, said toe portion where it forms the wall of said compartment having openings therein and having passages therein communicating with the interior thereof at points spaced from said openings, and means permitting movement of one of the portions forming a wall of said compartment so as to permit the insertion and removal of odor neutralizing means.

2,460,406
REAR-VISION MIRROR FOR AUTOMOBILES
Arthur S. Alexander, New York, N. Y.
Application August 20, 1946, Serial No. 691,711
1 Claim. (Cl. 88—73)



An automobile rear view mirror having an oblong portion with upper and lower longitudinal edges and vertical lateral edges, and a centrally extending portion along the upper edge of the oblong portion, said extending portion tapering upwardly from the oblong portion, and the edges of the extending portion being offset inwardly from the said lateral edges, whereby a triangular perspective rear view is obtained and obstructions to forward vision are reduced.

2,460,407
WASHER FOR GARDEN HOSE COUPLINGS
Orrin E. Andrus, Altadena, Calif.
Application December 10, 1945, Serial No. 633,961
6 Claims. (Cl. 138—46)

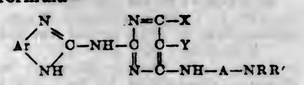
1. A washer or the like for garden hose connections, comprising a disc adapted to be confined in the connection transversely of the hose and having an orifice therein controlling the flow of water therethrough, means carried by the disc to adjust the size of the passage through the orifice for regulation of the flow of water, a filter member disposed on the inlet side of said disc, and a resilient circular rim member confining the corresponding adjacent edge portions of said disc and filter to hold the same in place and seal the connection against leakage.

2,460,408
AMPLIFIED ACCORDION
Walter J. Babicky, Milwaukee, Wis.
Application June 28, 1946, Serial No. 680,314
5 Claims. (Cl. 84—1.04)

1. The combination with a musical instrument having reed blocks and piano keys at one side thereof, of an amplifier pickup comprising a light weight microphone and a floating mounting therefor, and fastening means for securing the mounting to the piano side reed blocks in an otherwise unused space in the instrument.

2,460,409
2-BENZIMINAZOYL-AMINO PYRIMIDINES
Frederick Robert Basford, Francis Henry Swinden Curd, and Francis Leslie Rose, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application October 4, 1946, Serial No. 701,092. In Great Britain October 9, 1945
9 Claims. (Cl. 260—251)

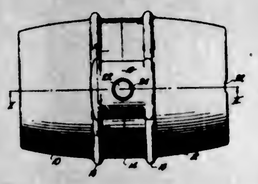
4. As new compounds, pyrimidine derivatives of the formula—



wherein Ar designates an ortho-attached arylene radical of not more than 10 cyclic carbon atoms

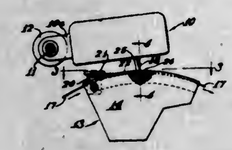
and whose cyclic carbon atoms carry substituents selected from the group consisting of hydrogen, chlorine, methyl and methoxy; R and R' are lower alkyl radicals, A is an aliphatic link joining the N-atom of the NH group to the N-atoms of the NRR' group and interposing therebetween at least two carbon atoms, while X and Y represent members selected from the group consisting of hydrogen and hydrocarbon radicals.

2,460,410
BARREL
Ernest H. Benson, Kansas City, Mo.
Application November 19, 1945, Serial No. 629,443
1 Claim. (Cl. 220—1)



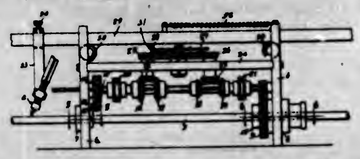
In a barrel of the character set forth, a body formed of sheet metal, provided with a filler opening in the side thereof and a bead on each side of the said filler opening; an out-turned flange integral with the barrel body and defining the edges of the filler opening; a flattened section in each bead having portions extending to each side of a longitudinal line passing through the axis of the filler opening; and a relatively strong reinforcing block secured to the outer face of the body, provided with a hole for receiving the out-turned flange, said block having its inner face contoured to rest against the outer face of the barrel body, including the flattened sections of the beads, and having its outer face contoured to form an uninterrupted, concentric, continuation of the outer faces of the ribs, the inner face of that portion of the block between the flattened portions of the ribs, and extending laterally from the opening being in snug contact with the underlying face of the barrel.

2,460,411
SOUND RECORDER
Sumter Calvert, Chicago, Ill., assignor to Raymond T. Moloney, Chicago, Ill.
Application March 9, 1944, Serial No. 525,781
4 Claims. (Cl. 274—11)



1. Sound apparatus including means providing a firm support over which film is adapted to move, rotatable members movably mounted on said support extending laterally of the movement of said film and over which said film is adapted to move, said members being movable toward and away from the plane of the film, and a sound stylus positionable upon said film at points across its width and between said rotatable members on a side of the film opposite from the latter.

2,460,412
APPARATUS FOR FLAME CUTTING
Frank J. Douglass, Pasadena, Calif.
Application October 7, 1942, Serial No. 461,174
4 Claims. (Cl. 33—21)



1. In the apparatus of the class described, the combination of a frame, a work supporting means carried by the frame, means for revolving the work support to rotate the work, a tool support, a reciprocating carriage for the tool support mounted to reciprocate on the frame in a direction parallel to the axis of rotation of the work, a pattern template, means driven by the work rotating means for rotating the template, a pin carried by the carriage to engage the pattern template, spring means for yieldably urging the carriage to maintain the pin in contact with the pattern periphery of the template whereby the carriage is reciprocated in accordance with the contour of the pattern periphery of the template as the work is revolved.

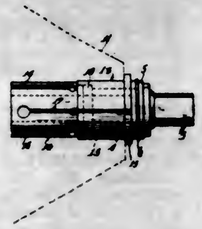
2,460,413
WELDER'S DOUBLE MITT
Sanford J. Errett, Portland, Oreg.
Application June 11, 1945, Serial No. 598,684
5 Claims. (Cl. 2—158)

1. A welder's mitt comprising an outer shell having a hand portion with a smooth seamless surface over the back and palm and extending around the forefinger edge, a single seam extending only across the finger tip end and along the little finger edge, and a thumb attached to the palm side of said hand portion by means of a seam extending around the base of the thumb, said thumb having a smooth seamless inner edge surface and a seam extending across the thumb tip and down the outer edge of the thumb; and a liner comprising a pair of identical blanks fastened together by a marginal seam to make said liner usable with either right or left hand outer shells.

2,460,414
INTERNAL COLLET
Morell M. Fuller, San Jacinto, Calif.
Application July 20, 1946, Serial No. 685,104
5 Claims. (Cl. 279—2)

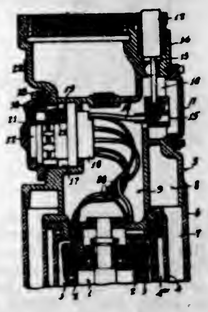
2. An internal collet for removably sustaining a workpiece from the inner bore thereof, which

collet comprises jaw members uniting to form a substantially cylindrical body separated longitudinally into three separate jaw members, a spherical fulcrum member positioned interiorly of the jaw members, the jaw members extending to both sides of the fulcrum member so that at one side thereof they expand and contact the bore of the workpiece to be supported by the



collet and at the other side of the fulcrum they provide surfaces adapted to be contracted by a device for mounting the collet, said jaw members having segmental spherical surfaces engaging the fulcrum member, and a resilient ring engaging the inner surface of the jaw members for yieldingly urging the jaw members into the releasing position.

2,460,415
SELECTIVE MOTOR LINE CONNECTING DEVICE
James M. Gaylord, San Marino, and Rowland E. Ball, Long Beach, Calif., assignor to Byron Jackson Co., Vernon, Calif., a corporation of Delaware
Application November 16, 1944, Serial No. 563,760
9 Claims. (Cl. 172—36)

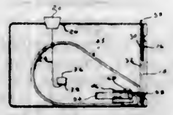


3. A device for effecting predetermined connections between an electric motor and power line wherein the motor is provided with sets of windings adapted for series or parallel connections, the combination of: a terminal base; a ring of terminal elements secured therein and arranged in sets connected with corresponding sets of motor winding leads, one of said sets also being connected to said power lines; a terminal plate; means for securing said terminal plate in at least one of two planularly offset positions relatively to said terminal base; a ring of terminal members carried by said terminal plate and several of said terminal members being arranged in electrically connected pairs to cause said pairs of terminal members to selectively bridge between different sets of terminal elements depending upon the position of said terminal plate, others of said terminal members being shorted so as to provide a shorting connection between the members of one set of terminal elements when said terminal plate occupies one of its positions, said shorting connection being inoperative when said terminal plate occupies its other position.

2,460,416
SCREEN CLEANER FOR PRESSURE FILTERS
Uriel E. Goodrich, Laramie, Wyo.
Application September 21, 1945, Serial No. 617,849
2 Claims. (Cl. 210—182)

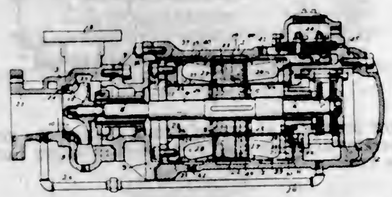
2. A device for cleaning filter screens of the flat, vertical, parallel, separated type used in dry cleaners' pressure filters comprising: a horizontal shaker bar lying across the upper edges of all of said screens at right angles to the planes thereof, there being notches in the lower edge of said shaker bar for receiving the upper edges of said filter screen; a horizontal shaft extending across said filter at right angles to and below said shaker bar; an eccentric member on said shaft at its point of intersection with said shaker bar; means on said shaker bar engaging said eccentric member; and means for rotating said shaft from the exterior of said filter to cause said eccentric to reciprocate said shaker bar horizontally.

2,460,417
MOUSETRAP
Robert F. Goostrey, Jackson, Mich.
Application January 17, 1946, Serial No. 641,779
7 Claims. (Cl. 43—61)



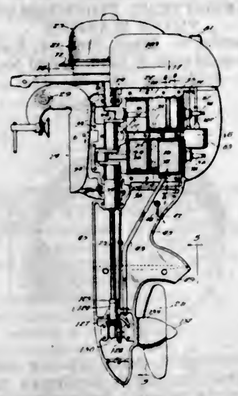
1. A mouse trap or the like, comprising a housing having an opening in one end thereof, a fixed plate member closing said opening and having a hole therein, a movable plate slidably positioned along the inside of said first plate and vertically movable between upper sprung position and a lower set position and having a hole therein registering with said first hole with said movable plate in its lower set position, means guiding said movable plate for movement relative to said first plate, spring means acting on said movable plate to project the same into the upper sprung position, a part on said movable plate extending above said housing with said movable plate in the upward sprung position and adapted to be depressed to move said movable plate into the lower set position, a trigger located within said housing, and means constituting a releasable connection between said movable plate and said trigger to hold said movable plate in the lower set position.

2,460,418
ELECTRIC MOTOR
Edward Hart, San Marino, Calif., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York
Application August 18, 1944, Serial No. 550,023
10 Claims. (Cl. 172—36)



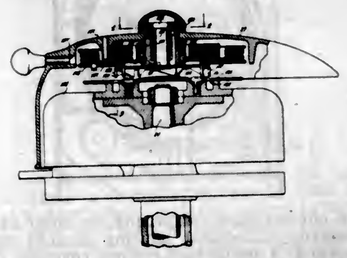
7. In a rotary electric motor including a stator, stator windings therefor, a housing for the motor, and end closures for said housing adapted to provide bearing supports for the rotor of the motor, a separate package enclosure containing the stator and its windings removably secured in said motor housing, the inside surface of said package comprising the stator laminations and a sleeve interlocked therewith and extending from each end thereof and being covered by a cylindrical lining of foil-like thickness of corrosion resistant material sealed at the ends of the package, means for removably securing and sealing one end of said package to one of said closures and means to allow limited longitudinal movement of the other end of said package within said housing to protect said lining against damage as by thermal expansion and contraction and to seal said end to protect said stator and windings against corrosive liquids, the outer wall of said package being open to the inside of said housing between said seals.

2,460,419
OUTBOARD MOTOR
Leo T. Kincannon, Milwaukee, Wis., assignor to Metal Products Corporation, a corporation of Wisconsin
Application April 14, 1943, Serial No. 482,967
12 Claims. (Cl. 115—17)



1. In an internal combustion engine, the combination of a motor casing having a bore therein adapted to receive a cylinder and a crank case, said casing being made in parts split in a plane substantially through the center line of the cylinder and the crank case, a cylinder in said bore having an integral head, means to clamp the two parts of the casing together with the cylinder in place therein, said cylinder and casing having a direct interlocking connection intermediate the ends of said cylinder to positively prevent longitudinal movement of said cylinder relative to said casing and completed when said parts of said casing are clamped together, and means cooperating with said casing to form a water jacket space for said head.

2,460,420
STARTER MECHANISM FOR MOTORS
Leo T. Kincannon, Milwaukee, Wis., assignor to Metal Products Corporation, a corporation of Wisconsin
Original application April 14, 1943, Serial No. 482,967. Divided and this application August 25, 1944, Serial No. 551,198
6 Claims. (Cl. 123—185)



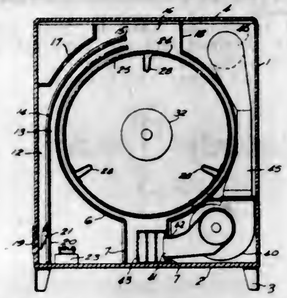
1. In a starter for a motor having a flywheel with apertures therein, a pulley, a spring attached to said pulley and adapted to rotate the pulley in one direction, a cord engaged with said pulley and adapted to rotate the pulley against the action of said spring, an actuating plate mounted concentrically with said pulley and having a limited movement in a plane perpendicular to the pulley, a cam member mounted on said pulley and in constant engagement with said plate, said cam being adapted simultaneously to rotate said plate and having fixed cam portions engageable with said plate to move the same toward said flywheel, and fixed lugs on said plate engageable in the apertures in the flywheel to rotate the latter.

2,460,421
FLEXIBLE VANE PUMP FOR OUTBOARD MOTORS
Leo T. Kincannon, Milwaukee, Wis., assignor to Metal Products Corporation, Milwaukee, Wis., a corporation of Wisconsin
Application June 22, 1946, Serial No. 678,657
4 Claims. (Cl. 103—117)

1. In a pump of the character described, the combination of a housing having a cylindrical cavity having an inlet in its bottom wall, a tube forming a fixed imperforate liner for the side walls of said cavity except for a flattened por-

tion spaced from said walls, said pump having a plate abutting said liner and having an outlet in the region of said flattened portion, means for clamping said plate and liner in assembled position, and a rotor centrally mounted in said cavity and having a plurality of flexible vanes mounted to rotate in said housing and cooperating with said inlet and outlet.

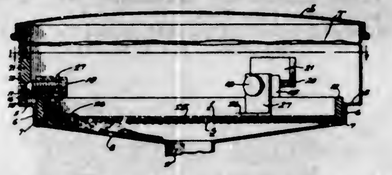
2,460,422
CLOTHES DRIER
Ernst R. Koppel, Chicago, Ill., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York
Application July 28, 1945, Serial No. 607,578
11 Claims. (Cl. 34—133)



1. A clothes drier comprising, an outer casing, a generally cylindrical housing secured within said casing, a perforated clothes carrying drum mounted for rotation within said housing and accessible through the front of said casing for loading and unloading of clothes, a diverter plate disposed laterally within one side of the casing substantially equi-distant between the casing and said housing to provide an outer duct between the plate and casing for the passage of fresh air and an inner duct between the plate and housing for the passage of heated air, said plate being curved inwardly at the upper portion to the shape of the housing and extending to a line above said housing, a vertical opening in said housing beneath the upper end of said plate, a baffle plate secured between the housing and top of the casing on the side of said opening opposite said ducts to direct the fresh air and heated air simultaneously through said housing opening and into said drum, means to supply fresh air to the outer passage and heated air to the inner passage, means to drive said drum, and means to flow said fresh air and heated air through said ducts and drum and out through the casing wall.

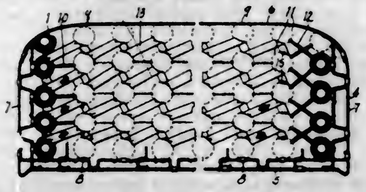
2,460,423
FILTER
Aloysius C. Kracklauer, Mundelein, Ill., assignor, by mesne assignments, to Sparkler Mfg. Co., Mundelein, Ill., a corporation of Illinois
Application March 26, 1945, Serial No. 584,899
8 Claims. (Cl. 210—158)

1. The combination with a filter having a tank provided therein at a point below its top with an annular seat, of a ring adapted to rest upon the seat and be supported thereby, a filter element supported in place between the ring and seat, a plurality of blocks affixed interiorly to the tank at a common elevation above the ring and each formed with a beveled under face, and a plurality of screw means, one for each block, carried by the ring and movable radially toward and from the beveled block faces for variable engagement therewith to transmit therefrom down-



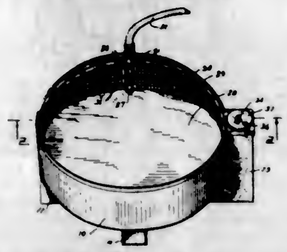
ward pressures at spaced points against the ring whereby to clamp the filter element tightly upon the seat.

2,460,424
SPRING CUSHION CONSTRUCTION
John Lupanoff, Detroit, Mich., assignor to L. A. Young Spring & Wire Corporation, Detroit, Mich.
Application November 9, 1946, Serial No. 708,827
10 Claims. (Cl. 5—274)



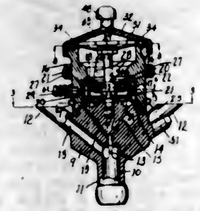
7. In a spring structure the combination of a top border frame comprising front, rear and end members, coiled body springs arranged in longitudinal rows, the top coils of the front, rear and end border springs being secured to the front, rear and end members of the border frame respectively, tie members connecting the top coils of adjacent springs in the rows, and webs of fabric rove zig-zag through the top coils of adjacent springs of adjacent rows.

2,460,425
INTERMITTENT PHOTOGRAPHIC PRINT WASHER
Charles E. Mace, Denver, Colo.
Application March 5, 1946, Serial No. 652,118
5 Claims. (Cl. 95—97)



1. A photographic print washer comprising: a circular tank having a discharge opening in the middle of its bottom; hydraulically-actuated means for opening said discharge opening at predetermined intervals; a circular removable imperforate sub-bottom in said tank of less diameter than the latter; partition members extending radially from said discharge opening and supporting said sub-bottom above the bottom of said tank; a cylindrical screen arising from the periphery of said sub-bottom in spaced relation to the wall of said tank; and means for admitting water to said tank.

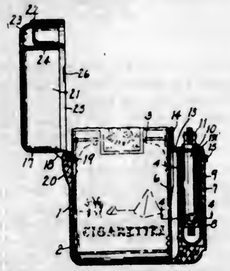
2,460,426
PULSATOR FOR MILKING MACHINES
Robert E. Maes, Marshall, Mich.
Application March 9, 1945, Serial No. 581,906
13 Claims. (Cl. 31—63)



1. A pulsator unit for milking machines comprising a chambered base member having a central depending vacuum connection nipple and peripherally spaced upwardly diverging teat cup connection nipples communicating with said chamber, said base also having an annular passage in its upper side communicating with its chamber, a casing member threaded upon said base member and constituting a wall for said annular passage and having a valve cylinder with vacuum ports at its upper end communicating with said annular passage and atmospheric ports at its lower end, said casing having spaced teat cup pulsating connection nipples opening thereto, a cap member threaded upon said casing member, a diaphragm disposed with its edges between said cap member and the upper end of said casing member and providing a diaphragm chamber, said casing member being provided with a passage opening to said diaphragm chamber and to the said valve cylinder between its said vacuum and atmospheric ports, a reciprocating valve adapted to alternately connect said vacuum ports and said atmospheric ports to said teat cup nipples and to said diaphragm passage, a stem on said diaphragm disposed centrally through said valve and having sliding engagement with said base member, said stem being provided with a double cone cam, and an annular coiled spring arranged within said valve coacting with said cam whereby the valve is actuated with a snap action through the actuation of said diaphragm.

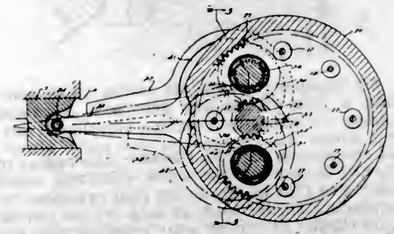
2,460,427
COMBINED CIGARETTE CASE AND LIGHTER
Henry E. Musselman and William H. Buck, Kalamazoo, Mich.
Application January 26, 1946, Serial No. 643,564
2 Claims. (Cl. 206—41.4)

1. A combined cigarette case and lighter comprising an integral body member of molded plastic material having a compartment of substantially rectangular cross section and of such dimensions as to receive a package of cigarettes with the upper end of the package projecting therefrom, the front wall of the compartment having internal longitudinally extending and laterally spaced ribs with outwardly inclined inner edge portions, said ribs acting to wedgingly engage a cigarette package within the compartment, said body member also having a longitudinal boss-like enlargement on the front wall thereof chambered to provide a lighter compartment and having internal longitudinally extending ribs with curved inner edges coacting with the inner wall of the chamber to receive and removably support a cylindrical lighter, the body member having a peripheral rib spaced from its upper edge providing a cover ledge, a cylindrical lighter arranged in said lighter chamber to project therefrom and provided with ignition means at its projecting end and having thereon an angular guard member with one arm thereof retainingly engaged with the lighter at the inner side of its ignition means and supported upon the end edge of the ignition chamber wall, the other arm projecting upwardly



and constituting a shield between the igniter means and the cigarette package, a cover member of molded plastic material hinged to the rear wall of said body member and having a compartment therein complemental to said cigarette compartment of said body member and adapted to receive the projecting end of a cigarette package therein and said shield, said cover member having a boss-like extension on its swinging end chambered to complement said lighter chamber, said cover member having a flange portion in its edge adapted to close over the upper end of the body member and abut the said cover ledge thereon, and a snuffer cap arranged in said complemental lighter chamber of said cover to enclose the projecting end of the lighter and the ignition means thereof.

2,460,428
MECHANICAL MOVEMENT FOR SLUSH PUMPS
Charles M. O'Leary, Los Angeles, Calif.
Application October 15, 1945, Serial No. 622,327
9 Claims. (Cl. 74—52)



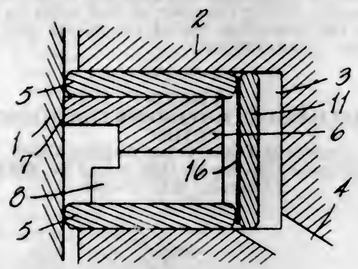
1. An epicyclic geared crank mechanism for a multi-piston pump, including a connecting rod for each piston, a sun and planet gear train in which the internal gear is fixed to the crank end of one connecting rod and is eccentric with respect to the sun gear and the axis of the sun

gear is fixed, said gear train including a member journaled on the sun gear axis, planet gearing journaled on the member and operatively connecting the internal and sun gear, and a journal carried by said member eccentrically of the sun gear axis for the crank end of another connecting rod.

2,460,429
ARTICULATED VEHICLE
Otto I. Oyler, Canton, Ohio
Application May 11, 1946, Serial No. 669,183
24 Claims. (Cl. 280—81)

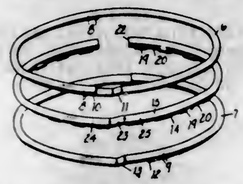
13. A dual bogie construction for vehicles comprising a forward wheeled bogie section and a rear wheeled bogie section, a transverse shaft on the forward bogie section, a universally jointed hanger depending from said transverse shaft, a second transverse shaft located on the rear bogie section forwardly of the rear bogie wheels, a second universally jointed hanger depending from the second transverse shaft, a rigid arm fixed to the forward end of the rear bogie section and pivotally connected to the lower end of the first named hanger, a pivotal connection between the lower end of the second hanger and the forward bogie section, and a pair of separable vertical pivots at the meeting faces of the two sections, said pivots being located on opposite sides of the center line of the bogie.

2,460,430
INNER RING OR EXPANDER FOR PISTONS
Harold P. Phillips, Hastings, Mich., assignor to Hastings Manufacturing Company, Hastings, Mich.
Application April 26, 1944, Serial No. 532,770
2 Claims. (Cl. 309—43)



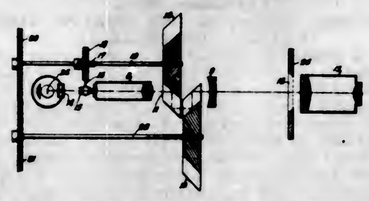
1. An expander spring for piston rings comprising a thin ribbon-like generally polygonal split strip of spring steel having a plurality of outwardly bowed ring engaging crimps and a plurality of connecting reaches therefor, the radius of curvature of said crimps being relatively small compared to that of the piston ring expanded by the expander spring, each of said crimps having chrome plating providing wear resisting ring engaging surfaces, such chrome plating being characterized by a pronounced crack pattern, the cracks of said pattern reducing compression and tension in the plating on the crimps upon flexing of the crimps to prevent scaling off of the plating and to maintain the resiliency of the spring steel.

2,460,431
PISTON RING
Harold P. Phillips, Hastings, Mich., assignor to Hastings Manufacturing Company, Hastings, Mich.
Application January 17, 1947, Serial No. 722,699
10 Claims. (Cl. 309—45)



1. A piston ring assembly comprising split spaced thin expansible side members and a split expansible spacer member intermediate said side members, said side members being disposed to present their outer edges to a cylinder wall and disposed to present their outer side surfaces to the opposite side walls of a piston ring groove, each side member having end portions overlapping approximately one-half the circumference of the side members and having an axially inwardly offset portion disposed at the attached end of one end portion and adjacent the free end of the other end portion, the offset portion in axial extent being approximately equal to the thickness of said adjacent end portion, the offset portion permitting the outer face of the side member to lie substantially entirely in a plane and permitting said face to engage the side wall of a ring groove substantially the entire length of the circumference of said side wall, said offset portion being circumferentially slightly spaced from said adjacent end to permit the side member to expand and contract in a ring groove, said spacer member being formed of ductile metal folded upon itself into a plurality of integrally connected superimposed plies, the bottom wall of the spacer member being upwardly bent at spaced intervals to provide alternate spacer and drain reaches, said spacer member opposite from the split thereof having an axial offset portion to permit the portions on the opposite sides thereof to lie in axially spaced planes, the axially offset portions of the side members and spacer member being in substantially axial superimposed relation to limit relative circumferential shifting of the side members and spacer members when disposed in operative position in a piston ring groove.

2,460,432
NONINTERMITTENT MOTION-PICTURE PROJECTOR
William C. Plank, Vallejo, Calif.
Application July 21, 1947, Serial No. 762,384
5 Claims. (Cl. 88—16.8)



1. In a non-intermittent motion picture projector, means to move the film at a uniform

velocity past an adjustable objective lens adapted to project a small real image of the film, two wheels comprised of rhombic reflecting prisms disposed so as to receive the light rays from the said objective lens through the smaller or inner faces of the prisms, means to rotate the said prisms past the said objective lens in the same direction as the film to compensate for the motion of the said film, and an auxiliary negative lens situated on the outside of the said prism wheels adapted to enlarge the arrested image.

2,460,433
ELECTRIC HOOD
Edwin B. Ripley, Los Angeles, Calif.
Application May 6, 1947, Serial No. 746,405
1 Claim. (Cl. 219—46)

A hood for the human head, adapted to fit over the top, back and sides of the human head, and having woven therein resistance wires for heating the hood, said wires having two terminal connecting means at opposite sides thereof, whereby to be connected in series with another electrically heated garment from one of said terminal connecting means, and to a source of electric energy by the other connecting means.

2,460,434
END PROTECTOR FOR ROLLED STRIP MATERIAL
Philip G. Salem, Akron, Ohio
Application May 20, 1946, Serial No. 671,109
4 Claims. (Cl. 206—59)

2. An end protector for strip material wound upon a core, said protector comprising a composite structure having a pair of axially apertured discs positionable against the end face of the rolled material and a sleeve in which the projecting end portion of the core is receivable, said sleeve having an end portion slitted and fanned radially outwardly, said sleeve extending through the axial aperture in one of said discs, the latter being bonded to each other with the fanned out portion of the sleeve confined therebetween, and a cap-like member mountable upon the projecting end portion of the core in telescoping relation with said sleeve, and bonded to the latter.

2,460,435
GOLF CLUB
Fred B. Schaffer, Kansas City, Mo.
Application April 23, 1948, Serial No. 22,877
8 Claims. (Cl. 273—77)

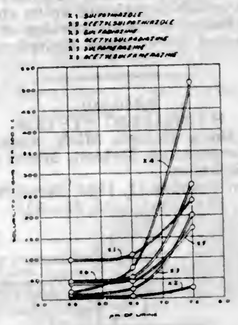
1. A golf club head comprising, a molded body of plastic material having integral top, forward and rear walls and terminating at one side in a neck adapted for connection with a golf club shaft, a ball striking face on the forward wall, a weight member engaging the forward wall and extending rearwardly therefrom substantially to the rear wall, and a plurality of rearwardly diverging ribs integral with and extending down-

wardly from the top wall connecting the weight member and rear wall to form a supporting structure for said weight member, said ribs being connected adjacent the weight member for entirely enclosing said weight member in plastic material and increasing the effective mass at the center of the head behind the normal point of impact of the striking face on a golf ball.

2,460,436
MERCAPTO ALCOHOL ESTERS
Bernard H. Shoemaker, Hammond, and Chester E. Adams, Highland, Ind., and Wayne A. Proell, Chicago, Ill., assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana
No Drawing. Application June 9, 1945, Serial No. 598,630
10 Claims. (Cl. 260—475)

1. A hydrocarbonmercapto monohydric alcohol ester of a polybasic carboxylic acid.

2,460,437
SULFA DRUG COMPOSITIONS
Marvin Russell Thompson, Riverside, Conn.
Application February 17, 1948, Serial No. 8,837
6 Claims. (Cl. 167—51.5)



1. An orally administrable therapeutic composition for producing effective blood levels of a sulfa drug without renal complications or alkalosis comprising a suspension of a sulfa drug in a liquid containing a lactate salt selected from the group consisting of sodium and potassium lactates in an amount at least three times the amount of the drug, and sufficient acid to reduce the pH of the liquid composition to slightly below the alkaline pH range to stabilize the drug and to enable the drug and lactate salt to be given as a mixture.

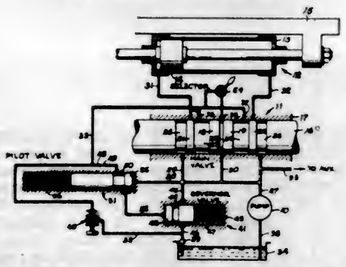
2,460,438
GARMENT HANGER
Morris Treiman, Los Angeles, Calif., assignor to Allied Plastics Company, Los Angeles, Calif., a copartnership
Application December 13, 1947, Serial No. 791,637
6 Claims. (Cl. 223—92)

1. A garment hanger comprising a body, a vertically disposed series of slots extending into said body alternately from opposite sides thereof, each of said slots having an inner portion overlapping the inner portion of the next adjacent slot, all in such manner that said overlapping inner portions cooperate to define the cross section of a vertical hole extending down into said body from the top edge thereof and opening alternately on opposite sides, a hook having a shank extending down into said hole, said body having an opening extending through from one side to the other and intersecting said hole, a washer mounted on said shank within said opening and adapted to bear on the top edge thereof, and means for securing said washer to said shank, whereby the latter is prevented from pulling out of said hole.

2,460,439
BENZOYL PEROXIDE BLEACHING COMPOSITION
Robert S. Whiteside, Scarsdale, N. Y., and Chester H. Allen, Cincinnati, Ohio, assignors, by mesne assignments, to Winthrop-Stearns Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application July 16, 1946, Serial No. 683,999
6 Claims. (Cl. 99—232)

1. A benzoyl peroxide bleaching composition comprising a finely divided intimate admixture of inert materials containing up to about 30% of benzoyl peroxide, a major portion of said inert materials being dead-burnt anhydrous calcium sulfate.

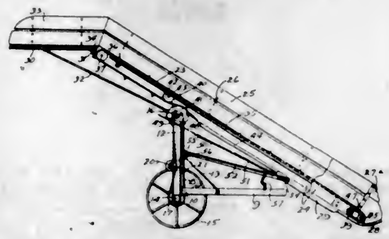
2,460,440
HYDRAULIC SYSTEM
Carroll R. Alden, Detroit, Mich., assignor to Ex-Cell-O Corporation, Detroit, Mich., a corporation of Michigan
Application October 11, 1943, Serial No. 505,799
12 Claims. (Cl. 60—52)



5. In a hydraulic system, the combination of a fluid delivery pump and an actuator, a main valve for cutting off the flow of fluid from said pump to said actuator when the valve is in an off position therefor, and means operable only when the main valve is in said off position to retain the pump discharge pressure either high or low.

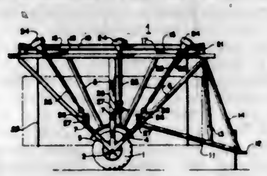
9. In a hydraulic system, the combination with an actuator and means including a pump for supplying pressure fluid thereto, of means operable automatically upon stalling of the actuator for not only preventing the supply of further fluid to the actuator from said pump but for also thereafter retaining said actuator at rest until the pump has been stopped and restarted.

2,460,441
AGRICULTURAL LOADING MACHINE
Everett H. Appel, Aurora, Ill.
Application April 19, 1944, Serial No. 531,693
6 Claims. (Cl. 214—41)



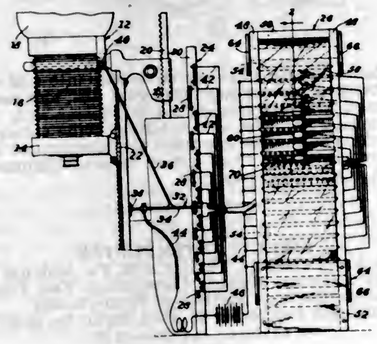
6. In an agricultural loading machine for bales and the like, a mobile frame, an inclined loading trough pivoted on said frame, means normally maintaining the lower end of said trough elevated well above pick-up position but yieldable and properly proportioned to the mass of a load to permit lowering of said end when a load is being picked up, an endless conveyor associated with said trough, a rotary pick-up element at the lower end of said trough to engage a load and pull down the lower end of said trough and deliver the load to said conveyor, and laterally flaring means adjacent the lower end of said trough to straighten a load relatively to said conveyor for engagement by said pick-up element.

2,460,442
TRAILER
Walter F. Aycock, El Centro, Calif., assignor, by mesne assignments, to Tank Fertilizer, Inc., Brawley, Calif., a corporation of California
Application February 7, 1947, Serial No. 727,144
4 Claims. (Cl. 214—75)



1. A trailer for handling bulky cargo, comprising: a pair of wheels; a pair of wheel mountings of generally segmental form each adapted to straddle and journal a wheel; a set of radiating upwardly diverging struts rigidly connected to each wheel mounting; a horizontally disposed rectangular top frame rigidly secured to said struts, said top frame and sets of struts defining a cargo receiving space; a cargo frame; springs yieldably supporting said cargo frame relative to said top frame; and means for suspending bulky cargo from said cargo frame.

2,460,443
PHOTOGRAPHIC ENLARGER EXPOSURE INDICATOR
John M. Benton, West Palm Beach, Fla.
Application May 9, 1946, Serial No. 668,341
8 Claims. (Cl. 88—24)

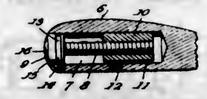


1. Photographic apparatus comprising in combination an enlarger, a series of stationary electrical contact elements of progressively increasing length, a movable contact slidably engaging said contact elements and connected to said enlarger whereby movements of said enlarger relative to a printing surface produce a proportional movement in said movable contact, a separate light electrically connected through said movable contact to each of said separate stationary contact elements and a movable, tape-like chart which may be moved lengthwise relative to said lights having indicia thereon for indicating the exposure to be used for any particular setting of said enlarger in accordance with the particular light which is lit by movement of the enlarger relative to the printing surface.

2,460,444
FACE POWDER CONTAINER
Lynn Bering, Hollywood, Calif.
Application December 6, 1947, Serial No. 790,191
5 Claims. (Cl. 132—82)

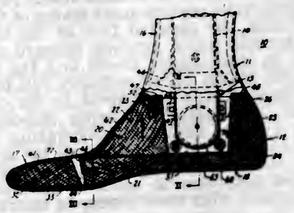
1. A face powder container, comprising: container means defining a powder puff compartment and a face powder reservoir separated by a partition, said partition having a ported area; a cover for said compartment; a valve means operable from the exterior of said means for passing face powder from said reservoir to said compartment; and means responsive to movement of said cover to lock said valve means against operation when said cover is open and permit said valve means to operate when said cover is closed.

2,460,445
ADJUSTABLE WEIGHT FOR GOLF CLUB HEADS
Charles W. Bigler, Cedar Falls, Iowa
Application April 19, 1948, Serial No. 21,801
2 Claims. (Cl. 273—77)



1. In a golf club head, means for adjusting the balance thereof, comprising a recess extending inwardly from one end of said head, a threaded screw member disposed longitudinally in said recess, said screw member being provided with an integral slotted adjusting head, of a size to substantially close the mouth of said recess and having its outer face shaped to conform to the contour of the adjacent area of the face of said golf club head, a peripheral groove extending around said screw head, a retractable projection in said golf club head extending into said groove, said projection and groove being relatively positioned with respect to one another and to the mouth of said recess to permit rotation of the screw but preventing its longitudinal displacement in the recess, a weight member in said recess, threaded to operatively engage the threads of said screw and longitudinally adjustable thereon by rotation of the latter, cooperative means in said recess and on said weight to prevent rotation of said weight with said screw, but to permit its longitudinal movement in said recess when the screw is turned, an index marking adjacent the mouth of said recess, on one of said faces and a series of cooperating markings on the other of said faces, said last named markings being calibrated to respectively indicate predetermined longitudinal positions of said weight on said screw, and means for locking said weight in selected positions.

2,460,446
ARTIFICIAL FOOT
Edward P. Carmichael, La Mesa, and Charles W. Radcliffe, Albany, Calif., assignors to Consolidated Vultee Aircraft Corporation, San Diego, Calif., a corporation of Delaware
Application September 23, 1947, Serial No. 775,686
17 Claims. (Cl. 3—5)

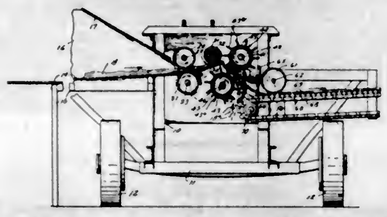


1. An artificial foot comprising a primary weight bearing portion and a toe portion, said primary weight bearing portion comprising an elongated core section and a fairing element applied at each elongated side of said core section, said fairings simulating contours of the human foot, said core section and said fairing elements being comprised of balsa wood, and a protective coating formed of a shock resisting material disposed upon the exterior of the assembled core and fairings.

2,460,447
CONVEYER CHAIN
John L. Clarkson, Nashville, Ill.
Original application April 4, 1945, Serial No. 586,559. Divided and this application August 21, 1946, Serial No. 691,956
4 Claims. (Cl. 74—246)

1. In a conveyor chain universal joint structure, a pair of elements arranged end to end, each having a central longitudinal portion of relatively shallow depth and flanges of relatively greater depth at the sides of said portion, the central longitudinal portion of one element forming spaced jaws and the central longitudinal portion of the other element having a tongue received between said jaws, and a pin extending through the tongue and jaws parallel to the planes of said flanges and pivotally connecting the two elements.

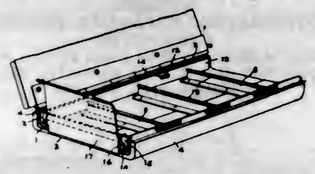
2,460,448
MACHINE FOR BREAKING FIBROUS MATERIALS
John V. Cook, Wilmette, Ill.
Application August 31, 1943, Serial No. 500,628
2 Claims. (Cl. 19—30)



1. In apparatus for treating fibrous material such as stalks of hemp, flax and the like, having a stationary breaker bar, the combination of a beater roll and a scutcher roll, said rolls each including a plurality of longitudinally extending, circumferentially spaced-apart blades of flattened cross section, the forward face of the blades of the beater roll being inclined forward with respect to its direction of travel and the forward face of the blades of the scutcher roll being inclined rearwardly with respect to its direction of travel, the beater roll being disposed in a position with its blades in cooperating relation to the breaker bar to operate upon the stalks for severing the pith thereof into small hurds, said rolls being rotatable in opposite directions and being disposed with their blades in intermeshing relation for receiving the stalks therebetween, as they feed from the breaker bar, for dislodging the hurds from the fibers of the stalks.

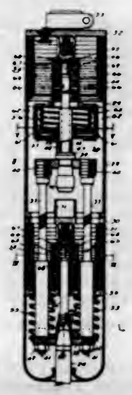
2,460,449
VISIBLE CARD INDEX
Robert J. Copeland, Toronto, Ontario, Canada
Application April 21, 1945, Serial No. 589,523
3 Claims. (Cl. 129—18)

2. A card index comprising, a holder having flanged edges, spaced ribs extending transversely of said holder between said flanged edges, bars slidably arranged parallel with the flanged edges of said holder, cross bars arranged above said ribs and having their ends secured in said slidable bars, said cross bars being spaced equal to the spacing of said cross ribs, means for moving said



slidable bars to move the cross bars into and out of vertical register with the cross ribs, and cards formed with notches spaced to register with the cross bars and ribs, said notches having enlarged portions at the top to permit displacement of the upper cross bars from out of vertical alignment with the holder cross ribs.

2,460,450
CIRCUIT INTERRUPTER
James M. Cumming, Turtle Creek, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 12, 1946, Serial No. 696,571
9 Claims. (Cl. 200—150)

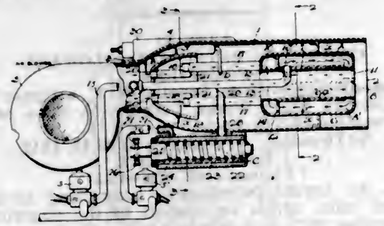


1. In a circuit interrupter, an operating cylinder, a piston operable within the cylinder, a contact secured to and movable with the piston, another contact cooperable with the said contact to establish an arc, an aperture provided in the piston, and contact means including a contact rod carrying the said other contact movable through the aperture to move the piston in sliding relationship to its charged position.

2,460,451
GASIFYING FUEL BURNER
Joseph E. Farrell, Toms River, N. J., assignor to Farhall, Inc., Toms River, N. J., a corporation of New Jersey
Application June 13, 1946, Serial No. 676,386
9 Claims. (Cl. 158—53)

1. A gaseous fuel burner comprising, a casing having a flame discharge end and a tapering throat portion leading to a relatively constricted

air intake end, a blower for supplying air to said intake end, a main generator for converting liquid fuel into a dry gas located within the flame discharge end of the casing, means for supplying liquid fuel to the main generator, a plurality of gas conveying tubes extending rearwardly from said main generator, a substantially conical aspirating shell supported in spaced relation to the

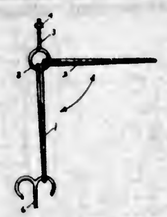


throat portion of the casing and having its fired end in overlapping and receiving relation to the outlet ends of the gas conveying tubes leading from the main generator, means for generating and delivering a preliminary supply of dry gas to the casing upstream of the main generator, and means for igniting the dry gas to provide heat for initiating the generation of gas in the main generator.

2,460,452
SANITARY PILLOW COVERING
Charlotte Hampton, Nashville, Tenn.
Application March 11, 1946, Serial No. 653,567
1 Claim. (Cl. 5—339)

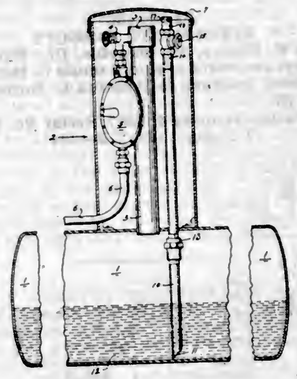
A removable and replaceable covering for a prismatic pillow which pillow has two triangular end panels and three rectangular side panels, said covering comprising a pair of triangular end sections, a rectangular back face attached at its ends by sewn seams to corresponding sides of said triangular end sections, a rectangular bottom face having one of its sides attached by a sewn seam to a side of said back face and having its ends attached by sewn seams to corresponding second sides of said triangular end sections, and a rectangular front face having one of its ends attached by a sewn seam to the remaining side of said bottom face and having portions of its sides attached by sewn seams to corresponding third sides of said triangular end sections, said front face having a flap portion extending over and substantially beyond an opening between said front face and said back face, the pillow to be covered being insertible into said covering through such opening, the sewn seams attaching said sections and faces being arranged to overlie the corresponding edges of the pillow to restrain said cover against slipping or creeping movement relative to the pillow, and said flap portion being of sufficient length to be positioned in overlapping engagement with a substantial portion of said back face to assure that such opening shall remain covered during normal use of the pillow.

2,460,453
SAFETY HANGER
George W. Harris, Mercer County, Ill., assignor of one-half to Rudolph Miller, Matherville, Ill.
Application October 9, 1944, Serial No. 557,892
5 Claims. (Cl. 211—119)



1. A duplex safety hanger for heavy loads comprising an overhead support, a pair of rings suspended thereby and pivotally mounted therein, said rings being rigidly united and diverging from the support.

2,460,454
THIEF LINE FOR BUTANE TANKS
Landrum L. Hughes, Erick, Okla.
Application June 7, 1946, Serial No. 675,286
3 Claims. (Cl. 62—1)

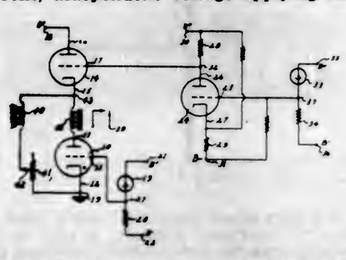


2. The combination with a sub-surface storage tank for liquefied butane having a dome thereon for which the tank top forms a floor, of a thief line including: an outlet pipe extending from the dome downwardly through the tank top to a point adjacent the bottom thereof; means for hermetically sealing the tank top to the exterior of the pipe; and an excess-flow-check intermediate the ends of the pipe and located within the tank adjacent the top thereof.

2,460,455
ELECTRONIC CIRCUIT
Samuel C. Hurley, Jr., Danville, Ill.; Wilmina L. Hurley, executrix of said Samuel C. Hurley, Jr., deceased, assignor to Wilmina L. Hurley, Danville, Ill.
Application January 4, 1947, Serial No. 720,229
2 Claims. (Cl. 315—179)

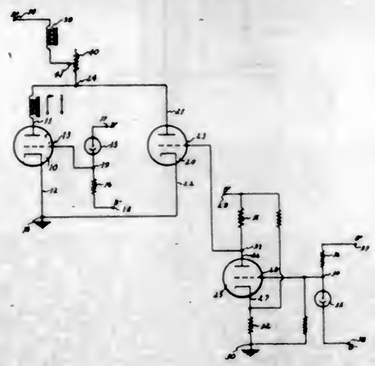
1. An electronic circuit comprising a source of direct current, a first series circuit connected to said source comprising a vacuum amplifying tube and a gas-filled amplifying tube, each of said

tubes having an anode circuit, a cathode circuit and a control grid, a second series circuit comprising a choke coil and a resistor connected in parallel with the gas-filled amplifying tube, the control grid of said vacuum tube being normally biased so as to enable the vacuum tube to conduct a current, independent voltage-applying means



controlling the bias on the control grid of the gas-filled tube thereby controlling the ionization of the gas-filled tube and means for preventing or stopping the flow of current through the gas-filled tube including voltage-applying means for placing sufficient negative bias on the control grid of the vacuum tube to render the vacuum tube non-conducting.

2,460,456
ELECTRONIC CIRCUIT
Samuel C. Hurley, Jr., Danville, Ill.; Wilmina L. Hurley, executrix of said Samuel C. Hurley, Jr., deceased, assignor to Wilmina L. Hurley, Danville, Ill.
Application January 4, 1947, Serial No. 720,230
1 Claim. (Cl. 315—207)



An electronic circuit comprising a source of direct current, a vacuum amplifying tube, a gas-filled amplifying tube, said vacuum tube and said gas-filled tube being connected in parallel with said source of direct current, each of said tubes having an anode circuit, a cathode circuit, and a control grid, a choke coil and a resistor connected in series with said parallel circuit including said vacuum tube and said gas-filled tube, a third amplifying tube having a loaded anode circuit, a cathode circuit and a control grid, the control grid of said vacuum tube being connected to the loaded anode circuit of said third amplifying tube such that the two tubes are 180° out of phase, independent photoelectric voltage-applying means controlling the bias on the control grid of the gas-filled tube thereby controlling the ionization of the gas-filled tube, and means for preventing or stopping the flow of current through the gas-filled tube including voltage-applying means placing sufficient negative bias on the control grid of the third amplifying tube such that the vacuum tube will conduct sufficient current from the direct current source of potential to render the gas-filled tube non-conducting.

2,460,457
ORGANO-SUBSTITUTED SILOXANE POLYMERS
James Franklin Hyde, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application April 17, 1943, Serial No. 483,448
7 Claims. (Cl. 260—46.5)

1. An organo-polysiloxane comprising structural units which correspond to the empirical formulae SiO_2 and $RR'SiO$, respectively, where R and R' are monovalent hydrocarbon radicals attached to silicon through carbon-silicon linkages, said units being joined together through silicon-oxygen linkages and the silicon atoms of said units being the only silicon atoms in said siloxane.

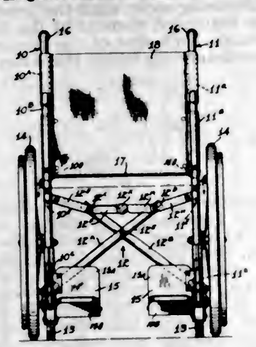
2,460,458
HEADBAND AND HOLDER FOR TELEPHONE RECEIVERS
Robert M. Kobrin, Chicago, Ill.
Application December 16, 1946, Serial No. 716,578
1 Claim. (Cl. 179—156)

A head band and holder for a telephone receiver formed of a single length of metal wire extending from one end briefly upwardly, then downwardly, inwardly and upwardly to form a curved longitudinal nest with a closed bottom and an open top, the wire beyond said net being bent at substantially right angles and extending upwardly, horizontally and downwardly, then reversed and extending upwardly, horizontally and downwardly to form a head band, the other end of the wire being then bent around itself above the nest portion, said head band adapted to removably engage the head of a user, said nest adapted to removably receive through its open top the ear piece of a telephone head set and removably hold in its closed bottom the ear piece so as to position the mouth of the telephone head set adjacent the user's mouth, so that the user may use the telephone head set without supporting the same with either hand.

2,460,459
FOLDING ARTICLE
Reinhold M. Kraska, Altadena, Calif., assignor, by mesne assignments, to Al R. Brooks, doing business as Aluminum Folding Crutch Company, Los Angeles, Calif.
Application March 13, 1947, Serial No. 734,352
4 Claims. (Cl. 155—140)

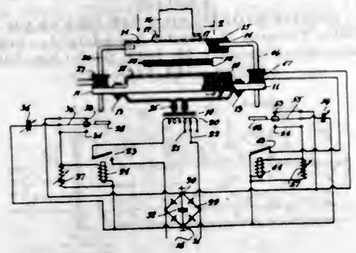
1. In folding articles of the character described, a pair of end frame members, a pivoted linkage

connecting said end frame members, said pivoted linkage including a pair of diagonal brace members, each having one of their ends pivotally connected to an adjacent end member and being pivotally connected at a point intermediate its ends to said other diagonal brace member, the other end of each diagonal brace member being pivotal-



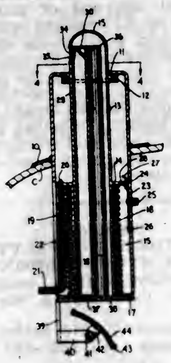
ly mounted on a respective pivot pin, a pair of link members each pivoted to a corresponding one of said pivot pins and also being pivotally mounted on the corresponding frame member, and a second pair of link members having their adjacent ends pin connected and their other ends pivotally connecting to a corresponding one of said pivot pins.

2,460,460
METHOD OF HEAT SEALING AND APPARATUS THEREFOR
Nicholas Langer, New York, N. Y.
Application January 15, 1945, Serial No. 572,882
17 Claims. (Cl. 154—42)



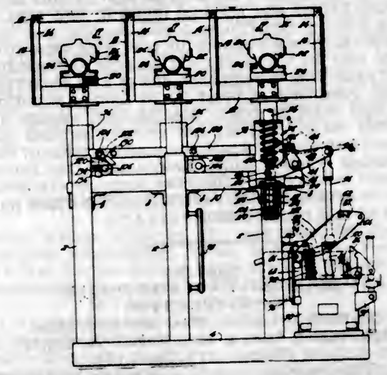
1. A machine for heatsealing thermoplastic sheets comprising in combination a pair of elongated pressure jaws having cooperating pressure surfaces, an electrically conducting directly heated heater element extending along one of said surfaces, means for displacing said jaws towards one another to apply pressure to a corresponding region of a pair of thermoplastic sheets interposed therebetween, and switching means responsive to displacement of said jaws into pressure applying position for connecting a source of current to said heater element for a predetermined period to heat said element and said interposed region of the sheets to heatsealing temperatures and for disconnecting said source from said element upon termination of said period and before releasing said pressure.

2,460,461
SPRING ACTUATED TELESCOPING PERISCOPE
Cordelia E. O. Larkin, St. Petersburg, Fla.
Application January 15, 1946, Serial No. 641,211
3 Claims. (Cl. 88—72)



1. A periscope for mounting on a vehicle comprising an elongated tubular casing, an inner end wall fixed to said casing, a tubular guide fixed to said wall and disposed concentrically within said casing, a tubular slide engaging said guide and projecting at one end from said casing, an annular flange fixed to said tubular slide within said casing, a spring in said casing between said inner end wall and said flange constantly urging said tubular slide to extended position, spring-pressed latch means engaging in said flange for locking said tubular slide in retracted position, an angled mirror in the upper portion of said tubular slide, a lens at the inner portion of said casing, and a second angled mirror carried by the inner end of said casing for reflecting the object viewed through said lens and said first mirror.

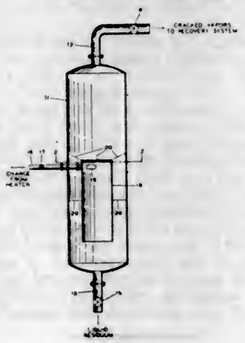
2,460,462
CIRCUIT CONTROLLER
Harry J. Lingal, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 16, 1945, Serial No. 578,209
5 Claims. (Cl. 200—153)



1. In a circuit interrupter, separable contact means, actuating mechanism for moving at least

one of said contact means relative to the other in at least one direction at high speed, means for abruptly halting said high-speed movement, freely movable rebound-preventing means positioned in the path of movement of a part movable with said mechanism and said one contact means at a point adjacent the end of said high-speed movement so as to be engaged with an impact by said part at said point in its opening movement to be moved beyond its movement with said part to a position where it is in the path of return movement of another part movable with said mechanism and one contact means, for momentarily positively blocking rebound of said movable contact means, and said rebound-preventing means being biased to occupy a non-blocking position at all other times.

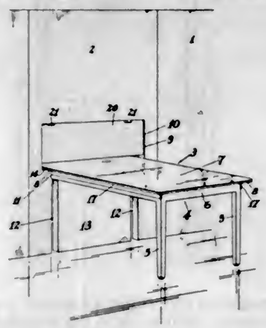
2,460,463
PROCESS FOR THE NONCATALYTIC CRACKING OF A HYDROCARBON OIL
John W. Loy, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application November 7, 1946, Serial No. 708,246
3 Claims. (Cl. 196—60)



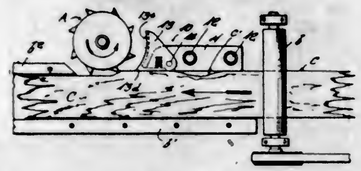
1. An improved method for noncatalytically cracking hydrocarbon oil which comprises in combination the steps of heating said oil to its cracking temperature; reducing the pressure on said oil, introducing said oil tangentially and at a relatively high velocity into a cylindrical separation zone which is closed at its top; rapidly separating vapors and residual liquid in said separation zone by centrifugal force; passing said separated products downwardly from said separation zone into an enlarged reaction zone surrounding and extending beyond each end of said separation zone; removing residual liquid from the bottom of said reaction zone; passing said vapors upwardly, at a relatively low velocity, around said separation zone and into the upper portion of said enlarged reaction zone; maintaining said vapors in said reaction zone for more complete cracking; and removing effluent vapors from the upper portion of said reaction zone.

2,460,464
BUILDING UNIT FOR HOUSE CONSTRUCTION
Richard F. Lufkin, West Medford, Mass.
Application April 4, 1945, Serial No. 586,487
2 Claims. (Cl. 20—1.11)

1. The combination with a partition of a dwelling house dividing one room from another, of a table presenting a body section with supporting legs and a top board element carried by the body portion and having its edges overhanging the sides of the body portion, said partition having an opening therethrough, the lower portion of which opening having a width sufficient to allow the body portion and legs of the table to pass therethrough and the upper portion of said opening being sufficiently wider than the lower portion to allow the top board element of the table to pass therethrough, each side of the opening presenting a horizontal edge where the wider upper portion and narrower lower portion meet, said horizontal edge being at a level just beneath the top board element of the table, a guiding roll rotatable about a horizontal axis mounted in the horizontal edge of each side of said opening, other guiding rolls rotatable about vertical axes mounted at the upper part of the sides of the narrower portion of said opening, the overhanging edges of the top board element having tracks to engage the horizontal guide rollers and the sides of the body section having tracks to engage the vertical guide rollers.

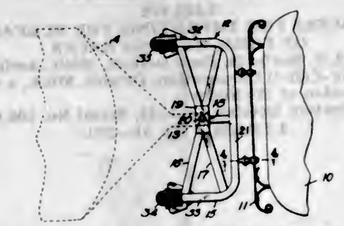


2,460,465
INSIDE SIDEHEAD CHIP BREAKER
Milo Thomas McBryde, Arkadelphia, Ark.
Application February 17, 1947, Serial No. 728,995
1 Claim. (Cl. 144—243)



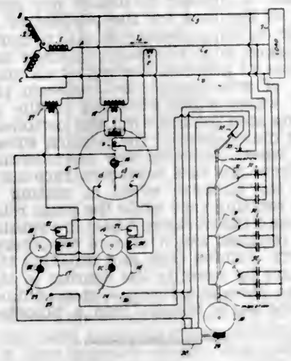
In a planing machine of the type wherein a cutter is mounted for cutting the side edges of lumber moving thereby, a frame along which the lumber moves to the cutter, a guide member secured to the frame forwardly of and on the same side as the cutter and in substantially parallel relation to the side edge of the lumber, a nose element adapted to encompass the forward end of the guide, a vertical pivot connection between the nose element and the guide, said guide member being provided with a recess forwardly of the pivot connection, and spring means having one end seated in said recess while the opposite end bears against said nose element to maintain the nose element against the side edge of the lumber to follow the contour thereof as the lumber moves toward the cutter.

2,460,466
TRAILER DOLLY
James Elliott Nogle, Jacksonville Beach, Fla.
Application February 4, 1946, Serial No. 645,274
1 Claim. (Cl. 280—33.4)



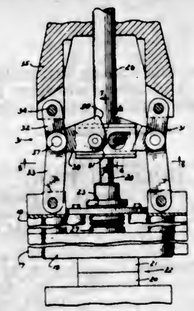
In combination with a trailer vehicle and a draft vehicle, a dolly for connecting the trailer and draft vehicles and for supporting the forward end of the former, said dolly including a substantially U-shaped, rearwardly opening frame, wheels supporting the dolly and swivelly connected to the rearwardly extending ends of the frame, the intermediate portion of the frame being disposed transversely thereof and being provided with forwardly projecting bracket arms, clamps detachably connected to the rear bumper of the draft vehicle and each having a rearwardly projecting bracket arm pivotally connected to one of said forwardly projecting bracket arms, crossed braces connecting the rearwardly extending ends of the frame, a brace connecting the intermediate frame portion to the crossed portions of the cross braces, and a reinforcing plate secured to said crossed portions of the first mentioned braces and having an upstanding coupling element for engagement with the trailer vehicle.

2,460,467
SYSTEM OF CONTROLLING ELECTRIC LINES
Rolland D. Nelson, Hales Corners, and Edwin A. Link, South Milwaukee, Wis., assignors to Line Material Company, Milwaukee, Wis., a corporation of Delaware
Application August 16, 1944, Serial No. 549,774
7 Claims. (Cl. 323—105)



1. A system of control for an electric power line comprising means for varying the capacity of said power line, and a relay having a member movable in opposite directions to increase and decrease, respectively, the effect of said means on said power line, said relay being arranged to respond to the wattless component of the current in said power line and said member being movable in one direction for a lagging wattless component and in the other direction for a leading wattless component.

2,460,468
MOLDING MACHINE FOR PLASTICS AND OTHER MOLDABLE MATERIALS
William S. Renier, Fond du Lac, Wis., assignor to Giddings & Lewis Machine Tool Company, Fond du Lac, Wis., a corporation of Wisconsin
Application May 6, 1947, Serial No. 746,242
7 Claims. (Cl. 18—30)

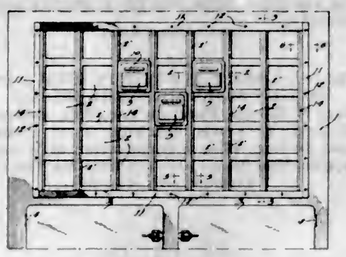


1. In a machine for molding plastics or other moldable material, a supporting frame, a first plate carried by said frame for supporting part of a die, a second plate movably carried by said frame for supporting the other part of the die, toggle joint mechanism connecting said movable die plate to said frame, a cylinder carried by said frame and having a fluid pressure operated piston therein and having a piston rod projecting therefrom, a heating cylinder carried by said movable die plate having a chamber for receiving plastic material and having a nozzle portion for directing plastic material in plasticized condition into said die, an injection plunger connected to said piston rod and movable into and out of said heating cylinder, and connecting means between said piston rod and toggle joint mechanism for causing opening and closing movements of said movable die plate in response to movement of said piston rod, said connecting means including means for maintaining a die closing pressure while said injection plunger finishes its forward stroke, and having an operative connection with said piston rod which is pivotally fixed during said opening and closing movements of said movable die plate and which is released for lateral lost motion movement while said last mentioned means is operative.

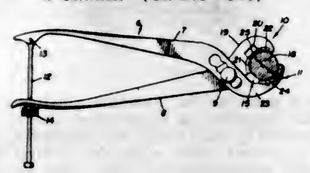
2,460,469
REFRIGERATOR HAVING A DOOR HEATING DEVICE
Milton Rifkin, Chicago, Ill., and Myer Stephen Sutton, Minneapolis, Minn., assignors to Frez-O-Mat Corporation, a corporation of Illinois
Application December 7, 1946, Serial No. 714,846
10 Claims. (Cl. 62—89)

1. In a refrigerated cabinet having an opening in a wall thereof and a door comprising a closure for said opening, means for heating said door which comprises a plurality of conduits bordering a portion of said door, an electric heating element for heating the air within, and the

walls of said conduits, said conduits being provided with transverse apertures through which the heated air from said conduits is directed toward said door, and means thermally connecting said conduits and door whereby heat is conducted from the conduit walls to the door.

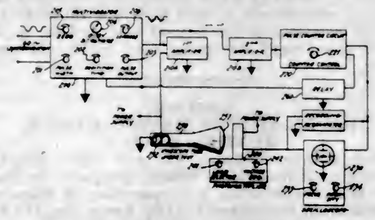


2,460,470
HOLDING TOOL
Samuel Perry Rogers, El Paso, Tex.
Application November 27, 1946, Serial No. 712,593
2 Claims. (Cl. 128—346)



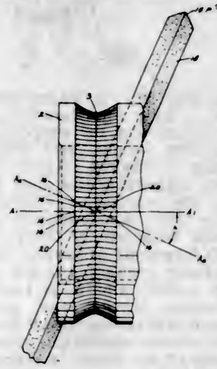
1. A bone clamping instrument comprising pivoted handles having at their forward extremities opposed clamping jaws for engaging the opposite surfaces of a bone to hold fractured parts thereof together, one of said jaws being provided with a through way slot extending outwardly from its clamping face for the reception of a fracture splicing plate.

2,460,471
METHOD AND APPARATUS FOR MEASURING PERSISTENCE SCREEN CHARACTERISTICS
Otto Heinrich Schade, West Caldwell, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application December 7, 1945, Serial No. 633,492
17 Claims. (Cl. 315—364)



1. In an apparatus for measuring the light output characteristics of a luminescent screen, means for reducing said screen to a predetermined energy level, means for applying to said screen light producing excitations of predetermined intensity, duration, number, and spacing, means for detecting the light output due to said excitations, and means for recording the signals generated by said light output detecting means.

2,460,472
PROCESS FOR IMPROVING THE SURFACE OF FORM GROUND RACES
Harold N. Seyferth, East Detroit, Mich., assignor to Ex-Cell-O Corporation, Detroit, Mich., a corporation of Michigan
Application October 13, 1943, Serial No. 506,046
4 Claims. (Cl. 51—291)

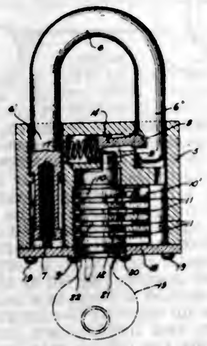


1. The process of preparing a ball bearing raceway which includes the steps of generating the ball contacted raceway surface as a surface of revolution substantially to its final form and dimensions by rotating the race about its working axis in fixed position and in cutting contact with a grinding wheel of complemental peripheral form in its axial plane and rotated about its axis while supported in fixed position parallel to the race axis, generating the form of the periphery of a deformable pattern wheel by rotating the same with its periphery in contact with the ball contacted raceway surface the race being rotated about its axis in fixed position and the pattern wheel being rotated about its axis in fixed position which is neither co-planar nor parallel to the axis of the race for the purpose of forming a contour on the periphery of said pattern wheel which makes, with the ball contacted race surface, a line of grinding contact at an angle with the line of grinding contact between race and grinding wheel which obtained in the raceway generating step, reproducing the peripheral contour and dimensions of the pattern wheel in an abrasive wheel, reducing any protuberant aberrations from the ball contacted race surface by rotating the abrasive wheel in cutting contact with the rotating race while the axial relation of the race and the abrasive wheel are substantially like the relation which existed therebetween in the pattern forming step, and finishing the raceway surface by running the bearing in the presence of an abradant during a step of finally adjusting the parts thereof into a predetermined relation.

2,460,473
CATHETER
Minton Larkin Smith, Savannah, Ga.
Application December 17, 1945, Serial No. 635,528
17 Claims. (Cl. 128—349)

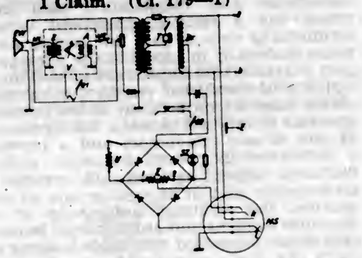
1. A catheter, comprising an outer flexible tube having a closed outer end; an inner tube within the outer tube discharging through the outer end of the outer tube, said inner tube having an inlet in the side of the outer tube adjacent its outer end, and said outer tube having recesses in its sides extending to its outer end having throats communicating with the bore of the outer tube around the inner tube.

2,460,474
PLUG RETAINING PLATE FOR LOCK CYLINDERS
Harry E. Soref and Daniel J. Foote, Milwaukee, Wis., assignors to Master Lock Company, Milwaukee, Wis., a corporation of Wisconsin
Application July 18, 1947, Serial No. 761,862
4 Claims. (Cl. 70—367)



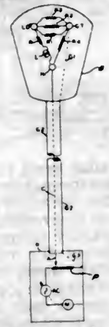
1. In a lock having a casing with a cavity therein which opens through an end of the casing, a pin shell non-rotatably mounted in said cavity, a plug turnable within said shell, means connecting the shell and plug as a unit and permitting slight longitudinal movement of the shell relative to the plug, and an apertured plate secured to said end of the casing and engaging the outer end of the plug to hold it against longitudinal movement while permitting slight longitudinal movement of the shell within said cavity.

2,460,475
ARRANGEMENT FOR CHANGING OVER THE SPEAKING DIRECTION IN LOUD-SPEAKER DUPLEX SYSTEMS
Otto Tschumi, Soleure, Switzerland, assignor to Autophon Aktiengesellschaft, Soleure, Switzerland, a joint-stock company of Switzerland
Application May 12, 1944, Serial No. 535,297
In Switzerland December 4, 1942
1 Claim. (Cl. 179—1)



In a loud speaker duplex system comprising several subscribers stations, an arrangement for changing over the speaking direction including a transducer and a dial in each of said subscriber's stations, dial contacts operated by the dial, a relay arrangement, a battery, contacts for connecting a subscriber station, contacts for changing over the speaking direction, a rectifier arrangement, a bridge relay in said rectifier arrangement operating said contacts for connecting a subscriber station, a shunt relay shunting a part of said rectifier arrangement and operating said contacts for changing over the speaking direction, the whole rectifier arrangement being connected in series, on one hand, with firstly one of said dial contacts, and on the other hand with one of said contacts for inserting a subscriber station, said relay arrangement being also connected alternately to the two poles of said battery.

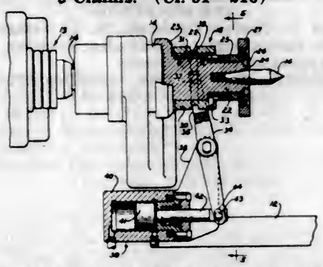
2,460,476
HIGH-FREQUENCY POTENTIAL DIVIDING TERMINATION
Howard J. Tyzzer, Caldwell, N. J., assignor to Ferris Instrument Laboratories, Boonton, N. J., a corporation of New Jersey
Application May 26, 1944, Serial No. 537,509
5 Claims. (Cl. 178—44)



1. In an electrical system for transmitting electrical alternating currents for the purpose of remotely developing therewith electrical alternating potentials from which to abstract working potentials considerably lower in value, in which system the frequencies are so high that the in-

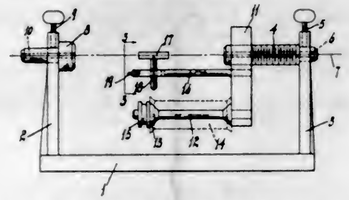
herent distributed inductances of the potential-developing elements necessary thereto must be taken into account in order that the developed working potentials may be sufficiently dependable for said purpose: the combination of a double conductor transmission line terminated by an impedance that remains substantially equal to the characteristic impedance of said line which also has substantially uniform distribution of its inductance and capacitance, said impedance comprising a resistor interposed between the terminating ends of said line having an ohmage value materially in excess of the ohmage value of said characteristic impedance of said line, a multiplicity of paralleled resistances having appreciable inherent inductance at the operating frequencies interposed between the terminating end of one of said conductors and a terminal; and a resistance interposed in series with an inductance element between said terminal and the terminating end of the other one of said conductors, the resultant inductance of said inductance element and any inherent inductance in said series-connected resistance bearing substantially the same ratio to the resultant inherent inductance of said parallel resistances as the ratio of said series-connected resistance to the resultant resistance of said paralleled resistances, and the summed up impedance of said paralleled resistances and the resistance in series with the inductance element being such that in parallel with the resistance interposed between the terminating ends of said conductors it establishes an impedance therebetween approximately equal to said characteristic impedance of said line, whereby the potentials developed across said paralleled resistances can be put to work without materially upsetting the required termination of said transmission line.

2,460,477
INDEXING HEAD
Carl B. Wallman, Birmingham, Mich., assignor to Ex-Cell-O Corporation, Detroit, Mich., a corporation of Michigan
Application November 15, 1946, Serial No. 710,005
9 Claims. (Cl. 51—216)



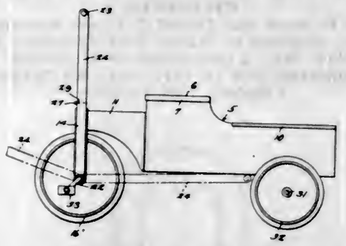
6. A rotary indexing head comprising in combination with a reciprocatory carriage and a spindle mounted for rotation on said carriage and for translation therewith, two telescoping sleeve elements coaxially mounted on said spindle and interconnected for relative rotary adjustment step-by-step upon relative axial reciprocation therebetween in opposite directions, and for joint rotation in each position of rotary adjustment, one of said elements being rotatable on said spindle and the other of said elements being splined for axial sliding movement on said spindle, and means operable in response to each movement of said carriage into a predetermined position to effect a relative reciprocation between said elements.

2,460,478
SPLICE WRAPPER
Milton W. Warner, Long Beach, Calif.
Application December 9, 1946, Serial No. 715,034
3 Claims. (Cl. 242—7)



1. A splice wrapper comprising a base, a threaded post mounted at one end of said base, said post having a hole extending therethrough, and through which the line to be spliced passes, a guide pin at the other end of said base, said guide pin having a hole extending therethrough, and through which the line passes, a block threaded on said post and adapted to move longitudinally of the post as said block is swung around the post, a spool mounted on said block, and guide means on the block for the thread on the spool.

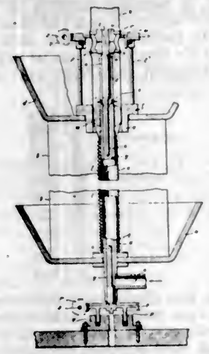
2,460,479
CHILD'S VEHICLE
William N. Wheeler, Paris, Ky.
Application June 25, 1946, Serial No. 679,162
2 Claims. (Cl. 280—7.17)



1. A vehicle of the type described, comprising a body, front and rear supporting wheels for the body, a fork in which the front wheel is mounted, a plate secured to the fork, a rear flange formed on the plate, a lip extending upwardly and forwardly from the front edge of the plate, a pivoted tongue including a fork fitted over the first mentioned fork, said tongue adapted to swing from a horizontal position to a vertical position, a pivoted latch member carried by the fork of the tongue and adapted to move to a position in contact with the lip securing the tongue in its vertical position, and handle bars carried by the tongue whereby the tongue may be operated to guide the vehicle.

2,460,480
METHOD OF AND APPARATUS FOR PRODUCING ARTIFICIAL SAUSAGE SKINS
Julius Wolff, Amstenrade, Netherlands; vested in the Attorney General of the United States
Application December 2, 1941, Serial No. 421,396
In Germany January 10, 1939
7 Claims. (Cl. 117—94)

1. That method of coating tubular fabrics with a fibrous mass of impregnating material, the steps of which comprise applying said mass to the outer and inner surfaces of a tubular fabric, and then advancing said tubular fabric along the longitudinal axis thereof while wiping the fibres in the applied mass on said inner and outer surfaces respectively at intersecting angles.

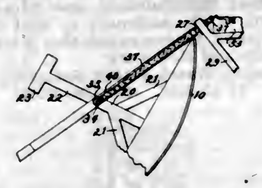


5. A device for producing impregnated tubular sausage skins and the like, comprising means for supplying an impregnating mass to the outer surface of said tubular skin, an outer wiper member for wipingly contacting said outer surface and the applied mass, means for mounting said wiper for rotation circumferentially about said tubular skin, means for supplying said mass to the inner surface of said tubular skin, an inner wiper member, means for mounting said inner wiper for circumferential rotation within the tubular skin at a point substantially opposite said outer wiper member, said inner wiper member adapted to wipingly contact said inner surface and the applied mass, means for supporting said skin for movement along the longitudinal axis thereof, and means individual to said wipers for rotating the latter during the longitudinal movement of said skin.

2,460,481
DRILL PIPE CLEANER
Logan F. Abel, Marlow, Okla., assignor of one-third to Charles P. McKinney and one-third to J. C. Barnard, both of Marlow, Okla.
Application May 27, 1947, Serial No. 750,747
3 Claims. (Cl. 166—18)

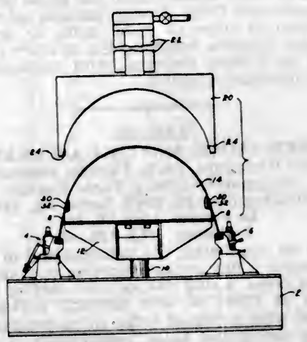
1. A drill pipe cleaning device comprising a weighted plunger member adapted to be inserted in a drill pipe, an inflatable bag member, means for securing the bottom end of the bag member to the top end of the plunger member substantially axially of both members, means in the top wall of said bag member for inflating the bag member, and a relief valve in said bag member for preventing the pressure in the bag member from rising above a predetermined value, the bottom end of the bag member being downwardly tapered.

2,460,482
SOLAR HEAT COLLECTOR
Charles Greeley Abbot, Washington, D. C.
Application February 20, 1945, Serial No. 578,806
6 Claims. (Cl. 126—271)



1. In a solar heat collector, in combination with a paraboloidal mirror, a heat receiver including a globe of material highly transmissible to heat rays disposed at the focus of said mirror and a tube communicating therewith, said globe and tube being filled with a highly ray-absorbing high boiling-point liquid, and a second globe and communicating tube surrounding but spaced from said first globe and tube, said second globe being formed of transparent material, said second tube being sealed hermetically to said first tube at the end of said second tube opposite its globe and the space between said globes and tubes being highly evacuated, said tubes having their opposed walls plated with reflecting metal, and a heat exchanger in communication with said first-named tube.

2,460,483
CUTTING MEANS FOR METAL STRETCHING DIES
Henry A. Berliner, Washington, D. C., assignor to Engineering and Research Corporation, Riverdale, Md., a corporation of Maryland
Application March 27, 1945, Serial No. 585,116
2 Claims. (Cl. 153—2)



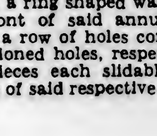
1. In combination with a sheet metal stretching machine of the type comprising spaced fixed

said elements.

a fibrous mass of impregnating material, the

means for anchoring the edges of a piece of sheet metal and vertically movable means therebetween having a convex upper surface adapted to be forced against the free intermediate part of the sheet metal to shape the same, vertically movable means above said convex surface having a concave lower surface, cutting means extending inwardly from said concave surface for cutting a free edge of the finished and shaped sheet, and means for forcing said upper vertically movable means and said cutting means downwardly against said convex surface to cut the sheet formed thereon.

2,460,484
ELECTRODE UNIT ASSEMBLY
Fred H. Best, Mountainside, and John R. Pierce, Millburn, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 5, 1948, Serial No. 13,256
10 Claims. (Cl. 250—27.5)



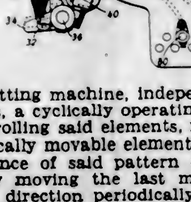
1. A unitary electrode assembly for electron discharge devices, comprising a metallic body of box-like configuration, flange extensions projecting from oppositely disposed surfaces of said body, a plurality of insulating rods in contact with said extensions and the adjacent surfaces of said body forming spacers in relation to the main surfaces of said body, and a winding having spaced turns encompassing said body and rods and supported by said rods.

2,460,485
FLEXIBLE WRINKLE COATED MATERIAL AND METHOD OF PRODUCING SAME
Nathan T. Beynon, Dayton, Ohio, assignor to New Wrinkle, Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Original application March 21, 1946, Serial No. 656,173. Divided and this application May 21, 1948, Serial No. 28,530
11 Claims. (Cl. 117—41)

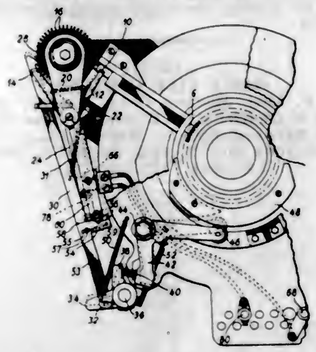
1. The method of manufacturing flexible, wrinkle-coated materials comprising the steps of mixing at room temperature 100 parts by weight of unsaturated fatty oil with varnish solvent and a solution of from 10 to 50 parts by weight of polyvinyl chloride, applying the mixture thus obtained to a base material, and subjecting the coated material to drying.

2,460,486
ALARM CLOCK AND LIKE APPARATUS
Henri Blampain, Paris, France, assignor to Salomon Goldberg, Paris, France
Application May 17, 1947, Serial No. 748,748
In France April 28, 1947
5 Claims. (Cl. 161—6)

1. In an apparatus, the combination of a support having a flat annular portion provided with a row of holes, a ring shaped wall carried by said support in front of said annular portion also provided with a row of holes corresponding with the first mentioned holes, respectively, a plurality of push-pieces each slidable in two corresponding holes of said respective rows, each push-piece being provided in the part thereof normally located between said two holes with a notch adapted to engage on the adjacent edge of the corresponding hole of the first mentioned row, a spring plate fixed to said push-piece transversely thereto and extending radially with respect to said support, a housing formed in said support for slidably accommodating the inner end of said spring plate to guide it radially, said spring being so shaped, in its free state, as to urge said push-piece frontwardly in said holes and to urge pivoting thereof in the direction corresponding to engagement of said notch on said edge of the corresponding hole of the first row, and an annular disc carried by said support between the flat annular portion thereof and the front ring-shaped wall carried by it, said disc being so positioned and dimensioned to limit frontward displacements of said push-piece under the action of said spring plate to a position of rest and to limit pivoting displacements of said push-piece under the action of said spring for engagement of said notch on said edge.



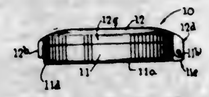
2,460,487
KNITTING MACHINE PATTERN MECHANISM
Paul W. Bristow, Laconia, N. H., assignor to Scott & Williams, Incorporated, Laconia, N. H., a corporation of Massachusetts
Application April 21, 1947, Serial No. 742,905
5 Claims. (Cl. 66—50)



1. In a knitting machine, independently movable elements, a cyclically operating pattern device for controlling said elements, means including a periodically movable element for the step-by-step advance of said pattern device, means for positively moving the last mentioned element in one direction periodically, yielding return means for the last mentioned element, and a member movable to a plurality of alternative positions in which it is located in the path of said periodically movable element to prevent its return and so interrupt advance of said pattern device.

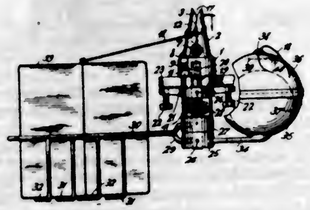
weighted plunger member adapted to be

2,460,488
MOLDED PLASTIC CONTAINER HAVING HINGED COVER
Joseph Brunetti, Carlstadt, N. J., assignor to Columbia Protektosite Company, Inc., Carlstadt, N. J., a corporation of New Jersey
Application May 6, 1948, Serial No. 25,452
4 Claims. (Cl. 220—31)



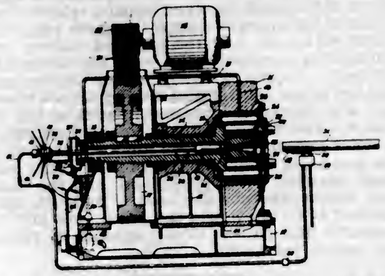
1. A portable cosmetic box formed of molded plastic comprising a receiver portion having a flat bottom side and an upstanding peripheral wall terminating in a plane parallel to said bottom side, said peripheral wall provided with a rim cutback rabbet and a protuberance outwardly extending from the exterior thereof, a box-like hinge anchoring structure integrally formed to extend outward of the exterior of said peripheral wall opposite to said protuberance having oppositely projecting aligned bosses spaced from said wall and said wall rim rabbet, a cover closure fitted to said receptacle portion formed with a rim cutback rabbet shaped and sized to seat on said wall rim rabbet, a tab integrally formed with said cover closure to extend therefrom in an overlying relation with respect to said wall having a recess positioned to receive and yieldably interlock with said protuberance, a yoke shaped hinge portion integrally formed to extend outwardly of the exterior of said cover closure opposite said tab, said yoke portion having parallelly spaced apart members fitted against said box-like structure provided with aligned openings with which said bosses trunnion so constructed and arranged that a slight resilient stretch in said members is provided when the recess of the locking tab is snapped over the protuberance for clamping the cover closure in a closed position on the receiver portion.

2,460,489
KNOT TYING DEVICE
David Burkard, Geneva, Switzerland, assignor to Kobler & Co., Zurich, Switzerland
Application March 7, 1945, Serial No. 581,488
In Switzerland May 12, 1944
7 Claims. (Cl. 289—2)



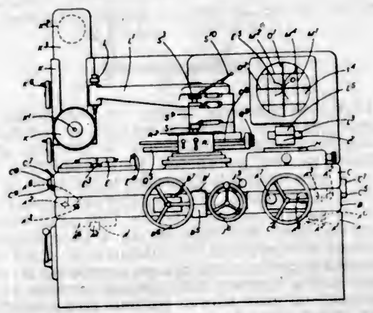
1. A device for tying knots in twine or the like, comprising a knotting plug, a base therefor, said plug including a fixed part rigid with the base and at least a movably mounted part, means for yieldingly applying said movable part against the fixed part, a cutting means for the twine disposed between said fixed and movable parts of the plug, and braking means for the twine formed between said parts of the plug applied against each other.

2,460,490
TUBE WORKING APPARATUS
Mark Frederic Cook, Mulberry, Ind., assignor to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
Application May 15, 1944, Serial No. 535,695
6 Claims. (Cl. 78—21)



5. In rotary swaging apparatus, in combination, a plurality of radially reciprocable dies adapted to swage tubular work, a rotary die head carrying said die, a hollow drive shaft for said die head, means for driving said shaft, means for impacting said dies against said work upon rotation of said die head, means for supplying fluid lubricant to said dies, a casing at the end of said shaft remote from said dies, means for flowing air in a stream inwardly past said dies and through said hollow shaft to withdraw lubricant given off from said dies, said air and withdrawn lubricant discharging from said shaft into said casing, for expansion of the air therein and separation of lubricant from the air, a plurality of annular baffle members rotatable with said shaft and arranged coaxially thereof at either side of the front wall of said casing in spaced relation thereto, to form a tortuous path outlet for escape of the said air from said casing, and an outlet for draining lubricant from the lower part of said casing.

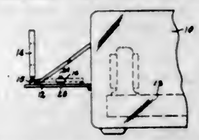
2,460,491
COPYING MACHINE WITH OPTICAL SYSTEM
Ernest Albert Cooke, Leicester, England, assignor to Taylor, Taylor & Hobson Limited, Leicester, England, a company of Great Britain
Application September 21, 1944, Serial No. 555,180
In Great Britain July 19, 1943
39 Claims. (Cl. 51—165)



1. A copying machine comprising a supporting base, a main carriage on the base, means for translationally adjusting the main carriage rela-

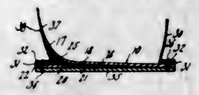
tively to the base, a support for a tool on said base, a datum on the base in spaced relation with respect to the tool, a rotary work support carried by the main carriage adjacent to the tool, a rotary copy support carried by the main carriage adjacent to the datum, a rotary control support carried by the main carriage translational adjustment of the main carriage causing relative translational movement between the three rotary supports, as a unit, and the tool and datum, interconnecting mechanism between the three rotary supports, means whereby rotary movement is applied to the control support and thence through the said interconnecting mechanism to the work support and control support in synchronism, the relative movement between the work support and the tool being a reproduction of the relative movement between the copy support and the datum, and means whereby the control support can be coupled to or uncoupled from the work and copy supports, and can be locked against, or released for, rotary movement, at will.

2,460,492
LOOP INDUCTANCE COMPENSATOR
Stanley Cutler and Norton Wiener, Los Angeles, Calif., assignors to Hoffman Radio Corporation, a corporation of California
Application October 30, 1946, Serial No. 706,668
4 Claims. (Cl. 250—33.67)



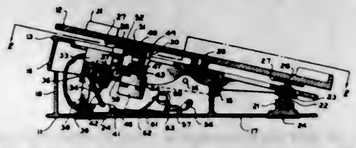
1. In combination with a loop antenna of the type mounted for movement on a support between two operative positions in which its inductance is different, compensating means comprising a slab of magnetic material secured to said support in such a position as to lie substantially within the turns of said loop antenna when the latter is in one of its operative positions.

2,460,493
SHOE WITH INNERSOLE PROVIDING ARCH SUPPORTING FLAP
Fred J. Diamant, New York, N. Y.
Application May 11, 1945, Serial No. 593,121
5 Claims. (Cl. 36—8.5)



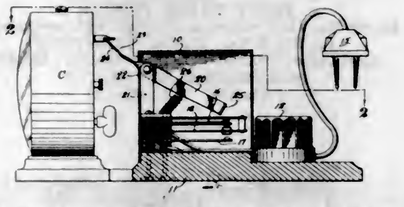
1. A shoe innersole having toe, shank and heel portions and a stitching margin of substantial width and uniform thickness around its entire periphery, and a tapered flap projecting outwardly and upwardly from the inner edge of said stitching margin at the inside of said shank portion to form a support for the foot arch integral with the sole, said flap having a base thickness substantially equal to the thickness of said innersole and tapering in thickness outwardly from its base; and a tapered sole member secured to the underside of said shank portion and underlying only said flap and a part of said shank portion, the outer edge of said member providing a continuation of said uniformly thick stitching margin along the inside of said shank portion.

2,460,494
FOOT PEDAL CONTROL RHEOSTAT
Ben Eisenberg, Larchmont, and Otto B. Schwarz, New York, N. Y., assignors to Lektra Laboratories, Inc., a corporation of New York
Application July 13, 1946, Serial No. 683,494
4 Claims. (Cl. 201—48)



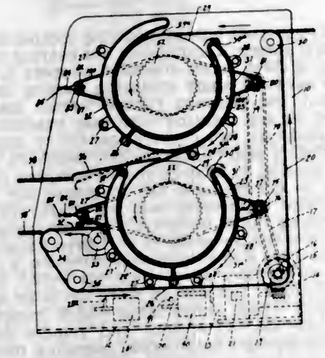
1. A foot pedal control for musical instruments or the like comprising a base, a rocker pivotally mounted on said base for vertical rotation about a substantially horizontal axis, a pedal pivotally mounted on said rocker for lateral rotation about an axis perpendicular to said horizontal axis, a first variable resistance device carried by said rocker and having a control shaft, a first pinion fixed to said control shaft, a linear rack pivotally connected at one end to said base and engaging said pinion, a first spring urging said rack toward said pinion, a second variable resistance device carried by said rocker and having a control shaft, a second pinion fixed to said latter control shaft, a second linear rack pivotally mounted at its center to said pedal, and a bowed spring fixed to said pedal and urging said rack into engagement with said pinion, said spring having its maximum bow opposite said second pinion, whereby lateral adjustment of said pedal about said perpendicular axis adjusts said second resistance device and vertical adjustment of said pedal about said horizontal axis adjusts said first resistance device.

2,460,495
RELEASABLE LEVER OPERATED SWITCH
Charles E. Elrick, Frostburg, Md.
Application May 10, 1946, Serial No. 668,706
1 Claim. (Cl. 200—35)



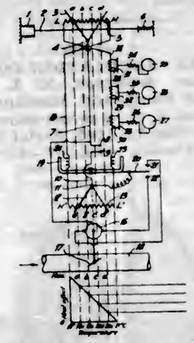
A switch comprising a base, a first pair of parallely spaced horizontal spring leaves serving as relatively stationary contacts, a second pair of parallely spaced horizontal spring leaves serving as a switch arm, one of said second pair of spring leaves being positioned between the spring leaves of the first pair and the other of said second pair of spring leaves being positioned above and normally spaced from the upper spring leaf of the first pair, insulated means supportably engaging the inner ends of all of said leaves and insulating the same from each other, the outer ends of said second pair of leaves extending outwardly beyond the outer ends of said first pair of leaves, an insulated spacing block connected to and between the outer ends of said second pair of leaves whereby upon upward or downward movement of said second pair of leaves move in unison, contact point means on the lower leaf of said second pair exposed above and below said lower leaf for engagement with the outer ends of the leaves of said first pair, said contact point means being normally engaged with the outer end of the upper leaf of said first pair, a bracket rising from said base to a level above said pairs of leaves adjacent to the inner ends thereof, an actuating lever pivoted intermediate its ends on an upper part of said bracket providing a first arm having a portion overlying the upper leaf of said switch arm and a second arm, releasable holding means adjacent said second arm holding said lever positioned with said first arm spaced above said switch arm, and spring means operating between said first arm of said actuating lever and said bracket to bias said first arm downwardly to engage and depress the upper leaf of said switch arm and depress said switch arm so as to disengage said contact point means from the upper contact leaf of said first pair and engage said contact point means with the lower contact leaf of said first pair when said holding means is withdrawn from holding engagement with said second actuating lever arm.

2,460,496
FLATWORK IRONER
Harry D. Forse, Anderson, Ind.
Original application March 1, 1939, Serial No. 259,223. Divided and this application September 29, 1944, Serial No. 556,372
4 Claims. (Cl. 38—4)



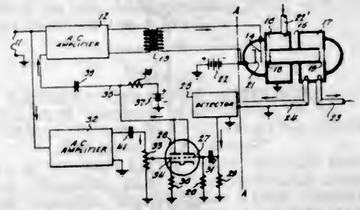
1. In a mangling machine the combination of a plurality of adjacent chests, each having a concave, arcuate sectioned ironing face, a cylinder rotatable in each chest, means for heating each chest, an endless work supporting element between each chest and cylinder and engaged by the latter for presenting the work to the heated arcuate ironing face of the chest, said element passing successively from an upper chest directly to the next lower chest, the exterior of the upper chest being disposed immediately contiguous to the chest exposed portion of next adjacent cylinder for preventing unintentional work displacement from the element between successive chests, means for moving the element and work through the chests, and work discharging means positioned between a pair of adjacent chests and having a portion thereof adjacent said work supporting element when in operative position for work removal when lower chest ironing is not desired, said portion being movable into non-removing position to permit lower chest ironing when desired.

2,460,497
AUTOMATIC REGULATING SYSTEM
Nils Pontus Wilhelm Frisk and Anders Georg Wilhelm Hernqvist, Stockholm, Sweden
Application January 15, 1946, Serial No. 641,386
In Sweden January 22, 1945
7 Claims. (Cl. 318—29)



1. A regulating system of the class specified in which a variation of a quantity or quantities influencing a value to be regulated effects a proportional variation in the reverse sense of the quantity to be regulated, comprising in combination, a regulating member for controlling said last-mentioned quantity, a motor for operating said regulating member, an electric driving circuit for said motor, another electric circuit for controlling the driving circuit of the motor, resistances inserted in said other circuit, relays for short-circuiting said resistances under the control of said first-mentioned quantities influencing the value to be regulated, a feeling member responsive to variations of the value to be regulated for controlling the circuit containing said resistances, the arrangement being such that the resistances are short-circuited when the respective controlling quantities are out of action, but are cut in for changing the state of the circuit containing the resistances when the controlling quantities are brought to activity.

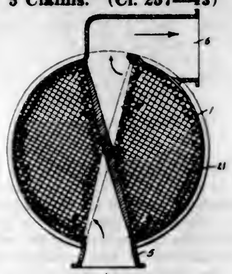
2,460,498
MODULATION CONTROL APPARATUS
Edward L. Ginzton, Wantagh, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application March 15, 1943, Serial No. 479,293
11 Claims. (Cl. 315—6)



8. High frequency apparatus comprising means for producing an electron beam, a first resonator adapted to be coupled to said beam, a second resonator adapted to be coupled to said beam, means coupled to said first resonator for supplying thereto a high frequency excitation voltage for modifying the electron velocity of said beam, a

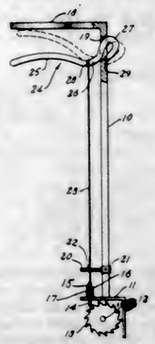
source of signal voltage, means operative on said beam and coupled to said source for causing the amplitude thereof to vary in relation with said signal voltage, and means coupled to said source and to said last-named means, and responsive to amplitude variations of said beam, for modifying the variation of beam amplitude in relation to said signal voltage.

2,460,499
REVERSIBLE CIRCULATION CONDENSER
John F. Grace, Arlington, N. J., assignor to Worthington Pump and Machinery Corporation, Harrison, N. J., a corporation of Delaware
Application July 16, 1945, Serial No. 605,413
5 Claims. (Cl. 257—43)



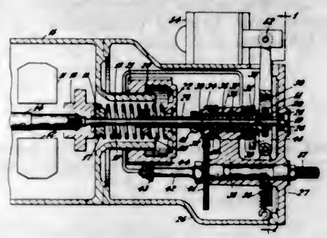
1. In a condenser having a shell with a multiplicity of horizontal tubes, a water box at each end of the shell in communication with the tubes, each of the water boxes having an inlet at the bottom and an outlet at the top, a movable diametral partition having fluid tight engagement with the inner wall of the water box pivotally mounted in the center of each water box, said partitions being inclined in opposite directions with respect to the lines through the centers of their respective inlets and outlets whereby the inlet of each water box is connected to the outlet of the other but is prevented by the diametral partition from having communication with the outlet in its own waterbox.

2,460,500
LEVER HANDLE
James R. Hall, Hammon, Okla.
Application April 11, 1947, Serial No. 740,889
3 Claims. (Cl. 74—537)



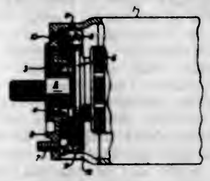
1. The combination with a stationary shaft, a ratchet wheel fixedly carried by said shaft, a main lever provided with a rectangular slot rotatably mounted on said shaft, and a spring-biased dog in engagement with said ratchet wheel, of a handle operatively connected to said spring-biased dog, said handle comprising a grip portion and a substantially oval pivot head, said head extending through the rectangular slot of the main lever and engaging the opposite edges of said slot under the biasing action of the spring of said dog.

2,460,501
SPEED CONTROL GEAR OF PRIME MOVERS
George Hallewell, Stamford, England, assignor to Blackstone & Company Limited, Stamford, England, a British company
Application July 17, 1944, Serial No. 545,311
In Great Britain May 21, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires May 21, 1963
5 Claims. (Cl. 264—3)



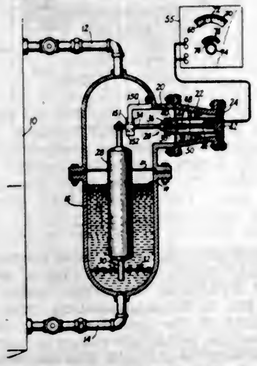
1. In governor control gear the combination of a control spring, a shouldered nut bearing on said spring, a fixed screw-threaded support for said nut, a governor shaft extension passing through said nut, two opposed friction clutch members carried on and rotating with said extension beyond said nut, two cooperating clutch members surrounding said friction clutch members, a lay-shaft parallel to said extension carrying driving means to engage said nut to rotate the same, gear trains connecting said lay-shaft with said cooperating clutch members, one train being such as to drive the lay-shaft in one direction and the other to drive it in the opposite direction, a clutch operating member operatively connected to said friction clutch members to move the same and so determine which cooperating clutch member is driven by said extension, and remote control means to operate said clutch operating member.

2,460,502
GENERATOR MOUNTING FLANGE
Ralph M. Heintz, Cleveland, Ohio, assignor to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application July 18, 1946, Serial No. 684,629
3 Claims. (Cl. 171—252)



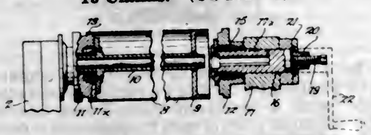
1. In a machine adapted to be releasably mounted on and driven from a pulsating power source, a housing shell and a drive shaft housed therein, said shell having at it one end an integral radially inwardly extending centrally apertured flange for supporting the bearings for said drive shaft and constituting the mounting base for releasably securing the machine to said power source, said flange being apertured to receive mounting bolts extending outwardly from said shell, said shell having windows to permit access to the interior of said shell for insertion and tightening of said bolts.

2,460,503
APPARATUS FOR MEASURING LIQUID LEVEL OR SPECIFIC GRAVITY
Wilfred H. Howe, Sharon, Mass., assignor to The Foxboro Company, Foxboro, Mass., a corporation of Massachusetts
Application February 26, 1945, Serial No. 579,721
6 Claims. (Cl. 73—33)



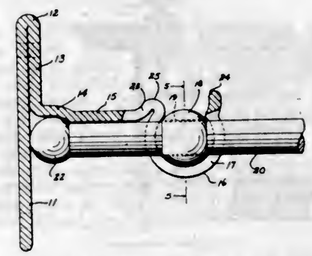
2. In apparatus for measuring the buoyancy of a float at least partially immersed in a liquid as a measure of a characteristic of said liquid such as specific gravity and liquid level, in combination, a flexure member having one end fixed to a rigid support and connected at its other end to said float whereby variations in the force exerted by said float in response to variations in the value of said characteristic flex said flexure member, a resistance element connected to spaced points on said flexure member to cause said element to be strained and its electrical resistance thereby varied as said flexure member is flexed, a closed flexible protecting tube surrounding said flexure member and said resistance element to protect said flexure member and resistance element from said liquid and its vapor, and means responsive to the electrical resistance of said element for indicating the value of said characteristic of said liquid.

2,460,504
PRINTING APPARATUS
William C. Huebner, New York, N. Y.
Application October 24, 1944, Serial No. 560,136
13 Claims. (Cl. 101—1)



1. In a printing press having a rotary cylinder, a main frame, and cylinder supports on said frame at opposite ends of the cylinder one of which drives the cylinder, the improved construction comprising means detachably connecting said cylinder at one end with said driving support, a bearing block shiftable in a guideway in said frame from a supporting position axially opposite the other end of said cylinder, a journal by which said second support is rotatably mounted and which is adjustable in said bearing block axially of said cylinder for releasing said second support from the cylinder, said bearing block being shiftable in said guideway with said second support away from its supporting position opposite the end of the cylinder when the support is released from the cylinder, said guideway being of greater dimensions than the diameter of the cylinder, and said cylinder being freed for disconnection from said driving support and removable endwise of itself from the press through said guideway when the bearing block is shifted out of its cylinder supporting position.

2,460,505
TOWEL RACK
William J. Jahoda, Put in Bay, Ohio
Application July 8, 1947, Serial No. 759,591
4 Claims. (Cl. 211—100)

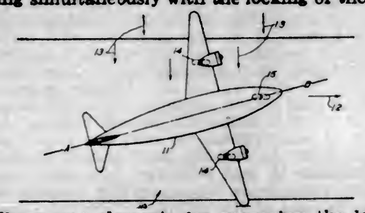


1. A towel rack, comprising a support, a forwardly extending plate member carried by said support, the forward end portion of said plate member being formed with a depending channel, said plate member being formed with a plurality of slots extending through the lower portion of said channel, ball members rotatably supported on the edge portions of the slots in said channel, and rack bars passing through said slots and slidably passing through openings in said ball members, said rack bars having enlarged inner end portions adapted to engage the bottom of the plate member in horizontal position, and to be supported on the ball members when the rack bars are in depending position.

2,460,506
LANDING GEAR FOR AIRPLANES
Charles R. Jamison, Morgantown, W. Va.
Application October 26, 1945, Serial No. 624,708
8 Claims. (Cl. 244—50)

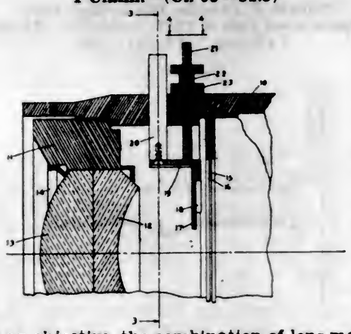
1. In an aircraft having main laterally spaced landing elements and a longitudinally spaced landing element, the elements being supported for vertical swinging movement and for turning on parallel axes when in landing or takeoff position; means interconnecting all of said elements for simultaneous turning on said axes from planes paralleling the longitudinal axis of the aircraft to diagonal parallel positions, means for selectively locking the laterally spaced elements only when such elements are set in position parallel

with the longitudinal axis of the craft, and means acting simultaneously with the locking of the lat-



erally spaced elements for preparing the longitudinally spaced element for free steering motion.

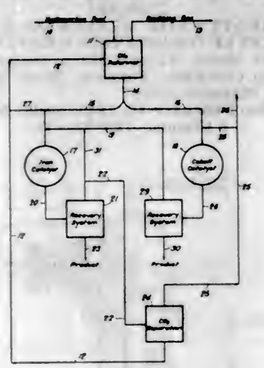
2,460,507
ADJUSTABLE MULTICOLORED LIGHT FILTER
Robert C. Johnston, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
Application October 25, 1944, Serial No. 560,366
1 Claim. (Cl. 95—81.5)



In an objective, the combination of lens mounting barrel, a plurality of lens components, a diaphragm and a multi-colored filter, said filter comprising a plurality of sector-shaped, differently colored filter elements, a support for each said element comprising a flange and an angularly directed arm and means attached to the arm of the support and extending radially outward of the objective for moving the support and filter including a slide, a bearing in the lens barrel in which said slide is guided, a threaded stem passing through the lens barrel connected to said arm and spaced from and projecting in a direction parallel with said slide, an adjusting nut threaded to the stem, means attached to the lens barrel for restraining said nut radially thereof and for preventing movement thereof axially with respect to the direction of spindle movement, a series of graduations on the slide and other graduations on the adjusting nut, and indicia associated with each of said filters for showing its respective color.

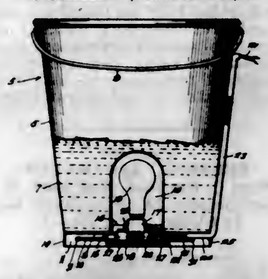
2,460,508
METHOD AND MEANS FOR HYDROCARBON SYNTHESIS
Everett A. Johnson, Park Ridge, and Sam B. Becker, Chicago, Ill., assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application July 30, 1946, Serial No. 687,064
2 Claims. (Cl. 260—449.6)

1. In the process of converting a gas mixture containing hydrogen and carbon monoxide initially in a ratio of at least 5:3, the steps which include contacting one portion of the total gas mixture with an iron type catalyst at a pressure above about 5 atmospheres and a temperature above about 400° F., contacting another portion of the total gas mixture with a cobalt type catalyst in a parallel reaction zone at about atmospheric pressure and at a temperature between about 340 and 500° F., separately withdrawing reaction products from said parallel reaction zones recovering from the reaction products withdrawn from the iron catalyst synthesis a residual gas



mixture including hydrogen and carbon dioxide, said residual gas mixture having a higher proportion of hydrogen to carbon monoxide than said total gas mixture separating from the reaction products of the cobalt catalyst synthesis a gaseous fraction relatively richer in carbon monoxide than said total initial gas mixture, supplying at least a portion of the hydrogen-rich residual gas from said iron catalyst synthesis to said cobalt catalyst synthesis, and supplying substantially all of the carbon monoxide recovered from the cobalt catalyst synthesis to said iron catalyst synthesis.

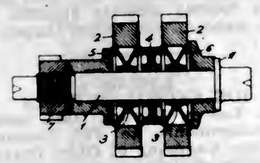
2,460,509
HEATED DRINKING VESSEL
Donald E. Keller, Millersport, Ohio
Application September 21, 1946, Serial No. 698,471
2 Claims. (Cl. 219—45)



1. In a heated drinking vessel, the combination of a container having an imperforate bottom formed with a reentrant pocket and provided at the marginal edge of said bottom with a downwardly extending flange, a heating element supporting cover provided under said bottom and formed with a neck portion removably receivable

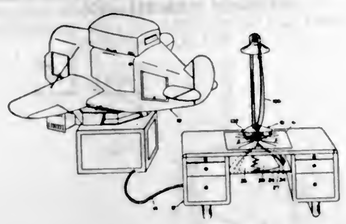
in said pocket, and a plurality of removable keeper rods extending through said flange and through said cover to retain the neck portion of said cover in said pocket.

2,460,510
FLEXIBLE CLAMPING SLEEVE
Emil Laesser, Zurich, Switzerland, assignor to Maag-Zahnräder und -Maschinen Aktiengesellschaft, Zurich, Switzerland
Application September 26, 1944, Serial No. 555,884
In Switzerland September 27, 1943
6 Claims. (Cl. 287—52.06)



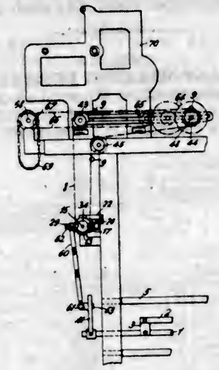
6. A device for mounting work pieces comprising, a hub substantially rigid having a pair of conical flexible discs extending therefrom in V formation, cylindrical rims formed on the extremities of said discs opposite the hub, said cylindrical rims having abutment faces on their outer ends which faces lie in planes extending perpendicularly to the axis of the hub, and means for exerting axial pressure on said abutment faces to alter the diameter of the rims to clampingly engage a work piece adjacent thereto.

2,460,511
AUTOMATIC RADIO SIGNALING MEANS FOR AVIATION TRAINERS
Gregor L. Lang, West Haven, Conn., assignor to Link Aviation, Inc., a corporation of New York
Application May 27, 1943, Serial No. 488,659
3 Claims. (Cl. 35—10)



1. In a device for teaching aircraft navigation or the like by means of radio range signals, means for simulating the phenomenon of "multiple courses" of actual radio ranges, said means comprising two pairs of metallic sectors shaped and positioned relative to one another like the quadrants of a real radio range station, means for charging each pair of said metallic sectors in different predetermined code patterns simulating the code pattern of the signal field of a real radio range, an additional metallic member insulated from and placed adjacent the face of a selected one of said sectors, and an electrical connection between said additional metallic member and one of said sectors charged in a different code pattern from the selected sector.

2,460,512
VARIABLE WARP TENSIONING MEANS
Adolf Lang, Wettingen, Switzerland, assignor to Baumwoll-Spinnerei & -Weberei Wettingen, Wettingen, Switzerland
Application June 29, 1945, Serial No. 602,205
In Switzerland June 26, 1944
2 Claims. (Cl. 139—24)



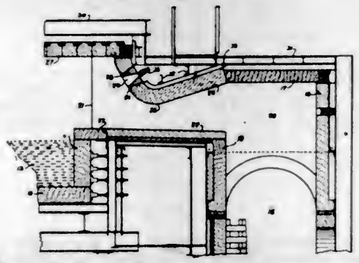
1. A control arrangement for looms for producing woven effects comprising, an oscillatory member over which threads deflected out of the warp are conducted, a chain provided with abutment stops constituting members of the chain and serving for controlling the oscillatory member, said chain being in operative relation with another operating device which controls the weaving operation, and a clutch for controlling the movement of the oscillatory member, one part of said clutch being formed as a sprocket wheel over which the chain passes.

2,460,513
FILE
Edward Blair Le Fevre, Warwick, R. I., assignor to Nicholson File Company, Providence, R. I., a corporation of Rhode Island
Application June 26, 1944, Serial No. 542,179
1 Claim. (Cl. 29—78)

An elongated double purpose file having a filing surface comprising a multiplicity of arcuate cutting teeth spaced along the length of the file the convex sides of which face toward that end of the file which leads when the file is moved on its cutting stroke, the centers of curvature of said teeth being spaced from each other along a line substantially coinciding with one edge of said filing surface, and substantially parallel lines of serrations each running through a plurality of said teeth from the trailing end of said file and the edge thereof opposite said one edge at an angle toward said one edge and the leading end of said file, dividing said arcuate teeth into individual tooth cutting sections, so that the tooth sections adjacent said one edge thereof are relatively short, widely spaced and have small angles of shear so as to together constitute an elongated coarse cutting or roughing area, and the tooth sections adjacent the opposite edge of the file are longer, closer together and have

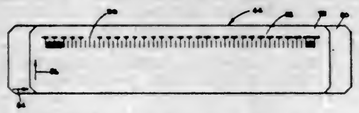
larger angles of shear than those of the roughing area and together constitute an elongated surface finishing area, whereby the file when moved forwardly upon a cutting stroke and given a simultaneous lateral movement with the roughing area in advance of the finishing area, will first rapidly remove stock from a given area of a work piece and, during the same stroke, will immediately thereafter finish file such portion.

2,460,514
GLASS MELTING FURNACE
Levi S. Longenecker, Mount Lebanon, Pa.
Application November 2, 1945, Serial No. 626,209
8 Claims. (Cl. 49—54)



1. In a regenerative tank type glass melting furnace having a port arranged to discharge a substantially horizontal stream of preheated air across the furnace chamber; such port having a floor, side walls and a refractory knuckle-like roof located between such side walls, approximating a shallow V in longitudinal sectional and forming a restricted throat for such port; the leg of such knuckle adjacent the furnace chamber being provided with a through opening, and a burner nozzle positioned above such knuckle and arranged to project a jet of liquid fuel through such opening and into the preheated air stream as such stream enters the furnace chamber.

2,460,515
CALIBRATED RETARDATION PLATE FOR MEASURING BIREFRINGENCE AND METHOD OF MAKING SAME
David D. Lowber, Snyder, and Joseph D. Reardon and Philip W. Collyer, Buffalo, N. Y., assignors to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application April 23, 1946, Serial No. 664,392
4 Claims. (Cl. 88—65)

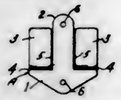


1. A retardation plate of the character described comprising a first plate-like member formed of quartz, said member being relatively long and in the shape of a uniformly tapering thin wedge to provide substantially uniformly varying birefringent retardation properties throughout an elongated portion thereof, a second plate-like member formed of quartz, said second member being relatively long and thin and having plane parallel opposed surfaces to provide substantially uniform birefringent retardation properties throughout an elongated portion thereof, the parallel surfaces of said second member being spaced so as to provide a thickness therein equal to the thickness of a transverse plane intermediate the ends of the elongated portion of said wedge shaped member, said wedge shaped member and plane parallel member being so disposed in adjacent face-to-face relation relative to each other that their optical axes are at right angles, a graduated scale having a base reference mark associated therewith for indicating zero birefringence carried by said elongated portion of said plane parallel member with said base reference mark located intermediate the ends thereof, and means securing said members together with said base reference mark located directly opposite the said transverse plane of said wedge shaped member.

2,460,516
ION-EXCHANGE RESIN
Enrique L. Luíces, Dayton, Ohio, assignor, by mesne assignments, to The Commonwealth Engineering Company of Ohio, Dayton, Ohio, a corporation of Ohio
No Drawing. Application October 20, 1943, Serial No. 507,038
4 Claims. (Cl. 260—38)

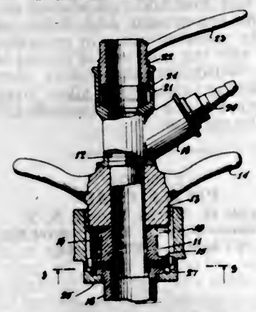
3. The method of making an ion exchange mass comprising a porous inert inorganic adsorbent base of large inner surface area for a given mass and a synthetic ion exchange resin consisting of phenol formaldehyde condensation product over said surface area as a thin film, which consists in adding 50 parts by weight of phenol to 75 parts by weight of porous adsorbent material consisting of discrete granules of large inner surface area, adding to the resulting mixture 25 parts by weight of formaldehyde (100% basis), and heating the mixture at a temperature of from 400° to 500° F. for time sufficient to complete the reaction.

2,460,517
CURTAIN FIXTURE
Ida Lundstrom, St. Louis, Mo.
Application March 29, 1945, Serial No. 585,552
6 Claims. (Cl. 211—105.2)



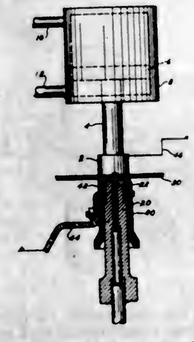
3. A curtain fixture comprising, in combination, a supporting bracket having spaced supporting hooks struck from a single plate providing thereby spaced shoulders and an intermediate arm to the rear of the gap formed by the spaced hooks, a curtain-rod having supporting ends in the form of return bends, means formed from the return bend material providing a rearwardly bent portion adapted to lie in the gap between the two hooks and an upright portion projecting from the rearwardly bent portion, and said upright portion projecting beyond the opposed side edges of the rearwardly bent portion and adapted to rest on the shoulders of the two spaced hooks.

2,460,518
LIQUID DISPENSER
Abraham Machtinger, New York, N. Y.
Application March 8, 1946, Serial No. 653,012
1 Claim. (Cl. 285—40)



In a tap for containers of the type comprising a protruding tap bush, the latter comprising an outer face adapted to be engaged by a resilient washer and further comprising means for detachably engaging a tap, in combination, a substantially hollow cylindrical tap body, said tap body being formed with a recess of substantially rectangular cross section, said recess being located opposite said face of said bush in the operative position of tap and bush, said recess further being substantially equal in inner and outer dameter to aid face of said bush, a resilient washer of substantially rectangular cross section located in said recess so as to present a resilient and non warping face to said face of said bush, and means engageable with said tap and bush for detachably connecting the two together.

2,460,519
WORKING OF HIGH TENSILE SHEET METAL
Lee L. Marchant, Takoma Park, Md., assignor to Engineering and Research Corporation, Riverdale, Md., a corporation of Maryland
Application May 31, 1945, Serial No. 596,887
1 Claim. (Cl. 219—3)

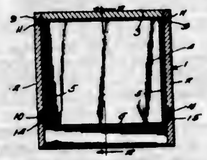


The method of working metal, which metal has such a high tensile strength that it tends to crack and shatter when worked cold, which consists in applying a working tool to the metal with a pressure insufficient to work it in the desired manner while cold but which is sufficient to work it in the desired manner at a temperature of the metal just above the critical temperature thereof, and while maintaining such pressure applying to the metal at the area of contact of the working tool electric energy in amount more than sufficient to cause the metal to be heated to a temperature at which the tensile strength is such that the pressure applied to the tool will cause the desired working.

2,460,520
PIEZOELECTRIC CRYSTAL APPARATUS
Warren P. Mason, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 9, 1946, Serial No. 646,639
20 Claims. (Cl. 171—327)

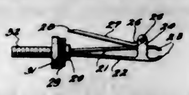
1. Piezoelectric crystal apparatus comprising means including a di-potassium tartrate crystal body for producing a substantially zero temperature coefficient of vibrational frequency within a temperature range substantially from 0° to +40° centigrade, said frequency being determined by a major face dimension axis of said crystal body, said dimension axis being made of a dimensional value corresponding to the value of said frequency, the angular orientation of said crystal body with respect to the mutually perpendicular X, Y and Z axes thereof being a value corresponding to and related to the value of said substantially zero temperature coefficient of frequency, and electric field-producing means for operating said crystal body at said substantially zero temperature coefficient of frequency.

2,460,521
DRAWER GUIDE
Robert H. McMurtrie, Huntingburg, Ind.
Application June 8, 1945, Serial No. 598,298
2 Claims. (Cl. 45—77)



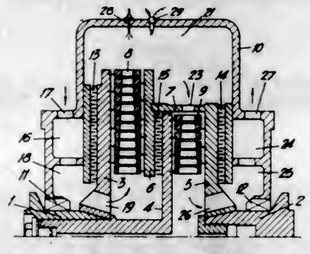
1. In combination, a casing having sides, a drawer having sides and a bottom, and means to mount said drawer on the sides of the casing for sliding movement into and out of the same, comprising lateral side flanges extending along the upper edges of the sides of the drawer, longitudinal guide grooves in the sides of the casing in which said flanges are slidably fitted, a pair of rollers mounted on opposite sides of the drawer adjacent to the lower rear corners of said sides, and a pair of channel guide tracks countersunk in the sides of the casing to extend parallel with said guide grooves, said rollers being fitted in and rotatable along said guide tracks, one of said guide tracks being of right-angled form in cross-section with a completely open side to permit side play of the roller therein inwardly and outwardly of said track, and the other of said guide tracks having sides confining the roller therebetween and preventing side play of the roller in the guide track.

2,460,522
MANICURE SET
Anthony J. Miller, Freeman, S. Dak.
Application May 2, 1947, Serial No. 745,376
1 Claim. (Cl. 132—75.5)



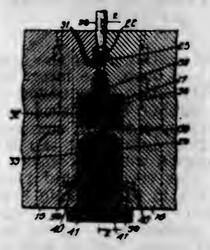
A manicure implement of the character stated comprising a relatively long handle body having a threaded axial bore in one end, a cutting implement comprising a pair of resilient blades, said blades being attached to a body of circular form, the body being exteriorly screw threaded, a stem forming an integral part of the body and adapted to engage in said socket, said cutting implement including a lever pivotally coupled with one blade and adapted to apply pressure to the other blade to move the same together into operating relation, said lever being adapted to be moved into substantially parallel relation with the blades, and a threaded nut mounted upon said body and adapted when moved in one direction to engage and secure said lever in the said substantially parallel relation with the blades.

2,460,523
COMBINED GAS TURBOCOMPRESSOR AND GAS TURBINE
Ragnar Olov Jacob Möller, Finspong, Sweden, assignor to Svenska Turbinfabriks Aktiebolaget Ljungström, Finspong, Sweden, a corporation of Sweden
Application December 20, 1945, Serial No. 636,201
3 Claims. (Cl. 60—41)



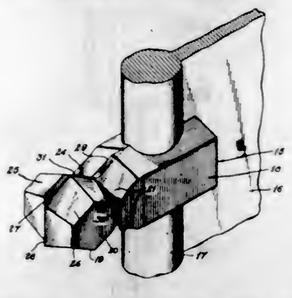
1. In a power plant the combination of a turbocompressor, a gas turbine, said compressor and said turbine each being the radial flow double rotation type, a common stationary casing therefor, two shafts centrally mounted with relation to said casing and adapted to rotate in opposite directions, two annular discs attached at their inner peripheries to one of said shafts at axially spaced points thereof, an annular disc attached at its inner periphery to the other shaft, said last mentioned disc having a disc supporting member at its outer periphery, another disc attached at a point between its inner and outer peripheries to said disc supporting member, said last mentioned disc being situated axially between the discs of the first mentioned shaft, the discs thus forming together three axially spaced radial passages between themselves, compressor blades in one end passage alternately attached to the respective discs, turbine blades alternately attached to the discs of the other end passage, labyrinth packing elements alternately attached to the discs of the intermediate passage, said compressor blades being arranged to operate while forcing the fluid under compression outwardly, the casing forming an annular chamber in free communication with the outer periphery of the set of compressor blades, means to introduce fuel into said chamber, means to ignite a mixture of this fuel and compressed air as produced by the compressor and delivered to said chamber, the chamber being in permanent communication with the inlet end of the set of turbine blades, the stationary and rotary elements of the plant having passages to allow admission of air to the compressor and expelling of exhaust gases from the turbine.

2,460,524
PINTLE CHAIN
Louis H. Morin, Bronx, N. Y.
Application December 28, 1943, Serial No. 515,883
9 Claims. (Cl. 59—78)



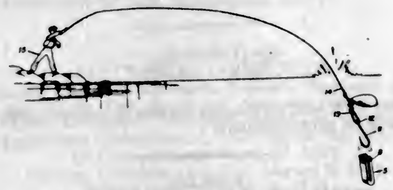
1. A chain comprising die cast links, each link having an integral pintle portion cast thereon, and a bearing also cast thereon encircling the pintle portion of an adjacent link in permanently coupling said links.

2,460,525
UNIVERSALLY UNITED SCOOP FOR SEPARABLE FASTENERS
Louis H. Morin, Bronx, N. Y.
Application November 21, 1944, Serial No. 564,487
12 Claims. (Cl. 24—205.13)



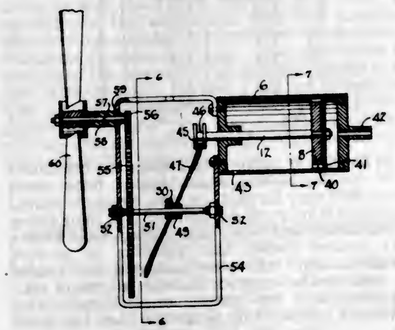
10. A scoop for separable fastener stringers, said scoop having a mounting end portion and a coupling end portion, the coupling end portion comprising a head and a recessed portion each defined at least in part by upper and lower walls, said recessed portion having oppositely faced shoulders, said head having on upper and lower walls thereof oppositely faced shoulders, and said head having widthwise of the scoop intersecting upper walls and intersecting lower walls.

2,460,526
RELEASABLE CASTING WEIGHT
Henry L. Oliver, Durango, Colo., and Mina B. Anderson, Albuquerque, N. Mex.
Application November 20, 1946, Serial No. 711,014
4 Claims. (Cl. 43—27)



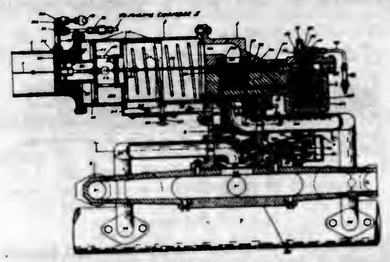
1. A releasable casting weight comprising a body with an opening at one end thereof, and a tearable strip of material carried by the body over said opening, said tearable strip adapted to receive the barbed end of a fishing hook, and said hook being torn through said strip and away from said body as the line carrying said hook is cast so that the hook contacts a body of water with impact.

2,460,527
WIND PUMP FOR AERATING BAIT CONTAINERS
Constant A. Oliveros, Houston, Tex.
Application January 13, 1945, Serial No. 572,704
1 Claim. (Cl. 261—30)



An aerating device for use in connection with live bait liquid containers comprising a frame of sheet metal having opposite walls, a reciprocating positive displacement airpump including a piston and a piston rod extending to within said frame, a channeled head on said piston rod within said frame, a pair of aligned shaft bearings adjustably secured in said opposite walls of said frame, a shaft journaled in said bearings, a wobble plate having a central apertured hub mounted on said shaft, set screw means securing said wobble plate to said shaft for rotation therewith, the periphery of said wobble plate extending into said channeled head of said piston rod, a large gear mounted on said shaft within said frame, a bushing affixed through one wall of said frame, a shaft rotatably extending through said bushing, a pinion gear affixed on said latter shaft and in mesh with said large gear, a windwheel removably secured to said pinion gear shaft without said frame, and an air conduit for conducting air from said pump to inside the liquid container, whereby rotation of said windwheel rotates said gears to rotate said wobble plate to reciprocate said airpump piston to positively pump air through said conduit to the live bait liquid container.

2,460,528
CARBURETOR
Olaf Oswald, Honolulu, Territory of Hawaii
Application January 27, 1944, Serial No. 519,904
20 Claims. (Cl. 261—13)

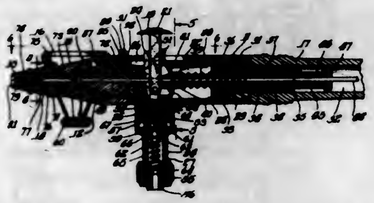


7. In combination in a carburetor for an internal combustion engine, having an air inlet through which the total air must pass and an outlet adapted to be connected to the manifold of an engine, a mixing chamber, a primary air passage between said inlet and said outlet, an auxiliary air passage between said inlet and said outlet and communicating with said primary air passage through said mixing chamber, air valve means for controlling the communication between said inlet and said auxiliary air passage, primary fuel supply means opening into said primary air passage between said air inlet and said mixing chamber, a throttle in said primary air passage between said primary fuel supply means and said mixing chamber, secondary fuel supply means opening into said primary air passage on the outlet side of said throttle, means operatively associated with said primary air passage for heating the air-fuel mixture flowing therethrough, automatic actuating means responsive to the total engine-suction induced air flow through said air inlet for simultaneously controlling said primary fuel supply means and said air valve to constitute an over rich air-fuel mixture in said primary air passage under the control of said throttle valve which is thereafter heated by said heating means and mixed with auxiliary air in accordance with the operation of said actuating means, said secondary fuel supply means comprising a plurality of interconnected fuel storage ducts, a source of fuel for said ducts, one of said fuel ducts being open to the atmospheric pressure through an air orifice, another of said ducts being in communication with said primary air passage through a valve means adapted for preventing the passage of fuel therethrough in response to suction applied through its discharge port superior to the predetermined normal engine suction, and another of said ducts being in communication with said primary air passage through a valve adapted to open in response to suction inferior to the predetermined normal engine suction.

2,460,529
AIRBRUSH
Jens A. Paasche, Chicago, Ill.
Application June 5, 1944, Serial No. 538,842
4 Claims. (Cl. 251—134)

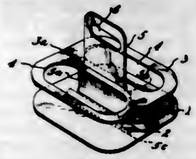
1. An airbrush of the type described comprising an elongated body having a passage for a

needle, a needle mounted in said passage for longitudinal movement therein, spring means biasing said needle in one direction, a pivoted finger operated lever for moving said needle in opposition to said spring, and means for micrometrically predetermining the limit of movement of said needle by said spring, said means comprising a transverse slot formed in said body in the proximity of said lever, a longitudinal passage intersected by said slot, a threaded member



mounted in said longitudinal passage and adapted to engage at one end said lever, a cup shaped nut mounted in said slot and on said threaded member, a cup shaped member mounted within said nut to form a closed chamber and a spring housed within said chamber to urge said latter cup and said nut into frictional engagement with the walls of said slot thereby to retain said nut and said threaded member in an adjusted position.

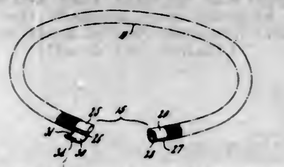
2,460,530
CONTAINER CARRIER
Stephen Petyak, Fort Mitchell, Ky.
Application February 15, 1946, Serial No. 647,918
1 Claim. (Cl. 224—48)



A carrier comprising a base portion consisting of one flat piece of material, a retainer portion consisting of one flat piece of material having a lateral opening along each side for embracing articles located on the base, and a handle member, said handle member being one flat piece of material, said base and retainer portions having central slots therein, for passage of the handle member, said handle member being wider than the base slot, at one of its ends, wider than the retainer slot between its ends, and having a portion of the dimension to pass through the retainer slot, said portion extending far enough to clear the tops of articles located on the base and engaged by the retainer openings, the extended portion having a hand grip portion.

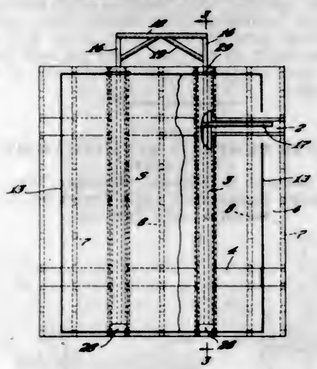
2,460,531
JEWELRY CLASP OR THE LIKE
Henry Pommier, New York, N. Y.
Application August 22, 1946, Serial No. 692,230
12 Claims. (Cl. 24—208)

1. A clasp comprising, in combination, a pair of longitudinally telescoping members; abutment means on one of said members; and an element hingedly connected to the other member on a longitudinal axis and movable transversely into embracing engagement with said one member, when said members are telescoped, to coop-



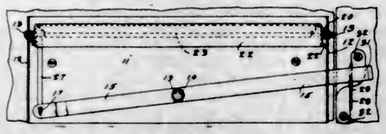
erate with said abutment means to prevent separation of said members.

2,460,532
MOLD FOR CASTING WALL SLABS
Leslie Ross Porter, Jr., Peabody, Mass.
Application October 12, 1945, Serial No. 621,987
2 Claims. (Cl. 25—121)



1. In the art of casting wall slabs the combination of means having a horizontal floor upon which a slab may be cast, narrow elongate longitudinal and transverse sections of said floor being freely liftable away from said means, said means having spaces under said sections to receive longitudinal and transverse members, said spaces being open at the ends so that the members may be inserted into the spaces longitudinally and transversely respectively after the slab has been cast.

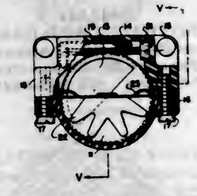
2,460,533
COMBINED HINGED TRAY AND DOOR FASTENER
Allen Hussell Potts, Chevy Chase, Md., assignor to the United States of America as represented by the Administrator, Federal Works Agency
Application October 7, 1947, Serial No. 778,447
2 Claims. (Cl. 292—196)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. An article supporting tray and door latching device which includes a supporting plate adapted to be attached to a door, two tray supporting pivots and a tray hinged on said pivots to said

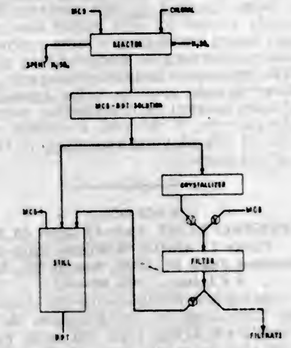
plate, the improvement which comprises a fulcrum perpendicular to said plate and midway of the lateral margins of said plate, a lever arm pivotally mounted on said fulcrum extending beyond one margin of the door plate and a link connecting one end of said arm with said tray eccentrically of said supporting pivots.

2,460,534
ELECTRICAL CONDENSER
Claude Langdon Richards, London, England, assignor to The Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application November 16, 1944, Serial No. 563,723
In Great Britain June 25, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires June 25, 1963
4 Claims. (Cl. 175—41.5)



1. An electrical condenser comprising a disc-shaped composite body having a segmental aperture therein and comprising particles of insulating dielectric material and electrically conductive particles insulated from each other by interposed particles of said insulating dielectric material, a plurality of condenser electrodes in capacitative relationship with said body, said electrodes consisting of two semicircular metallic plates in contact with opposite surface portions of said body, and means to rotate said body relative to said plates to thereby vary the extent to which the non-apertured portion of the disc is interposed between said electrodes.

2,460,535
MANUFACTURE OF TRICHLOROMETHYL DIARYL METHANES
John W. Robinson, Brecksville, Ohio, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application February 21, 1945, Serial No. 579,107
6 Claims. (Cl. 260—649)



1. In a process for the manufacture of the product trichloromethyl diaryl methanes by the condensation of a chloral-yielding compound with an aromatic compound having replaceable ortho and para hydrogen in the presence of sulfuric acid in which said product is recovered in solution in said aromatic compound, the steps of dividing the solution of the product in the aromatic compound into two fractions, crystallizing product from one of said fractions, separating the crystals from the mother liquor, introducing the crystals into the remaining fraction, and then treating the resulting fraction to recover the product of the condensation free of the aromatic compound.

2,460,536
REACTION BETWEEN VINYL CYANIDE AND REACTIVE METHYLENE COMPOUNDS
Arthur O. Rogers, Lewiston, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 18, 1946, Serial No. 684,539
4 Claims. (Cl. 260—465)

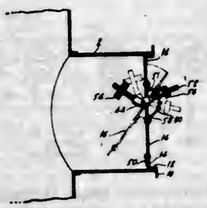
1. The process which comprises reacting vinyl cyanide with a compound containing a reactive methylene group at a temperature between 150° C. and 250° C. in the presence of an alkaline catalyst.

2,460,537
COATED WELD ROD
Ernest Clarence Rollason, Essex, England, assignor to Metal and Thermit Corporation, New York, N. Y., a corporation of New Jersey
No Drawing. Original application October 16, 1946, Serial No. 703,490. Divided and this application May 13, 1948, Serial No. 26,931. In Great Britain November 8, 1945
1 Claim. (Cl. 219—8)

A flux-coated welding electrode in which the flux ingredients comprise an alkali metal compound and a manganese-aluminum alloy having a composition within the range:

	Per cent
Manganese	50 to 98
Aluminum	1 to 10
Carbon	not exceeding 1.5
Silicon	not exceeding 5
Copper	not exceeding 5
Iron with traces of normal impurities	remainder

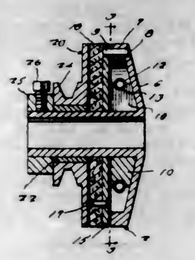
2,460,538
DRAFT REGULATOR
Frank H. Schneider, Gardner, Mass., assignor to Florence Stove Company, Gardner, Mass., a corporation of Massachusetts
Application March 14, 1945, Serial No. 582,764
5 Claims. (Cl. 236—45)



1. A draft regulator comprising a supporting frame having an opening therethrough, a baffle substantially closing said opening and supported by pivotal means above its middle whereby said

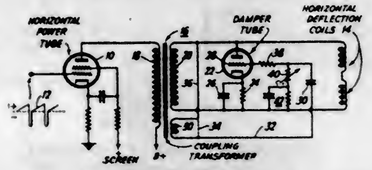
baffle may swing in said opening, a lever extending through said baffle and pivotally connected thereto to be movable in a generally vertical plane, a weight movable along said lever on one side of said baffle, and means associated with the other end of said lever for maintaining said lever in selected angular relation with said baffle.

2,460,539
CENTRIFUGAL CLUTCH
Eldon C. Shank, Freeport, Ill.
Application October 19, 1945, Serial No. 623,294
1 Claim. (Cl. 192—105)



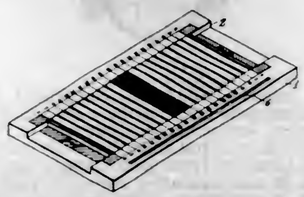
A clutch comprising a rotary driving housing having a sleeve adapted to be secured to a drive shaft, the said housing having a conical end wall, a plurality of centrifugal members in the housing and guided axially by the conical wall, a continuous annular groove extending around the upper portions of the centrifugal members, a coil spring in the groove biased to urge the centrifugal members inwardly toward the axis of the drive shaft, a friction plate mounted on the sleeve and slidable axially thereon, a pin secured to the inner rim of the housing and extending parallel to the axis of the drive shaft, a cooperating aperture in the friction plate to receive the pin to drive the friction plate along with the housing, and a driven member freely rotatable on the sleeve and adjacent the friction plate, whereby the centrifugal members when rotated will be guided by the conical wall to exert axial pressure on the friction plate to engage the latter with the driven member.

2,460,540
CONTROL CIRCUIT
Hubert Rice Shaw, Drexel Hill, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application February 26, 1946, Serial No. 650,372
9 Claims. (Cl. 315—27)



1. In a cathode ray beam deflection system of the type in which a power tube is adapted to supply cyclically varying current through a coupling transformer to a cathode ray beam deflection coil, and in which a grid-controlled variable impedance damper tube is connected across the secondary winding of said transformer, the combination of electrical differentiating means, electrical connections for applying the voltage developed across said cathode ray beam deflection coil to said differentiating means, an auxiliary coil electromagnetically associated with said coupling transformer, said auxiliary coil being so wound that the voltage developed thereacross is substantially in phase with the voltage developed across the secondary winding of said transformer, means for applying the voltage developed across said auxiliary coil to said differentiating means in additive series with the voltage developed across said cathode ray beam deflection coils, and means for applying the output of said differentiating means to the grid of said damper tube to control the impedance of said damper tube.

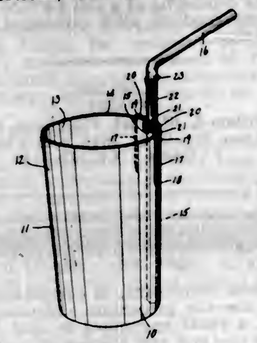
2,460,541
FOOTBALL CARD GAME
Thomas Barton Siler, Atlanta, Ga.
Application January 30, 1946, Serial No. 644,398
6 Claims. (Cl. 273—94)



1. In a simulated football game comprising a rectangular chart, said chart being comparatively rigid and having raised marginal portions comprising marginal zones constituting guides, said chart and its marginal portions defining a broad rectangular valley between said marginal portions, said marginal portions and said valley having lines thereon arranged transversely thereof, said lines on said valley and on said marginal portions being substantially and respectively in alignment with each other, said lines being substantially parallel and suitably spaced from each other substantially equal distances, said marginal portions having indicia thereon to indicate the relative yardage of spaces and lines on said chart, in combination with a rectangular board, said board being as wide as said valley and being located in said rectangular valley and slidably guided by said raised marginal portions, said board having transverse grooves therein to detachably receive and support players in an upright position when placed therein, the major number of said grooves being equally spaced but centrally located grooves being more closely spaced to provide, if desired, a closely arranged disposition of the players, especially in the initial portion of the game.

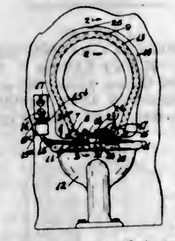
2,460,542
DRINKING TUBE AND GLASS CLAMP
Clyde C. Smith, Kokomo, Ind.
Application June 12, 1945, Serial No. 599,073
6 Claims. (Cl. 65—65)

1. An anchoring flexible clip for the purpose described including in combination a pair of exterior wall engaging legs, an arm extending from each and inwardly toward the other arm, each arm terminating in an arcuate portion, the arcuate portions being similarly directed, upwardly directed arms at the other ends of the arcuate portions, and an oppositely directed



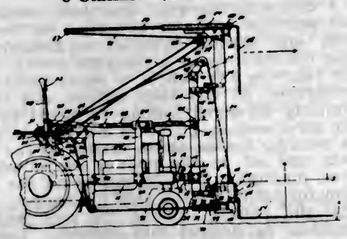
arcuate portion connecting the other ends of the upwardly directed arms.

2,460,543
ULTRAVIOLET RAY TOILET SEAT
Edward Spierer, Brooklyn, N. Y.
Application November 2, 1943, Serial No. 508,662
5 Claims. (Cl. 4—233)



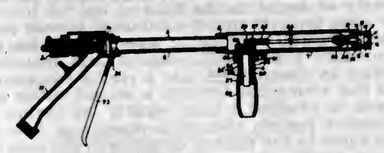
1. An ultraviolet ray toilet seat, comprising a toilet seat of material adapted to transmit ultraviolet light rays and an ultraviolet ray tube mounted in a recess cut in the bottom face of said toilet seat, a filler element of material adapted to transmit ultraviolet rays and set into the bottom of said recess for holding said tube in position, and means for releasably holding said filler element in position on said seat.

2,460,544
HAY LOADER
Charles J. Smith, Albany, N. Y.
Application May 24, 1946, Serial No. 671,957
8 Claims. (Cl. 214—112)



1. A hay loader adapted to be attached to an automotive vehicle including a support frame, a loading frame, and a plurality of gathering prongs on the loading frame adapted to be moved upwardly and downwardly on the loading frame, said loading frame being hingedly supported by the support frame, and means for swinging the loading frame and the gathering prongs thereon at will to the right or to the left, said means consisting of a pair of winding drums, each drum being slidably and rotatably mounted on a horizontal shaft extending transversely of the vehicle, said shafts being adapted to be driven in opposite directions by the motor of the automotive vehicle, a brake on each drum, a spring permanently urging said brakes into working position, a clutch flange on each drum, a clutch disc rigidly mounted on each shaft and spaced from the clutch flange, a control lever adapted to move the drum in and out of clutch-engaging position, a hand lever pivotally mounted on the control lever for releasing the drums from their brakes, a substantially circular bracket on the loading frame having a circumferential groove therein, and a cable fastened to each side of the loading frame and arranged in said groove, one of said cables leading to one of the winding drums and the second cable leading to the other drum.

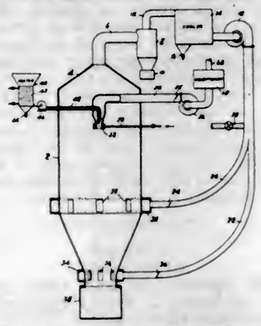
2,460,545
SPRAY GUN
Warren M. Spreng, Ashland, Ohio, assignor to The F. E. Myers & Bro. Company, Ashland, Ohio, a corporation of Ohio
Original application June 15, 1940, Serial No. 345,519. Divided and this application August 7, 1942, Serial No. 453,973
3 Claims. (Cl. 299—112)



1. A spray gun comprising a barrel, said barrel including a first and a second length of tubing, said tubing lengths being straight from end to end, means on adjacent ends of said tubing lengths for attaching them together in axial alignment whereby to form a straight passageway interiorly from end to end of said lengths of tubing and thereby prevent turbulence of fluids passing therethrough, said first length of tubing having a nozzle and having a threaded boss located on its under side intermediate its ends, a hollow substantially cylindrical member threadedly engaging said boss and extending below said first tubing length, a rotatable handle grip extending downwardly from said hollow member and forming a continuation thereof, a stem attached to said handle grip and extending upwardly through said member and having an upper end including an offset pin which projects into said first tubing length, a rigid rod member extending lengthwise of said first length of tubing and having an aperture at one end engaging said pin and a valve member at its opposite end, said nozzle having a restricted passageway adapted to be at least partially closed, or fully closed by rotation of said handle grip, said second length of tubing having a hollow rigid handle element and a pivoted trigger handle extending downwardly therefrom and being in the same plane as said rotatable hand grip on said first tubing, and a valve on said second tubing length and operatively con-

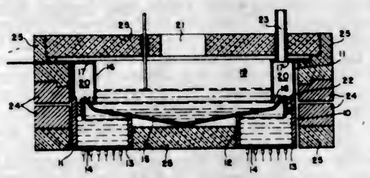
nected to said pivoted trigger handle to control the passage of fluid from within said handle element to said tubing lengths.

2,460,546
METHOD AND APPARATUS FOR TREATING MATERIALS
Nicholas N. Stephanoff, Elkton, Md., assignor, by mesne assignments, to C. H. Wheeler Manufacturing Company, a corporation of Pennsylvania
Application October 1, 1942, Serial No. 460,401
32 Claims. (Cl. 260—95)



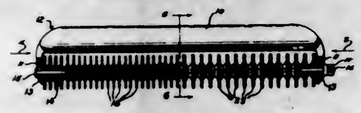
7. A method including passing elastic fluid into a receiver through a nozzle to produce a high velocity jet having in at least a portion thereof a velocity of flow at least equal to the velocity of sound in the fluid of the jet having the same pressure and temperature as said portion of the jet, introducing material into the jet to produce a fine suspension of said material, passing an elastic fluid into a region containing said fine suspension through a second nozzle arranged to produce a high velocity jet having in at least a portion thereof a velocity of flow at least equal to the velocity of sound in the fluid of the jet having the same pressure and temperature as said portion of the jet, introducing into the second jet a different material to produce a fine suspension of the second material admixed with that of the first named material, and separating resulting material from the elastic fluid.

2,460,547
DRAWING CRUCIBLE
Charles R. Stevens, Toledo, Ohio, assignor, by mesne assignments, to Glass Fibers, Inc., Waterville, Ohio
Application October 7, 1946, Serial No. 701,823
11 Claims. (Cl. 49—55)



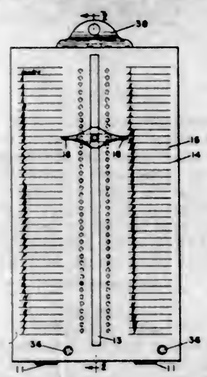
11. An orifice plate for a melting crucible for glass having a plurality of orifices therein through which glass exudes, comprising, a plate having a plurality of orifices therein through which glass exudes, said orifices receding from the discharge side of said plate as straight-sided holes at least adjacent the discharge surface side of said plate, said discharge surface side of said plate consisting of a flat surface comprising a platinum-rhodium alloy consisting of at least 40% rhodium.

2,460,548
COMB
William L. Stewart, Fitchburg, Mass.
Application March 23, 1946, Serial No. 656,549
2 Claims. (Cl. 132—16)



1. A comb comprising, in combination, a back bar and laterally projecting end-pieces defining a holder, a shaft journalled in said end-pieces, a head at one end and a screw-threaded portion at the remaining end of said shaft, an adjusting knob on said screw-threaded portion, a plurality of rotatable discs each comprising a circular plate formed with a rounded peripheral edge, and a concentric, frusto-conical boss formed integrally on each side of said plate, said discs being formed with central apertures adapted to rotatably receive said shaft, and the adjustment of said knob varying the frictional contact between said discs.

2,460,549
DEVICE FOR RECORDING GROCERY WANT LISTS
Earl Stiles, Lusk, Wyo.
Application August 20, 1946, Serial No. 691,796
2 Claims. (Cl. 164—111)

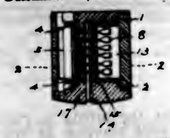


1. A device of the kind described, comprising a back panel section, a cover section for the back section and having external columnarly arranged indicia thereon, a movable pointer selectively following the indicia, a puncturable sheet superimposed on the back section and having columnarly arranged indicia identical to that of the cover section, puncture mechanism, forming a recorder for the sheet, carried by the cover section and set by the pointer on adjustment thereof, manually operated means on the cover section for actuating the said mechanism when set by the pointer, means for returning the mechanism to normal non-recording position, and a hanger on the back section and latching the cover thereto.

2,460,550
MODIFIED GLOBIN AND METHOD FOR ITS PREPARATION
Max M. Strumia, Penn Valley, and Francis W. Chornock, Devon, Pa., assignors to The John S. Sharpe Research Foundation of The Bryn Mawr Hospital, a nonprofit corporation
No Drawing. Application August 10, 1945, Serial No. 610,214
8 Claims. (Cl. 260—112)

1. The method of preparing a modified globin adapted for parenteral injection into humans which includes separating globin from the other components of hemoglobin and treating the separated globin with an alkali in aqueous solution of an alkali concentration such as to produce an alkaline globin solution having a pH in excess of pH 9.0 until the molecular weight of the globin is reduced to about one-half of that of the original globin.

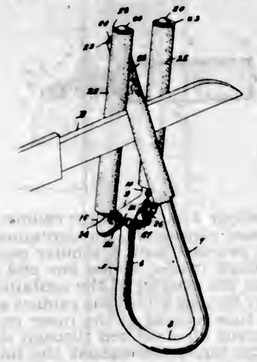
2,460,551
UNITARY TUMBLER CYLINDER LOCK
Gunnar E. Swanson, New Britain, Conn.
Application June 16, 1945, Serial No. 599,877
5 Claims. (Cl. 70—364)



1. The combination in a cylinder lock, of a barrel having a central opening with a longitudinal groove therein, a cylinder rotatable in the barrel opening and provided with a longitudinally extending open-sided recess and with integrally formed spacing plates within the recess having a plurality of similar transverse slots between them which cylinder has a longitudinal key slot communicating at its inner edge with the last said slots and also has a longitudinal locking bar slot between its periphery and the said recess, a locking bar in the last said slot movable outward into the barrel groove to effect locking, and a tumbler unit comprising a longitudinal base plate connected with the cylinder within the recess and also comprising a plurality of fingers formed integrally with the base plate which fingers have resilient portions adjacent the base plate and within the recess and also have other portions extending through the respective slots between the spacing plates and positioned to be separately moved within the last said slots by a key in the key slot and the said tumbler unit further comprising tumbler plates integral with the respective fingers and projecting transversely thereof beyond the slots between the spacing plates so that the outer edges of the spacing plates prevent inward movements of the tumbler plates which tumbler plates normally engage the locking bar to hold it in its outer locking position and are notched to permit inward movement of the bar upon movement of the fingers by the proper key and upon corresponding movement of the tumbler plates along the outer edges of the spacing plates to align the said notches.

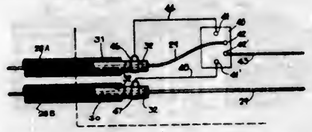
2,460,552
KNIFE SHARPENER
Sigmund Tarapcaynski, Niagara Falls, N. Y.
Application May 22, 1947, Serial No. 749,820
4 Claims. (Cl. 51—214)

1. A device for sharpening knives, comprising a holder having opposed arms normally disposed in spaced relation, rods constituting extensions of the respective arms and threadedly connected at one end to said arms, relatively elongated sharpening stones rotatably mounted on the rods, the stones being normally spaced apart when the arms



are in normal position, means for inclining the stone-holding ends of the arms toward each other, whereby to cross the stones in angular relation, and a flexible connection extending between the arms, whereby to limit outward movement thereof beyond their normal positions.

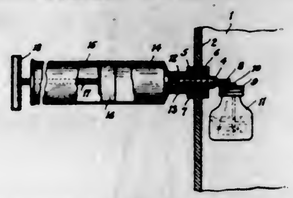
2,460,553
ELECTRIC CURRENT THEFT PREVENTION MEANS
David Trompeter, Sandy Hook, Conn.
Application August 28, 1947, Serial No. 770,964
2 Claims. (Cl. 171—97)



1. A protective apparatus for the purpose described, comprising an electric current supply circuit including a first pair of conductors, one a current supply one and the other a current return one, and also including a second pair of conductors, one a current supply one and the other a current return one, each of the conductors of said first pair being part of a cable wherein said part as the main electric conductor thereof is enclosed by an insulating wall and said insulating wall is enclosed by a second insulating wall and a conductive wall is interposed between said two insulating walls; a current consumption registering meter interposed between said first pair of conductors and said second pair of conductors whereby normally said meter registers the current consumption by way of said circuit; a sealed casing structure for enclosing said meter; and a normally inoperative means for breaking said circuit between said first pair of conductors and said second pair of conductors, said means having electric terminals each connected to the conductive wall of a different one of the cables of the said first pair of conductors, whereby when the two conductive walls last-named are bridged by a conductor brought into contact with both said walls said means is rendered effective to break said current supply circuit, said means also enclosed in said casing structure.

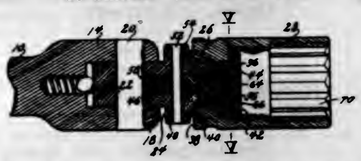
latching the skirt in collapsed position, said means

2,460,554
SPRAYER
William Martin Vogel, Montclair, N. J.
Application November 1, 1945, Serial No. 625,970
4 Claims. (Cl. 21—78)



1. In a sprayer attachment for cabinets, chests or other closed containers, the container having a fixed wall provided with a tubular passage extending through it and having one end communicating with the exterior of the container, a liquid container located within the cabinet and having a spray tube located at the inner end of the passage whereby air delivered through the latter will spray the liquid throughout the interior of the cabinet, the second end of the passage being located on the outside of the cabinet and having means for detachably receiving and supporting a hand-operated air pump and permitting hand operation of the pump and spraying inside of the cabinet without requiring opening of the door thereof.

2,460,555
TOOL ASSEMBLY
Frederick Von Voigtlander, Ann Arbor, Mich.
Application February 4, 1947, Serial No. 726,332
10 Claims. (Cl. 287—119)



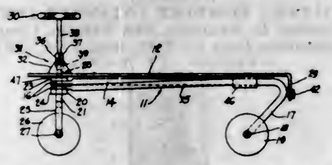
1. In a tool having an actuating member and a head detachably secured thereto, locking means therebetween comprising a shank on one of said members having a key cross-sectional configuration, a socket in the other member of like cross-sectional configuration for telescopically receiving the shank, means determining a limitation of shank insertion in said socket, a shoulder in said socket providing member which is adjacent the terminus of the shank when the parts are in assembled position, a key terminally mounted on said shank having a perimeter which in one position of the key lies entirely within the cross-sectional configuration of the shank and in an angular position therefrom extends therebeyond to engage said shoulder, and means for angularly shifting said key.

2,460,556
COIL ARRANGEMENT FOR ELECTRO-MAGNETIC DEVICES
Harold N. Wagar, Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application November 8, 1947, Serial No. 784,828
4 Claims. (Cl. 175—21)

1. An electromagnetic device comprising a core, an energizing coil positioned on said core, said coil being of a type subject to shrinkage in use, and separate means attached to each end of said coil acting cooperatively to prevent motion of said coil on said core in a direction at right angles

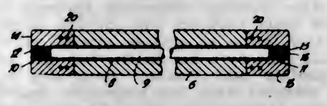
to the longer axis thereof, the first of said means being anchored in position on said core and the second of said means being slidably mounted on said core.

2,460,557
CONVERTIBLE CHILD'S SEAT AND CAR
Florence White, Bound Brook, N. J.
Application April 25, 1945, Serial No. 590,232
18 Claims. (Cl. 280—30)



5. A child's car including a rigid, removable, portable child's seat having at the rear thereof a downwardly projecting flange adapted to engage the rear edge of an automobile cushion on which the seat is adapted to rest, a collapsible frame comprising side bars swingably interconnected at the front end of the frame, the latter being adapted to removably receive and support the seat, and the flange and frame having portions detachably interengaging the flange and frame to prevent swinging movement of the side bars and thus to avoid collapse of the frame.

2,460,558
SLIDE RULE
Oscar Anton Wiberg, Finspong, Sweden
Application October 8, 1945, Serial No. 620,915
In Sweden October 11, 1944
6 Claims. (Cl. 235—70)

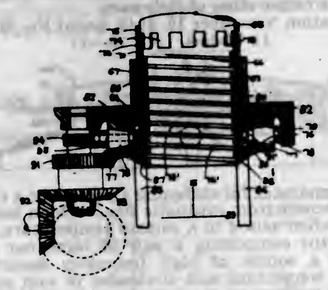


1. A slide rule comprising in combination, one or more rules having a slide-way and provided with graduations at the margins of said guideway, a slide adapted to reciprocate in said slideway, and means for lengthening or shortening said members with relation to each other by exerting a longitudinal stretching or compressing action thereon in order to effect accurate alinement of the graduations of the rule or rules with a graduation of the slide.

2,460,559
BLADE PITCH ADJUSTMENT
Ernest Wildhaber, Brighton, N. Y.
Application October 9, 1943, Serial No. 505,675
24 Claims. (Cl. 170—160.11)

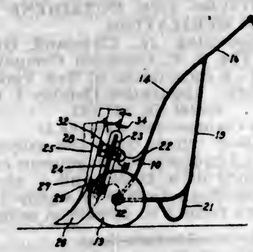
1. Blade pitch adjustment, comprising a rotatable hub, a plurality of blades mounted in said

hub on substantially radial centers for adjustment about and along said centers, the mounting means of a blade comprising a pair of circular members having multiple ways equally spaced



about their axes, rolling elements engaging said ways, a cage member for holding said rolling elements in position, means for turning one of said circular members on its axis, and positive means for turning the cage member at a reduced rate as compared with said one member.

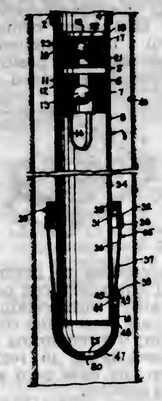
2,460,560
HAND SNOWPLOW
Horace Williams, Alliance, Ohio
Application September 27, 1946, Serial No. 699,755
5 Claims. (Cl. 37—53)



1. Hand snow plow construction including a frame having an inverted U-shaped member and a forked handle secured to the top thereof, an axle shaft mounted on the ends of said U-shaped member, an L-shaped central stiffening member secured at its upper end to said handle and having a forwardly projecting lower end connected to said axle shaft, wheels journaled on the ends of said shaft, and a snow-deflecting blade detachably mounted on said U-shaped frame member for up and down and forward and back adjustment.

2,460,561
APPARATUS FOR CEMENTING WELLS
Samuel A. Winkelmann, Houston, Tex., assignor of one-half to W. L. Goldston, Houston, Tex.
Application October 13, 1944, Serial No. 558,555
2 Claims. (Cl. 166—1)

1. The combination of a pipe in a well to be cemented and a cementing assembly including a float valve in the pipe, a latch release means above said valve but adapted to pass thereby upon the circulation of fluid under pressure past said valve, a slidable skirt about the pipe, means latching the skirt in collapsed position, said means being releasable by said latch release means in



response to the movement of said latch release means thereagainst by fluid pressure.

2,460,562
BOBBY PIN OPENER
Ted H. Worrell, Santa Paula, Calif.
Application December 13, 1946, Serial No. 715,996
3 Claims. (Cl. 132—1)

1. A bobby pin opener including a finger ring, and an upwardly extending member on said ring, said member having a transversely disposed tapered aperture to receive one arm of said pin while the other arm is deflected outwardly by frictional contact with the outer edge of said member, an inclined plane on one side of said member extending from the adjacent edge of the member to the larger end of said aperture, the axis of the aperture being parallel to the axis of the ring, and said inclined plane extending onto the ring.

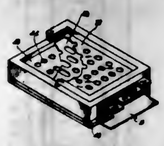
2,460,563
RELATIVELY MOVABLE MEMBERED PUZZLE
Arnold Zelvin, New York, N. Y.
Application May 8, 1946, Serial No. 668,067
4 Claims. (Cl. 273—155)

1. In a game device of the class described, a frame member, a base card disposed within and supported by the frame and containing on the upper face thereof a plurality of symbols, a plurality of parallel, stationary plates above said base card and supported by the frame in spaced relation, one above the other, each containing said valve, a slidable skirt about the pipe, means

thread at one end; a head member having three

2,460,571
APPARATUS AND METHOD FOR MAKING A

and in registry with all the said symbols on the base card, a plurality of slide sheets slidably supported within the frame and in superposed relation, there being one sheet between two adjacent plates, each of said sheets being independently movable between a predetermined retracted and a predetermined projected position, said sheets containing differently arranged apertured por-



tions therein according to predetermined patterns, certain of the apertured portions of each sheet being in registry with certain predetermined symbols on the base card when the sheet is in its retracted position, the remaining apertured portions in the sheet being in registry with the other symbols on the base card when the sheet is in its projected position.

2,460,564

CHLORINATION OF PHTHALIC ANHYDRIDE

Thad M. Amacker, Baton Rouge, La., assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. **Application September 11, 1946, Serial No. 696,376**

3 Claims. (Cl. 260—341)

2. In the preparation of chlorinated phthalic anhydride by a process which includes the steps of introducing chlorine into molten phthalic anhydride containing iron powder as a source of ferric chloride catalyst, condensing any vapors of phthalic anhydride to prevent a loss of the anhydride, and finally separating the chlorinated product from the ferric chloride catalyst, the additional steps which comprise adding to the molten anhydride the solvent tetrachloroethane, vaporizing this solvent, condensing the vapors of the solvent to liquid, and returning the liquid to the molten reaction mixture thereby to dissolve and return any sublimed phthalic anhydride, and finally evaporating the tetrachloroethane from the chlorinated product.

2,460,565

VAPOR PHASE CHLORINATION OF PHTHALIC ANHYDRIDE

Thad M. Amacker, Baton Rouge, La., assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. **Application September 11, 1946, Serial No. 696,377**

4 Claims. (Cl. 260—341)

1. A process for producing monochlorophthalic anhydride which comprises passing a gaseous mixture of substantially equimolecular proportions of phthalic anhydride and chlorine over a catalyst at a temperature in the range of about 250 to 400° C., the said catalyst comprising a solid polyvalent metal chloride selected from the group consisting of thorium chloride, cupric chloride, ferric chloride, calcium chloride, platinum chloride, and chromium chloride whereupon chemical reaction takes place to form gaseous monochlorophthalic anhydride, condensing the gaseous monochlorophthalic anhydride to liquid form and recovering substantially pure liquid monochlorophthalic anhydride.

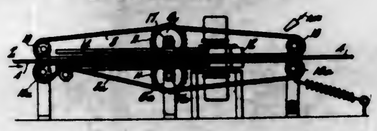
2,460,566

TREATMENT OF SYNTHETIC FIBERS AND APPARATUS THEREFOR

George H. Brown and Cyril N. Hoyler, Princeton, N. J., assignors to Radio Corporation of America, a corporation of Delaware

Application November 19, 1943, Serial No. 510,870

11 Claims. (Cl. 18—1)



1. Apparatus for stiffening a portion of a fabric sheet woven from synthetic fibers which become tacky when raised to a certain temperature, said apparatus comprising a pair of unheated electrodes, a source of high frequency electricity, means connecting said electrodes to said source for the production of an electrostatic field thereadjacent and therebetween, a belt consisting of heat and electrical insulating material contacting a surface of said electrodes, means including said electrodes and said belt for passing a portion of said fabric sheet through said electric field, in contact with a surface of said belt but out of contact with said electrodes, and means including said electrodes for exerting a predetermined pressure on a portion of said fabric sheet being subjected to said electric field.

2,460,567

AROMATIC MERCAPTO-ALIPHATIC ETHERS AS MODIFIERS FOR BUTADIENE EMULSION POLYMERIZATION

George L. Browning, Jr., Cleveland, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. **Application October 4, 1944, Serial No. 557,222**

8 Claims. (Cl. 260—86.5)

1. The method which comprises polymerizing a butadiene-1,3 hydrocarbon in aqueous emulsion in the presence of a beta-(p-alkyl phenoxy)-beta'-mercapto-diethyl ether in which the alkyl group contains from 4 to 12 carbon atoms.

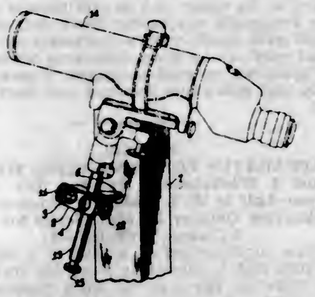
2,460,568

UNIPOD FOR OPTICAL INSTRUMENTS

Oswald Buehner, West New York, N. J.

Application June 11, 1946, Serial No. 676,015

1 Claim. (Cl. 248—216)



A support for optical instruments, comprising a post member having a tapered wood-screw thread at one end; a head member having three holes, two of said holes being at right angles having intersecting axes, the third hole being parallel to one of the others, said post member being rotatably fastened in said third hole of said head member, and fastening means whereby the instrument to be supported is held in one of said intersecting holes.

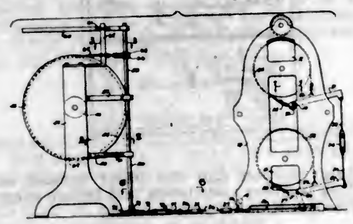
2,460,569

BRAKE AND TENSION FOR WARP BEAMERS

Charles W. Burrum, Augusta, Ga.

Application August 8, 1946, Serial No. 689,155

2 Claims. (Cl. 28—35)



2. In a tension frame for a warp beamer provided with two rotatable drums over which the warp in rope form passes to impart rotation to the drums, interconnected brakes for applying a braking action to the drums to impart tension to the warp, a rotatable shaft having a lever thereon and having a collar secured thereon, a flexible connection between the collar and one of the brakes, whereby rotation of the shaft in one direction will wind the flexible member onto the collar to increase the braking action of the brakes on said drums to increase the tension in the warp extending from said drums.

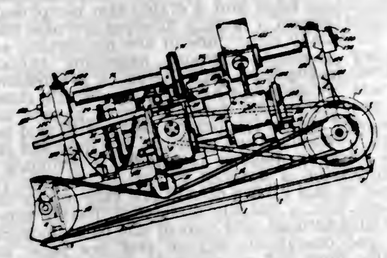
2,460,570

GRINDING MACHINE

Pliny Catucci, Kearny, N. J., assignor to William Crabb & Company, Newark, N. J., a corporation of New Jersey

Application April 21, 1945, Serial No. 589,511

2 Claims. (Cl. 51—79)



1. A grinding machine for sharpening the ends of rods and pieces of wire and the like which comprises a plate having parallel grooves therein for said rods or wire, revoluble spiral guides spaced from said grooves adapted to receive said rods or wire and move them laterally while maintaining them in parallel relation.

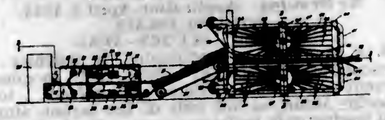
2,460,571

APPARATUS AND METHOD FOR MAKING A PLASTIC COMPOSITION AND PRODUCT

Randolph W. Chaffee, Normandy, Mo.

Application May 22, 1942, Serial No. 444,139

7 Claims. (Cl. 154—26)



1. A mechanism for use in making plastic material, comprising a chamber, a conveyor passing through the chamber, the conveyor having openings therethrough from top to bottom, air discharge means adapted to discharge a ribbon of air across the conveyor, bond discharge means providing a supply of powdered bond across the conveyor and in the path of the ribbon of air, and means to deflect the air stream onto one side of the conveyor.

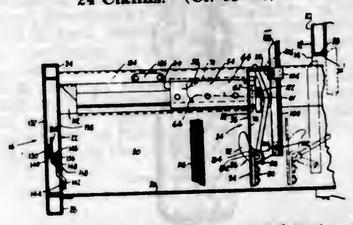
2,460,572

COMBINED CABINET AND DRAWER WITH COMPRESSING AND SIGNALING MEANS

Milton Effros, New York, and Charles E. Mills, Floral Park, N. Y.

Application November 16, 1943, Serial No. 510,485

24 Claims. (Cl. 45—2)



7. The combination with a cabinet, and a drawer mounted for movement into and out of the cabinet through an opening in a wall of the cabinet, the drawer providing means for retaining a plurality of cards in stacked relationship, of a wall movable in the drawer for compressing the stacked cards, a signal carried by the movable wall, means tending normally to move the signal relatively to the movable wall and the cabinet to indicate the position of the movable wall in relation to the cards, and means carried by the movable wall and for engagement by cards being compressed to move the signal out of the normal position.

2,460,573

INTERPOLYMERS OF VINYLIDENE HALIDES, DIALKYL ESTERS OF MALEIC ACID, AND VINYL ESTERS AND METHOD OF MAKING SAME

Vernon L. Folt, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. **Application April 10, 1946, Serial No. 661,079**

10 Claims. (Cl. 260—78.5)

1. An interpolymer prepared by polymerizing in aqueous dispersion a mixture of monomeric materials consisting of from 30 to 95% of a vinylidene halide, from 1 to 45% of a dialkyl ester of maleic acid having not more than six carbon atoms in each of said alkyl groups, and from 1 to 25% of a vinyl halide.

2,460,574

VINYL CHLORIDE POLYMERS PLASTICIZED

said regular and auxiliary printing devices, a cir-

2,460,578

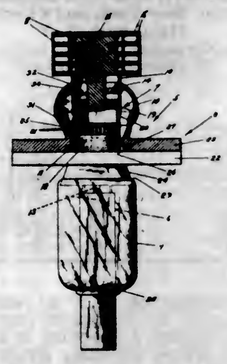
SOLUTIONS OF VINYLIDENE CHLORIDE

supporting the sealing means outside the space by radially expandable means, and introducing into said space a fluid under sufficiently high

2,460,574
VINYL CHLORIDE POLYMERS PLASTICIZED WITH DIALKYL CHLOROPHTHALATES
Thomas L. Gresham, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application April 5, 1945, Serial No. 586,819
8 Claims. (Cl. 260—31.8)

8. A composition comprising a polymer of monomeric material in which each monomer present is a chloroethylene having from 1 to 2 chlorine atoms on one only of the carbon atoms and having only hydrogen atoms attached to the remaining valences of the carbon atoms, plasticized with a dialkyl chloro-phthalate containing a total of between 7 and 23 carbon atoms in the two alkyl groups.

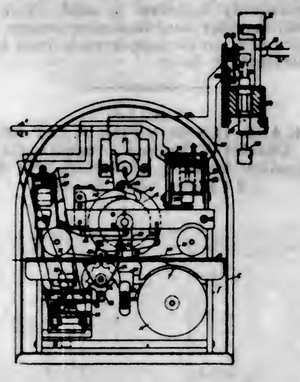
2,460,575
ELECTRON DISCHARGE DEVICE SEAL
Per Roland Hanson, Winchester, and Harold W. Ulmer, Belmont, Mass., assignors to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application May 21, 1945, Serial No. 594,850
6 Claims. (Cl. 250—27.5)



1. In an electron-discharge device: a plurality of electrodes; means, connected to one of said electrodes, for conducting therefrom heat developed therein; means, spaced from said first-named means, and electrically connected to said last-named electrode, for conducting electrical energy between said last-named electrode and an external circuit; an envelope sealed to the outer surface of said second-named means; and a continuous strip of the same material as said envelope, secured to the inner surface of said second-named means in the region of contact between said envelope and said second-named means.

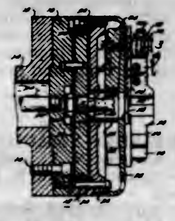
2,460,576
TAPE TIME RECORDER WITH DIFFERENTIATED RECORDS
Harold E. Hobby, Gardner, Mass., assignor to Simplex Time Recorder Co., Gardner, Mass., a corporation of Massachusetts
Application October 13, 1945, Serial No. 622,153
3 Claims. (Cl. 101—93)

1. In a time recorder having a record sheet, sheet feeding means, and periodically advanced printing devices, in combination, an auxiliary printing device bearing two different printing symbols, an impression hammer, a solenoid to move said hammer to make an impression from said regular and auxiliary printing devices, a circuit for said solenoid, and means to shift said auxiliary printing device to move one symbol into



printing position and the other symbol out of printing position alternately and before each successive operation of said hammer.

2,460,577
DIAPHRAGM CHUCK
George Hohwart and Ernest F. Hohwart, Detroit, Mich., assignors to N. A. Woodworth Company, Ferndale, Mich., a corporation of Michigan
Application June 10, 1947, Serial No. 753,786
5 Claims. (Cl. 279—46)



1. In a diaphragm chuck of the class including a mounting plate and a diaphragm peripherally secured thereto, a radially directed jaw base fixed to the axially outer face of the diaphragm and having a dovetail groove extending radially thereof in the outer face thereof, a jaw received by said jaw base and having a dovetail rib thereon received in the dovetail groove of said jaw base, and means for locking said jaw to said jaw base, the combination with said jaw base and jaw of a back-up member for said jaw including a body having a dovetail projection thereon received in said groove of said jaw base at one end of said jaw, a radially directed adjusting screw threaded through said body of said back-up member and operatively engage said jaw base, the axially inner end of said back-up member being slotted in a plane radial of the axis of said chuck, and a screw projected through said back-up member in parallel relation with respect to the axis of said chuck and threading into said jaw base, said screw and back-up member having complementary frusto-conical surfaces acting to spread such slotted end of said back-up member in said groove upon tightening of said screw.

2,460,578
SOLUTIONS OF VINYLIDENE CHLORIDE POLYMERS IN AMIDE SOLVENTS
Ray Clyde Houtz, Snyder, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 1, 1947, Serial No. 738,729
21 Claims. (Cl. 260—32.6)

2. As a new composition of matter, a polymer of vinylidene chloride containing in the polymer molecule at least 95% by weight of vinylidene chloride dissolved in a solvent comprising an amide selected from the group consisting of N,N-diethylacetamide, N,N-dibutyllauramide, N,N-diphenyllauramide, N,N-diphenylcrotonamide, N,N-dimethyl methyl carbamate, N,N-dimethyl methoxy acetamide, N,N,N',N'-tetramethyladipamide, N,N,N',N'-tetraethyladipamide, N,N,N',N'-tetramethyloxamide, tetramethyl urea and N-acetyl piperidine.

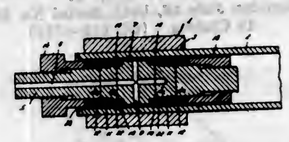
2,460,579
SOLUTIONS OF VINYLIDENE CHLORIDE POLYMERS IN A SOLVENT CONTAINING A SULFOXY GROUP
Ray Clyde Houtz, Snyder, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 1, 1947, Serial No. 738,730
21 Claims. (Cl. 260—30.8)

2. As a new composition of matter, a polymer of vinylidene chloride containing in the polymer molecule at least 95% by weight of vinylidene chloride dissolved in a solvent comprising a sulfoxy compound selected from the group consisting of diphenyl sulfoxide, dibenzyl sulfoxide, tetramethylene sulfone, alpha-methyltetramethylene sulfone, beta-methylenetetramethylene sulfone, 2,2-bis(ethylsulfonyl) propane, 2,2-bis-(ethylsulfonyl) butane, N-amylbenzenesulfonamide, N-amyl - p - toluenesulfonamide, N,N-diamyl-p-toluenesulfonamide, N - ethyl-p-toluenesulfonamide, N,N-dibutylbenzenesulfonamide, N-(p-toluenesulfonyl) piperidine, N-butylchlorobenzenesulfonamide, N - isobutylcyclohexanesulfonamide.

2,460,580
METHOD AND DEVICE FOR FIXING AND SEALING TUBES IN A PARTITION WALL BY USE OF FLUID PRESSURE
Walter Huber, Winterthur, Switzerland, assignor to Sulzer Frères, Société Anonyme, Winterthur, Switzerland
Application March 18, 1943, Serial No. 479,601
In Switzerland March 31, 1942
15 Claims. (Cl. 153—79)

1. Apparatus for fixing and sealing a tube in a partition which comprises a body member to be inserted into the tube to be fixed, a pair of sealing means surrounding the body member and forming between them a space around the body member, means whereby a fluid under pressure may be introduced into said space, radially expandable means mounted on the body member for supporting said sealing means on the side thereof opposite to said space, and means on the body member for holding said supporting means against axial movement.

5. The method of fixing and sealing a plurality of tubes in a partition wall which comprises inserting each tube in a hole in the partition wall, forming a space inside the tube within the wall hole, sealing said space at both ends, supporting the sealing means outside the space by radially expandable means, and introducing into said space a fluid under sufficiently high pressure to enlarge the tube and simultaneously



radially expand the sealing means and its support to such an extent as to bring the support to bear on the tube wall during the enlargement of the tube wall.

2,460,581
REACTION PRODUCTS OF THIURAM DISULFIDES AND ALKYLENE IMINES
Jacob Eden Jansen, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application April 30, 1945, Serial No. 591,223
5 Claims. (Cl. 260—239)

1. A viscous oily reaction product, useful as an accelerator and activator for the vulcanization of rubber, prepared by bringing together, in an inert liquid diluent, reactants consisting of one molecular proportion of a thiuram disulfide having at least one hydrogen atom in an amino group, and two to four molecular proportions of an alkylene imine, maintaining the reactants at a temperature between room temperature and about 35° C. until heat of reaction is no longer evolved, and then removing the inert diluent.

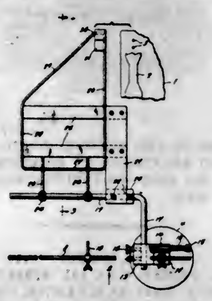
2,460,582
DRYING POLYMERIC MATERIALS
Archie B. Japs, Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application June 4, 1946, Serial No. 674,383
3 Claims. (Cl. 260—29.6)

1. In a method of preparing a water-free plasticized polymer of a monomeric material comprising predominantly a chloroethylene having from one to two chlorine atoms on one only of the carbon atoms, from a mixture of said polymer with water containing less than 80% by weight of water, the steps which comprise mixing said polymer-water mixture with a water-immiscible liquid plasticizer in which said polymer is substantially insoluble at temperatures up to 50° C. and in which said polymer is soluble at temperatures above 75° C., in proportions such that there is present from 0.2 to 4.0 parts by weight of said plasticizer to one part of said polymer and the polymer-water mixture is present dispersed in said plasticizer, inverting the phases to form a dispersion of polymer in said plasticizer and a separable aqueous phase, removing said aqueous phase from contact with the said polymer-plasticizer dispersion, heating said polymer-plasticizer dispersion at 50° C. to remove residual traces of moisture, and further heating the said water-free polymer-plasticizer dispersion at 150 to 250° C. to dissolve the polymer in said plasticizer and to form a homogeneous water-free, fully-plasticized polymer.

2,460,583

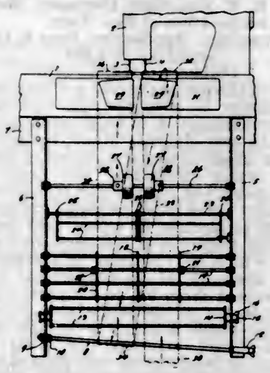
reception by a plate hook, and a retainer plate

2,460,583
ADJUSTABLE FABRIC GUIDING ATTACHMENT
George Kahn, Lawrence, and Leo Schwartz, New York, N. Y.
Application July 26, 1945, Serial No. 607,148
10 Claims. (Cl. 112—152)



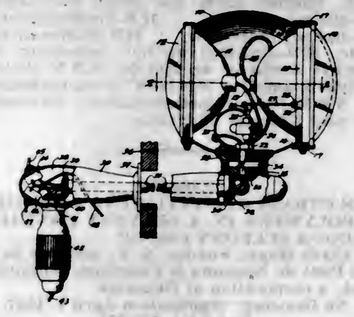
1. Fabric guiding attachment for sewing machines comprising a standard, an arm at the upper part thereof extending horizontally over which fabric is adapted to pass, a horizontal extension below said arm, a substantially flat horizontal guide frame secured to said extension and terminating adjacent to the needle of said machine, said guide-frame being adjustable on said extension, one edge of said frame being at 45° to the line of travel of fabric being sewed, said fabric passing over said arm and on said frame across the front of said machine, then over said 45° portion and under said needle.

2,460,584
FABRIC GUIDING DEVICE AND METHOD
George Kahn, Lawrence, and Leo Schwartz, New York, N. Y.
Application July 26, 1945, Serial No. 607,149
16 Claims. (Cl. 112—152)



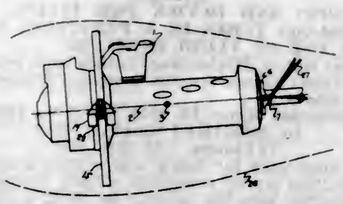
1. A fabric guide for sewing machines comprising a frame attached to the bed of a sewing machine forwardly of and below the same, a rod secured in said frame and adapted for adjustment in a plurality of positions at an acute angle to the horizontal to guide fabric into said machine, said frame including a pair of depending lateral members, one end of said rod being mounted on one of said members for pivotal movement, the other end of said rod being mounted in the other member, and means for clamping said other end in a plurality of positions in a vertical plane.

2,460,585
WARNING LIGHT AND SEARCHLIGHT COMBINATION
Jeremiah D. Kennelly, Oak Park, Ill.
Application January 31, 1947, Serial No. 725,689
5 Claims. (Cl. 177—327)



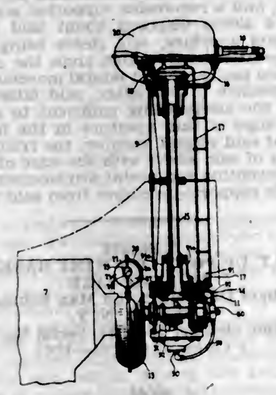
1. In a manually controlled light structure having an arm extending through the wall of a vehicle, a casing rotatably mounted on said arm, a pair of angularly disposed lights mounted on said casing, said casing having openings for said lights and at least one of said lights being movably mounted; power means for oscillating said movably mounted light, and means associated with the inner end of said arm and with said casing for moving said casing relatively to said arm.

2,460,586
ENGINE MOUNTING
William A. Keetch, Erie, Pa., assignor to Lord Manufacturing Company, Erie, Pa., a corporation of Pennsylvania
Application March 3, 1945, Serial No. 580,839
3 Claims. (Cl. 248—5)



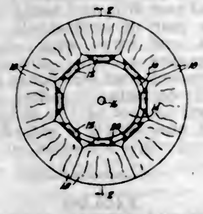
1. In an engine having cylinders spaced along its crankshaft, a three point suspension of rubber sandwich mountings arranged transverse to the crankshaft so as to yield in shear in any direction in planes transverse to the crankshaft and spaced on opposite sides of the center of gravity of the engine, two of the sandwiches being at one end of the engine and spaced on opposite sides of the crankshaft so as to sustain torsional vibrations in shear, and the third sandwich being arranged at the other end of the engine adjacent the crankshaft so as to offer negligible resistance to torsional vibrations.

2,460,587
AIRPLANE DRIVE
Victor A. Larsen, Altadena, Calif., assignor, by mesne assignments, to Gustav Hanke, Massapoqua, N. Y.
Application November 9, 1942, Serial No. 464,958
8 Claims. (Cl. 170—135.75)



1. In an airplane, an engine, a propeller located at a point remote from the engine and out of line with the engine crankshaft, driving means between the engine and the propeller whereby the propeller may be driven from the engine, including an impeller member having recesses therein for the reception of a driving fluid and vanes for setting up a rotational movement of said driving fluid, an impelled member for receiving a driving fluid and vanes to be impelled by a driven fluid, a driving fluid between said impeller member and said impelled member, and a housing to prevent escape of said driving fluid, said housing being mounted at one end to said impeller and in slidable contact with the impelled member at the other end, and flexible means provided in said housing to prevent the transmission of vibrations from one point of contact to the other through said housing.

2,460,588
BUFFING WHEEL
John F. Leslie, Mishawaka, Ind.
Application September 1, 1948, Serial No. 47,207
9 Claims. (Cl. 51—193)



1. A buffing wheel comprising a metal plate having a central mounting aperture and a plurality of integral inwardly return-bent hooks spaced uniformly about the margin of the plate and equally spaced from said aperture, a plurality of fabric buffing members, a metal eye member carried by the center of each fabric member for reception by a plate hook, and a retainer plate bearing against said first plate with its margin adjacent the mouths of said hooks to prevent disengagement of said hook and eye.

2,460,589
ARM SUPPORT
Ada V. Lewis, Baltimore, Md.
Application July 27, 1945, Serial No. 607,314
1 Claim. (Cl. 128—94)

An arm sling of the class described comprising a single shoulder strap formed of a continuous band of flexible material arranged for placement over one shoulder of a wearer on the side of the injured arm to straddle the shoulder and extend in front of the wearer alongside the injured arm down to the elbow, forming a loop around the forearm adjacent the elbow and folding back along the back side of the injured arm to a point where it joins and is secured to the portion of the band on the back side of the wearer, the band extending from this point diagonally across the back of the wearer towards the other arm and away from the armpit and terminating in a loop portion reaching from the back under the arm to the front of the body and of predetermined size to slip on and encircle the wrist portion of the injured arm, and a brace loop fastened in two places to said shoulder strap adjacent the portion looped around the injured forearm so as to restrain the arm from outward movement from the body, said portion of the strap extending diagonally across the back of the wearer constituting the only connection between the shoulder portion of the strap and the portion thereof looped around the wrist of the wearer.

2,460,590
ELECTRIC RESISTANCE ELEMENT AND METHOD OF HEAT-TREATMENT
James M. Lohr, Morristown, N. J., assignor to Driver-Harris Company, Harrison, N. J., a corporation of New Jersey
No Drawing. Application May 11, 1946, Serial No. 669,103
6 Claims. (Cl. 201—76)

1. An electrical resistance element comprising an alloy consisting essentially of 2 to 4 percent aluminum, .30 to 6.0 percent iron, 10 to 30 percent chromium, balance nickel, that has been annealed at a temperature of about 1700° F. to 2000° F. and heat treated for a period of 1 to 5 hours at a temperature of 900° F. to 1100° F., and having a temperature coefficient of resistance below .00006.

2,460,591
DENTAL FLOSS TOOTH CLEANING APPARATUS
Thomas E. Luxar, Chicago, Ill.
Application November 29, 1946, Serial No. 712,785
3 Claims. (Cl. 132—92)

1. A dental strand holding and tensioning device comprising a tubular handle closed at one end and open at the other end and constituting a receptacle for a roll of dental floss, the open end of the tube having a smooth interior sur-

face, a bow-shaped frame having a shank making

stantially parallel with the horizontal portion of

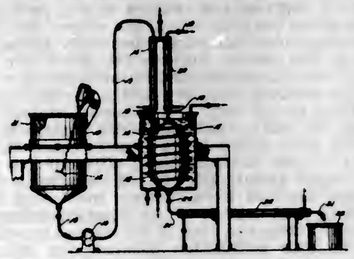
2,460,596
CUSHION SUPPORT

reciprocal movement on said frame, a magazine insertable in said handle portion, and a with-

face, a bow-shaped frame having a shank making a snug sliding fit in the end of the handle, a portion of the length of the shank that extends into the tube having a slot in the surface thereof for receiving a portion of the length of a dental strand, the slot terminating within the portion

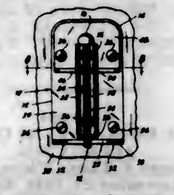
of the shank that is inside the tube and at a portion thereof being of a depth less than the thickness of a dental strand held in the device so that the strand may be wedged and locked between the shank and the inner surface of the end of the tube.

2,460,592
GENERATION OF MONOMERIC FORMALDEHYDE GAS FROM FORMALDEHYDE POLYMERS
Arthur R. Miller, Jr., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application May 1, 1945, Serial No. 591,390
5 Claims. (Cl. 260—606)



1. A method of generating substantially pure monomeric formaldehyde from a polymer of formaldehyde which comprises metering said polymeric form into a heated generating zone as a suspension of finely divided particles in a liquid carrier having a vapor pressure of not exceeding 15 m. m. Hg at 200° C., whereby the polymeric form is converted to formaldehyde and the liquid carrier remains unchanged.

2,460,593
SUPPORT
Arthur E. Nelson, University City, Mo.
Application January 26, 1946, Serial No. 643,544
2 Claims. (Cl. 248—309)



1. In combination, a bracket construction comprising a first member adapted to be fixed to a wall and including a vertical portion and a horizontal portion, a second member secured to the vertical portion of the said first member and having a horizontal portion spaced from and substantially parallel with the horizontal portion of said first member, an aperture in said horizontal portion of said second member, a slot in said horizontal portion of said second member extending from the aperture to the edge of said horizontal member, a post secured to said horizontal portion of said first member and extending through said aperture, and a removable supported member including a sleeve disposed about said post and within said aperture, said sleeve being of sufficiently greater cross section than the cross section of said post to permit lateral movement of the former relative to the latter, said lateral movement of the sleeve being sufficient to engage it with an edge of said aperture in the horizontal portion of said second member, the frictional engagement of said sleeve with the edge of said aperture preventing accidental displacement of said removable supported member from said post.

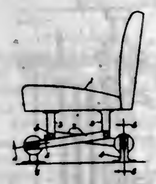
2,460,594
BUILT-UP POST FOR WIRE BASKETS AND THE LIKE
William Obernauer and Max Schuster, New York, N. Y.
Application October 16, 1947, Serial No. 780,270
1 Claim. (Cl. 211—126)

A device of the character described comprising a longitudinal thin rod which at its half way point is bent horizontally to form a V whose shanks constitute the beginning of two identical sections of said rod and are bent at their extremities laterally to a point from whence they are bent downwardly and partially back to form two horizontally opposing loops, the lower end portions of the loop forming parts of said sections being bent downwardly to form the vertical downwardly diverging main portions of an upright post, at the lower end of said main portions both sections of the thin rod being bent rectangularly horizontally in the same plane, and the extremities of said thin rod being bent back and shaped as a pair of horizontally opposing resilient hooks, said loops being adapted for detachably engaging a corner portion of the rim of an upper basket, and said hooks being adapted for detachably engaging a corner portion of the rim of a lower basket of the same size as said upper basket and which is placed beneath the latter in spaced relation thereof, all substantially as described.

2,460,595
DENTAL METAL ALLOYS
Joseph Reich, Tel Aviv, Palestine
No Drawing. Application May 25, 1945, Serial No. 595,877. In Palestine June 26, 1944
1 Claim. (Cl. 75—134)

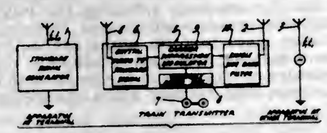
An alloy composed of the following in parts by weight: 1 Au, 1 Pt, 1 Ni, 1 Zn, 10 Ag, 13 Pd and 21 Cu.

2,460,596
CUSHION SUPPORT
Paul C. Roche, Erie, Pa., assignor to Lord Manufacturing Company, Erie, Pa., a corporation of Pennsylvania
Application September 16, 1944, Serial No. 554,404
7 Claims. (Cl. 248—358)



1. In a support, crossed load supporting arms having load transmitting connections at opposite sides of the crossover for connection between a load and its support, the connections at one end of each of said arms comprising pivot joints, and the connections at the other ends of said arms comprising torsion spring joints resisting angular movement of the arms, said torsion joints comprising opposed joint members relatively movable angularly and length wise of the arms, and an element of rubber like material between and fixed to the joint members resisting the relative movements of the joint members.

2,460,597
POSITION INDICATION AND CONTROL SYSTEM
Lionel M. Rodgers, Springfield Township, Montgomery County, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application August 4, 1945, Serial No. 608,953
2 Claims. (Cl. 177—353)



2. In a system for indicating at a remote point the locations of a plurality of movable objects, means at said remote point for transmitting a single signal of radio frequency, means at each of said objects for receiving said signal, means at each of said objects effective to generate a signal having a frequency differing from said first signal by an amount which is a function of the distance of said object from said remote point, apparatus at each of said objects for transmitting the last-named signals, and means for comparing the frequency of said first-named signal with the frequency of each of said last-named signals and for utilizing the difference in said frequencies to indicate the locations of said objects.

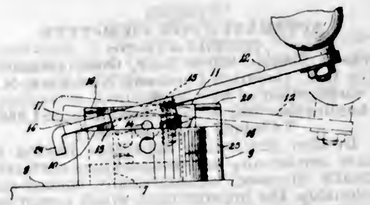
2,460,598
MAGAZINE PISTOL SAFETY AND COCKING MECHANISM
Frank D. Rosvall, Worcester, Mass.
Application February 1, 1944, Serial No. 520,606
4 Claims. (Cl. 42—7)

1. A magazine pistol comprising a frame having a handle portion, a breech-block mounted for reciprocal movement on said frame, a magazine insertable in said handle portion, and a withdrawing member engaged by the magazine as it is inserted in said handle portion and coacting with said breech-block to move said breech-block rearwardly during such magazine insertion, said

member clearing and releasing said breech-block for return to normal forward position as such magazine insertion is completed, and said withdrawing member thereafter remaining in rearward position but being returned to its original forward position by subsequent removal of the empty magazine from said handle portion.

3. In a magazine pistol, a frame, a firing pin, a sear effective to engage and hold said pin, a safety device effective to lock said sear from pin-releasing movement, a magazine insertable in said frame, and means to unlock said sear by insertion of said magazine and to restore said sear to locked condition by completion of such insertion.

2,460,599
ELECTRIC SWITCH ACTUATOR
Raymond N. Rowe, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a corporation of Connecticut
Application October 3, 1945, Serial No. 619,999
12 Claims. (Cl. 74—565)

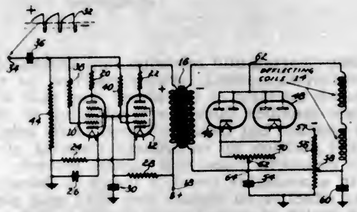


1. In a two-position electric switch, a rotatable actuating shaft, a handle hinged to said shaft permitting said handle to be tilted, said handle having an extension beyond said shaft, stops standing in the path of movement of said handle and said extension respectively and a spring tilting said handle so that it can be rotated in one direction, the handle being rotatable in the other direction only when the spring is compressed, said stops having overhanging lips for interrupting the movement of said handle and said extension.

2,460,600
AMINO ALCOHOLS AS SOFTENERS IN BUTADIENE-STYRENE COPOLYMERS
Donald V. Sarbach, Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application November 29, 1944, Serial No. 565,809
2 Claims. (Cl. 260—32.6)

1. A plastic unvulcanized synthetic rubber composition comprising a copolymer of butadiene and styrene and as the sole softening and plasticizing agent, 10 to 20 parts by weight of triethanolamine for each 100 parts by weight of the copolymer.

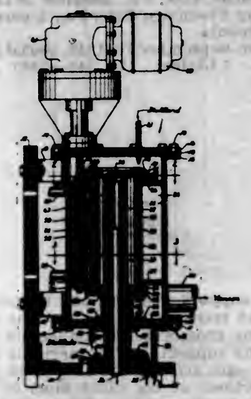
2,460,601
CATHODE-RAY TUBE DEFLECTING SYSTEM
Otto H. Schade, West Caldwell, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 18, 1945, Serial No. 573,437
4 Claims. (Cl. 175—335)



1. In a circuit arrangement of the type in which cyclically varying current having a wave form a portion of each cycle of which is linear with respect to time is caused to flow through an inductive member having distributed capacity, the combination of a rectifier circuit connected across said inductive member, said rectifier circuit including an unby-passed resistance element and a unilaterally conducting device in series, and means for adjusting the value of said resistance element to change the resistance of said rectifier circuit as it appears across said inductive member to thereby maintain the linearity of said wave form portion.

2,460,602
APPARATUS FOR FILM-TYPE DISTILLATIONS
Waldo L. Semon, Silver Lake, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application May 4, 1945, Serial No. 591,960
7 Claims. (Cl. 202—205)

5. In film distillation apparatus having stationary condensing and evaporation surfaces in vertically disposed, concentrically spaced-apart relationship, the improvement which comprises a plurality of freely rotatable rollers mounted between said evaporation surface and said condensing surface, but out of contact with said condensing surface, and mounted so as to travel over said evaporation surface and spread distilland thereon in a thin film by a calendering action, an upper ring structure rotatably supporting the upper ends of said rollers, means for rotating the ring and roller assembly to effect repeated distribution of said film on said evaporation surface, means for delivering distilland to said ring at a point in the circumference thereof so that said distilland is distributed around the entire circumference of said evaporation surface during the positive rotational travel of said ring, means for withdrawing distillate from the condensing



surface, means for withdrawing undistilled residue from said evaporation surface, and means for evacuating the space between said surfaces.

2,460,603
PREPARATION OF ALPHA-CYANO ESTERS
Waldo L. Semon, Silver Lake Village, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application September 11, 1946, Serial No. 696,355
3 Claims. (Cl. 260—465.4)

1. A process for the preparation of alpha-cyanoethyl acetate which comprises mixing acetone cyanhydrin, vinyl acetate and from 1 to 5%, based on the combined weight of acetone cyanhydrin and vinyl acetate, of an alkaline catalyst for the reaction, refluxing the mixture at atmospheric pressure whereupon chemical reaction takes place to form alpha-cyanoethyl acetate and acetone, and then fractionally distilling the mixture resulting from the reaction to remove the acetone and recover alpha-cyanoethyl acetate.

2,460,604
VENTILATOR
Burton B. Simcox, Knoxville, Tenn.
Application August 9, 1944, Serial No. 548,649
4 Claims. (Cl. 98—13)

1. A ventilator adapted to be tensionally and rotatably held in a circular hole in an enclosing wall of a vehicle comprising a cylindrical portion of flexible material having an outside dimension which is slightly larger than the hole in the vehicle wall and having a cut-away portion extending from its inner end towards its outer end so that the inner end of the cylindrical portion can be compressed for insertion into the hole, a cap member closing the outer end of the cylindrical portion and having portions thereof extending outwardly beyond the outer surface of the cylindrical member, the cylindrical member having means projecting outwardly from its inner end for normally preventing the ventilator from moving entirely out of the hole, said cylindrical member having a projection intermediate its ends and on its exterior surface to prevent inward or outward movement of the ventilator relative to the enclosing wall except when the cylindrical member is compressed.

2,460,605
APPARATUS FOR FEEDING FLOWABLE MATERIAL FROM A PLURALITY OF CONTAINERS
John A. Soissa, Winnetka, Ill., assignor to Certain-teed Products Corporation, Chicago, Ill., a corporation of Maryland
Original application May 7, 1941, Serial No. 392,261. Divided and this application August 7, 1944, Serial No. 548,436
13 Claims. (Cl. 222—14)

1. Apparatus for control of flowable comminuted material which comprises a plurality of containers for containing separate supplies of comminuted material and each having an outlet opening in a wall thereof, a plurality of flow governing means respectively associated with said outlet openings respectively to govern flow of comminuted material from said supplies, a hopper providing an accumulating space for accumulation therein of comminuted material discharged from said containers, conduit means for conducting comminuted material discharged from at least two selected ones of said supply containers to said hopper, and control means comprising a yielding part actuated by pressure thereagainst by the accumulated comminuted material in said hopper and connected to the flow governing means of said selective supply containers for successively starting and stopping the flow of the comminuted material from said selected containers for delivery to said hopper of predetermined amounts of each of said comminuted materials.

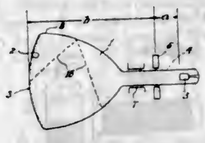
2,460,606
CREATINE AND CREATININE AS CATALYSTS FOR POLYMERIZATION OF BUTADIENE
William D. Stewart, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application December 21, 1943, Serial No. 515,150
5 Claims. (Cl. 260—84.5)

5. The method which comprises polymerizing a butadiene-1,3 hydrocarbon in an aqueous emulsion in which the sole emulsifying agent is soap in the presence of a catalytic amount which is from 0.1 to 1.0% by weight based on the amount of material polymerized, of a compound selected from the class consisting of creatine and creatinine.

2,460,607
PUSH-BUTTON MEANS
Perry W. Sullivan, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a corporation of Delaware
Application May 2, 1946, Serial No. 666,800
3 Claims. (Cl. 292—1)

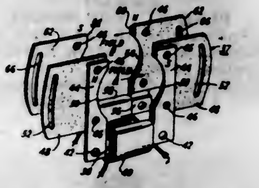
1. Push button means comprising a cup-shaped socket member, a cup-shaped push button member telescopically arranged with respect to said socket member with the open end of said push button member extending into the open end of said socket member, said socket member having a slot extending lengthwise thereof and said push button member having a lug element fitting in said slot for preventing rotation of said push button member relative to said socket member, spring means between said socket and push button members for normally biasing the latter outwardly of said socket member, a stationary lip member mounted in fixed relation with respect to said cup-shaped members and having a portion disposed adjacent the open end of said socket member adapted to be engaged by said lug element of said push button member to limit the outward movement of the latter away from said socket member by said spring means, said lip member being adapted to be engaged with the fingers of one hand to effect a leverage therethrough to the thumb adapted to have engagement with said push button member to move the latter inwardly of said socket member against the force of said spring means.

2,460,608
CATHODE-RAY TUBE
Constantin S. Szegho, Chicago, Ill., assignor to The Raulan̂d Corporation, Chicago, Ill., a corporation of Illinois
Application January 12, 1945, Serial No. 572,456
14 Claims. (Cl. 250—141)



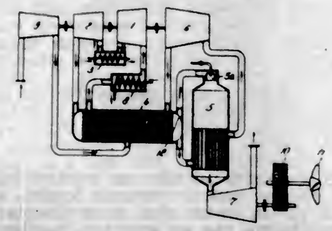
1. In a cathode ray tube, an envelope having a main chamber with a reentrant portion, a fluorescent screen within said main chamber, said envelope having also an auxiliary chamber within the reentrant portion, means for producing an electron beam within said auxiliary chamber, and means enclosing within said reentrant portion for deflecting said electron beam.

2,460,609
BEAM ALIGNING APPARATUS
Charles Edward Torsch, Lancaster Township, Lancaster County, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application January 30, 1946, Serial No. 644,262
6 Claims. (Cl. 250—162)



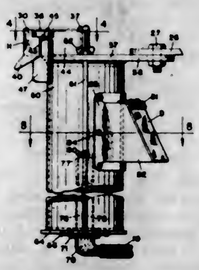
1. Apparatus for re-aligning the electron scanning beam in a cathode ray tube of the type in which the ions in the developed cathode ray beam are separated therefrom through the medium of an electrostatic field which acts to bend both the ions and the electrons in the developed cathode ray beam away from the axis of the cathode ray tube, said apparatus comprising means for producing a first electromagnetic field, acting substantially transversely to the axis of the cathode ray tube, whereby the electrons which have been bent away from the axis of the cathode ray tube by the action of said electrostatic field are caused to follow a path which intersects the axis of said tube, while the ions are substantially unaffected by said first electromagnetic field, means for producing a second electromagnetic field also acting substantially transversely to the axis of said cathode ray tube and in a direction normally opposite to that of said first electromagnetic field, whereby the electrons following said path are caused to be deviated by said second electromagnetic field in such a manner as to follow a new path which is substantially coincident with the axis of said cathode ray tube, and further means for permitting a limited rotational adjustment of said second-mentioned means about said axis and relative to said first-mentioned means, whereby the normally opposite direction of said second electromagnetic field relative to said first electromagnetic field may be altered.

2,460,610
GAS TURBINE PLANT
Walter Traupel, Winterthur, Switzerland, assignor to Sulzer Frères, Société Anonyme, Winterthur, Switzerland
Application January 28, 1944, Serial No. 520,048
In Switzerland May 8, 1943
2 Claims. (Cl. 60—49)



1. A gas tubine plant comprising compressor means, a heater, a gas turbine, conduit means connecting the compressor means, the heater and the gas turbine and forming a circuit for a gaseous working medium to flow serially through said compressor means, said heater and said turbine, a fuel burner for the heater, means for withdrawing a portion of the gaseous working medium from said circuit and conducting it to said burner to form one of the constituents of a combustible mixture, a turbine for delivering the useful output of the plant at varying speeds, said last-named turbine being driven by exhaust gases from said heater, and a make-up compressor connected to the circuit for the working medium for delivering compressed working medium to said circuit, said first-mentioned turbine driving said compressor means at substantially a constant speed, the pressure of the working medium in the circuit varying in accordance with variations of the load on the circuit, the curvature of at least the majority of the blades of the useful output turbine being sharper than the curvature of the majority of the blades of the turbine which drives the compressor means, whereby the overall efficiency of the plant is increased.

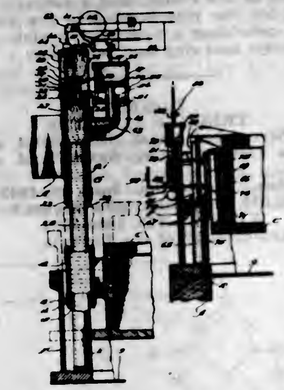
2,460,611
PNEUMATIC THREAD HOLDER FOR WEFT REPLENISHING LOOMS
Richard G. Turner, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application October 9, 1946, Serial No. 702,197
13 Claims. (Cl. 139—247)



1. In a pneumatic thread holder having an intake mouth for the weft ends extending from reserve bobbins in a loom provided with pneumatic means to create subatmospheric pressures, hollow means communicating pneumatically with said mouth, a thread accumulator under said hollow means pneumatically connected to the latter by means of an opening in said hollow means and also connected pneumatically to said pneumatic means, a thread guide within the hollow means having a substantially vertical thread engaging edge intermediate the mouth and opening along which the weft ends extend, said hollow means having a thread slot extending upwardly from the lower part thereof and causing a draft of air to be directed upwardly against said weft ends.

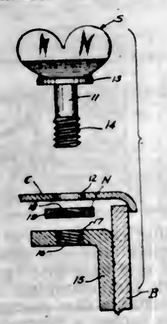
2,460,612
PRESS WITH HYDRAULICALLY CONTROLLED BLANK HOLDER
David C. Verson, Chicago, Ill., assignor to Verson Allsteel Press Company, Chicago, Ill., a corporation of Delaware
Application April 26, 1943, Serial No. 484,585
18 Claims. (Cl. 113—45)

1. A punch press having a crank driven work slide and a blank holder slide, characterized by an hydraulic system for interlocking the two slides, said system including a pair of reversely acting cylinder-plunger sets connected to the two slides, so that as one set expands, the other set contracts when relative movement occurs between the two slides, a fluid connection between the cylinder-plunger sets so that liquid may transfer from the contracting to the expanding



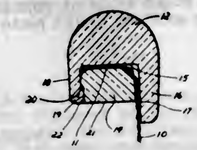
set to permit relative movement therebetween, a solenoid valve in the fluid connection to prevent transferring of liquid and thereby interlock the two slides, a circuit including a switch for controlling the valve, and a cam driven by the crank shaft for timing the opening and closing of said switch.

2,460,613
CAPTIVE SCREW ASSEMBLY
Roderick J. Whelan and Robert A. Reich, Berea, Ohio, assignors to The Ohio Nut & Bolt Company, Berea, Ohio, a corporation of Ohio
Application April 12, 1945, Serial No. 587,864
4 Claims. (Cl. 292—251)



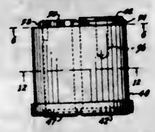
4. A captive screw assembly for detachably securing two members together including in combination a screw having a head, a threaded portion having rolled threads formed thereon and an intermediate unthreaded portion of a diameter substantially equal to the pitch diameter of said thread, said intermediate unthreaded portion being disposed between the head and said threaded portion and having a length at least equal to the length of said threaded portion; and a nut having an opening of slightly larger diameter than said unthreaded portion of the screw whereby the nut may have free rotary and longitudinal movement on said unthreaded portion, said opening in the nut having a minimum diameter less than the major diameter of said threaded portion of said screw and having threads of major diameter, pitch and configuration to permit the threaded portion of said screw to be screwed therethrough, said nut being disposed on said intermediate unthreaded portion of said screw in non-gripping relation to said two members when the assembly is in use.

2,460,614
STRAINER
Myron J. Zimmer, Wood Dale, Ill., assignor to Ekco Products Company, Chicago, Ill., a corporation of Illinois
Application December 5, 1945, Serial No. 632,965
4 Claims. (Cl. 210—161)



1. In a strainer, a wire mesh bowl having an integral flange surrounding and extending laterally outwardly from its upper edge, a continuous member having a seat with which the upper surface of said flange is engaged, a continuous inner wall integral with and extending downwardly from the inner limits of said seat with which the inner surface of the upper side wall portion of the bowl is engaged, a continuous outer wall integral with and extending downwardly from said seat in spaced encircling relation to said inner wall and having an inwardly offset lower portion on its inner surface providing an upwardly facing seat between the upper and lower limits thereof, a second rim member insertable under tension into a final position between said inner and outer walls of the first rim member so as to bear upon the surfaces of said flange and said upper side wall portion of the bowl opposite to the surfaces thereof in engagement with the seat and inner wall of said first rim member, said second rim member having a downwardly facing shoulder with which said shoulder on the outer wall of the first rim member cooperates to detachably lock said rim members against unintentional separation.

2,460,615
REMOVABLE CORE LOCK
John P. Andrew, New Rochelle, N. Y., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn., a corporation of Connecticut
Application June 7, 1945, Serial No. 598,133
17 Claims. (Cl. 70—369)



1. In a lock of the class described, a housing, a lock core removably mounted in said housing, a pair of independently movable key plugs movably mounted in said lock core, tumblers for locking said key plugs against movement in said lock core,

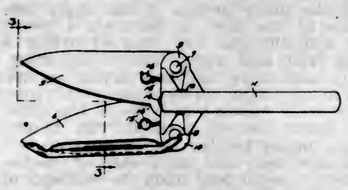
the gas turbine and forming a circuit for a gaseous

an hydraulic system for interlocking the two

and each of said key plugs having a keyway therein whereby said tumblers are key set and said key plugs are released for movement relatively to said lock core, and retaining means movable between a release position and a retaining position for retaining said lock core in said housing and adapted for movement by one of said key plugs out of retaining position and into a release position.

2,460,616
GRASS-CATCHING ATTACHMENT FOR SHEARS
John F. Appleton, Seattle, Wash.
Application March 10, 1944, Serial No. 525,931
2 Claims. (Cl. 56—202)

1. As an attachment for grass or pruning shears to catch cuttings delivered therefrom: a plate having one edge turned inwardly to define a flange lying at an angle of approximately 90° from the plane occupied by the plate proper, said flange acting as a sustaining ledge arranged, in applying the attachment to a blade of the shears, to bear upon one face of the blade along the outer margin of the latter; and a leaf-spring attached centrally of its length to the plate and presenting



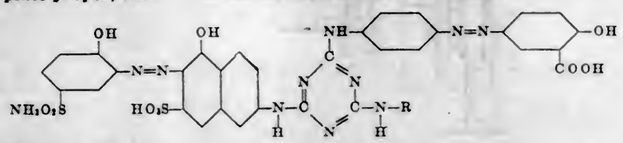
spring arms extending lengthwise of the plate therefrom into such overlying relation to the flange as, upon application of the attachment to the blade, to resiliently grip the other face of that part of the blade sustained on the ledge.

2,460,617
PLANETARY PISTON FUEL PUMP
Roy O. Balogh, Cleveland, Ohio, assignor to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio
Application November 10, 1944, Serial No. 562,768
3 Claims. (Cl. 103—132)

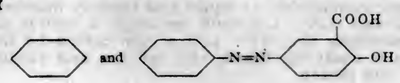
1. A rotary pump comprising a housing formed with a substantially cylindrical chamber, a recess extending radially outward therefrom and a port on each side of the recess, a shaft arranged axially in the chamber, a cam on the shaft, a ring journalled on the cam for orbital movement in spaced relation to the walls of the chamber, a vane formed of material as rigid as that of the housing, said vane extending substantially for the full depth of the recess, and a unitary resilient covering for the ring bonded to the vane, said covering providing a restricted flexible connection between said ring and said vane.

2,460,618
TRIAZINE AZO DYES
Eduard Bernasconi, Basel, Switzerland, assignor to Ciba Limited, Basel, Switzerland, a Swiss firm
No Drawing. Application June 30, 1945, Serial No. 602,677. In Switzerland August 9, 1944
3 Claims. (Cl. 260—153)

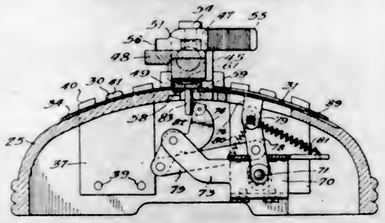
1. An azo-dyestuff of the formula



wherein R is selected from the group consisting of



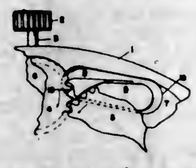
2,460,619
FILM SPLICER
Jack Briskin, Chicago, Ill., assignor to Revere Camera Company, Chicago, Ill., a corporation of Delaware
Application October 26, 1945, Serial No. 624,818
10 Claims. (Cl. 154—42.2)



9. A film splicer comprising a base provided with a transversely disposed slot dividing the upper surface of said base into two film holding tables, stationary film clamping means on one of said tables, shiftable film clamping means on the other of said tables, a pivoted member pivotally mounted on said base, an arm mounted on said pivoted member and capable of being swung from an inoperative position to an operative position in which it overlies said slot, swivel means connecting said arm to said pivoted member for permitting said arm to be twisted along its longitudinal axis alternatively into a cutting position or into a pressing position, a shear blade mounted on said arm and adapted to project into said slot when said arm is twisted into cutting position and swung into operative position, a presser resiliently mounted on said arm and

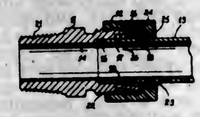
adapted to bear against one of said film tables at a point immediately adjacent said slot when said arm is twisted into said pressing position, a projection carried by said arm and swung into operative position, and actuating means disposed in the path of said projection and adapted to be engaged thereby only when said arm has been twisted into pressing position for displacing said shiftable film clamping means when said arm is swung into operative position, whereby the edges of a strip of film held on said film tables are caused to overlap before they are engaged by said presser.

2,460,620
FLOATING PAWL
Elis Fedor Carlstrom, Lancaster, Pa., assignor to Hamilton Watch Company, Lancaster, Pa.
Application June 14, 1945, Serial No. 599,354
7 Claims. (Cl. 58—83)



1. In a winding mechanism, a pair of meshing gears, a pawl formed with an elongated flat portion adapted to underlie one of the gears, an upstanding wedge shaped portion adapted to be moved into and away from locking position through frictional contact between the flat surface of the pawl and the undersurface of one of the gears.

2,460,621
TUBE COUPLING
Louis B. Courtot, Cleveland, Ohio, assignor to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio
Application July 10, 1945, Serial No. 604,163
6 Claims. (Cl. 285—122)



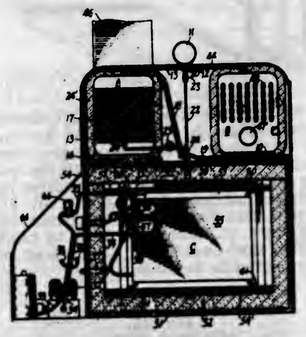
1. A tube coupling comprising a body adapted to receive a tube and having a tube sealing ring frangibly disposed integral with said body, and a tube nut for shearing said ring from said body and forcing it into engagement with a tube to be received in the body, said body having a recess adjacent said frangible connection whereby the sheared end of the ring can move axially and radially as it is sheared from the body.

2,460,622
FITTING
Charles H. Crawley, Cleveland, Ohio, assignor to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio
Application November 13, 1944, Serial No. 563,201
1 Claim. (Cl. 285—210)

A tube fitting comprising an outer member having an end portion provided with means for connection to another fluid conduit, an enlarged body portion, a transverse bore through said body portion and a longitudinal passage through said end portion intersecting said transverse bore, the diameter of said transverse bore being substantially larger than the diameter of said longitudinal passage, and an inner member having an end portion provided with means for connection to another fluid conduit and a cylindrical portion, a substantially diametric aperture extending through said cylindrical portion and a longitudinal passage through the end portion of said inner member intersecting the diametric aperture of said member, the diameter of the diametric aperture in the inner member being substantially larger than the diameter of the longitudinal passage in the end portion of said outer member, the external diameter of the cylindrical portion

of the inner member being substantially the same as the internal diameter of the transverse bore of the outer member, the inner wall of the transverse bore in said outer member being uninterrupted except by the longitudinal passage in said member, the two members being assembled together with the cylindrical portion of the inner member disposed within the diametric aperture bore of the outer member, the transverse of the inner member being disposed within the outer member and in communication with the longitudinal passage of the outer member, and the contacting surfaces of the members being bonded together by a fluid tight alloy bond.

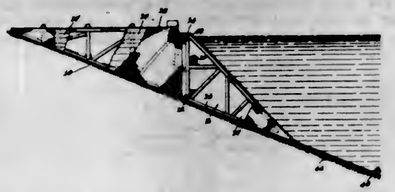
2,460,623
LIQUID COOLER FOR AIR-CONDITIONING SYSTEMS
Mario Di Zoppola, New York, N. Y., assignor, by mesne assignments, to Reconstruction Finance Corporation, New York, N. Y., a corporation of the United States
Application October 24, 1944, Serial No. 560,138
4 Claims. (Cl. 62—134)



1. In an ice producing and storage device, a tank, a plurality of refrigerant fluid circulating units adapted to receive refrigerant fluid, means for supporting said units within said tank for movement in all directions, said means including links for supporting the unit and resilient means tending to return the unit to a predetermined

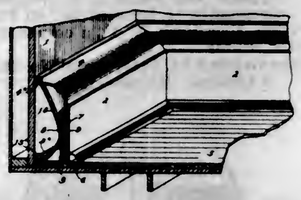
position, whereby when ice is formed around the unit the latter will be permitted to move in any direction as expansion may occur.

2,460,624
COFFERDAM
Carson Dobell, New York, N. Y., assignor to Preload Enterprises, Inc., a corporation of Delaware
Application November 13, 1945, Serial No. 627,990
4 Claims. (Cl. 61—34)



1. A method of forming a cofferdam about a submerged surface area to be exposed in a body of water, which consists in providing about said area relatively adjacent and juxtaposed cooperating blanket supporting surfaces within the water and extending upwardly from the bottom of said body to above the water level, and excluding water from the area by attaching the outer free margin of rolled blanket material to the top portion of the combined surfaces above the water level and unrolling the material therefrom downwardly over the surfaces to the bottom of said area and from thence outwardly therefrom over the bottom.

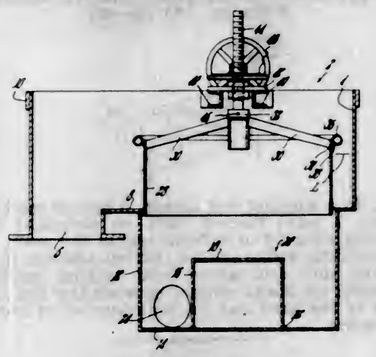
2,460,625
BASEBOARD ROOM HEATER
William A. Ellis, Portland, Oreg.
Application October 31, 1945, Serial No. 625,729
3 Claims. (Cl. 219—34)



1. An electrical heater for rooms comprising a hollow base-board having a panel section and provided with top and bottom flanges extending from the panel into engagement with the wall and providing an enclosed space, a resistance heating unit made in flat form located therein, angular lips on said flanges, means supported by said flange lips and engaging said unit to hold it in contact with said panel, and a source of current supply connected to the unit.

2,460,626
MIXING BOX
George A. Engert, Westfield, Mass., assignor to Cheney Bigelow Wire Works, Springfield, Mass., a corporation of Massachusetts
Application July 26, 1946, Serial No. 686,591
3 Claims. (Cl. 92—37)

3. A mixing box construction comprising in combination, a horizontal lower wall and a continuous vertical side wall extending upwardly therefrom and forming therewith a chamber, said side wall at one side of the chamber arranged in the form of a portion of a circle of certain radius and at an opposite side thereof in the form of a portion of a circle of relatively shorter radius providing a main portion and an outlet portion of said chamber, said lower wall provided with a sump opening and an outlet opening and disposed in the main and outlet portions of the chamber respectively, a cylindrical side wall extending downwardly from said lower wall around the sump opening therein and a lower wall secured to the lower end of said cylindrical side wall forming therewith a sump below said lower wall, said cylindrical wall of the sump provided with inlet means to admit water

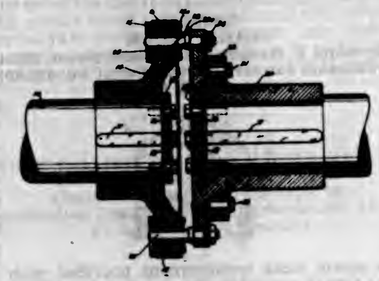


and paper stock, a hollow cylindrical gate having a lower portion within said sump and a continuous upper edge adapted for the flow of water and stock from said inlet means upwardly therethrough and over said upper edge and at all sides thereof into said chamber, and said upper edge of the gate provided with an overflow weir extending entirely therearound, and operating means between upper sides of said gate and side wall for moving said gate up and down relative to said sump, and a dome extending upwardly from the lower wall of the sump having a side wall spaced inwardly from the side wall of said sump and an upper wall disposed above the horizontal plane of said inlet means.

2,460,627
PROCESS FOR THE ISOLATION OF SOYBEAN PROTEIN
Eero O. Erkko, Wilmington, Del., and Richard T. Trelfa, Kalamazoo, Mich., assignors to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 7, 1946, Serial No. 695,546
7 Claims. (Cl. 260—112)

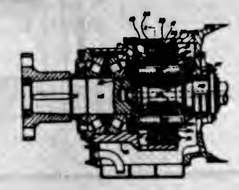
1. A process for the isolation of protein from soybeans comprising treating oil-free soybean meal with water substantially at the isoelectric point of said protein, separating protein mechanically from the fibrous portion of said meal and subsequently leaching the fibrous portion with an alkaline aqueous protein solvent, thereby extracting additional amounts of protein.

2,460,628
FLEXIBLE COUPLING
Thomas L. Fawick, Akron, Ohio
Application February 15, 1943, Serial No. 475,872
2 Claims. (Cl. 64—11)



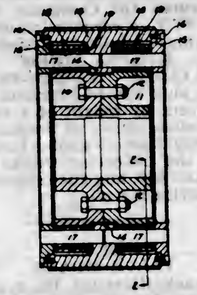
1. A flexible coupling for transmission shafts in series, said coupling comprising a first coupling member formed with a circumferentially spaced set of axially extending sockets, a set of torque-transmitting assemblies mounted in said sockets respectively, each of said assemblies comprising an annular, outer, shell member, an inner, axially disposed stud member, and an annular body of cushioning material having substantially the resilient deformability of vulcanized soft-rubber, said body being held under radial compression by said shell member and said stud member, releasable means for holding each shell member at a determinate position axially of its socket an annular coupling member constituting a mounting for the stud members and movable in an axial direction away from said first coupling member for simultaneously removing said assemblies from their apertures in said first coupling member, without affecting the radial compression of their said cushioning bodies, and a shaft-head member upon which said annular coupling member is mounted, the two being formed with mating stop faces limiting movement of the annular coupling member toward the said first coupling member when the latter is in determinate relation to the shaft-head member, so that the magnitude of axial preloading of the coupling as a thrust coupling is determined by mutual contacting of the said stop faces.

2,460,629
CUSHIONED PLANETARY GEARING
Thomas L. Fawick, Akron, Ohio
Application March 19, 1945, Serial No. 583,533
6 Claims. (Cl. 74—305)



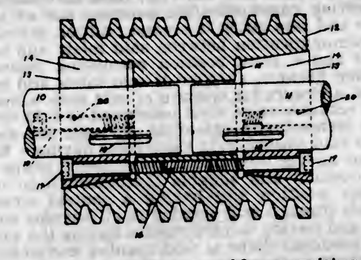
1. A planetary gearing comprising a set of planet gears, two gears entrained with each other through said planet gears, a mounting for said planet gears, and, interposed between the planet gears respectively and their mounting, all-direction-cushioning means individual to the planet gears and comprising material having substantially the resilient deformability of vulcanized soft-rubber, each planet gear being isolated from said mounting by the said material and having, with respect to all rigid parts of the assembly, clearances such as to permit universal cushioned movement of each of the planet gears in relation to their said mounting.

2,460,630
MULTICUSHIONED GEAR
Thomas L. Fawick, Akron, Ohio
Application April 12, 1945, Serial No. 587,892
8 Claims. (Cl. 74—411)



4. A gear comprising a structure adapted to be engaged with a mounting for the gear, a structure having gear teeth, the two overlapping each other radially and overlapped portions of one of them being formed with two axially spaced apart sets of circumferentially spaced cushion sockets, two sets of axially disposed pins on the other structure, extending axially into said sockets and each, with the wall of its socket, defining an annular space, and, in each of the annular spaces, a torque-cushioning member having substantially the resilient deformability of vulcanized soft-rubber, the sockets and pins of each set being axially aligned with those of the other set respectively, and the teeth having such axial extent that they axially overlap torque-cushioning members of both sets.

2,460,631
SHAFT-FASTENING ASSEMBLY
Thomas L. Fawick, Cleveland, Ohio
Application November 17, 1945, Serial No. 629,229
7 Claims. (Cl. 287—114)



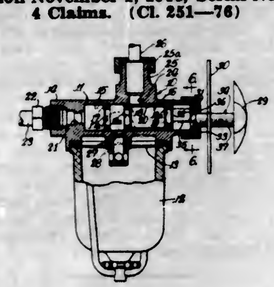
1. A shaft-fastening assembly comprising a rotary annular member adapted to surround a shaft to which it is to be secured, said member being formed with a conical inner face in effect,

at least, surrounding the shaft and tapered axially inward from an end face of the member, and with an internal flange adjacent the smaller end of said conical face, a wedging member tapered for wedging coaction with only the shaft and said conical face, and terminating short of said flange, and a threaded member extending through said wedging member, at a less radius from the shaft's axis than that of any part of said conical face, and threaded means coacting with said threaded member for pulling said wedging member toward said flange.

2,460,632
SPARK PLUG THREAD LUBRICANT
Bert Folda, Jr., Los Angeles, Calif., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application April 8, 1946, Serial No. 660,409
8 Claims. (Cl. 252—29)

1. A spark plug thread lubricant comprising: 30 to 50 per cent by weight of a solid lubricant consisting predominantly of graphite, 0.5 to 5.0 per cent by weight an oil-soluble hydroxy heterocyclic amine the molecular weight of which is between 300 and 400, and the remainder a naphthene-base lubricating oil.

2,460,633
VALVE MEANS
George E. Franck, Riverside, Ill., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application November 1, 1946, Serial No. 707,131
4 Claims. (Cl. 251—76)

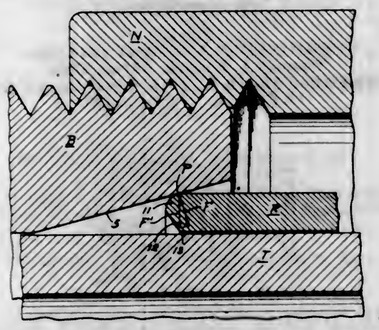


1. Valve means comprising: a casing having a bore formed therein, a plurality of inlets opening to said bore and an outlet leading from said bore, a spool valve element slidably and rotatably mounted within said bore having a first position permitting communication between one of said inlets and said outlet, a second position preventing communication between said inlets and said outlet and a third position permitting communication between another of said inlets and said outlet, a closure for one end of said bore, a manually actuable valve stem connected to said spool valve element and extending through an opening in said closure, said valve stem having a first section having the same cross sectional shape as said opening and slidable therethrough in one angular position and having a central section slidable through said opening in all angular positions and having a third section having the same cross sectional shape as said opening and slidable therethrough in another angular position, whereby said valve stem may be manually moved from the said second position wherein said central section is positioned in said opening to said first or to said third position by manually rotating the valve stem to cause one or the other of said first or third sections of said valve stem to register with said opening.

2,460,634
ALARM CLOCK
Raymond F. Heckmer, Sr., Youngstown, Ohio
Application January 7, 1946, Serial No. 639,495
1 Claim. (Cl. 58—19)

An alarm clock arrangement provided with a visual signal consisting in an electric bulb producing light of a predetermined volume and intensity and supplied by connections with the mains of a network of customary network voltage, comprising an alarm clock provided with a winding shaft, an outer casing surrounding and enclosing said alarm clock, a switch mechanism between said casing and said alarm clock, including a push rod carrying a push plate and a push button, the latter projecting outside of the casing and adapted for hand operation, and the former projecting into the vicinity of the winding shaft, an insulated lever pivoted to said casing and connected with said push rod, a contact bridge piece carried by the same, contacts facing said bridge piece and adapted to be operatively connected thereby, said contacts being carried by said outer casing and connected with the electric bulb and its supply wires respectively, and a member fixed on the winding shaft for pressing back said push plate and operating said push rod upon rotation of the said shaft.

2,460,635
FITTING
Robert E. Herold, Cleveland, Ohio, assignor to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio
Application June 27, 1946, Serial No. 679,750
5 Claims. (Cl. 285—122)



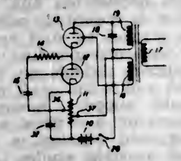
1. In a fitting for metallic tubing, a fitting body having an internal tapered wall and an abutment wall for the end of a tube, a nut threaded to said body and having an internal shoulder, and a continuous tube cutting and gripping ring, one end of said ring engaging said nut shoulder, said ring

having a tube cutting edge formed by the intersection of a substantially cylindrical inner wall of the ring and a conical ring edge surface which forms an obtuse angle with said inner wall, said cutting edge cutting and shearing up metal of the tube when the nut is tightened and motion of said ring axially along said tapered body wall causing the forward portion of the ring to turn radially inwardly so that its conical edge acts as an abutment against the tube metal tending to prevent excessive cutting and shearing of said tube material.

2,460,636
SELF-SEALING ELECTRIC LIGHT SOCKET FOR REFRIGERATOR PANELS
Charles M. Holloway, Chicago, Ill.
Application September 9, 1948, Serial No. 48,407
3 Claims. (Cl. 173—339)

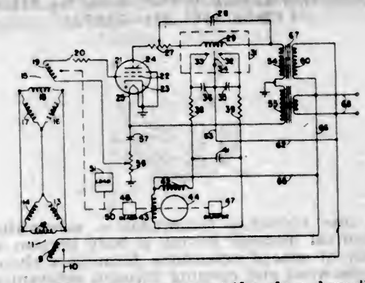
3. An electric light socket for refrigerator panels comprising an outer flexible housing having a hollow interior with a front opening adapted to receive an electric light bulb, means for connecting said socket to a suitable source of electrical supply, a continuous flange extending around the outside of said housing to form a non-circular shape, a plurality of shorter flanges extending partially around the outside of said housing and spaced slightly from said continuous flange on a corresponding line, said socket adapted to be installed without the use of tools in a single non-circular opening in a refrigerator panel corresponding in shape to the shape of said housing between said flanges, so that said flanges grip the edges of the opening and hold the edges in the space between said continuous flange and said shorter flanges, so that said socket may not be accidentally turned and said continuous flange contacts the face of the refrigerator panel around the entire circumference of the opening to provide a moisture proof seal around said opening.

2,460,637
OSCILLATION GENERATOR
Henry M. Huge, Lorain, Ohio, assignor, by mesne assignments, to Lorain Products Corporation, Lorain, Ohio, a corporation of Ohio
Application July 17, 1944, Serial No. 545,278
9 Claims. (Cl. 250—36)



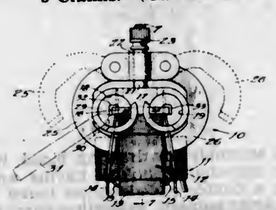
1. An oscillator circuit comprising, in combination, an oscillator tube having at least an anode, a cathode and a control element, a control tube having at least an anode, a cathode and a control element, an output circuit having a regenerative winding, circuit means for connecting the anode of the control tube to the cathode of the oscillator tube, means for connecting the output circuit between the anode of the oscillator tube and the cathode of the control tube, means for connecting the control element of the oscillator tube to the cathode of the control tube through said regenerative winding, a timing circuit, and means for exciting the control element of the control tube from the timing circuit.

2,460,638
SERVO FOLLOW-UP CONTROL
Clarke M. Gilbert, Chappaqua, N. Y., assignor to General Precision Laboratory Incorporated, a corporation of New York
Application November 13, 1946, Serial No. 709,653
11 Claims. (Cl. 318—30)



1. In a servo mechanism of the class described, the combination which comprises an output shaft and an input shaft, means for generating an error voltage whose amplitude is a function of the difference in angular position between said output and input shafts, control means comprising a single thyratron, an alternating current voltage source, means for impressing said error voltage and said alternating voltage on the input of said thyratron control means, relay means controlled by the thyratron control means, delay means connected to the output of said thyratron means and to said relay means, a motor connected to said output shaft, means operable by said relay means to control the direction and speed of rotation of said motor whereby said output shaft is caused to assume the same angular position as said input shaft.

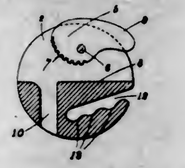
2,460,639
MEANS FOR BINDING MAGNETIC CORE STRUCTURES
Martin B. Grout, Chicago, Ill., assignor to Jefferson Electric Company, Bellwood, Ill., a corporation of Illinois
Application September 11, 1944, Serial No. 553,616
5 Claims. (Cl. 153—1)



1. Apparatus for use in binding a sectional magnetic core structure which includes a U-shaped strap and a cooperating end bar, said apparatus comprising a body member having a

surface adapted to rest on said core structure, a block slidably associated with said body member, strap interlocking means carried by said block, means for forcing said block away from said body member to tension said strap, and means cooperating with said body member for deforming the ends of said strap while it is maintained under tension by said interlocking means so that said deformed ends will cooperate with said end bar to maintain the parts in tensioned relationship after said apparatus is removed.

2,460,640
CLOTHESLINE TIGHTENER
Howard M. Jensen, Halesite, and Richard W. Bridges, Farmingdale, N. Y.
Application August 20, 1945, Serial No. 611,468
1 Claim. (Cl. 211—119.15)

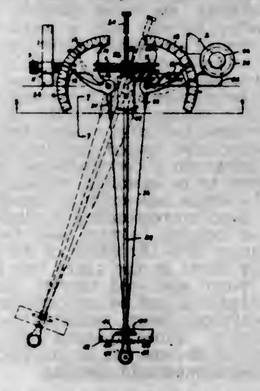


A line tightener comprising a substantially cylindrical member having a body portion and a pair of spaced extensions forming a channel therebetween and opening through substantially half of the peripheral face of said cylindrical member, said body portion having a line receiving opening establishing communication between said channel and the peripheral face of said cylindrical member remote from said channel and having also an inclined line receiving slot closed at one end and opening through the peripheral face of said cylindrical member at its other end remote from the aforesaid channel and the aforesaid hole, and means within said channel for clamping a line against said body portion.

2,460,641
BLOOD COLLECTING APPARATUS
Joseph J. Kleiner, Woodmere, N. Y.
Application August 14, 1945, Serial No. 610,780
5 Claims. (Cl. 128—214)

1. In an assembly for drawing blood, in combination a cup-shaped holder having an apertured base, a double ended hollow bored needle, having its ends pointed, extending through said aperture and supported against movement with respect to said base, said needle having its inner end extending into a plane short of that into which the edges of the side walls of the cup project, an evacuated tube having a length greater than the depth of said cup, a stopper including an enlarged head and a plug portion, the plug portion being disposed under compression within said tube, the head thereof bearing against the edge of the latter, the thickness of the effective seal provided by said stopper being less than the effective height of the inner needle portion and the length of the part provided for the needle point of such portion being substantially less than the thickness of such seal, the end of the tube with the stopper mounted thereon being slidably engageable with, and guided for movement by, the inner side wall faces of the cup to cause the inner needle end to penetrate the seal provided by the stopper when the stopper head is at a point adjacent the cup-base, and means short of such point for indicating when the tube has been introduced into said cup to a position at which the inner needle end is completely embedded within and has its bore closed by, the seal afforded by said stopper.

2,460,642
DIP CO-ORDINATOR
Walter T. Knauth and Robert B. Briggs, Houston, Tex.
Application February 24, 1948, Serial No. 10,288
9 Claims. (Cl. 33—76)

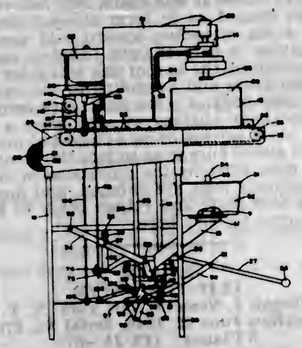


7. An instrument of the character described comprising, supporting means having a straight edge, a fixed and a movable pointer on the supporting means aligned with the straight edge, a rotatable threaded shaft on the supporting means, protractors, one fixed on the supporting means and a protractor support movable along the supporting means and with which the shaft has a threaded connection and on which the other protractor is mounted, pointers pivotally mounted with respect to, and arranged to cooperate with, the corresponding protractors, a tension rod support slidable on the supporting means and with which the shaft has a threaded connection, said support having a bearing mounted to pivot on a vertical axis, a tension rod slidable in said bearing, a straight edge carried by, and at right angles to, said rod, a bearing surface carried by the forward end of said rod, a flexible measuring tape movable about said surface and one of which has connection with one pivotal pointer, said tape also having an operative slidable connection with the other pointer and storage means on which the other end of the tape may be spooled.

2,460,643
ADJUSTABLE LOCK WEDGE
John Lazar, West Allis, Wis.
Application March 15, 1946, Serial No. 654,651
1 Claim. (Cl. 306—34)

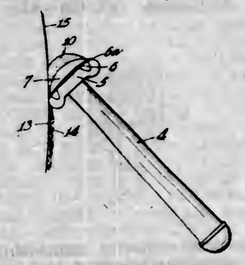
A wedge for securing a wooden shaft in the socket of a tool head comprising a wedge shaped blank, a rotatable locking key member installed longitudinally within said blank, and said key member being tapered on two opposed sides so as to be flush with the sides of said wedge when in unlocked position characterized by said key when partially rotated having opposed untapered portions which extend outwardly from said wedge blank, further characterized by said outwardly extending portions having ribs thereon for firm engagement with said shaft.

2,460,644
MEANS FOR WRAPPING TUBULAR CAKE PANS
Jackson M. Luker, Urbana, Ill.
Application September 8, 1945, Serial No. 615,179
7 Claims. (Cl. 93—2)



1. A package wrapping and tying machine comprising, in combination, a package support platform, means operable for moving said platform from a lowered to a raised position along a fixed vertical path, an open bottomed and open topped housing disposed above and in axial alignment with said platform, said housing having vertical side walls of a contour similar to the contour of the package to be wrapped, means for releasably positioning a sheet of wrapping material across the open bottom of said housing, a tying and knotting mechanism including a wrapping arm mounted for rotation about the upper portion of said housing, a stop member disposed in vertical alignment with said platform and positioned above said housing, said first mentioned means including a foot treadle movable from raised to lowered positions for moving said platform from lowered to raised positions, said platform, when moved upwardly, forcing a package to be wrapped upwardly against the sheet of wrapping material and through said housing for disposing said sheet of wrapping material across the top or upper portion and downwardly over the side walls of said package, said package being limited in its upward movement by said stop member, means operable upon movement of said platform to a fully raised position for actuating said tying and knotting mechanism, and means operable upon lowering of said platform from a raised to a lowered position for actuating the sheet positioning means to position a sheet of wrapping material across the open bottom of said housing.

2,460,645
SAFETY RAZOR CUSHION
William P. MacMicking, Minneapolis, Minn.
Application August 26, 1944, Serial No. 551,294
6 Claims. (Cl. 30—41)



2. In a razor having a blade and a top backing therefor, the improvements which comprise, a compressible cushion attached to the outer surface of said backing and having a margin of reduced thickness extending along the cutting edge of said blade to be compressed against the surface over which the razor is drawn in shaving, simultaneously with the shaving operation.

2,460,646
CHANNEL TYPE CLAMP FOR SLIP JOINTS
Roscoe I. Markey, Montclair, N. J., assignor, by mesne assignments, to Noma Electric Corporation, New York, N. Y., a corporation of Maryland
Application March 30, 1945, Serial No. 585,720
3 Claims. (Cl. 285—129)

1. In an exhaust manifold system having a pair of tubular conduit members arranged end to end; the combination of an annular ring mounted on the outer periphery of one of said members adjacent one end thereof and spaced axially in-

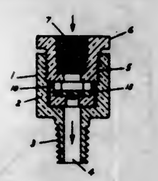
wardly therefrom, a second annular ring mounted

high adjacent the juncture of the upper edge of

2,460,653

wardly therefrom, a second annular ring mounted on the outer periphery of the other one of said members adjacent one end thereof and extending axially outwardly therefrom in overlapping engagement with the adjacent end of first named member, and means including a channel-shaped split clamping ring cooperating with said first and second named rings for holding said tubular conduit members against movement away from one another but permitting limited movement of said members axially with respect to one another to compensate for axial expansion and contraction due to temperature changes.

2,460,647
FLOW CONTROL DEVICE
Wesley G. Miller, Erie, Pa., assignor to Hays Manufacturing Company, Erie, Pa., a corporation of Pennsylvania
Application April 5, 1947, Serial No. 739,551
10 Claims. (Cl. 138—45)

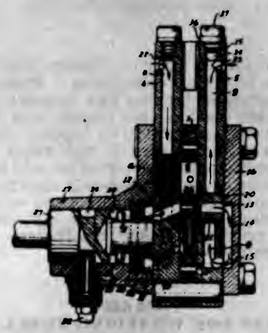


10. A flow control device comprising a member having an outlet aperture and laterally extending grooved passages leading thereto, and a resilient member for disposal over said aperture and said groovod passages adapted to restrict the cross-sectional area of said passages upon increase in pressure of the fluids.

2,460,648
UNIVERSAL JOINT FOR MILL DRIVES
Roland R. Millar, Massillon, Ohio, assignor to Republic Steel Corporation, Cleveland, Ohio, a corporation of New Jersey
Application September 29, 1944, Serial No. 556,340
6 Claims. (Cl. 64—7)

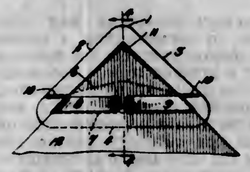
1. A flexible coupling for two shafts, comprising a tongue attached to one shaft, a body attached to the second shaft and having a recess defined in part by opposed curved surfaces to receive said tongue, and means for connecting said tongue and body, said means comprising bearing metal shoes disposed in the curved recesses of the body and provided with recesses open to said tongue and impact absorbing and distributing members filling and fixed against movement in said recesses in said shoes and engaging said tongue, said members comprising fibrous material and heat hardenable material.

2,460,649
GEAR PUMP WITH FLOW CUSHIONING MEANS
Geza W. Muller, Brou, France; vested in the Attorney General of the United States
Original application March 7, 1942, Serial No. 433,808. Divided and this application August 27, 1945, Serial No. 612,966. In France February 20, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires February 20, 1961
2 Claims. (Cl. 103—126)



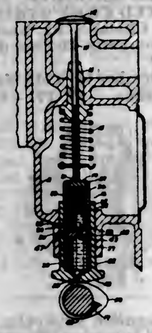
1. A gear pump comprising in combination a pump body, recesses in said body, pump gears housed in said recesses, a fluid circuit through said body comprising suction and delivery ducts on opposite sides of said gears, said delivery ducts being so shaped as to form at least one elbow having a leg extending toward said gears, said body having a bore therein forming an alined continuation of the end of the elbow leg remote from said gears and extending to the outer surface at said body, a plate shaped to conform to the outer body surface at said bore, a rubber stopper block carried by said plate and projecting into said alined bore so as to face the coming flow of said fluid whereby the pulsations of the fluid in the delivery duct are damped, and means for securing said plate and rubber block in position with respect to said bore.

2,460,650
CLIP FOR PAPER
Joseph J. Nemeth, New York, N. Y.
Application June 22, 1946, Serial No. 678,695
3 Claims. (Cl. 24—67)



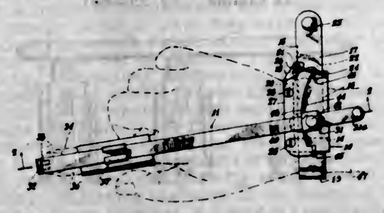
1. A clip for holding loose sheets of paper consisting of a triangularly shaped blank formed of thin pliable metal, there being a polygonal aperture therein, the lower edge of which is parallel to the base of the blank, a pair of fingers integral with said blank and extending toward each other from each end of said lower edge, each of said fingers forming means to embrace said sheets of paper and forming a juncture with the blank on a line parallel with a side of the triangularly shaped blank, the metal of said blank adjacent the juncture of the upper edge of each of said fingers with the blank having a fold line whereby the upper portion of said blank above said fingers may be readily folded on the fold line.

2,460,651
SELF-ADJUSTING TAPPET
Joseph Norman Paquin, Euclid, Ohio, assignor to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio
Application May 2, 1945, Serial No. 591,577
3 Claims. (Cl. 123—90)



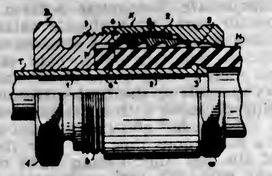
2. A sealed self adjusting tappet unit comprising a cylinder, a hollow piston in said cylinder having an inner wall, fluid sealing means to prevent flow of fluid from said cylinder past said piston, orifice means in the inner end wall of said piston, a sac in said piston with its mouth sealed against said inner piston wall, fluid in said sac, plunger means in said piston engaging an outer wall of said sac, and resilient means cooperating with said plunger means arranged to cause fluid transfer from said sac to said cylinder through the orifice, and fluid in said cylinder.

2,460,652
INSTRUMENT FOR POST-MORTEM FINGERPRINTING
Harold P. Peterson, Raritan Township, Middlesex County, N. J.
Application September 11, 1946, Serial No. 696,334
7 Claims. (Cl. 41—4)



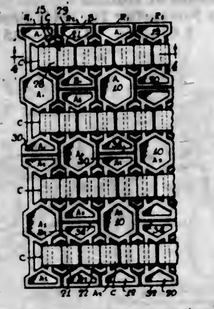
1. An instrument of the character herein described which comprises a wrist clamp having adjustable wrist engaging means so that the clamp may be fastened to the wrist of a deceased person's hand and a finger-extending rod capable of holding a finger of the hand in extended position for fingerprinting, said rod having wrist clamp engaging means at its inner end to attach said rod to said clamp and a slender sharp flesh contacting part secured to the rod at its outer end to press into the flesh and fasten said rod at its outer end to said finger.

2,460,653
HOSE END
Frank J. Raybould, Lakewood, Ohio, assignor to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio
Application April 20, 1946, Serial No. 663,678
2 Claims. (Cl. 285—86)



1. A hose coupling comprising a body member including a hose insert portion, an axially extending sleeve portion surrounding a portion of said insert portion and radially spaced therefrom, and a hose abutment wall portion between said insert and sleeve portion, a split hose clamping ring formed with axially-spaced external tapered surfaces of different angularity, the steeper tapered surface being adapted to engage the sleeve portion of said body member, and a nut threaded to said body member having a surface engaging the shallower of said tapered surfaces on said clamping ring, the action of the fitting on a hose being one whereby as the nut is tightened the engagement between the nut and ring causes radial contraction of the ring and compression of the hose adjacent said engagement, against said insert, said tightening tending to separate the ring from its engagement with the body sleeve portion, resulting in an axially forward motion of said ring and adjacent hose portions relative to said body with an attendant gathering and forcing of the hose against said abutment wall.

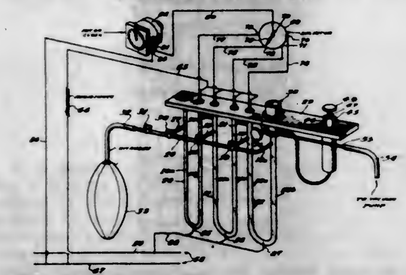
2,460,654
FLEXIBLE FABRIC COMPOSED OF RIGID INTERCONNECTED LINKS
Harry Reinstein, Rye, N. Y., assignor to Reinad Novelty Co. Incorporated, New York, N. Y., a corporation of New York
Application February 1, 1947, Serial No. 725,867
3 Claims. (Cl. 41—10)



1. A mesh fabric of close construction comprising along its length a vertically extending row consisting of all relatively long links alternating with a vertically extending row consisting of two relatively short links and at least one relatively long link the same as the said relatively long links of the first-mentioned row, each

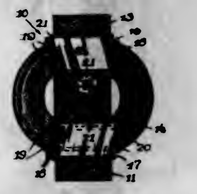
of the said relatively long links consisting of an intermediate hexagonal portion and two semi-hexagonal portions each of approximately half the size of said intermediate hexagonal portion, equi-spaced therefrom, having a marginal straight edge coincident respectively with the top and bottom edges of said link and connected with the intermediate hexagonal portion by a pair of connector bars; each of said relatively short links consisting of a pair of semi-hexagonal portions joined together by a pair of connector bars and each having a marginal straight edge; the links in each of the first-mentioned vertical rows being disposed with a marginal edge of one link in substantial abutment with a marginal edge of a contiguous link and with the marginal edges of the top and bottom links of said row coincident with the top and bottom edges respectively of said fabric, thereby producing in said row top and bottom semi-hexagonal portions and entervening hexagonal portions, equi-spaced from each other, in a vertical direction; the links in each of said alternating rows being disposed with the two short links at the top and bottom of said row, with the top and bottom marginal edges of the top and bottom links coincident with the top and bottom edges respectively of said fabric and with the bottom and top marginal edges respectively of the top and bottom links in substantial abutment with the marginal edges of the semi-hexagonal portions of a contiguous long link in the same row, thereby producing in said row top and bottom semi-hexagonal portions and intervening hexagonal portions equi-spaced from each other; the side edges of said semi-hexagonal portions and of said hexagonal portions of contiguous vertical rows being in substantial abutment; and connector members each consisting of a hexagonal portion having laterally extending arms positioned with the sides of the hexagonal and semi-hexagonal portions of said links and the connector arms loosely engaging the said connector bars of contiguous links in contiguous rows to permit relative movement between the thus connected links.

2,460,655
APPARATUS FOR DETERMINING THE PERMEABILITY OF MATERIALS
Ernst Walter Riekmeyer, Berkeley, Ill., assignor to Jefferson Electric Company, Bellwood, Ill., a corporation of Illinois
Application November 16, 1945, Serial No. 629,058
3 Claims. (Cl. 73—38)



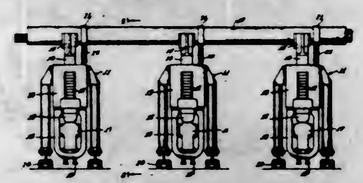
1. Apparatus comprising a U-tube assembly including a plurality of U-shaped tubes, a body of mercury partially filling each U-tube, means for creating a mercury pressure head in the U-tube assembly, a seat for supporting a time delay element and having an aperture therethrough, the time delay element being supported over the aperture, the U-tube assembly being connected to the seat and being in communication with the aperture so that fluid may pass through the time delay element disposed on the seat through the passage and into the U-tube assembly under the influence of the mercury pressure head in the U-tube, and clock means for timing the flow of said fluid through the time delay element.

2,460,656
ADJUSTABLE MAGNETIC SHUNT FOR LAMINATED CORE STRUCTURES
Walter Sliwiak, Chicago, Ill., assignor to Jefferson Electric Company, Bellwood, Ill., a corporation of Illinois
Application September 10, 1945, Serial No. 615,275
8 Claims. (Cl. 171—119)



1. In electromagnetic apparatus, a core structure comprising a substantially rigid assembly of elements providing two oppositely disposed spaced surfaces to form a gap, a separate laminated structure positioned in said gap and comprising a plurality of substantially rigid laminations disposed in skewed relationship, and adjustable means for compressing said laminated structure in a direction perpendicular to the length and width dimensions of said gap to expand the length dimension of said laminated structure.

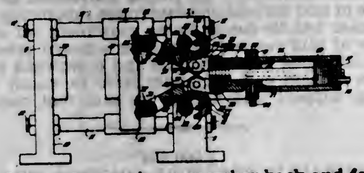
2,460,657
METHOD AND APPARATUS FOR PEENING THE INSIDE OF TUBES AND OTHER HOLLOW BODIES
Thomas Robinson, New York, N. Y., assignor to Lancaster Processes, Inc., New York, N. Y., a corporation of New York
Application December 22, 1944, Serial No. 569,382
24 Claims. (Cl. 29—90)



1. A method of peening the inner surface of a hollow member, which comprises introducing peening elements in said hollow member and vibrating said member to produce repeated impact between said peening elements and the inner surface of said member.

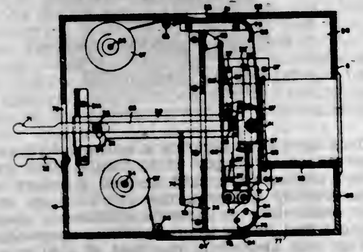
17. Apparatus for peening the inside of a tube, which comprises peening elements adapted to be inserted in said tube and a plurality of units cooperating to vibrate said tube throughout its length to produce repeated impact between said peening elements in the tube and the inner surface of said tube.

2,460,658
RECIPROCATING AND LOCKING MEANS FOR DIES OR THE LIKE
Carl Roehri, Chicago, Ill.
Application June 9, 1945, Serial No. 598,546
18 Claims. (Cl. 74—106)



1. Means for moving a member back and forth and locking the same in position at the end of its movement in one direction, comprising a frame having guiding means for said member, reciprocable means, links pivotally connected with said reciprocable means, links pivotally connected with said member and with said first mentioned links, shafts fixed on said frame and cranks pivotally connected with both said links and mounted to swing into engagement with and about said shafts to align the pivots connecting said links to each other with the pivots connecting said first mentioned links and said member and the axes of said shafts.

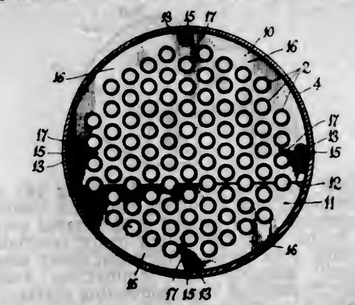
2,460,659
TIME RECORDING APPARATUS
Arthur J. Schmidt, Milwaukee, Wis.
Application March 8, 1946, Serial No. 653,209
4 Claims. (Cl. 101—288)



1. In an apparatus of the character described a casing, a time printing mechanism in said casing, a frame, roller means in the frame operable to rapidly press a strip against said printing mechanism, spring means urging said roller carrying frame out of printing contact with the printing mechanism, pivoted lever means for urging said roller carrying frame against the action of said spring means to load said roller pressing means in position to be released for rapid rolling contact against said printing mechanism, coacting means on said frame and lever for releasing the roller carrying frame at a predetermined point in its loading operation to the action of the spring means to cause a strip to be printed by said printing mechanism, and means under control of said pivoted lever for intermittently moving a strip with each loading operation.

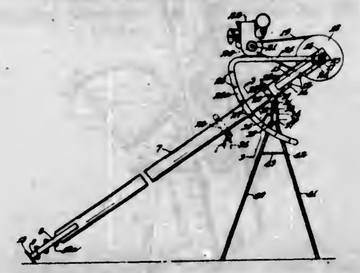
2,460,660
HEAT EXCHANGER
Townsend Tinker, Orchard Park, N. Y., assignor to Ross Heater & Manufacturing Co., Inc., Buffalo, N. Y., a corporation of New York
Application March 22, 1947, Serial No. 736,460
6 Claims. (Cl. 257—224)

1. For use as an element of a heat exchanger of the type characterized by a longitudinal nest or tubes, an enclosing shell, spaced baffle plates in diametrical planes of the shell severally formed to provide angularly located adjacent flow windows, inlet and outlet connections for the flow of a fluid medium through the tubes of the nest, inlet and outlet connections for the flow externally of the tubes of a fluid medium which travels in a mean axial direction of the shell through the spaces between adjacent baffle plates and through the windows, a base construction which includes a fixed head in which end portions of the tubes are secured, the tubes passing through openings in the baffle plates, and tie rods secured in said head and located beyond



the perimeter of the tube nest through openings in the baffle plates: integers for the support and mutual spacing of the baffle plates and for the sealing of the circumferential space between the tube nest and the shell from the flow of the external medium, whereby such medium will flow substantially wholly through the spaces between and among the tubes comprising the nest, the integers severally consisting of a spacing and supporting sleeve loosely mounted on a tie rod between adjacent baffle plates and associated wing means rigidly carried by and projecting from the sleeve and extending athwart said space between the adjacent tubes of an adjacent pair.

2,460,661
PORTABLE GRAIN ELEVATOR
Hubert A. Tintes, West Fargo, N. Dak.
Application September 13, 1946, Serial No. 696,808
2 Claims. (Cl. 198—213)



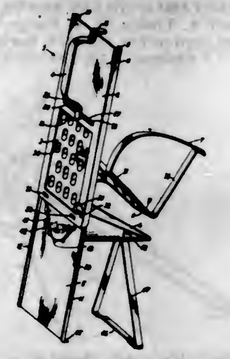
1. In a portable grain elevator, a casing and a movable conveyor unit therein, said conveyor unit having a drive shaft extending across the upper end of said casing, said casing having a power unit supported thereby adjacent its upper end, said power unit having a supporting bracket mounted for rotation about said drive shaft, said

bracket including a portion lying adjacent said conveyor casing in spaced relation with said drive shaft and formed on an arc having said shaft as a center, the arcuate portion of said bracket, at spaced points, being arranged for connection with said casing.

2,460,662
BUILDING CONSTRUCTION
Noble Van Voorhis, Canton, Ohio, assignor, by mesne assignments, of 76.89 per cent to E. E. MacKenzie and 23.11 per cent to L. V. Bockius
Application May 1, 1945, Serial No. 591,325
1 Claim. (Cl. 72—1)

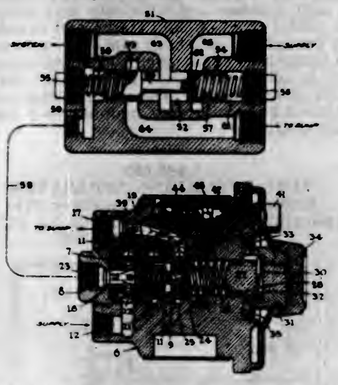
A rigid concrete structure including two end wall elements and a curved roof wall element, each element being formed of laminated corrugated board, each corrugated board lamination comprising a corrugated and a flat sheet, means adhesively securing the laminations rigidly together throughout their contacting surfaces to maintain a predetermined shape, at least the outer surface of each wall element being corrugated, means securing the end and curved roof wall elements together to provide a stable structural form, a coating of concrete applied and bonded to the outer corrugated surfaces of the laminated form, and the laminated corrugated board elements comprising an integral part of and thermal insulation for the walls of the finished structure.

2,460,663
RECIPROCATING GRATER WITH REMOVABLE TOOLPLATE
Theron H. Walker, Los Angeles, Calif.
Application March 3, 1945, Serial No. 580,745
4 Claims. (Cl. 146—178)



2. A comminuting utensil comprising an inclined slide support having a hopper thereon, a tool plate holder slidable on said support, a handle on said holder, a pusher for said hopper, said pusher having a hinge connection with said support above said hopper, said hopper having a bottom extending on opposite sides of a vertical through said hinge, a handle on said pusher, said slide support and said hopper having a foot rest extending on opposite sides of a vertical line through said hinge, and said slide support supporting said holder for sliding movement on one side of said vertical and said hinge supporting said pusher handle for swinging movement on other side of said vertical whereby downward pressure on said slide holder handle and downward pressure on said pusher handle serve to steady said slide support and hopper on said foot rest.

2,460,664
HYDRAULIC PRESSURE CONTROL MEANS
David J. Whittingham, Watertown, N. Y., assignor to The New York Air Brake Company, a corporation of New Jersey
Application February 26, 1945, Serial No. 579,867
9 Claims. (Cl. 50—12)

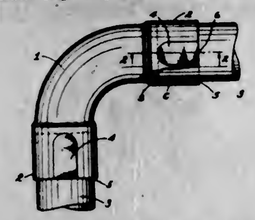


1. In a device for deriving a uniform hydraulic pressure from a supply of hydraulic fluid at a pressure higher than said derived pressure but not necessarily uniform, the combination of a supply connection; a movable abutment; means forming a first and a second working space separated by said abutment, the first of said spaces being subjected to the derived pressure and being in restricted communication with the second working space; a loaded relief valve serving to vent hydraulic fluid from said second working space; valve means actuated by said abutment, controlling flow from said supply connection to the first working space, and arranged to restrict such flow as the abutment moves in response to predominant pressure in the first working space; and yielding means arranged to oppose such motion.

2,460,665
SOLDER FITTING
Paul D. Wurzburger, Cleveland Heights, Ohio
Application July 8, 1944, Serial No. 544,061
4 Claims. (Cl. 285—115)

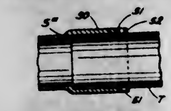
1. A fitting for a capillary joint having a socket adapted to receive through the open end thereof a tube or member telescopically with capillary space for bonding material between the interior surface of the wall of the socket and the exterior surface of the said tube or member, part of the said wall of the socket comprising at least one thickened portion, a greater part of the said wall including at least a portion of said wall near the said open end of the socket being substantially

thinner than said thickened portion, said thickened portion having appreciably greater mass and heat capacity per unit of wall area than



said thinner part of the wall, said thickened portion being disposed in the wall of the socket adjacent an exposed edge of said capillary space to provide a feeding point for bonding material.

2,460,666
FITTING
Paul D. Wurzburger, Cleveland Heights, Ohio
Application August 7, 1944, Serial No. 548,327
4 Claims. (Cl. 285—115)

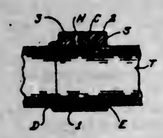


1. A fitting for a capillary solder type joint having a socket part adapted to receive a tube or member in telescoping relation with capillary space between the adjacent surfaces thereof into which solder or other bonding material may be fed to unite said surfaces; said socket part having an open end at or adjacent to which said capillary space terminates in an exposed substantially annular edge and said socket part having at least one solder feeding notch extending longitudinally inward from said open end through the wall of said socket part and terminating interiorly of said edge of said capillary space and defining an inwardly protruding contour in the edge of said capillary space through which solder may enter said capillary space, said socket part having a portion adjacent its open end defining a non-capillary space with the tube or member to be received therein outwardly of said edge of said capillary space and said socket having a heat absorbing rib extending inwardly of said edge of said capillary space into the zone of said capillary space, and said notch traversing said portion and extending into said rib.

2,460,667
FITTING
Paul D. Wurzburger, Cleveland Heights, Ohio
Application October 18, 1944, Serial No. 559,171
5 Claims. (Cl. 285—115)

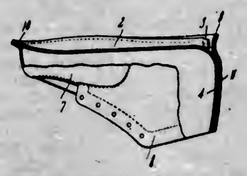
1. A joint comprising in combination a socket and an entering member telescoping with said socket, said socket and said entering member having therebetween a space of capillary magnitude to be filled by a bonding material by capillary attraction, said socket having at least one radially projecting feeding pocket of non-capillary magnitude adjacent the outer edge of said socket and extending longitudinally back from said outer edge less than the full length of said socket and forming an open-ended cavity for receiving bonding material.

2,460,668
FITTING
Paul D. Wurzburger, Cleveland Heights, Ohio
Application October 18, 1944, Serial No. 559,172
5 Claims. (Cl. 285—115)



1. In a fitting for a capillary joint a socket part having a wall not substantially thicker than required for the mechanical strength of the joint, said wall having an internal surface adapted to define a capillary space with the juxtaposed surface of a member telescopically received therein, said socket part also having a raised external rib rising above the external surface of said wall a distance at least substantially equal to said wall thickness and overlying a part of said capillary space, at least the greater part of said rib being spaced away from the open end of the socket, said rib having a transverse opening extending therethrough and through said wall and communicating with said capillary space, said opening being adapted to receive a length of bonding material substantially equal to the thickness of the wall of the socket plus the thickness of the rib, whereby sufficient heat is made available to melt the bonding material in said opening and induce its capillary flow or flash from said opening in and through said space when the temperature of the socket wall and rib is but moderately in excess of the melting point of said bonding material.

2,460,669
SHOE WITH INTEGRAL INSOLE AND BACKSTAY
Fred L. Ayers, Waltham, Mass.
Application November 13, 1945, Serial No. 628,168
6 Claims. (Cl. 36—16)

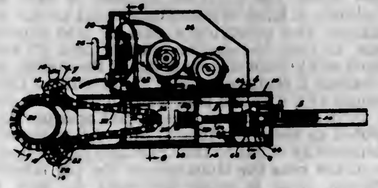


1. A shoe having an upper including inside and outside backstays between which the adjacent edges of the upper extend, said inside backstay having an innersole portion provided with a margin secured to the lower margin of said upper, said upper margin and the lower end of said outside backstay being out-turned, and an outersole secured to said out-turned margins and outer backstay.

2,460,670
RAILWAY BRAKE BEAM STRUCTURE
Donald E. Barton, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a corporation of Illinois
Application May 11, 1946, Serial No. 669,145
12 Claims. (Cl. 188—224.1)

1. In a railway truss type brake beam including a compression member and a tension rod with their end portions converging, a brake head member receiving said end portions, and a device on the end of the tension rod thrusting the brake head member against the end of the compression member, and an element integral with one of said members and interlocking with a part of the other member and preventing disassembly of said members.

2,460,671
POSITIONING MEANS
Joseph M. Benedick, Wilmar, Calif.
Application November 1, 1945, Serial No. 625,990
4 Claims. (Cl. 214—1)



1. A machine for rotating objects to be operated upon along a line circumferentially passing around the work, including: a housing provided at one end with a plurality of bearings; a pair of shafts mounted in a corresponding pair of bearings; a pair of rollers mounted at the ends of each pair of shafts; a chain sprocket securely fastened to each of said shafts intermediate each pair of rollers; a bearing structure mounted for longitudinal movement in said housing; a shaft supported in said bearing structure; a driving chain sprocket securely fastened to said shaft supported in said bearing structure; a chain mounted on said driving chain sprocket and adapted to encircle the workpiece between said pairs of rollers and to engage with the sprockets fastened to the shafts on which the rollers are mounted; power means supported by said bearing structure and serving to drive said driving chain sprocket; means to adjust the speed at which said power means drive said chain sprocket; means for adjusting the position of said bearing structure in said housing to adjust the tension imparted to the chain encircling the object being operated upon; and a resilient connection between said adjusting means and said bearing structure.

2,460,672
THIMBLE-NEEDLE THREADER
Fedor Benedik, New York, N. Y.
Application May 9, 1947, Serial No. 746,942
4 Claims. (Cl. 223—99)

1. A needle threader comprising a hollow body in the form of a thimble and having an enclosed top end, said body being formed with a slot in the side thereof for frictionally engaging a needle inserted therein and so that the head of said needle may be viewed by looking through said

top end in the direction of the hollow of said body, said top end comprising an optically magnifying lens whereby the head of said needle may be observed in a magnified state so that the threading thereof may be facilitated.

2,460,673
DETACHABLE BIT
Irvine J. Berscheid, Bissett, Manitoba, Canada
Application June 9, 1944, Serial No. 539,426
9 Claims. (Cl. 255—64)

1. In drills, the combination of a detachable bit member and a shank member, the said bit member including forwardly located cutting surfaces and rearwardly located integral projecting finger members, the said shank having recesses therein cooperatively to receive the said finger members of the said bit, means in connection with said shank for retaining said bit in locking engagement with said shank, said shank being adapted to deform said finger members into said locking engagement with said shank upon percussive contact between said bit and shank, to retain said bit from axial dislodgment during operation, said fingers forming torsion applying means between said bit and shank.

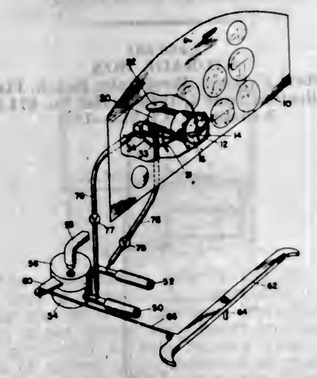
2,460,674
SHAPED FABRIC ARTICLE
Lajos Bihaly, London, England, assignor to Trubenised Limited, London, England
Application February 12, 1946, Serial No. 647,305
In Great Britain February 1, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires February 1, 1963
9 Claims. (Cl. 2—42)

1. Textile fabric for use in producing shaped articles of wearing apparel or the like, consisting

of stretchable knitted fabric, each thread of which is composed of a strand of thermoplastic material and a separate parallel strand of non-thermoplastic material, said strands being independently shiftable relative to each other preliminary to and during shaping of said apparel, said stretchable fabric being laminated with a fabric of non-thermoplastic material having a factor of stretchability substantially equal to that of the composite strand knitted fabric, the laminae being deformed and held to shape by said thermoplastic material.

2. Breast cups for brassieres and like three-dimensional shaped articles, composed of stretchable knitted fabric, said fabric being knitted from a double composite thread consisting of a thermoplastic and a separate non-thermoplastic strand, each strand having the characteristic of being shiftable relative to the other prior to and during shaping, said fabric being deformed, and the component strands united together to maintain the deformation shape.

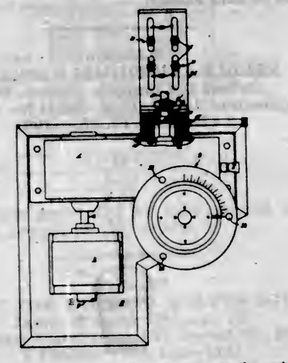
2,460,675
INCLINOMETER
Robert G. Bourgaize, Tacoma, Wash.
Application February 9, 1946, Serial No. 646,640
8 Claims. (Cl. 35—12)



1. A centrifugal-force simulation inclinometer for non-flying aircraft trainers having a rudder and rudder control means, comprising: an open-ended curved transparent tube enclosing a ball free to roll therein, a reversible gear pump, fluid conduit means placing each side of said pump in communication with an end of said tube, and suction-operated means to operate said pump in either direction in response to the application to the trainer of either left or right rudder.

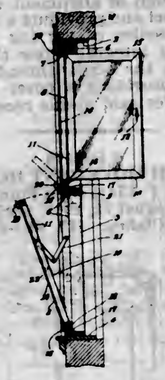
2,460,676
MAGNETO TESTER
Samuel Casper, San Francisco, Calif.
Application August 10, 1945, Serial No. 609,964
6 Claims. (Cl. 73—118)

1. In a tester for a magneto and the like having power transmission elements including a drive shaft adapted to be connected with a source of power, and a horizontally extending driven shaft, a housing enclosing said elements having a side wall through which said driven shaft extends, a cylindrical bearing member concentric with the axis of said driven shaft secured rigidly to said side wall, a sleeve rotatably supported on said bearing member, means for releasably securing said sleeve to said member at any point in its rotation on the latter, means on said sleeve



rigid therewith for carrying a magneto with the shaft of the latter in alignment with said driven shaft, and means for releasably securing said driven shaft to such magneto shaft.

2,460,677
ADJUSTABLE WINDOW CASING
Fred Cervellone, New York, N. Y.
Application October 30, 1946, Serial No. 706,701
1 Claim. (Cl. 20—53)



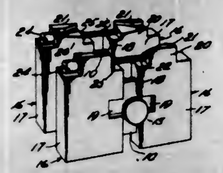
A window construction comprising a casing comprising a top, a bottom and sides, a cross piece uniting the midpoints of the sides, a sash frame hinged at its lower edge to the bottom and a frame hinged at its lower edge to the cross piece, said frames filling the spaces between the cross piece and the top and bottom, releasable catches to connect the tops of said frames to said casing, the sides, top and lower side of the cross piece having inward facing shoulders engaged by the frames, the bottom and upper side of the cross piece having outward facing shoulders, the lower ends of said frames having ribs along their edges projecting downward to cover the last-named shoulders, each of said frames having a vertical bar joining the top and bottom at the middle, said frames and said bar having outward facing shoulders, framed window panes hinged to the opposite sides of the frames and engaging said shoul-

ders, catches for said framed panes to engage the vertical bar thereof; and means for limiting the inward and downward movement of the sash frames in said casing.

2,460,678
NEEDLE AND THIMBLE HOLDER
Robert L. Chiarizia, Saxton, Pa.
Application July 1, 1946, Serial No. 680,672
2 Claims. (Cl. 223—109)

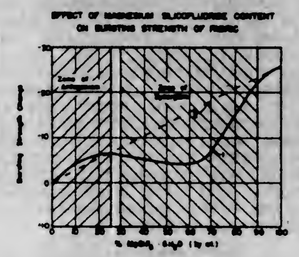
1. A combined thimble, needle and thread holder comprising a cup shaped cap member having external screw threads adjacent the rim thereof, a central aperture in said cap, a sleeve tightly received in said aperture and extending inwardly and outwardly of said cap, an ornamental figure fixed on the outer portion of said sleeve and having a longitudinal channel in alignment therewith, an integral thread receiving double spool mounted on the inner portion of said sleeve, said spool having a longitudinal bore therethrough in alignment with said sleeve and said channel and providing a receptacle for a plurality of needles of varying lengths and a thimble having integral screw threads for engagement with the screw threads on said cap, said thimble providing a cover for said spool and a closure for said needle receptacle.

2,460,679
WATCH MOVEMENT HOLDER
Marvin F. Clay, High Point, N. C.
Application August 22, 1945, Serial No. 612,066
4 Claims. (Cl. 81—6)



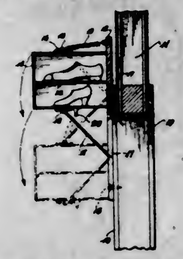
1. In a watch movement holder, a pair of rectangular plates arranged in parallel spaced relation, a screw extending centrally through said plates, said screw being journalled for free rotation and held from longitudinal movement through one of said plates and having threaded engagement with the other plate, a pair of jaw members for each plate, each pair of jaw members having confronting faces and slots extending from these faces into the members, each plate having its ends fitting into the slots of a respective pair of said jaw members, and a screw for each pair of jaw members having a head portion freely revoluble in and held from movement through one jaw member of the pair and having threaded engagement with the other member of said pair.

2,460,680
LAUNDRY SOURING COMPOSITION
Albert L. Courtney and Clifton E. Smith, Wyandotte, Mich., assignors to Wyandotte Chemicals Corporation, Wyandotte, Mich., a corporation of Michigan
Application July 10, 1947, Serial No. 760,146
3 Claims. (Cl. 252—135)



1. A laundry souring composition consisting essentially of 10–70% by weight ammonium silicofluoride and 30–90% magnesium silicofluoride, the amount of the latter ingredient being calculated on the basis of $MgSiF_6.6H_2O$.

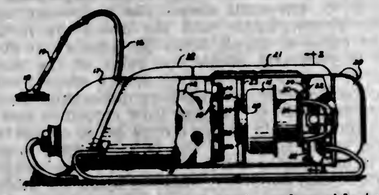
2,460,681
STORAGE BOX
Robert F. Davis, West Palm Beach, Fla.
Application June 4, 1946, Serial No. 674,220
3 Claims. (Cl. 312—112)



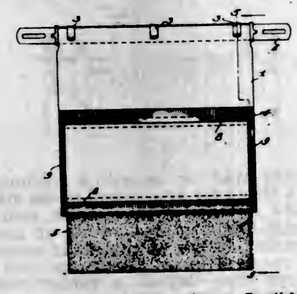
2. A retractable storage box for use at a doorway that comprises a supporting frame adapted to be attached to the wall above the doorway, a box normally adapted to be positioned horizontally adjacent said frame and having the side adjacent said frame open, a reciprocating connection between said frame and said box for maintaining said box against rotation but permitting said box to move downwardly to a position below the frame and upwardly to a position in horizontal alignment with said frame, and counterbalancing means connected between said frame and said box for counterbalancing the weight of said box.

2,460,682
MECHANICAL MOUNTING
Ferman C. Doughman, Darien, Conn., assignor to Electrolux Corporation, Old Greenwich, Conn., a corporation of Delaware
Application April 11, 1944, Serial No. 530,484
3 Claims. (Cl. 230—232)

1. A vacuum cleaner body, a motor-fan unit, a bulkhead within the body, a rubber supporting ring placed over one end of the unit and affixed thereto, a flange on the bulkhead forming an annular opening supporting said ring, a plurality of rubber sandwiches affixed at one side to the other end of the unit and at the other side to the interior of the body, the planes of said sandwiches being perpendicular to the axis of the unit.



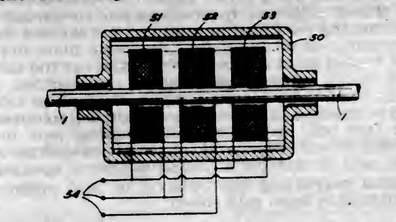
2,460,683
CARBON PAPER HOLDER FOR MANIFOLDING TYPEWRITERS
Joseph Carroll Doyle, Baltimore, Md., assignor to Kee Lox Manufacturing Company, Rochester, N. Y., a corporation of New York
Application November 28, 1945, Serial No. 631,375
12 Claims. (Cl. 197—126)



1. The combination with a flexible holding sheet that is permanently attachable to a supporting bar of a manifolding typewriter, of a carbon paper carrier detachably and interlockingly connected to said holding sheet, and a length of carbon paper fastened at one end to the carrier and wound continuously therearound affording a multiplicity of superposed thicknesses and a free end extending beyond said holding sheet, the holding sheet provided with means interlockingly engaging the carbon paper carrier and permitting removal of the carbon paper and carrier without disturbing the position of the holding sheet on the supporting bar, the carbon paper carrier being retained on the holding sheet by the interlocking relation between the holding sheet and carbon paper carrier.

2,460,684
METHOD AND APPARATUS FOR DEMAGNETIZING TUBING
Cecil Farrow, Bainbridge Township, Geauga County, Ohio, assignor to Republic Steel Corporation, Cleveland, Ohio, a corporation of New Jersey
Application May 26, 1943, Serial No. 488,480
2 Claims. (Cl. 175—181)

1. The method of demagnetizing elongated magnetized articles in the presence of a steady magnetic field which comprises diverting the lines of force of the steady field around the article and subjecting the article to a magnetic field generated by a polyphase alternating current with magnetic fluxes of progressively different phase generated by said current applied along the length of the article.



2,460,685
DIP POT FOR HOLDING MOLTEN SOLDER
James L. Ford, Chicago, Ill.
Application October 8, 1945, Serial No. 620,860
3 Claims. (Cl. 113—111)

3. A soldering device comprising a bail, a dip pot pivotally mounted near its open end between the end portions of the bail with its center of gravity substantially below its pivotal axis, a rod having one end fixed to the center of the yoke portion of the bail, a cylindrical sleeve freely rotatably mounted on the rod, a handle fixed upon and embracing an end portion of the sleeve remote from said bail, and means restraining longitudinal separation of the rod and sleeve during relative rotation of the rod and sleeve.

2,460,686
ELECTRICAL INSTRUMENT
George H. Fritzinger, West Orange, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application January 4, 1944, Serial No. 516,947
8 Claims. (Cl. 171—95)

1. In an electrical instrument: the combination of a pivoted permanent magnet construction having its magnetic axis extending crosswise to its pivot axis; a field coil offset from said pivot axis and having its polar axis at least substantially

deflecting system arranged to deflect said beam

silica, and an effective amount up to 4% of an

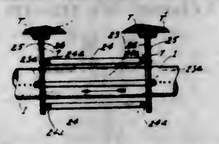
parallel to said pivot axis, said coil and magnet construction being offset along said pivot axis to lie closely adjacent to one another in partially overlapping relationship; and a shield for said instrument comprising a first magnetic plate normal to said pivot axis and lying adjacent the side of said coil opposite said magnet construction, a second magnetic plate normal to said pivot axis and at the side of said magnet construction opposite said coil, and a magnetic tubular part intervening said plates and concentric to said pivot axis, said second plate having a central opening therein permitting the removal of said magnet construction from said shield.

2,460,687

INDUCTION HEATER

Norbert E. Fuchs, Cleveland, Ohio, assignor to Republic Steel Corporation, Cleveland, Ohio, a corporation of New Jersey

Application March 31, 1945, Serial No. 585,973
3 Claims. (Cl. 219—13)



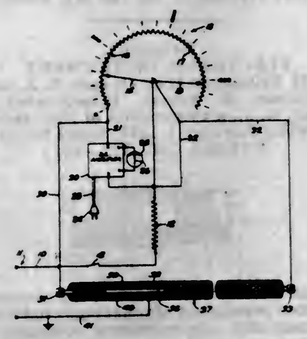
1. An induction heater comprising first and second associated transformer secondary terminals, third and fourth associated transformer secondary terminals, a main conductor having a straight portion and return conductors having straight portions beside the straight portion of said main conductor, said main conductor being mechanically and electrically connected at one end to said first transformer terminal and at the other end to said third transformer terminal, said return conductors each being connected at one end to said second transformer terminal and at the other end to said fourth transformer terminal.

2,460,688

APPARATUS FOR LOCATING FAULTS IN CABLES

Richard D. Gambrill and Clay E. Lewis, Baltimore, Md., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

Application May 4, 1944, Serial No. 534,094
2 Claims. (Cl. 175—183)



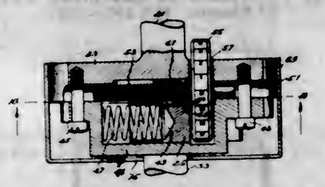
1. In an apparatus for testing for and locating high resistance faults in the insulating jackets of insulated cables including a calibrated potentiometer connected across the ends of the conductor of such a cable, means for impressing a high D. C. potential across the balancing arm of the potentiometer and the insulating jacket of the cable to break down the insulation at a fault therein and divide the cable at the fault so as to form a Wheatstone bridge circuit with the potentiometer, and balance indicating means comprising a D. C. vacuum tube amplifier and a milliammeter, said bridge circuit being connected to the input circuit of the D. C. amplifier and said milliammeter being connected to the output circuit of said amplifier, whereby when the bridge circuit is formed through the breakdown of a high resistance fault in the insulation, any large currents produced therein will pass through the amplifier only and will affect the milliammeter only as permitted by the amplifier.

2,460,689

BORING HEAD

Howard C. Gillette, Gates, N. Y.

Application April 11, 1945, Serial No. 587,709
7 Claims. (Cl. 279—6)



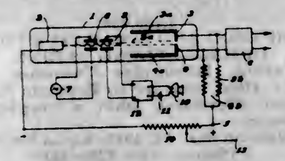
2. A boring head for use with a machine tool, including a shank for attachment to the machine tool, a plate attached to said shank, said plate being of disk-like form and having an approximately circular outline substantially concentric with said shank, a pivot mounted on said plate adjacent one edge thereof, a carrier mounted on said pivot to oscillate thereon and extending in an approximately diametrical direction from said pivot across said plate, a socket at an intermediate point of said carrier for receiving a boring tool, and means mounted on said plate and cooperating with said carrier near the end thereof remote from said pivot, for adjusting the position of said carrier relatively to said plate to adjust the eccentricity of a boring tool mounted on said carrier with respect to the axis of said shank.

2,460,690

MODULATOR

Paul Glass, Chicago, Ill., assignor to Askania Regulator Company, a corporation of Illinois

Application November 14, 1946, Serial No. 709,741
3 Claims. (Cl. 332—13)



1. In combination, an electron tube including means for establishing an electron beam along a given axis, a pair of anodes arranged on opposite sides of said axis, an output circuit connected to said anodes in push-pull relation, a

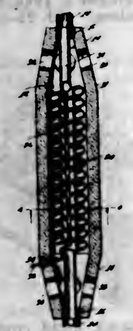
deflecting system arranged to deflect said beam in the plane of said anodes, a source of alternating current of fixed frequency, means for energizing said deflection system from said source to alternately deflect the beam from one anode to another at the frequency of said source and at a constant amplitude, a second deflection system arranged to deflect said beam in the plane of said anodes, and a source of signal current for energizing said second deflecting system to shift the mean position of said beam to one side or the other of said axis in the plane of said anodes, and said anodes having a dimension in the direction of deflection of said beam relatively large with respect to the transverse dimension of said beam in the same direction.

2,460,691

HOT-WATER HEATING UNIT

George M. Godshall, Leonardo, N. J.

Application April 23, 1946, Serial No. 664,376
1 Claim. (Cl. 219—39)



A device of the character described, comprising a hexagonal shaped housing formed of refractory brick, a complementary shaped chamber in said housing, a hexagonal shaped coil in said housing, inlet and outlet pipes connected to said housing and to said coil, electrical heating means mounted in said housing intermediate of said coil, a support in said housing for mounting said heating means thereon, tapered ends on said housing and diametrical apertures in said tapered ends to admit air into said housing.

2,460,692

POLYMERIZATION OF RESIN OILS WITH MIXED CLAY AND ORGANIC ACID CATALYST

David F. Gould, Riverton, N. J., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York

No Drawing. Application June 24, 1943, Serial No. 492,121
6 Claims. (Cl. 260—81)

1. A process for producing resins from resin oils selected from the group consisting of oils obtained from coal tar, water-gas tar, oil-gas tar, drip oil, coke-oven distillates and cracked and reformed petroleum distillates, the polymerizable constituents of which consist predominantly of at least one of the compounds selected from the group consisting of coumarone, indene, styrene, and their homologs, which comprises contacting the oil with an effective amount up to 15% of an unactivated adsorbent clay, containing between 12% and 27% alumina and between 54% and 63% silica, and an effective amount up to 4% of an acid selected from the group consisting of formic and oxalic acids based on the weight of the oil at a temperature between 80° and 120° C.

2,460,693

SEQUENCE CONTROL MECHANISM

Edward L. Hall, Los Angeles, Calif., assignor to North American Aviation, Inc.

Application May 12, 1947, Serial No. 747,772
3 Claims. (Cl. 74—471)

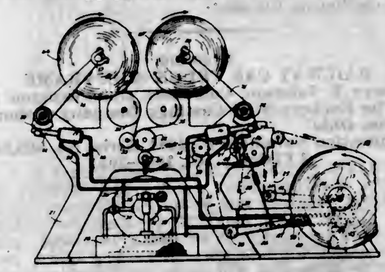
1. A combined lost motion and sequence device comprising a supporting member, a first long curved guide slot associated with said supporting member, a shorter second curved guide slot associated with said member spaced from and diverging with respect to said first guide slot, a control member having a terminal guided for movement within said first guide slot, an operating member having a terminal guided for movement within said second guide slot, and link means interconnecting the said terminals of said control and operating members, the curvature and relationship of said guide slots arranged in such manner as to positively transmit forces from said control to said operating member during an initial portion only of said guided terminal movement and for the remaining portion of said guided terminal movement said control forces are overridden by rotation of said link means and said forces are not transmitted to said operating members.

2,460,694

WEB TENSIONING AND PRESSURE MECHANISM

Henry L. Haswell, Brevard, N. C., assignor, by mesne assignments, to Ecusta Paper Corporation, Pisgah Forest, N. C., a corporation of Delaware

Application August 8, 1945, Serial No. 609,638
16 Claims. (Cl. 242—75)



1. In a slitting or rewinding machine having a supply roll and at least one rewind roll and a winding drum to drive said roll, means for passing a continuous web from the supply roll and between the drum and said rewind roll, the combination of hydraulically controlled pressure mechanism for regulating the tension of the web running from the supply roll and for maintaining constant pressure between the rewind roll and said drum, the rewinding roll resting upon the

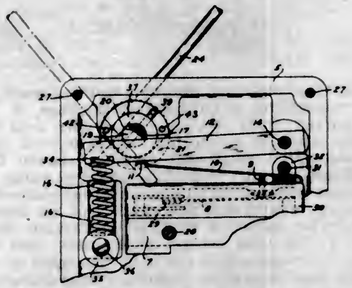
2,460,699

2,460,701

ROD OR PIPE CLAMP

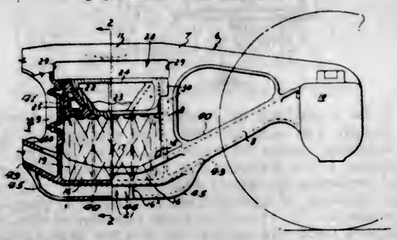
winding drum and being maintained in positive pressure contact therewith by said hydraulically controlled mechanism, the pressure control mechanisms for regulating the tension of the web and for maintaining the pressure on the rewind roll being interconnected as component parts of a single hydraulic system.

2,460,695
SENSITIVE SWITCH ACTUATOR
Mark M. Hennessy, Milwaukee, Wis., assignor to Durant Manufacturing Co., Milwaukee, Wis., a corporation of Wisconsin
Application August 31, 1946, Serial No. 694,224
4 Claims. (Cl. 74—96)



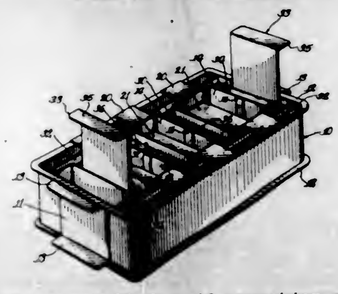
1. A switch actuator comprising, a switch housing casing, a rigid lever pivotally suspended within said casing in spaced relation to the switch, a leaf spring interposed between said lever and the actuating plunger of the switch, the free end of said spring remote from said plunger slidably engaging one side of the swinging end of said lever, an oscillatory shaft journalled in said casing transversely of said lever and having a transverse recess provided with a flat elongated bottom surface facing and cooperable with the opposite side of the swinging end of said lever to position the latter in neutral position, said recess being of greater depth than the length of the adjacent radius of the shaft, a stiffer second spring confined within said casing and coacting with said lever to constantly urge the same toward said shaft and recess bottom, and an arm projecting laterally of said shaft externally of said casing for oscillating the shaft.

2,460,696
RAILWAY CAR TRUCK SIDE FRAME
George T. Johnson, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio
Application November 27, 1944, Serial No. 565,241
3 Claims. (Cl. 105—205)



1. A railway car truck truss type side frame including a tension member provided intermediate its ends with a spring seat, a compression member, and spaced bolster guide columns connecting the tension and compression members, each column having a web with a substantially vertical lower portion merging with the spring seat, the tension member having a web at the top thereof inclined downwardly from the end portions of the side frame and merging with said vertical portions of the column webs above said seat, said spring seat extending in opposite directions beneath the column webs, diverging upwardly toward the ends of the side frame and terminating between the columns and the ends of the side frame, the bottom of the medial portion of the compression member being spaced a sufficient distance above the spring seat to accommodate upward and downward movement of a bolster end resting on long travel springs.

2,460,697
CONCRETE BLOCK MOLD
Lawrence F. Kreger, Chicago, Ill.
Application September 5, 1946, Serial No. 694,870
5 Claims. (Cl. 25—119)

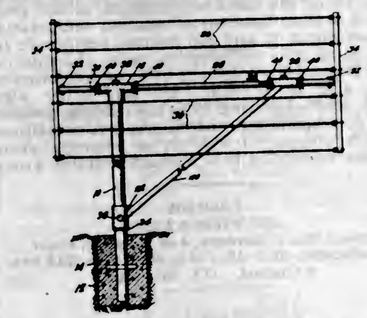


1. A concrete block mold comprising a rectilinear mold frame, a plurality of cores located within said frame in spaced relation thereto, straps for holding said cores in place and bridging the space between the cores and the frame, an ejector plate movable in said space and limited for movement in one direction by said straps, and means on said ejector plate for engaging said straps to effect such limitation of movement of the plate and having a relatively small area of engagement with the straps to prevent concrete spilled on said straps from interfering with movement of the plate.

2,460,698
CANDY CHEWING GUM
Eric G. Lindhe, Hastings on Hudson, N. Y., assignor to Sweets Laboratories, Inc., New York, N. Y., a corporation of New York
No Drawing. Application March 7, 1946, Serial No. 652,798
10 Claims. (Cl. 99—135)

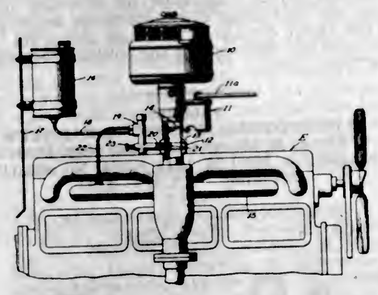
1. A hard-candy-like chewing gum stabilized against oxidative deterioration having a uniform homogeneous hard - candy - like appearance throughout its interior inside of its surface and having a tendency to crunch and fracture like hard candy and consisting of a uniform homogeneous dispersion of substantially dehydrated sugar as an exterior phase and chewing gum base dispersed therethrough as an interior phase, said chewing gum base being invisible to the eye along the fractures, said gum gradually being converted from hard candy texture to chewing gum texture and forming an elastic cud when retained in the mouth and chewed.

2,460,699
CLOTHESLINE POLE
Chester Clay Long, Los Angeles, Calif., assignor of one-half to Ballinger Mills, Jr., Galveston, Tex.
Application December 2, 1946, Serial No. 713,586
17 Claims. (Cl. 211—119.16)



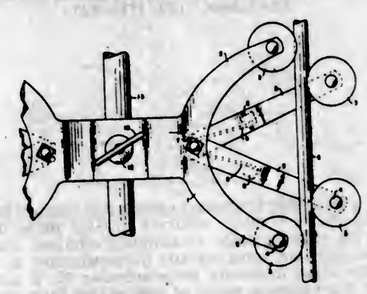
5. A clothesline support comprising a vertical leg, a brace rotatably received thereon, a bearing on said leg and a bearing on the end of said brace, a shaft received in said bearings, first means for locking said shaft in selective positions, means for locking said brace in selected positions relative to said leg, anchoring means secured to said leg, a pair of transverse cross-members removably secured to the ends of said shaft, having clotheslines secured therebetween, said first means including apertures in said shafts and bearings, and studs received therein, said means including a removable locking pin extending through openings in said brace and said leg.

2,460,700
METHOD OF OPERATING AN INTERNAL-COMBUSTION ENGINE
Willard E. Lyons, deceased, late of Chicago, Ill., by John T. Dempsey, administrator, Chicago, Ill., assignor to Leo Corporation, Chicago, Ill., a corporation of Illinois
Application July 1, 1947, Serial No. 758,469
11 Claims. (Cl. 123—1)



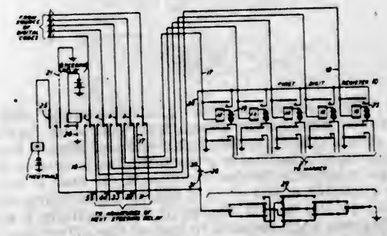
1. The method of creating and maintaining combustion-improving catalytic deposits in the combustion chamber of an internal combustion engine, which comprises introducing into the combustion chamber during operation of the engine an aqueous type internal coolant liquid containing a small but effective quantity of a dispersed compound of a catalytic metal.

2,460,701
ROD OR PIPE CLAMP
Celso L. Malaspina, Tuckahoe, N. Y., now by judicial change of name Charles Louis Marshall
Application July 12, 1946, Serial No. 683,106
5 Claims. (Cl. 24—254)



1. A holder comprising a yoke-shaped member having upper and lower arms, with grooved wheels at the ends thereof, movable arms pivoted to said yoke between the arms thereof, each of said movable arms being associated with one of the arms of the yoke and projecting beyond same, the movable arms each carrying a wheel at the outer end in position to cooperate with one of the first named wheels, and means engaging said movable arms for normally holding same in position to grip a vessel between the wheels thereon and the wheels on the fixed arms.

2,460,702
REGISTRATION SYSTEM
Paul Mallery, Murray Hill, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 30, 1948, Serial No. 5,467
6 Claims. (Cl. 177—353)

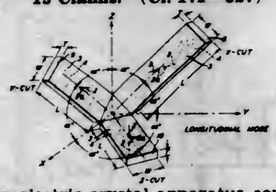


1. A registration system comprising a plurality of register relays, each relay provided with a single energizing winding and contacts, signaling means effective to energize momentarily and simultaneously a desired group of said windings, one group per registration and consisting of at least one winding, indicating means for indicating whether said desired group of windings has been energized, circuit means including contacts of said relays for controlling said indicating means, said contact inclusive means adapted to effect continued energization of said group of windings when said signaling means ceases to energize same, and circuit means for preventing said signaling means from controlling directly said indicating means.

potential, high frequency electricity; a high ca-

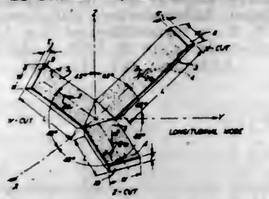
2,460,711
POTTING APPARATUS

2,460,703
PIEZOELECTRIC CRYSTAL APPARATUS
Warren P. Mason, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 5, 1946, Serial No. 659,679
13 Claims. (Cl. 171—327)



1. Piezoelectric crystal apparatus comprising a piezoelectric sodium chlorate crystal plate having its substantially rectangular-shaped major faces disposed substantially perpendicular to one of the three mutually perpendicular X, Y and Z axes, the opposite edges of said major faces being disposed at one of the angles of substantially 0 and 45 degrees with respect to one of the other two of said three mutually perpendicular X, Y and Z axes, and means comprising electrodes disposed adjacent said major faces for operating said crystal plate in a face mode of motion at a frequency which varies in substantially uniform linear relation with respect to the value of ambient temperature applied thereto.

2,460,704
PIEZOELECTRIC CRYSTAL APPARATUS
Warren P. Mason, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 5, 1946, Serial No. 659,680
13 Claims. (Cl. 171—327)

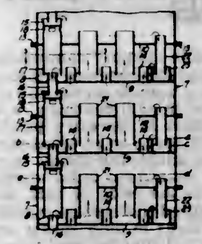


1. Piezoelectric crystal apparatus comprising a piezoelectric sodium bromate crystal plate having its substantially rectangular-shaped major faces disposed substantially perpendicular to one of the three mutually perpendicular X, Y and Z axes, the opposite edges of said major faces being disposed at one of the angles of substantially 0 and 45 degrees with respect to one of the other two of said three mutually perpendicular X, Y and Z axes, and means comprising electrodes disposed adjacent said major faces for operating said crystal plate in a face mode of motion at a frequency which varies in substantially linear relation with respect to the value of ambient temperature applied thereto.

2,460,705
CHLORINOLYSIS
Earl T. McBee and Ogden R. Pierce, La Fayette, Ind., assignors to Purdue Research Foundation, La Fayette, Ind., a corporation of Indiana
No Drawing. Application July 18, 1946, Serial No. 684,533
7 Claims. (Cl. 204—163)

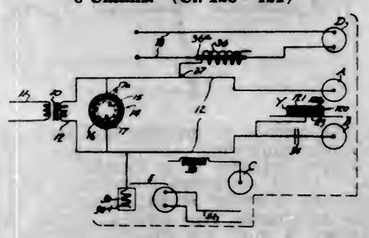
1. In a method for the conversion of an isopropyl group on an aromatic ring containing from one to three alkyl substituents, each substituent containing from one to five carbon atoms inclusive, at least one of which is the isopropyl group, to a pentachloroethyl group, the step of reacting the aromatic compound together with chlorine, the total amount of chlorine being in excess of that theoretically required to perchlorinate all of the alkyl substituents, in the presence of actinic light, at a reaction temperature between about 20 and 200 degrees centigrade for a period of time sufficient to cause chlorinolysis of the isopropyl substituent to a pentachloroethyl group and to perchlorinate any other alkyl groups, and separating from the reaction product the corresponding perchloroalkyl-substituted aromatic compound wherein an isopropyl group has been converted to a pentachloroethyl group.

2,460,706
RECTIFICATION
Ernest Kurt Metzner, Los Angeles, Calif.
Application May 19, 1947, Serial No. 749,045
8 Claims. (Cl. 261—108)



1. In a rectification column, a second plate and a first plate parallel to and immediately below said second plate, said second plate having a plurality of boiling tubes extending from a first elevation above one side of said second plate and terminating adjacent to but spaced from the first plate, a first liquid drain tube extending from above the second plate for discharging liquid onto said first plate, a vapor tube supported in the first plate for discharging vapor from below said first plate to between the second and first plates at an elevation above the level of liquid normally standing on said first plate, and a second liquid drain tube for draining liquid from the first plate at an elevation below that of the vapor discharge tube and above the elevation of the lower end of the boiling tubes above said first plate.

2,460,707
ELECTROTHERAPEUTIC APPARATUS
Thomas H. Moray, Salt Lake City, Utah
Application April 30, 1943, Serial No. 485,112
8 Claims. (Cl. 128—421)

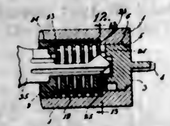


1. Apparatus for applying radiant energy therapeutically, comprising means for producing high potential, high frequency electricity; a high capacity sparking condenser; and a treatment electrode connected in circuit with the foregoing, said treatment electrode including a discharge element adapted to charge the patient with said high potential, high frequency electricity, and radioactive means adapted to discharge radioactive emanations into said charged patient.

2,460,708
PROCESS FOR MAKING ACETAMIDO DIMETHYLACRYLIC ACID
Ralph Mozingo, Elizabeth, and Karl Folkers, Plainfield, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application March 22, 1946, Serial No. 656,510
1 Claim. (Cl. 260—534)

The process which comprises reacting α-amino-β-methoxyisovaleric acid with a mixture comprising aqueous sodium acetate and acetic anhydride to produce α - acetamido - β,β - dimethylacrylic acid.

2,460,709
LOCK MECHANISM
Eugene M. Navarro, New York, N. Y.
Application February 25, 1947, Serial No. 730,765
2 Claims. (Cl. 70—369)

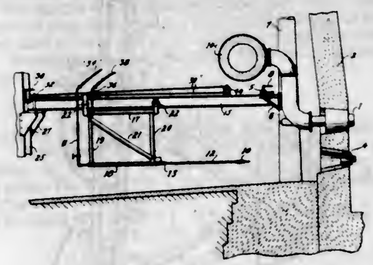


1. A lock comprising a casing having separated longitudinal ribs therein, a barrel therein having tumblers to project between some of said ribs and engage the casing and prevent rotation of the barrel till said tumblers are retracted, the casing having a circular slot on its interior adjacent the inner ends of said ribs, and an additional tumbler to engage the slot to permit the barrel to be turned in the casing while holding it against withdrawal therefrom, all of said ribs being united at their inner ends to provide one wall of said slot, the latter having an entrance opening between two of said ribs, which are bevelled at their forward ends, and a rotatable plug in said casing on the other side of said slot, said plug having a cavity and a transverse recess and the inner end of said barrel a stud and a projection to enter same respectively, the plug also having a circular groove and the casing a stop entering the groove to allow limited rotation of the plug.

2,460,710
FUNGICIDAL PREPARATIONS
Kenneth G. Nolan, South Norwalk, Russell L. Morgan, Old Greenwich, and John H. Fletcher, Riverside, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application January 31, 1947, Serial No. 725,742
6 Claims. (Cl. 99—154)

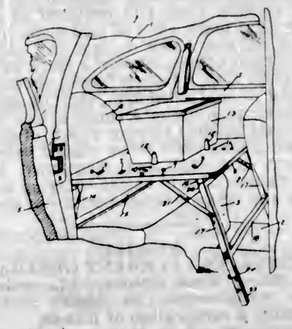
1. A method of controlling organisms which cause decay of citrus fruits which includes applying to said fruit a toxic quantity of a water soluble compound selected from the group consisting of 2-aminopyridine and its salts of acids.

2,460,711
BOTTING APPARATUS
Martin O'Hare, Donora, Pa., assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application July 31, 1946, Serial No. 687,268
6 Claims. (Cl. 266—42)



1. In a botting apparatus for controlling flow through a discharge opening such as the cinder notch of a blast furnace, including a beam extending outwardly from the opening at a level thereabove, the improvement comprising a trolley reciprocable along said beam, said trolley being composed of tubular members, a tubular bott rod extending from said trolley and communicating with the interior of one of the tubular members thereof and coolant-liquid connections extending to said trolley.

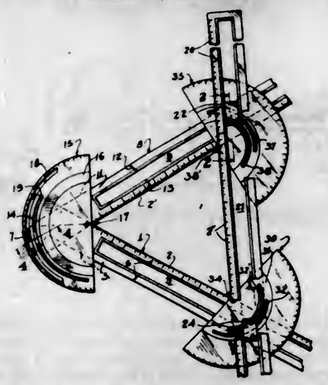
2,460,712
COLLAPSIBLE CASKET TABLE FOR AUTOMOBILES
Russell G. Peterson, Minneapolis, Minn.
Application December 21, 1946, Serial No. 717,753
1 Claim. (Cl. 311—21)



In a device of the class described, a casket-receiving top, a pair of relatively long supporting legs hingedly secured to the lower surface of said top adjacent one longitudinal edge thereof and adapted to engage the floor of a vehicle adjacent an upstanding seat, said legs being longitudinally extensible and contractible, and a pair of relatively short legs hingedly secured to the lower surface of said top adjacent the opposite longitudinal edge thereof and adapted to rest upon said seat, said shorter legs being connected at their bases by an enlarged seat-engaging brace member.

comprising two longitudinal strips disposed edge

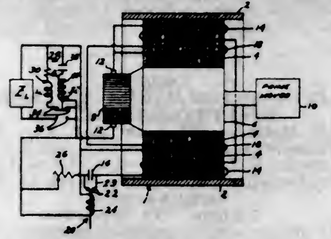
2,460,713
GEOMETRICAL MEASURING AND DRAFTING INSTRUMENT
Ewell Richardson, Los Angeles, Calif.
Application February 10, 1948, Serial No. 7,398
4 Claims. (Cl. 33—98)



4. A geometrical instrument comprising a protractor plate, a protractor scale on said plate, a zero mark on said protractor scale, a pair of concentric arcuate slots, an arm, an arcuate flange on said arm, of curvature similar to the curvature of one of said slots and slidably positioned in said slot, a second arm, a second arcuate flange on said second arm, of curvature similar to the other of said slots and slidably positioned in said other slot, each of said arms having a ruled straight edge along opposed longitudinal faces of said arms, said edges intersecting at said zero mark, said plate also having a circular edge centered at said zero mark, each of said arms being chamfered to form an arcuate chamfer of radius of curvature substantially equal to the curvature of said circular edge and centered at said zero mark on said plate, each of said arms containing a slot, a slidable block in said slot, an arcuate ridge on each of said blocks, a third arm, a slot in said third arm, a pair of blocks slidably placed in the slot in said third arm, each of said pair of blocks having an arcuate ridge, a pair of plates, each of said plates carrying a pair of concentric slots, said plates each being placed between the third arm and said first mentioned arm, the arcuate flanges of said blocks entering said arcuate slots and being slidably positioned therein.

2,460,714
ALTERNATING CURRENT GENERATOR
Carl S. Roys, West Chicago, Ill., assignor, by mesne assignments, to Nader Engineering Company, a corporation of Illinois
Application March 29, 1946, Serial No. 658,061
8 Claims. (Cl. 171—209)

8. In combination, a self-excited, commutator type generator having an exciting field winding, a capacitive reactance connected in series relation with said field winding, a primary load for said generator, a dummy load conducting D. C. current, a selector relay responsive only to A. C. voltage arranged to be energized by the generated voltage of said generator, said relay having one set of normally closed contacts connecting said dummy load across the terminals of said generator and another set of normally open contacts connecting said primary load across the terminals of said generator, whereby said primary load is supplied by said generator only when operating as an A. C. generator, means providing a direct current conducting path in shunt to said capacitive reactance, whereby said generator builds up as a direct current generator and

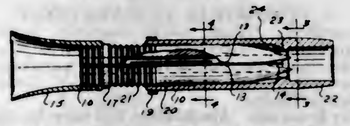


supplies said dummy load, and means for opening said direct current conducting path in response to the voltage generated by said generator, whereby said generator is converted to A. C. generation and supplies said primary load.

2,460,715
BRASSIÈRE
Henry Schoebel, West Hempstead, N. Y., assignor to Model Brassiere Corp., Brooklyn, N. Y., a corporation of New York
Application June 20, 1947, Serial No. 755,839
2 Claims. (Cl. 2—42)

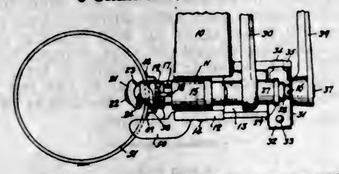
1. A brassière comprising a body encircling band having breast receiving pockets thereon, a preformed segment patterned to shape the contour of each of said breast receiving pockets, adhesive means for attaching said segments to said breast receiving pockets and a flexible strip adapted to maintain said contours of said segments whereby said breast receiving pockets are held in position on the breasts, said flexible strip extending throughout the bottom edge of each of said segments and being secured to the edges of said body encircling band.

2,460,716
BIRD CALL
Robert G. Shurley, Money, Miss.
Application November 8, 1946, Serial No. 708,663
2 Claims. (Cl. 46—180)



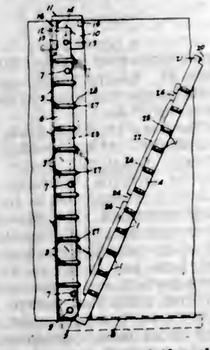
1. A bird call comprising substantially semi-cylindrical tongues having longitudinal grooves to form a bore and inner opposed longitudinal edges, the rear portions of the edges diverging rearwardly, a reed held between the opposed edges, a horn secured to the front end of the tongues, a sleeve receiving the tongues and having screw-threaded engagement therewith, said sleeve being provided near its rear end with an internal flange, and ribs secured to the rear ends of the tongues and extending longitudinally thereof and having rearwardly converging edges engaging within the flange, so that rotation of the sleeve in one direction moves the rear portions of the tongues closer together while rotation in the opposite direction moves said rear portions further apart whereby the pitch of the call may be varied

2,460,717
CAN OPENER
Courtland N. Smith, Jr., Colonia, N. J., assignor to The Regina Corporation, Rahway, N. J., a corporation of New Jersey
Application February 16, 1945, Serial No. 578,232
6 Claims. (Cl. 30—9)



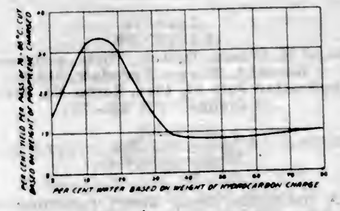
2. A can opener including a frame, a revolvable cutter, a can feeding means comprising a propelling wheel engaging the exterior of the can to propel the same in relation to the cutter, said revolvable cutter having a substantially horizontal part engaging the top of the can rim while the propelling wheel is rotated and is in frictional engagement with the bottom of the can rim, a guide extension on said frame below said can propelling wheel, and a guide element for positioning the can in the opener, comprising a flat spring metal body mounted rearwardly of the can propelling wheel and beneath the revolvable cutter and having a pair of forwardly extending wing elements disposed before and behind the point of cutting of said cutter, the lower edge of said spring metal body being seated upon said extension from the can opener body.

2,460,718
LOOSE-LEAF BINDER
Clifford Brooks Stevens, Milwaukee, Wis., assignor to The Heinn Company, Milwaukee, Wis., a corporation of Wisconsin
Application October 11, 1943, Serial No. 505,717
8 Claims. (Cl. 129—10)



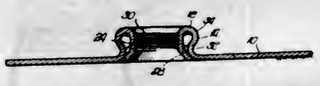
1. In a loose leaf binder of the class described, a base of uniform thickness and width throughout comprising two longitudinal strips disposed edge to edge, a pivotal connection at one end for securing said strips together and providing for lateral separation of the same at the opposite end, a slide of a width substantially the same as the strips at the laterally separable end of said strips for laterally locking the same in closed position with the strips being recessed beneath their ends to receive the slide, said slide underlying the recessed end of the strips to maintain the uniform base dimensions and protect the lock against injury.

2,460,719
PROCESS OF ALKYLATION IN THE PRESENCE OF WATER AS CATALYST
William A. Stover, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application December 1, 1945, Serial No. 632,211
6 Claims. (Cl. 260—683.4)



2. The process of manufacturing a high-octane motor fuel, which comprises contacting an alkylatable normally gaseous isoparaffinic hydrocarbon with a normally gaseous olefinic hydrocarbon containing at least three carbon atoms, in a gaseous phase and in a reaction zone under alkylating conditions including a temperature varying between about 700° F. and about 850° F. and a pressure of at least 500 pounds per square inch, in the presence of a catalyst comprising essentially water in amounts of up to about 30% by weight based on the hydrocarbon charge, and maintaining said alkylatable normally gaseous isoparaffinic hydrocarbon in excess over said normally gaseous olefinic hydrocarbon in said reaction zone, so that alkylation is the principal reaction.

2,460,720
THREADED OPENING
Roy J. Thompson, Gary, Ind., assignor to Inland Steel Company, Chicago, Ill., a corporation of Delaware
Application July 7, 1945, Serial No. 603,682
3 Claims. (Cl. 285—49)



1. A bung comprising a flat base member, a circular wall extending substantially normal to said base member, said wall having a rounded rim merging into a flange extending toward the article, said flange terminating in a reflanged portion flaring from the flange toward and contacting the base member at the base of the wall,

2,460,721

thereby establishing an electrical quantity in ac-

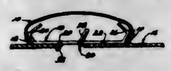
2,460,724

apart alignment and two strips extending di-

2,460,721
METHOD OF FORMING BUNGS IN METALLIC PLATES
Roy J. Thompson, Gary, Ind., assignor to Inland Steel Company, Chicago, Ill., a corporation of Delaware
Original application July 7, 1945, Serial No. 603,682. Divided and this application May 3, 1947, Serial No. 745,881
3 Claims. (Cl. 29—148.2)

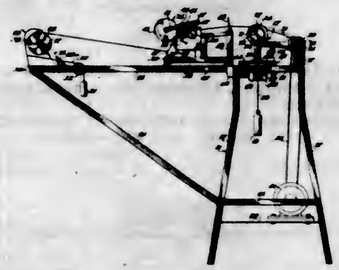
1. The method of forming an opening member in a plate or the like comprising, forming a circular recess having a wall extending from the plate, the wall being closed by an end portion, dishing and punching such end wall to form a reentrant flange and annular recess, reflanging such flange at its end, and closing said recess in said wall.

2,460,722
FASTENER
David H. Waara, Detroit, Mich., assignor to Robert L. Brown, Ferndale, Mich.
Application July 17, 1946, Serial No. 684,226
2 Claims. (Cl. 24—73)



2. A malleable sheet metal fastening device comprising a base, a downwardly and outwardly extending stationary arm depending from said base, a second arm extending above and below said base, said second arm being joined to said base by malleable means intermediate the ends of said arm whereby it is adapted to be bent to project its lower portion in a direction opposite to the direction of said first named arm to form a positive locking means.

2,460,723
LINE MEASURING AND REELING DEVICE
Max Weesner, Cincinnati, Ohio, assignor to The Weesner Bait Company, Cincinnati, Ohio, a corporation of Ohio
Application July 3, 1945, Serial No. 602,992
7 Claims. (Cl. 242—85.5)

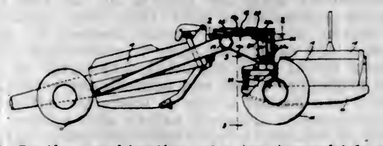


1. A machine for producing coils of line, comprising, a line measuring device, a series of spools for receiving the line and control means for directing the line onto successive spools, said control means being actuated from said measuring device for shifting the line to the next successive spool when a measured amount of line has passed through the device.

2,460,724
RESINOUS REACTION PRODUCTS
Harry L. Allen, Philadelphia, Pa., and Earl G. Kerr, Haddenfield, N. J., assignors to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York
No Drawing. Application October 31, 1945, Serial No. 625,958
13 Claims. (Cl. 260—43)

1. A process for producing thermoplastic resins which comprises heating together at a temperature between 65° and 102° C. an oil containing as its major polymerizable constituent at least one polymerizable material of the group consisting of coumarone, indene and their homologs boiling below 210° C.; a phenolic reagent of the group consisting of phenol, mixtures thereof with minor proportions of cresols and mixtures thereof with minor proportions of xylenols; and 0.70 to 0.95 mol of formaldehyde for each mol of phenolic reagent and total polymerizable material, in the presence of an acid catalyst of the group consisting of sulfuric acid, phosphoric acid and hydrochloric acid, the weight of total polymerizable material being equal to not less than 10% nor more than 100% of the weight of said phenolic reagent in the mixture.

2,460,725
SPRINGING ARRANGEMENT FOR TRACTOR-TRAILERS
George E. Armington, South Euclid, Ohio, assignor to The Euclid Road Machinery Co., Euclid, Ohio, a corporation of Ohio
Application May 2, 1946, Serial No. 666,650
17 Claims. (Cl. 280—33)

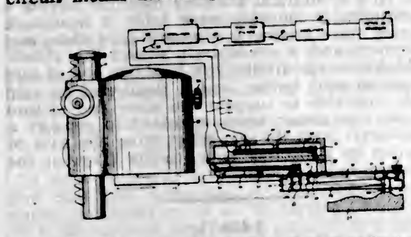


1. In the combination of a tractor vehicle and a trailer vehicle drawn thereby, hitch means connecting said vehicles and including horizontally disposed pivot means extending crosswise of said tractor vehicle, said vehicles being oscillatable about said pivot means, spring means mounted between said vehicles on one side of said pivot means only and adapted to be loaded by said vehicle oscillation, and dashpot means operatively connected with said spring means for controlling the unloading action of the latter.

2,460,726
SURFACE ROUGHNESS MEASURING DEVICE
John P. Arndt, Jr., Euclid, Ohio, assignor to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio
Application January 11, 1943, Serial No. 471,967
1 Claim. (Cl. 73—105)

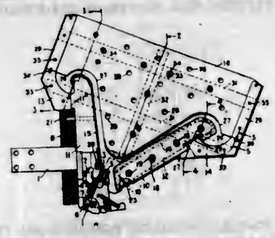
In a roughness measuring device for use on a specimen having surface waviness and surface roughness; an arm; motor means for driving said arm across said specimen; first piezoelectric crystal generator means mounted on said arm; a first stylus having a tip small enough to follow surface waviness and too large to follow surface roughness; first lever means connecting said first stylus to said first generator means for applying to said first generator means motions of small amplitude and large force compared to the motions and force applied to said first stylus as said first stylus is moved across said specimen

thereby establishing an electrical quantity in accordance with the waviness induced vertical excursions of said first stylus; second piezoelectric crystal generator means similar to said first generator means mounted on said arm; a second stylus having a smaller tip able to follow the surface roughness as well as the surface waviness, said second stylus being located on said specimen near said first stylus; second lever means connecting said second stylus to said second generator means for applying to said second generator means motions of small amplitude and large force compared to the motions and force applied to said second stylus as said second stylus is moved across said specimen thereby establishing an electrical quantity in accordance with the waviness and roughness induced vertical excursions of said second stylus, the electrical quantity established in accordance with waviness induced vertical excursions of said second stylus being substantially equal in magnitude to and substantially in phase with the electrical quantity established in accordance with the waviness induced vertical excursions of said first stylus; indicator circuit means including an indicator; first electrical connection means connecting said first generator means to said indicator circuit means for giving on said indicator an indication of surface waviness; second electrical connection means including switch means which upon being closed selectively connect said second generator means to said indicator circuit means simultaneously with said first generator means so that the electrical quantity from said first generator means is substantially 180 degrees out of phase with and substantially cancels the portion of the electrical quantity representing surface waviness from said second generator means whereby there is given on said indicator an indication of surface roughness; speed control means for controlling the speed at which said first and second stylii are driven across said specimen by said motor means whereby when said first generator means alone is connected to said indicator circuit means the speed at which said first stylus is driven across said specimen may be increased; and lifter means connected to said arm for lifting said second stylus up off of said specimen and maintaining said second stylus in said lifted position in order that its tip will not be damaged while said first stylus traces the specimen at high speeds.



2,460,727
ARC EXTINGUISHING DEVICE
Winfield A. Atwood, Yeadon, and Eugene W. Boehne, Drexel Hill, Pa., assignors to General Electric Company, a corporation of New York
Application October 8, 1945, Serial No. 621,064
2 Claims. (Cl. 200—144)

1. In an arc extinguishing device, two insulating plates forming an arc lengthening chute, insulating side walls between said plates comprising two hook-shaped elements in reverse spaced-apart alignment and two strips extending divergently outward from the arc initiating portion of the chute toward the discharge portion thereof and into abutting engagement with the inwardly curved ends of said hook-shaped elements with the ends of the strips projecting therebeyond in the chute to form therein recidivous arcing pockets open toward the discharge portion of the chute, and two divergent arc runners in said compartment respectively mounted on said strips, each of said arc runners having an outwardly hooked end curved around the projecting end of the mounting strip therefore into the recidivous arcing pocket therebehind.



2,460,728
COMBINATION TIE CLASP AND CHAMBERED HOLDER
Joseph Averna, Brooklyn, N. Y.
Application January 23, 1948, Serial No. 3,967
2 Claims. (Cl. 24—11)

1. A connecting means for securely fixing against movement the tail of a clip extending into a cylindrical chambered holder through an opening in the side wall of the chambered holder open at one end, said connecting means having a cylindrical plug extending into the open end of the holder and having a snug fit therein, said plug having a head forming an abutment or limiting stop to engage the open end of the holder, the inner end of said plug disposed adjacent to, but just clear of, the opening in the side wall of the chamber, said inner end of the plug being plane and extending perpendicular to the inner face of the holder and the full distance transversely from one side to the other of the inner face of the holder, means for anchoring the tail against movement laterally relative to said plug, and prongs extending from said inner end with a space between the same to receive the tail of the clip between them and anchor the tail against rotation relative to said plug, the prongs being clinched over the tail and anchoring the tail securely against the plane surface of the inner end of the plug.

2,460,729
COMMUTATOR MACHINE CONTROL
Frederick W. Baumann, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application August 23, 1947, Serial No. 770,243
9 Claims. (Cl. 318—244)

1. An alternating-current dynamoelectric machine having a stator and a rotor, a winding on said stator adapted by connection to a line to

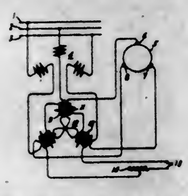
act as a power winding, a commutated winding

2,460,731
CRANKPIN GRINDING APPARATUS

thereto, said body supporting member including

2,460,736
LINT REMOVAL MEANS FOR BOBBIN WINDING MACHINES

act as a power winding, a commutated winding on said rotor, brushes contacting the commutator of said commutated rotor winding, a saturable core device comprising at least two windings arranged about a common magnetic core, means including an adjustable supply of direct current connected to one of said device windings for adjustably varying the degree of saturation of said

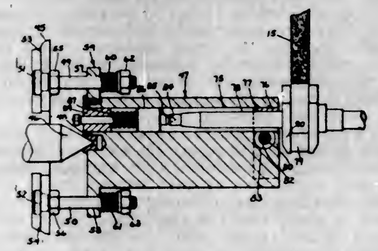


core, and means including connections from said commutator brushes to the other of said device windings for closing the circuit of said rotor winding and for varying the impedance in the external circuit of said rotor winding, whereby adjustment of said direct current supply may be made to affect the operating characteristics of said dynamoelectric machine.

2,460,730
CIGARETTE CONTAINER
David H. Bell, Overland, Mo.
Application March 19, 1948, Serial No. 15,870
1 Claim. (Cl. 312—73)

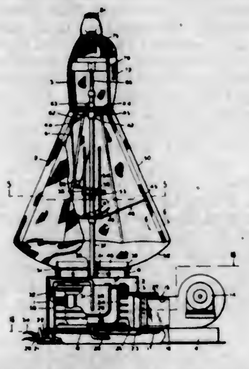
In a cigarette container, a body including an upper flared portion constructed of substantially rigid material, a disc secured to the body in vertical spaced relation with the upper flared portion providing the bottom of the container, an annular flange rising from said disc providing a central circular spring chamber, a movable member including a vertical band of a diameter equal to the diameter of the disc, a circular member secured to the outer surface of the band, providing the wall of the container, a ring disposed above the annular flange, arms connecting the ring to the band to move therewith, and an expansible spring resting within the spring chamber, the upper end of the spring being secured to the ring, said spring normally urging the band and movable circular member into engagement with the upper flared portion enclosing the cigarettes held in the container.

2,460,731
CRANKPIN GRINDING APPARATUS
Albert G. Belden and Carl G. Flygare, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application May 21, 1947, Serial No. 749,414
6 Claims. (Cl. 51—72)



1. In a cylindrical grinding machine having a longitudinally movable work table, a headstock on said table having a rotatable face plate and a center, and a crankshaft supporting chuck, yieldable means drivingly to hold one end of said chuck on said center, and a steadyrest on said table rotatably to support the other end of said chuck, said chuck being arranged to support a crankshaft with its axis offset from the axis of rotation by a distance equal to the throw of the crankpin to be ground.

2,460,732
GARMENT FINISHING DEVICE
Robert W. Brenner, Foster, and John R. Petre, Cincinnati, Ohio, assignors to The American Laundry Machinery Company, Cincinnati, Ohio, a corporation of Ohio
Application June 11, 1947, Serial No. 753,950
8 Claims. (Cl. 223—70)



1. Garment finishing apparatus of the character described, comprising a skirt supporting member including a flexible porous lower bag upon which the skirt portion of a garment may be dressed for finishing, a support for said bag, means for supplying a treating fluid under pressure to the space within said bag, and an upper body supporting member separate from the skirt supporting member and separably connected thereto, said body supporting member including foraminous front and back walls shaped to simulate the bosom and back of the torso and spaced apart to provide side openings, and a flexible porous upper bag mounted upon and enclosing said walls.

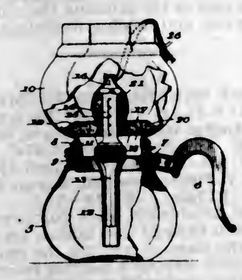
2,460,733
DIAMINO COMPOUND
Herman A. Bruson, Rydal, and Warren D. Niederhauser, Philadelphia, Pa., assignors, by mesne assignments, to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application June 13, 1945, Serial No. 599,302
1 Claim. (Cl. 260—583)

As a new composition of matter, a saturated diamine having the formula $C_{36}H_{74}N_2$, containing two primary amine groups, boiling at 230°–250° C. at 0.01 mm., and being the product obtained by treating dimerized octadecadienonitrile with hydrogen under pressure at 50° to 170° C. in the presence of a hydrogenation catalyst.

2,460,734
ASBESTOS IMPREGNATED WITH TIN OXIDE AND PROCESS OF PRODUCING
Thomas D. Callinan, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
No Drawing. Application October 4, 1944, Serial No. 557,238
2 Claims. (Cl. 117—126)

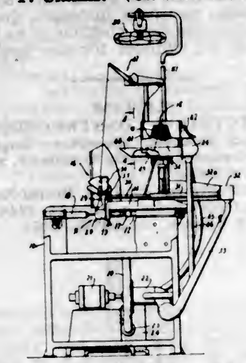
2. The method of improving the tensile strength and dielectric properties of a flexible asbestos paper consisting of 80 to 70 parts asbestos and 20 to 30 parts of clay, which consists in impregnating said paper with an aqueous solution of alpha stannic oxide and heating the impregnated paper to about 60 to 100° C. to convert the alpha oxide to the beta form of the oxide.

2,460,735
COFFEE STEEPING BAG
Katherine Ester Carroll, Prescott, Ariz.
Application December 1, 1947, Serial No. 789,092
6 Claims. (Cl. 99—77.1)



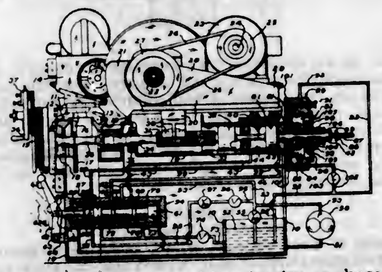
3. An improved coffee steeping bag comprising three discs of porous flexible material stitched together around the center to form a circle, said circle being diametrically slit in a plurality of directions to provide centrally extending flexible flaps adapted to fit closely around the central tube of a percolator, a row of stitching peripherally of the bottom and middle discs to form them into a sack, and a drawstring threaded peripherally through the upper disc to close it over the upper end of the said percolator tube.

2,460,736
LINT REMOVAL MEANS FOR BOBBIN WINDING MACHINES
Russell P. Drake, Caledonia, Ill., assignor to Barber-Colman Company, Rockford, Ill., a corporation of Illinois
Application November 22, 1946, Serial No. 711,782
17 Claims. (Cl. 242—32)



1. In a bobbin winding machine having means rotatably supporting a bobbin to be wound, a support mounted for movement in a direction lengthwise of the bobbin and adjacent thereto, a yarn traversing device mounted on said support, yarn supply means including a support for a yarn mass, and a tensioning device through which a strand of yarn leading from said yarn mass passes into operative association with the traversing device; the combination of lint removing means comprising an upwardly opening hood enclosing the yarn mass laterally thereof, hoods partially enclosing said yarn tensioning device and said yarn traversing device respectively, and an exhaust system connected with the respective hoods and operative to withdraw lint accumulating therein.

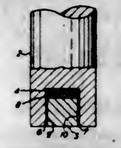
2,460,737
GRINDING WHEEL FEEDING MECHANISM
Carl G. Flygare, Worcester, Mass., and Homer L. Swainey, Shaker Heights, Ohio, assignors to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application August 17, 1945, Serial No. 611,144
4 Claims. (Cl. 51—165)



1. In a grinding machine having a base, a transversely movable grinding wheel slide, a rotatable grinding wheel on said slide, a hydraulic piston and cylinder to move said slide rapidly toward and from an operative position, a dash pot feed regulator including a dash pot piston and cylinder to slow down the rapid approach-

ing movement to a predetermined relatively slow grinding feed, a control valve to control the admission of fluid to and exhaust of fluid from said hydraulic cylinder, and means including a pipe directly connecting the control valve with the dash pot cylinder to admit fluid under pressure directly from the pump to the dash pot cylinder during movement of the wheel slide to an inoperative position positively to return the dash pot piston to an inoperative position so as to rapidly fill the dash pot cylinder for the next grinding operation.

2,460,738
ELECTRODE CONSTRUCTION
Victor James Francis, Wembley, England, assignor to General Electric Company, a corporation of New York
Application February 25, 1947, Serial No. 730,805
In Great Britain June 14, 1946
6 Claims. (Cl. 176—126)



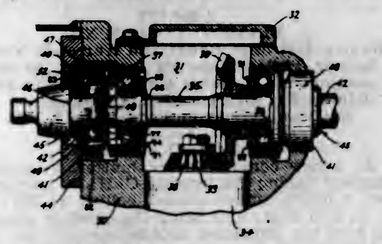
1. In an electrode structure for an electric discharge device of the high pressure type, the combination comprising a body member of refractory metal having at one end thereof a terminal surface, a recess in said terminal surface, activating material in said recess, and a plug inserted in said recess and having a shape different from that of said recess and defining with the wall of said recess a space for the passage of activating material to said terminal surface.

2,460,739
ELECTRODE CONSTRUCTION
Victor James Francis, Wembley, England, assignor to General Electric Company, a corporation of New York
Application February 25, 1947, Serial No. 730,806
In Great Britain April 17, 1946
5 Claims. (Cl. 176—126)

3. In an electrode structure for an electric discharge device of the high pressure type, the combination comprising a rod member of refractory metal, one end of said rod having a recess, activating material in said recess, and a plug in said recess, said end and plug defining a terminal surface constituting a substantial portion of the cross-sectional area of said end.

2,460,740
SEALING MEANS
Jakob R. Frei, Sidney, N. Y., assignor to Bendix Aviation Corporation, New York, N. Y., a corporation of Delaware
Original application February 12, 1942, Serial No. 430,554. Divided and this application October 31, 1944, Serial No. 561,236. In Canada December 4, 1942
4 Claims. (Cl. 308—187.1)

1. In apparatus having a substantially closed compartment and a rotatable shaft extending through the wall thereof, the combination with said shaft and wall of a roller bearing for journalling said shaft in said wall and sealing means for preventing the flow of oil from said compartment along said shaft comprising an oil slinger having fan-like blades attached to said shaft



adjacent one side of said bearing, an annular oil seal surrounding said shaft and having rubbing contact therewith on the other side of said bearing, a member surrounding said shaft between said bearing and annular seal, and a reverse spiral groove on said shaft where said shaft passes through said member in which it has only a running clearance.

2,460,741
RANGE CONNECTOR
Arthur Friedman, Shaker Heights, Ohio, assignor to Patrol Valve Company, Cleveland, Ohio, a corporation of Ohio
Application January 9, 1946, Serial No. 639,931
5 Claims. (Cl. 285—122)

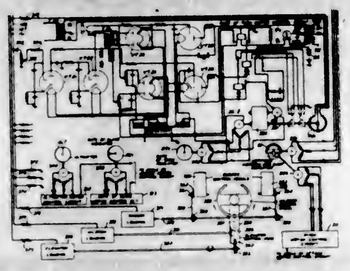
2. A tube coupling comprising in combination a body with a counterbore therein, a sleeve adapted to fit within the tube and with a flange fitting in and against the bottom of said counterbore to form an annular space for receiving the end of a tube, and means for gripping the outer surface of said tube end and holding it against the sleeve.

2,460,742
METHOD OF BREAKING UP FOAMED BLAST FURNACE SLAG AND OTHER SMELTS
Marcel Gallai-Hatchard, Cheam, England
No Drawing. Application June 3, 1947, Serial No. 752,276. In Great Britain April 18, 1946
Section 1, Public Law 690, August 8, 1946
1 Claim. (Cl. 49—77.5)

Method of producing blast furnace slag and other smelts in foamed and broken up condition, comprising the steps of pouring the molten smelt into a container having a bottom constructed of porous material, introducing water through the said bottom so as to have the bottom saturated with water prior to the pouring of the molten smelt which on being poured forms an initially foamed carpet or layer on the said bottom, introducing additional water through the porous bottom to complete the foaming of the smelt, ceasing the water supply, leaving the carpet or layer of foamed smelt to solidify and anneal on the porous bottom and then, while the solidified carpet or layer is still glowing or hot, introducing further water through the porous bottom to cause

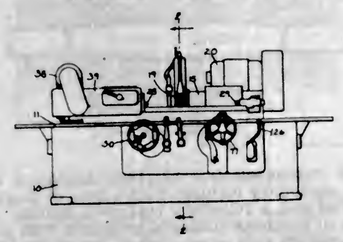
a chilling and sudden contraction of the carpet or layer whereby it will be broken up into pieces of foamed smelt of useful size.

2,460,743
AIRCRAFT PERSONNEL TRAINER
Charles E. Germanton, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 30, 1944, Serial No. 542,982
14 Claims. (Cl. 35—12)



1. In an aircraft trainer, a control member, means for applying a load to said control member in simulation of its operation under actual flight conditions, instruments for indicating different flight conditions, means for operating said instruments, an instructor's desk, motor-driven switching means for variably controlling said instrument operating means and said loading means to simulate the effect on the similar instruments of an aircraft and the effect on the response of the control of an aircraft when rough air conditions are encountered, and means at said desk for controlling said latter means.

2,460,744
CAMSHAFT GRINDING MACHINE
Clarence J. Green, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application June 6, 1947, Serial No. 752,978
5 Claims. (Cl. 51—101)



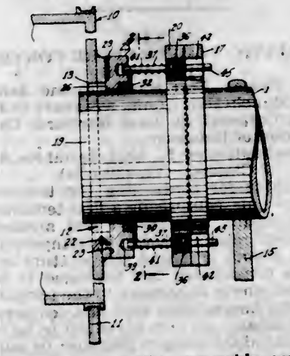
1. In a camshaft grinding machine having a transversely movable rotatable grinding wheel, a longitudinally movable table, a rock bar on said table, a master camshaft rotatably supported on said rock bar, a plurality of spaced master cams and master bearings on said shaft, a headstock and a footstock center on said rock bar in axial alignment with the master camshaft rotatably to support a camshaft having a plurality of spaced cams and bearings to be ground, a slidably mounted rotatable master cam roller on said table, an electric counter actuated by oscillation of the rock bar which is rendered operative when a cam is in an operative grinding position to control the duration of a cam grinding operation, and an electric timer which is rendered operative when a bearing is in an operative grinding position to control the duration of a bearing grinding operation.

2,460,745
PROCESS OF PREPARING N-ALKYLATED COMPOUNDS OF CONDENSED ARYL-PYRROLS
Harry W. Grimmel and Harlan B. Freyermuth, Easton, Pa., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application June 28, 1944, Serial No. 542,628
7 Claims. (Cl. 260—319)

2. The process for producing N-monoalkyl indoles which comprises refluxing an indole containing the hetero grouping

with an aqueous solution of caustic alkali in excess of that theoretically required to form the N-alkali indole and an organic solvent for the indole which is chemically inert in the reaction and which forms an azeotropic mixture with water, until no more water is distilled off, adding a dialkyl sulfate which is non-volatile at the reaction temperature to the reaction mixture, continuing the refluxing under vacuum until no more water is distilled off, and isolating the N-alkyl indole from the reaction mixture.

2,460,746
JOINT CONSTRUCTION
Thomas Guthrie, Albany, Calif., and Gordon R. Evans, Collingswood, N. J., assignors to Allied Chemical & Dye Corporation, a corporation of New York
Application August 6, 1945, Serial No. 609,270
3 Claims. (Cl. 285—10)

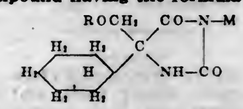


1. A joint construction assembly comprising a pair of adjacent members associated and arranged in substantially spaced-apart and in non-fluid-tight relation and to provide a port thru which fluid may egress or ingress, at least one of said members being rotatable with respect to the other; a bearing ring fixed to and projecting from the outside of one of said members, encircling but spaced substantially from said other member to constitute a portion of the wall of said port, and forming by its outwardly directed sur-

face a first sealing face; a wear ring, snugly associated with, projecting outwardly from, carried by but axially movable with respect to said other member and forming by a surface thereof a second sealing face directed toward and adapted to contact said first sealing face in fluid-tight relation; packing movable with said wear ring and mounted immediately between said wear ring and said other member for preventing passage of fluid between said wear ring and said other member, adjustable compression means carried by said other member and arranged externally of both of said members, said compression means acting directly on said wear ring to maintain said sealing faces in fluid-tight relation, said faces being constructed and arranged to form a seal surrounding said port and to permit substantial eccentric movement of said members without breaking contact between said sealing faces; said members, said rings and said adjustable compression means being so constructed and arranged as to facilitate ready adjustment of said compression means from without said assembly in its entirety.

2,460,747
5-ALKOXY-ALKYL, 5-CYCLOHEXYL HYDANTOINS
Henry R. Henze, Austin, Tex., assignor to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan
No Drawing. Application July 10, 1944, Serial No. 544,331
4 Claims. (Cl. 260—309.5)

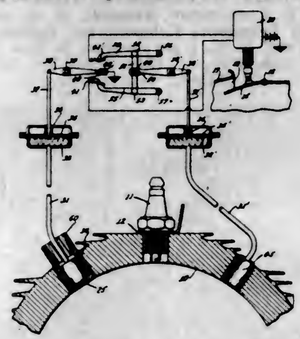
1. A compound having the formula



where R is a member of the class consisting of lower alkyl and cyclohexyl and M is a member of the class consisting of hydrogen and salt-forming groups non-toxic to the human body.

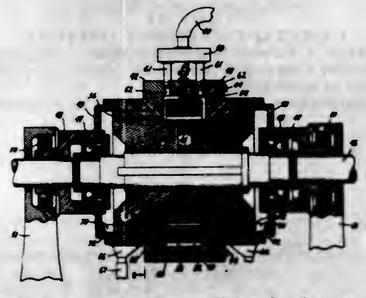
2,460,748
AUTOMATIC TEMPERATURE CONTROL APPARATUS
Donald S. Hersey, East Hartford, and Arthur A. Brown, Manchester, Conn., assignors to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application September 14, 1944, Serial No. 554,126
2 Claims. (Cl. 236—74)

1. Apparatus for controlling the temperature of a given means, comprising a first temperature-responsive means constructed and arranged to be sensitively responsive to the temperature of said given means, a second temperature-responsive means constructed and arranged to be relatively more slowly responsive to the temperature of said given means than said first temperature-responsive means, an arm arranged to be moved in a predetermined path in response to said first temperature-responsive means and connected to be moved in said path so that its position is a function of the temperature to which said first temperature-responsive means is exposed, an independently movable yoke means cooperating with said arm and having arms adapted to be selectively engaged by said arm upon the occurrence of a change of the temperature of said first temperature-responsive means, means responsive to said second temperature-responsive means for moving said yoke means in a direction such as to cause the disengagement of one of said yoke arms with the first named arm following such engagement incident to a change in the temperature of said given means, reversible actuating means for controllably varying the flow of a temperature-affecting fluid which directly influences the temperature of said given means,



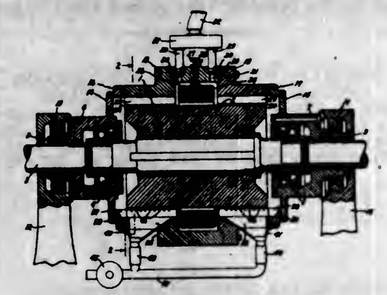
and an electric circuit for controlling the operation of said reversible actuating means to cause it to operate to vary the flow of said temperature-affecting fluid in a corrective direction respectively upon and during contact between said first named arm and one of the arms of said yoke means.

2,460,749
DYNAMOELECTRIC MACHINE
Roland F. Hertel, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application December 29, 1945, Serial No. 638,374
7 Claims. (Cl. 188—104)



1. A dynamoelectric machine having a relatively stationary member with a core of magnetic material and a relatively rotatable member with a core of magnetic material arranged with an air gap between said cores, means for magnetically exciting said cores, longitudinally extending teeth with slots therebetween in the inner peripheral surface of the magnetic material of said stationary member core, means for supplying cooling fluid into said air gap onto said rotatable member, means including longitudinally extending scoop members of nonmagnetic material in said slots adjacent the lowermost part of said stationary member with an outer longitudinal edge of said scoop members extending towards the adjacent teeth for removal of fluid from said rotatable member and for directing such removed cooling fluid into said slots, means including longitudinally extending guiding surface members of nonmagnetic material having transversely curved outer slot surfaces extending from the air gap surface of said latter teeth into said slot on the side of the tooth adjacent each of said scoop members for guiding cooling fluid from said air gap into said slots, and means for draining removed cooling fluid from said slots.

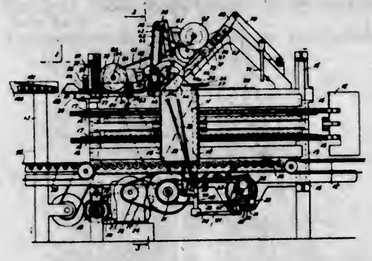
2,460,750
DYNAMOELECTRIC MACHINE
Roland F. Hertel, Nutley, N. J., assignor to General Electric Company, a corporation of New York
Application October 15, 1946, Serial No. 704,248
9 Claims. (Cl. 188—104)



1. An inductor eddy current type dynamoelectric machine having a rotor with a relatively smooth inductor eddy current surface and a relatively stationary member having magnetic flux-concentrating polar tooth means adjacent said rotor inductor surface radially spaced therefrom by an air gap, means for producing magnetic excitation of said machine for producing eddy currents in said rotor inductor surface on rotation of said rotor, means for supplying cooling liquid for flow into contact with said rotor inductor eddy current surface for cooling the same, at least one cooling liquid exhaust passage formed between said magnetic flux-concentrating polar means adjacent the lower part of said machine, and means for supplying a high velocity jet of air directed against said rotor inductor eddy current surface in a direction opposite to the direction of rotation of said rotor and adjacent said exhaust passage whereby the cooling liquid is removed from said rotor inductor eddy current surface for flow into said exhaust passage.

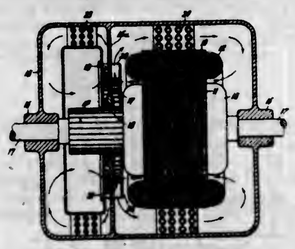
2,460,751
BUNDLE SEALING MACHINE
William L. Irvine, Brooklyn, N. Y., assignor to The American Sugar Refining Company, New York, N. Y., a corporation of New Jersey
Application February 4, 1947, Serial No. 726,418
18 Claims. (Cl. 93—6)

1. In a machine for closing and sealing the tops of bundles, the combination of means for advancing a bundle with an open top in upright position, a pair of folding members movable in a horizontal plane for forcing one end wall of the top inwardly, a pair of holding members movable into the top to engage the inner surface of the second end wall of the top, a plate engageable with the outer surface of the second end wall between the holding members, means for applying adhesive to the inner surface of the second end wall, means operable after the application of the adhesive to move the plate to force the second end wall inwardly upon the first end wall, while the holding members remain in



position, and form the side walls of the top into flaps, means for applying adhesive to the inner faces of the flaps, and means for folding the flaps inwardly upon the infolded end walls.

2,460,752
DYNAMOELECTRIC MACHINE
William E. Jacobsen, Ballston Lake, N. Y., assignor to General Electric Company, a corporation of New York
Application September 9, 1947, Serial No. 772,986
9 Claims. (Cl. 171—252)

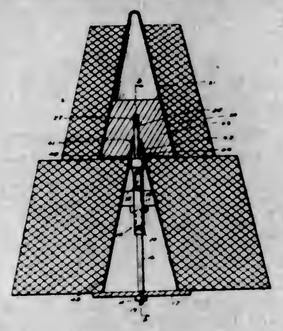


1. In a dynamoelectric machine having a stator core portion with a winding and a rotor core portion with a winding and a cooperating commutator, a substantially closed ventilating system for said core portions and said windings, a separate substantially closed ventilating system for said commutator, each of said ventilating systems comprising an assembly of impeller blades rotatable with the rotatable portions of said machine, and means for cooling ventilating medium in each of said ventilating systems.

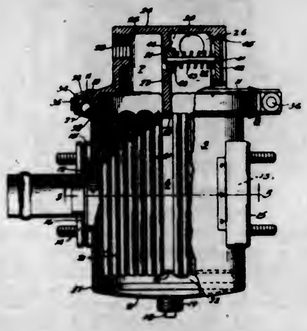
2,460,753
SPRING EQUIPPED DOUBLE CONE TIE
Stephen J. Kardos, Allentown, Pa.
Application April 17, 1945, Serial No. 588,867
2 Claims. (Cl. 242—130)

1. In combination with a plate for a knitting machine and a bobbin supporting bar therefor, said bar being formed with axially aligned sockets in its upper and lower ends, the upper end of said bar being enlarged and centrally countersunk, a spindle insertable in said lower socket for locking the bar on said plate, a bobbin supporting spindle in the upper socket in said bar, a bobbin on said spindle, said bar being formed with a radial opening communicating with the upper

socket, and a leaf spring supported locking detent on said bar disposable through said radial opening for locking said bobbin supporting spindle in said upper bore.

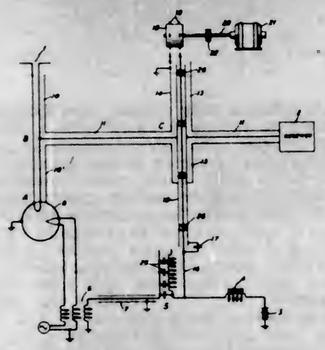


2,460,754
HEAT EXCHANGER
Earl H. Kidd, Racine, Wis., assignor to Young Radiator Company, Racine, Wis., a corporation of Wisconsin
Application July 5, 1946, Serial No. 681,548
2 Claims. (Cl. 257—2)



1. In a device of the class described, the combination of a one-piece shell closed at one end and having the perimetrical portion of the open end formed to provide an annular ledge and having inlet and outlet ports formed in the sides thereof, a core for said shell comprising a pair of header plates held in axially-spaced relationship a distance less than the internal axial length of said shell by a plurality of axially-disposed radially-spaced tubes the ends of which tubes extend through and are bonded to the respective header plates, said core being adapted to telescopically fit within said shell with the one header spaced from the closed end of said shell to form a chamber communicating with all of said tubes, a closure for the open end of said shell formed with axially- and radially-disposed peripheral flanges the former of which is adapted to telescopically fit within the open end of said shell with the radially-disposed flange resting on the peripheral ledge of said shell, said closure having the interior divided into two compartments by an axially-disposed partition the lower end of which is disposed in the plane of the lower edge of said axially-disposed peripheral flange, said closure also having inlet and outlet ports communicating with the respective closure compartments, valve mechanism located in said partition and operable under the influence of fluid entering said closure inlet port for controlling communication directly between said closure compartments or indirectly through said core, and clamping means gripping the superimposed closure flange and shell ledge whereby to press said lower edges of said axially-disposed closure flange and partition against the upper of said header plates and thereby force the lower of said header plates into contact with said shell bottom to seal off communication between the chambers of said shell on the opposite sides of said lower header.

2,460,755
RECEIVER PROTECTIVE CIRCUIT FOR PULSE TRANSMISSION SYSTEMS
Battle H. Klyce, Jr., Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 30, 1945, Serial No. 602,652
2 Claims. (Cl. 250—13)

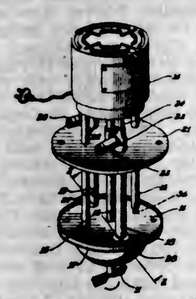


1. A pulse transmitting and receiving station comprising in combination an antenna, pulse transmitting means coupled to the antenna, a spark gap, a source of direct current for producing a spark discharge across the spark gap for initiating the generation of pulse energy by the pulse transmitting means, pulse receiving means, a coaxial transmission line for coupling the pulse receiving means to the antenna, and protective means for protecting the pulse receiving means from pulse energy generated by the pulse transmitting means, said protective means including an open-ended stub coaxial line extending from said coaxial transmission line for a length that is an even multiple of a quater wavelength of the pulse energy transmitted by the transmitting means, means for short-circuiting the open end of the stub line with said spark discharge whereby said short-circuit is virtually transferred to the coaxial transmission line, said means comprising said source of direct current and a wire conductor connected to said source and extending through the stub coaxial line to the open end thereof for forming one electrode of said spark gap, said wire conductor being capacitatively coupled to one of the concentric conductors of said stub coaxial line.

2,460,756
LINER AND TAP RING FOR STEEL BARRELS
Ernst R. Keppel, Chicago, Ill., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application August 22, 1945, Serial No. 611,977
6 Claims. (Cl. 285—49)

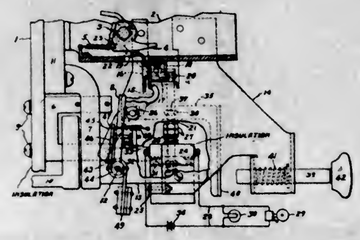
1. A barrel formed of sheet metal comprising a hollow shell; heads integral with said shell for closing the ends thereof; an inwardly dished depression in one of said heads having a tap aperture; a tap fitting having a tubular stub protruding through said aperture, said fitting having a flange the outer face of which is engaged with the margin of the head surrounding said aperture; a sheet metal annular bracket surrounding said fitting and anchored at its radially outer region to said head, the radial inner region of said bracket being superposed on the region of the head which engages the fitting flange; and an outside weld anchoring said superposed regions of the head and bracket to the fitting flange.

2,460,757
LIQUID CIRCULATING APPARATUS
William Kurz, Chicago, Ill., assignor to Precision Scientific Co., Chicago, Ill., a corporation of Illinois
Application August 24, 1945, Serial No. 612,471
1 Claim. (Cl. 259—96)



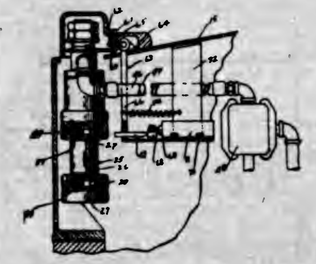
A constant temperature liquid circulating apparatus comprising in combination a storage vessel, a cover therefor carrying a driving motor having a shaft extending through said cover into said vessel and carrying at its lower end adjacent the bottom of said vessel a mixing agitator adapted to create circulating currents of liquid, a pump casing in said vessel, a plurality of posts from said cover and supporting said pump casing, said posts extending upwardly above said casing to support said motor, a pair of said posts being hollow and constituting liquid discharge and return conduits for said pump casing, an impeller carried by said shaft inside said casing, said casing having an opening therein for withdrawing a portion of the circulated liquid from said vessel, said return conduit having a discharge opening at a point remote from said agitator.

2,460,758
LOCKOUT AND ALARM DEVICE FOR CIRCUIT BREAKERS
Harold H. Lawson, Philadelphia, Pa., assignor to General Electric Company, a corporation of New York
Application March 23, 1946, Serial No. 656,568
5 Claims. (Cl. 177—311)



1. A manually reset lockout and alarm device for a circuit breaker trip mechanism having automatic tripping means, comprising an auxiliary latch released by said automatic tripping means, lockout means including a member held under control of said latch in an inactive position and having biasing means for moving said member therefrom upon release of said latch to a lockout position for holding said mechanism to prevent reclosure of the circuit breaker, alarm switching means operated by said member in said lockout position, and manual reset means for returning said member to said inactive position.

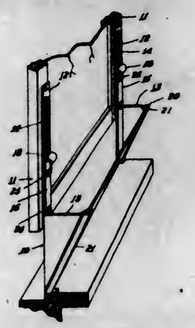
2,460,759
ELECTRIC RESISTANCE WELDER
George B. Martin, Detroit, Mich, and Barron D. Berger, Warren, Ohio, assignors to The Federal Machine and Welder Company, Warren, Ohio, a corporation of Ohio
Application August 20, 1946, Serial No. 691,844
10 Claims. (Cl. 219—4)



1. An electrical resistance welder, comprising: electrode carrying means, movable toward or away from a work surface; means for urging said electrode carrying means toward said work surface; leaf spring means, connected to said urging means, for receiving thrust from said urging means, said leaf spring means being adapted to deflect an amount proportionate to the thrust applied; and means, actuated by deflection of said leaf spring means for controlling welding operation.

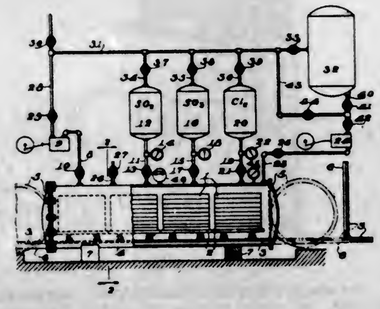
the refrigerant in the second compartment on

2,460,760
ADJUSTABLE VENTILATOR
Eric Massa, Bronx, N. Y.
Application March 20, 1945, Serial No. 583,726
4 Claims. (Cl. 98—99.2)



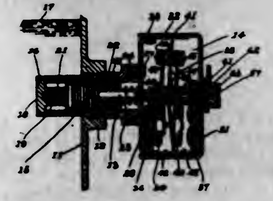
1. In a ventilator, a pair of channeled uprights fixed to a sash, a second pair of uprights formed to mate with and slidably attached to the first mentioned uprights, a pair of side enclosing members connected to the second mentioned pair of uprights and provided with aligned grooves to support a glass in said members, said glass supporting means having its aligned slots disposed at an angle to said first pair of uprights to retain said glass, and means to position said second mentioned uprights in a set relationship with first mentioned uprights.

2,460,761
UNFIRED BONDED CERAMIC ARTICLES AND METHOD OF PRODUCING SAME
John W. H. Miller, Bala-Cynwyd, Pa.
Application January 23, 1945, Serial No. 574,151
7 Claims. (Cl. 25—156)



1. The method of producing an unfired refractory article, which consists in preforming a body of granular refractory magnesia-containing material tempered with water, then subjecting said body to the chemically reactive effect of an extraneous gas selected from the group consisting of sulphur-dioxide, sulphur-trioxide and chlorine to bond the grains into a homogeneous mass.

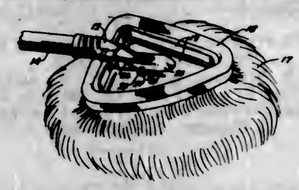
2,460,762
THERMOSTATIC SWITCH
Stehman S. Minnich, Cleveland, Ohio, assignor to The Patrol Valve Company, Cleveland, Ohio, a corporation of Ohio
Application February 2, 1946, Serial No. 645,262
14 Claims. (Cl. 200—140)



1. A thermostatic electrical switch comprising in combination an open-ended well adapted to be exposed to the temperatures to which the switch is intended to be responsive, a sealed hollow expansible member secured within said well, containing a temperature-responsive expansible fluid and having a cup-shaped inwardly extending closure at the end of said member toward the open end of the well, a switch frame removably secured to the well at the open end thereof, said switch frame having spaced first and second plate members with openings coaxial with said well, the first of which is closer to the said well, a push rod having a head in the bottom of said closure cup and a threaded end extending through the opening in said first frame plate member, a compression spring surrounding said rod between said head and said first frame plate member, a stressed column leaf spring mounted in said frame transversely to said rod whereby it has position of rest bowed either toward or away from said expansible hollow member, movable switch-contact carrying blades secured to said leaf-spring on either side thereof, stationary contacts secured to said frame to cooperate with said switch blades for closing one or the other of said sets of contacts according to the position of the leaf-spring, said leaf-spring having a central opening, a connector rod having a narrow portion extending through said leaf-spring opening, and a larger portion forming a shoulder adapted to bear against the inner surface of said leaf-spring, said larger portion having a threaded bore adjustably secured upon the threaded end of said push rod, an adjustment stem secured to said connector rod coaxially therewith, extending through the opening in said second frame plate member and having a shoulder adapted to bear against the outer surface of the leaf-spring, a dial and a pointer, one of the latter two elements being secured to said adjustment stem, and the other of said latter two elements being secured to said second frame plate member whereby rotation of said adjustment stem varies the axial distance between said head and said shoulder to adjust the operating temperature of said switch.

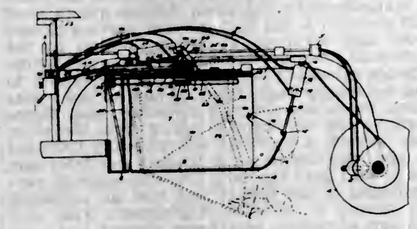
2,460,763
MOP STRUCTURE
Frederic E. Oakhill, Wilmette, Ill., assignor to O-Cedar Corp'n, Chicago, Ill., a corporation of Illinois
Application December 6, 1946, Serial No. 714,547
2 Claims. (Cl. 306—19)

1. In a mop structure, a relatively rigid mop head having a central raised portion provided with a longitudinal slot, a handle socket having its forward end received within said socket and having a cam surface inclined downwardly towards said forward end, a pin pivotally connecting said socket within said slot, and a second pin extending through said slotted raised portion



forward of said first pin, and a U-shaped spring having central portion wrapped about said second mentioned pin and having a forwardly extending portion engaging said mop head and a rearwardly extending saddle portion resting upon the cam surface of said handle socket.

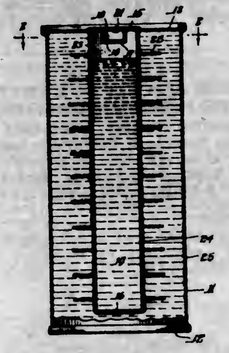
2,460,764
EARTH-MOVING MACHINE
Eli Oklejas, Monroe, Mich.
Application October 15, 1945, Serial No. 622,320
7 Claims. (Cl. 37—126)



1. In an earth moving machine, a movably supported chassis, a carrier suspended thereunder and fixed relative thereto, a scoop constituting a bottom section of the carrier and mounted for swinging movement relative thereto, said scoop being normally in closed position against the carrier, said carrier being open at one end, a door hingedly connected to the open end of the carrier and normally positioned under one end of the scoop to constitute a support for said end, and separate hydraulically operated means under the control of an operator for opening the door to release the scoop and for lowering the scoop.

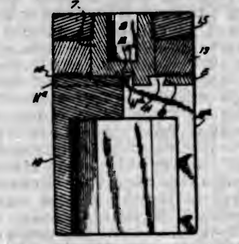
2,460,765
REFRIGERATING MEANS FOR CONTAINERS
Herbert E. Palaith, Evanston, Ill.
Application October 29, 1945, Serial No. 625,341
7 Claims. (Cl. 62—92)

1. A food or beverage container comprising means forming a compartment for the food or beverage, a cover for said compartment, and a second compartment united to the cover of the first compartment for receiving an expansible refrigerant adapted to absorb heat from the food or beverage in the first compartment on venting of the second compartment to atmosphere, and closure means for said second compartment and readily operable to open said second compartment to atmosphere to initiate the refrigerating action of said refrigerant and means in said second compartment providing an orifice of predetermined size to control the rate of expansion of the refrigerant in the second compartment on opening the said closure means to prevent quick



freezing of the food or beverage to the wall surface of the second compartment.

2,460,766
SPIRAL CAM ADJUSTABLE SOCKET WRENCH
Frank C. Peterson, Lecona, C. Z.
Application March 14, 1945, Serial No. 582,595
1 Claim. (Cl. 81—128)



An adjustable socket wrench for turning bolts and nuts, comprising a circular body having an integral depending sector-shaped socket section at one side, a pair of radially adjustable sector-shaped socket sections slidably connected to the bottom of the body and disposed at opposite sides of the integral socket section, said body having two sets of slots therethrough with three parallel slots in each set and being provided with an integral central upstanding cylindrical stud formed with a square handle-receiving socket, a set of three ribs on the top of each adjustable socket section slidably engaged in the slots of one set, the intermediate rib of each set being provided on its upper surface with spiral thread portions, the remaining ribs of each set and the slots engaged thereby being of dovetail form, an adjustable ring rotatable on said stud and provided in its under surface with a spiral thread groove receiving the thread portions of the intermediate ribs of the adjustable socket sections whereby rotation of said ring will effect adjustment of the adjustable socket sections toward or away from each other radially of the body, depending upon the direction of rotation of said ring, the body and the adjusting ring being of the same diameter as the combined socket sections when the adjustable socket sections are fully adjusted toward each other, and a collar secured on the upper end of said stud and rotat-

ably confining said ring against the body with

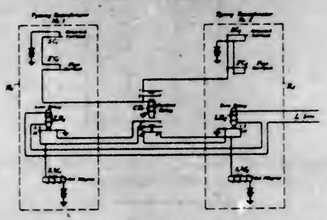
body, and a ball chain comprising a ball within

gizable elements selectively; and means remote

prising passing gaseous ammonia through liquid stock at a pressure of between 100 pounds per

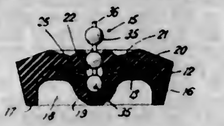
ably confining said ring against the body with the thread portions of said ribs engaged in the spiral groove of said ring, said collar being of the same diameter as the body and the adjusting ring.

2,460,767
CONTROL CIRCUIT FOR SWITCHING TELEGRAPH FACILITIES
George Ruement Pigman, Ridgefield Park, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application September 1, 1944, Serial No. 552,252
3 Claims. (Cl. 178—2)



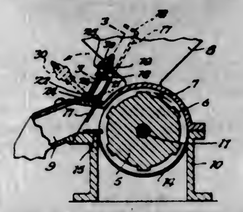
1. In a teletypewriter system, a pair of teletypewriter receivers at a station responsive to Baudot code signals transmitted from a distant station, a switching relay having contacts and normally conditioning one of said receivers for reception of Baudot code signals and disabling the second receiver, said receiver thus conditioned having a contact responsive to a case shift signal and another contact responsive to reception of a predetermined Baudot code signal other than a case shift signal, a circuit closed when both of said contacts are in actuated condition for actuating said switching relay, means controlled by said switching relay when actuated to lock up said switching relay, circuits in which contacts of said switching relay are interposed to disable said first receiver when said switching relay is actuated and at the same time to condition said second receiver to receive Baudot code signals, said second receiver having a contact responsive to a case shift signal and another contact responsive to reception of a predetermined Baudot code signal other than a case shift signal, and circuit means adapted to unlock said switching relay when said contacts of said second receiver are simultaneously actuated.

2,460,768
BASIN PLUG STOPPER OR THE LIKE
George A. Riley, Bridgeport, Conn., assignor to H. O. Canfield Co., Bridgeport, Conn., a corporation of Connecticut
Application October 17, 1946, Serial No. 703,725
6 Claims. (Cl. 4—295)



2. A stopper comprising a body of compressible material, said stopper being formed with a central opening extending down from the upper side but terminating short of the underside of the body, an insert within said stopper, said opening in the body extending below said insert, said insert being formed with a central opening and slots radiating from said opening, the opening in the insert registering with the opening in the body, and a ball chain comprising a ball within the bottom of said opening and contacting the underside of said insert, and a neck of the chain passing through the opening in the insert.

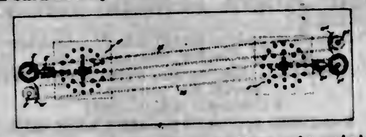
2,460,769
GATE POSITIONING MECHANISM FOR HULLING MACHINES
Eugene A. Schwarz, Snyder, N. Y., assignor to The Geo. L. Squier Mfg. Co., Buffalo, N. Y.
Application June 11, 1947, Serial No. 753,929
5 Claims. (Cl. 146—235)



3. In a hulling machine having a housing containing hulling instrumentalities and having a discharge spout for the hulling material, that improvement which includes a gate in the form of a substantially flat plate slidable crosswise of said spout in a slot in the upper portion of said spout and arranged at an inclination to the horizontal, the upper portion of said gate having a flange extending substantially perpendicular to and outwardly from that surface of said gate which faces laterally and upwardly, said flange having a slot extending inwardly from the outer edge thereof, a threaded bolt pivotally mounted on said machine to swing toward and from said slot in said gate about an axis substantially perpendicular to the axis of said bolt, an adjusting nut having a threaded engagement with said bolt and adjustable lengthwise thereof and having an annular groove formed therein substantially concentric with the axis of said bolt and formed to enter said slot when said bolt is swung about its axis, the portions of said nut forming the side walls of said groove engaging opposite faces of said flange adjacent to said slot, to transmit adjustment of said nut lengthwise of said bolt to said gate for adjusting the same relatively to said spout, a lock nut arranged on said bolt for cooperating with said adjusting nut, said gate and said bolt being arranged relatively to each other so that said bolt will be in an inclined position when said nut is in engagement with said slot in said gate flange to cause said bolt to be urged by gravity into a position to hold said nut in engagement with said flange.

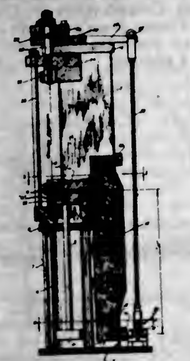
2,460,770
ARTILLERY WAR GAME
Charles Harold Shirey, Bridgeville, Pa.
Application April 7, 1948, Serial No. 19,603
7 Claims. (Cl. 272—101.2)

1. A game apparatus for use by a player and conjointly by an opposed player, said game apparatus comprising in combination, a target means including a grouped plurality of individually energizable elements; a rotary switch means operable by said player and comprising a rotatable switch arm and a rotatable contact plate carrying thereon a plurality of contact points at least as numerous as are said energizable elements; conductors adapted to establish circuits through a power source, said rotary switch means and said energizable elements selectively; and means remote from said rotary switch means and operable only



by an opposed player for rotating said rotatable contact plate to dispose the contact points carried thereon in new positions.

2,460,771
MATERIALS TESTING MACHINE
Alfred Sonntag, Greenwich, Conn., assignor, by mesne assignments, to The Baldwin Locomotive Works, a corporation of Pennsylvania
Application June 19, 1945, Serial No. 600,320
4 Claims. (Cl. 73—93)



1. A materials testing machine comprising, in combination, a pair of vertical channel iron frame members, cross connections at their upper and lower ends, a vertically extending hydraulic cylinder and piston disposed between said channels at their lower end toward the front side thereof, an upper specimen engaging member supported near the upper ends of said channels, a lower specimen platen connected to said piston at a point offset from the axis of a specimen to be tested whereby eccentric forces are induced in said platen during a tension test, a moment arm connected to said platen and lying in a plane which extends vertically between said channels and also extends downwardly behind said loading cylinder, guides secured to said platen slidably engaging the front sides of said channels, and guides secured to said moment arm at the lower portion thereof for engaging the rear side of said channels whereby said eccentric forces are resisted and converted into a true axial loading force for the specimen throughout full vertical movement of the piston.

2,460,772
PREPARATION OF OLEONITRILE
Lee A. Stegemeyer, Cincinnati, Ohio, assignor to Emery Industries, Inc., a corporation of Ohio
No Drawing. Application May 4, 1948, Serial No. 25,101
2 Claims. (Cl. 260—465.2)

1. A method for preparing oleonitrile from the reaction of oleic acid stock with ammonia comprising passing gaseous ammonia through liquid stock at a pressure of between 100 pounds per square inch and 150 pounds per square inch and a rate of flow of substantially two liters per kilogram of stock per minute for a period of between two and one-half and three and one-half hours, the stock being maintained at a temperature between 320° centigrade and 330° centigrade.

2,460,773
TEMPERATURE SENSITIVE VARIABLE INDUCTANCE
Allen G. Stimson, Lynnfield, Mass., assignor to General Electric Company, a corporation of New York
Application December 8, 1944, Serial No. 567,172
1 Claim. (Cl. 171—777)

A temperature sensitive variable inductance comprising a tubular member of magnetic material closed at one end by magnetic material and open at the opposite end, a central core member of magnetic material within the tubular member, a coil contained within the tubular member and surrounding the central core, said core being magnetically connected to the tubular member at one end of the coil and adjustable axially within the tubular member towards and away from the closed end thereof at the other end of the coil, said parts forming an adjustable air gap magnetic circuit for the flux of the coil, a substantial portion of the magnetic material of said circuit having an appreciable temperature coefficient of permeability, said core being accessible through the open end of the tubular member for adjustment of the air gap to vary the value of the inductance at a given temperature, and an externally threaded sleeve surrounding the open end portion of the tubular member whereby the same may be threaded through a wall.

2,460,774
VALVE
Walter C. Trautman, North Hollywood, Calif., assignor, by mesne assignments, to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application September 18, 1943, Serial No. 502,877
9 Claims. (Cl. 137—165)

9. Apparatus for proportioning the flow rates in a pair of branch ducts connected in parallel relation to each other and in series with a common duct containing means for circulating fluid in either direction therethrough, said apparatus comprising: first flow control means interconnecting said common duct with said branch ducts for dividing flow from the common duct into the branch ducts in predetermined ratio when the flow through said common duct is in one direction; second flow control means also interconnecting said common duct with said branch ducts for proportioning flows from the branch ducts

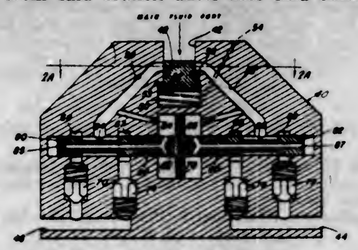
into the common duct in a predetermined ratio when the flow through said common duct is in

2,460,777
WATERPROOFING CELLULOSIC MATERIAL

80, at a temperature of 150–250° C. with a compound selected from the group consisting of ammonia and compounds capable of generating

quency of received signal frequency requisite to maintain a desired mean frequency of said intermediate frequency, a frequency controlling de-

into the common duct in a predetermined ratio when the flow through said common duct is in the opposite direction; and means for preventing flow from said branch ducts into said common



duct through said first flow control means and preventing flow from said common duct into said branch ducts through said second flow control means.

2,460,775

BUTTON CONSTRUCTION FOR GARMENTS AND THE LIKE

Robert E. Tuttle, Wilmington, Del.
Application November 2, 1946, Serial No. 707,496
2 Claims. (Cl. 2—96)

1. The combination in garment closures of an ornamental design on one closure border, said border having a plurality of buttonholes, a plurality of ornamental buttons of various designs on the other closure border, the ornamental designs of the buttons cooperating with the ornamental design on the border when the garment is buttoned.

2,460,776

BACTERIOSTATIC BASE FOR MEDICINAL, COSMETIC, AND TOILET PREPARATIONS

James G. Vincent, Rochester, N. Y., assignor to The Noned Corporation, a corporation of New York
No Drawing. Application November 19, 1945, Serial No. 629,721
17 Claims. (Cl. 167—58)

1. A fluid base composition containing in an aqueous medium an alcohol selected from the class which consists of ethyl alcohol and a mixture of ethyl and isopropyl alcohols, a glycerin compound selected from the class which consists of glycerin and a monoglyceride, a compound selected from the class which consists of urea and urethane, commercially pure bile salts and quince seed extract, said composition having bacteriostatic action in the presence of 10% blood serum, and being a valuable fluid base for use in the compounding of medicinal, cosmetic and toilet compositions.

2,460,777

WATERPROOFING CELLULOSIC MATERIAL WITH HIGHER ALIPHATIC ACYL PEROXIDES

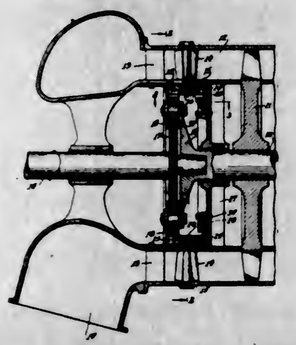
Warren B. Warden, Bradford, Pa., assignor to Peter J. Gayler, Newark, N. J.
No Drawing. Application February 18, 1946, Serial No. 648,573
6 Claims. (Cl. 8—120)

1. A method for waterproofing solid cellulosic materials, comprising treating said materials with an organic peroxide having an aliphatic acyl group containing 10 to 20 carbon atoms dissolved in an inert solvent, substantially removing the solvent, and heating the thus treated material at least to the decomposition temperature of the peroxide.

2,460,778

TORQUE REGULATING DEVICE FOR COMPRESSORS

Andrew V. D. Willgoos, West Hartford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application April 12, 1946, Serial No. 661,815
4 Claims. (Cl. 230—114)



1. A compressor for internal combustion engines comprising a fluid passage, a plurality of movable shutters controlling the passage of fluid therein, a driving shaft, an impeller driven by said shaft for pumping fluid through said passage, a gear train connecting said driving shaft to said impeller including a reaction gear movable to a predetermined limited extent only, means responsive to the movement of said reaction gear for controlling the adjustment of said shutters, and means mechanically responsive to variations in the compressor input torque for automatically controlling the position and movement of said reaction gear.

2,460,779

SYNTHESIS OF PHTHALOCYANINES FROM ω-CHLORINE OR ω-BROMINE SUBSTITUTED o-TOLUNITRILES

Robert E. Brouillard, Bound Brook, N. J., and Erwin Baumgarten, Westerleigh, Staten Island, N. Y., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application June 2, 1947, Serial No. 751,989
10 Claims. (Cl. 260—314.5)

1. A process for preparing phthalocyanine pigments which comprises reacting an omega halogeno o-tolunitrile, the halogen having an atomic weight of at least 35 and not more than

80, at a temperature of 150–250° C. with a compound selected from the group consisting of ammonia and compounds capable of generating ammonia at the reaction temperature and mixtures thereof, and a metalliferous reagent, the metal of which has an atomic number of 27 to 29.

2,460,780

RAILWAY BRAKE BEAM MOUNTING

Edwin G. Busse, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a corporation of Illinois
Original application February 3, 1943, Serial No. 474,527. Divided and this application September 28, 1945, Serial No. 619,089
10 Claims. (Cl. 188—212)

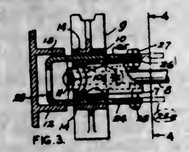


FIG. 3.

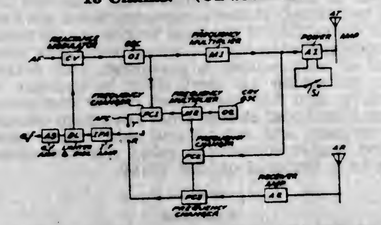
1. In a railway vehicle brake beam, elongated structure, a brake head having a pocket receiving the end of the structure and seating the same, means affixing the head to the structure, there being passageways extending laterally through the head and spaced apart above and below said structure, and a U-shaped bracket with its legs spaced apart vertically and slidably received in said passageways and movable therein to a projected position, in which the bracket may oppose a truck part to support the beam, and into a retracted position, in which the bracket clears the truck part.

2,460,781

CIRCUIT FOR STABILIZING FREQUENCIES OF TRANSMITTER-RECEIVER SYSTEMS

Herbert Reginald Cantelo, Writtle, England, assignor to Radio Corporation of America, a corporation of Delaware
Application February 27, 1945, Serial No. 579,994
In Great Britain October 7, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires October 7, 1963
18 Claims. (Cl. 250—13)

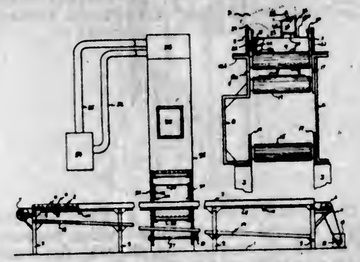


1. A radio or like apparatus adapted for use alternatively as a transmitter or as a receiver, including an oscillation generator for producing oscillations for modulation and ultimate transmission, a frequency changer for producing an intermediate frequency from received signal frequency and oscillations derived from said oscillation generator, means for producing a first frequency controlling potential variable in sign and magnitude in accordance with departures from a desired frequency of the output from said generator, means for producing a second frequency controlling potential variable in sign and magnitude in accordance with departures from the frequency of received signal frequency requisite to maintain a desired mean frequency of said intermediate frequency, a frequency controlling device for said oscillation generator operable under control of said first frequency controlling potential to stabilize the frequency of said generator or under control of said second frequency controlling potential to vary the frequency of said generator, thereby to stabilize said intermediate frequency.

2,460,782

CONVEYING MEANS FOR SHOE MANUFACTURE

Bruno T. Gialdini, Larchmont, N. Y.
Application September 28, 1944, Serial No. 556,188
12 Claims. (Cl. 12—1)



12. In a conveyor structure spaced rails mounted upon supports, a plurality of rollers journaled between said rails in a horizontal series so that the rails extend above the upper surfaces of said rollers to form guides, an endless belt passing beneath said rollers and contacting them in its upper flight, roller means for keeping said belt in contact with said first mentioned rollers, roller means for supporting the lower flight of said belt, another pair of rails located on said supports beneath said first mentioned rails, and a series of rollers mounted between said last mentioned rails, said last mentioned rails disposed aslant to the horizontal between said supports so as to constitute said last mentioned series of rolls a gravity conveyor, in combination with a series of elongated metal pans dimensioned widthwise to lie between said rails on said first and last mentioned rollers, said pans having medial upraised portions bearing pins for the acceptance of shoe lasts, said pans being movable in one direction by said first mentioned rolls when driven by said belt and returnable in the other direction by said gravity conveyor, said first mentioned rolls serving to support said pans to permit work to be done in shoe elements supported by said lasts.

2,460,783

PREPARATION OF PHTHALOCYANINE PIGMENTS FROM ω-CHLORINE OR ω-BROMINE SUBSTITUTED o-XYLENES

Hans Z. Lecher, Plainfield, and Robert E. Brouillard, Bound Brook, N. J., and Erwin Baumgarten, Staten Island, N. Y., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application June 2, 1947, Serial No. 751,990
19 Claims. (Cl. 260—314.5)

1. A process for preparing phthalocyanine pigments which comprises reacting an omega halogeno o-xylene having at least one halogen atom in each methyl group the halogen having an atomic weight of at least 35 and not more than 80, at a temperature from 150–250° C., with a compound selected from the group consisting of

ammonia and compounds capable of generating ammonia at the reaction temperature and mix-

may be used, a rectifier excited by said signals, said rectifier having an output impedor wherein

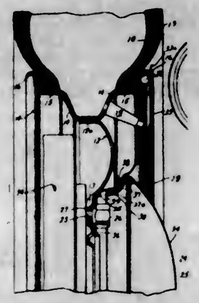
2,460,789

FAULT INDICATOR FOR RADIO RELAYING SYSTEMS

with the grid of the succeeding tube, thus forming a closed loop of the tubes, other means each including a resistor and a capacitor connected in

ammonia and compounds capable of generating ammonia at the reaction temperature and mixtures thereof and a metalliferous reagent, the metal of which has an atomic number of 27 to 29.

2,460,784
WHEEL COVER
George Albert Lyon, Allenhurst, N. J.
Application April 10, 1944, Serial No. 530,855
12 Claims. (Cl. 301—37)



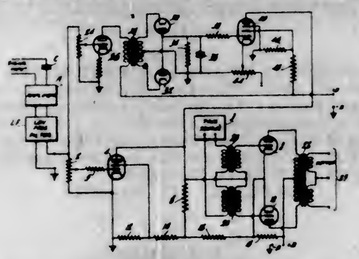
1. The combination with a wheel structure having a central load bearing portion constructed at a radially inner part thereof for attachment to a vehicle and having attachment means for securing the wheel to a vehicle, and a circular cover member formed from resiliently flexible, yet form sustaining material, whereby the outer edge thereof may be temporarily flexed to render the rear side thereof accessible, and a retaining member of relatively rigid material interconnected with the inner margin of said cover member and including at the radially inner part thereof, a portion formed to nest in the attachment part of the central load bearing portion and constructed to be attached thereto by said attachment means as said means secures the wheel to the vehicle.

2,460,785
PROCESSES FOR PREPARING SUBSTITUTED PROPANOIC ACID
Earl Pierson, Harrisonburg, Va., and Max Tishler, Rahway, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application March 14, 1946, Serial No. 654,503
3 Claims. (Cl. 260—534)

1. The process of preparing 2-amino-3-carboxymethylmercapto-propanoic acid which comprises reacting together cystine, chloracetic acid and zinc, said reaction being carried out by bringing together zinc and a solution of cystine and chloracetic acid in an aqueous alkali metal hydroxide.

2,460,786
SQUELCH CIRCUIT FOR SUPPRESSING NOISE COMPONENTS
Robert E. Schock, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application June 4, 1946, Serial No. 674,181
3 Claims. (Cl. 178—70)

1. In a system for relaying telegraphy signals and for preventing relaying of noise components in the absence of signals, a first control tube having input electrodes excited by said signals and noise and having output electrodes in circuit with an impedor wherein a potential is developed which may be used, a rectifier excited by said signals, said rectifier having an output impedor wherein a potential is developed which is negative in the presence of signals, a second tube having a control grid coupled to said rectifier and excited by



said last named potential and having an anode circuit including the impedor in the output circuit of said first tube, and means for biasing said second tube by a potential such that the same is cut off in the presence of signals at the input of said rectifier.

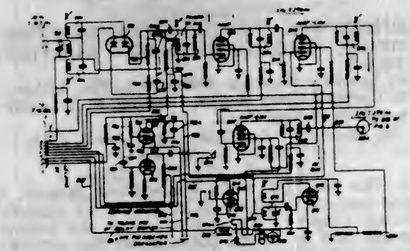
2,460,787
FELT BASE MATERIAL FOR ADHESIVE ATTACHMENT TO SURFACES AND COATING COMPOSITION FOR SAME
Ralph F. Seedorf, Cincinnati, Ohio, assignor to Carthage Mills, Inc., Cincinnati, Ohio, a corporation of Ohio
No Drawing. Application April 30, 1945, Serial No. 591,218
9 Claims. (Cl. 117—99)

1. A felt base material prepared for adhesive union with a support and comprising a fibrous sheet saturated with bitumen and bearing upon one surface a coating comprising binder components one of which is water insoluble, miscible with said bitumen and firmly bonded to the bitumen saturant in said base, and the other of which is water soluble, the total weight of said binder components being substantially between one-sixth and one-eighth of the dry weight of said coating, the first mentioned binder component being substantially one-fifth of the total weight of said binder components and said second mentioned binder component being substantially four-fifths of the total weight of said binder components whereby the water permeable character of said coating is preserved, said coating also containing an inert filler to increase its porosity, said first mentioned binder component being a material chosen from the group consisting of rosin and tall oil and said second mentioned binder component being a water soluble soap of a material of said group.

2,460,788
PRODUCTION OF METHACRYLONITRILE AND ALPHA-CHLORO ISOBUTYRONITRILE
Le Roy U. Spence, Elkins Park, Pa., and Emile H. Sakal, Brooklyn, N. Y., assignors to Röhm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application September 3, 1947, Serial No. 772,612
3 Claims. (Cl. 260—465.7)

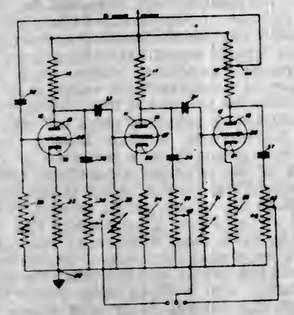
1. The process of preparing methacrylonitrile and α-chloroisobutyronitrile which comprises reacting tri-α-cyanoisopropyl phosphite with chlorine and pyrolyzing the resulting product to form nitriles.

2,460,789
FAULT INDICATOR FOR RADIO RELAYING SYSTEMS
Leland E. Thompson, Merchantville, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Original application February 6, 1945, Serial No. 576,453. Divided and this application March 15, 1946, Serial No. 654,554
11 Claims. (Cl. 177—311)



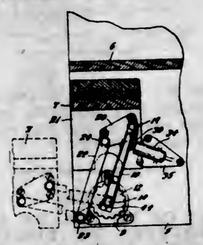
1. In combination, a high frequency amplifier comprising a tube having anode, cathode and grid electrodes, a source of waves to be amplified connected to said grid and cathode, a resistor connected between a pair of said electrodes for developing a direct current control potential in the presence of signal waves to be amplified, a high frequency oscillator, circuits utilizing said direct current potential to prevent said oscillator from oscillating and for permitting said oscillator to oscillate in the absence of said control potential, and a circuit for feeding a potential from said oscillator to the input of said amplifier when said control potential fails.

2,460,790
GENERATOR
Charles W. Jarvis, Washington, D. C., assignor to the United States of America as represented by the Secretary of the Navy
Application March 11, 1946, Serial No. 653,491
4 Claims. (Cl. 175—363)



1. A generator, energizable by direct current, for providing polyphase alternating current, said generator comprising a plurality of electron discharge tubes each including an anode, a cathode and a grid, resistors, one for each tube, and each connected, at one end, to the positive direct current terminal, and at its other end to the anode of a corresponding tube, cathode resistors connecting the cathodes of said tubes to the negative direct current terminal, means, each including a capacitor, connecting the anode of each tube with the grid of the succeeding tube, thus forming a closed loop of the tubes, other means each including a resistor and a capacitor connected in series and each connected at one end to the anode of a corresponding tube and at its other end to the cathode thereof through a corresponding one of the cathode resistors, and terminals connected to said last-named means serving as the polyphase output.

2,460,791
RETRACTING DEVICE FOR KNEELING BENCHES
Benjamin S. Bernhard, New Britain, Conn., assignor, by mesne assignments, to Automatic Kneeler Corporation, Hartford, Conn.
Application January 16, 1946, Serial No. 641,490
9 Claims. (Cl. 155—166)



9. A device of the character described for lifting a kneeling bench from a lower position to a retracted position underneath the seat, the said device comprising a casing mounted at one end of said seat, a shaft rotatable in said casing, a first lever rotatable with said shaft, a second lever pivotally mounted at a point spaced from said shaft, a pair of levers pivotally mounted at the opposite side of said seat, a kneeling bench pivotally supported upon the outer ends of said levers for movement thereof in a vertical position from a lowered to a retracted position, a spring urging said shaft for operating the first pair of levers to raise said bench, a connecting bar rotatable with said shaft and connecting therewith the opposite lever corresponding to said first lever for combining the operation of said pairs of levers to carry said kneeling bench and prevent twisting thereof, and air pressure controlled means for yieldingly resisting the movement of the bench towards its retracted position.

2,460,792
ORGANIC MEDIUM FOR THE PRODUCTION OF AEROSOLS
Arthur C. Pabst, Douglaston, Albert E. Griffiths, Port Washington, and Robert B. Killingsworth, Douglaston, N. Y., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application October 3, 1946, Serial No. 700,858
3 Claims. (Cl. 196—149)

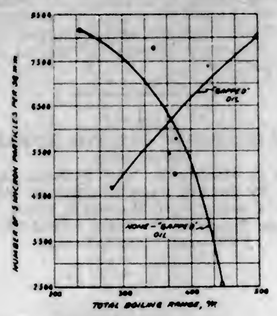
1. An organic medium for the production of thermal aerosols having a boiling range of about 242° to about 742° F., said medium consisting of about 25 per cent to about 65 per cent of a more volatile hydrocarbon fraction and the balance a less volatile hydrocarbon fraction; said more volatile fraction having an initial boiling point of about 240° to about 370° F., a final boiling point of about 320° to about 530° F., a 50 per cent point of about 275° to about 440° F., and a 90 per cent point of about 295° to about

500° F.; said less volatile fraction having an initial boiling point of about 505° to about 570°

envelope, a longitudinally extending filament in spaced relation to the said anode, and a control

DESIGNS

500° F.; said less volatile fraction having an initial boiling point of about 505° to about 570° F., a 10 per cent point of about 546° to about 621° F., and a final boiling point of about 630°



to about 740° F.; and the 90 per cent point of the more volatile fraction being separated from the 10 per cent point of the less volatile fraction by about 111° to about 325° F.

2,460,793

ALKYLATION OF PHENOL BY ALKYL HALIDES CATALYZED BY FINELY DIVIDED GELS OF CERTAIN DRYING OILS

Charles J. Plank and John F. Socolofsky, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

No Drawing. Application November 18, 1944, Serial No. 564,175

5 Claims. (Cl. 260—624)

1. A process for alkylating phenol, which comprises refluxing equimolar portions of phenol and a tertiary alkyl halide, in the presence of a drying oil gel selected from the group consisting of boron trifluoride-bodied China-wood oil gel, boron trifluoride-bodied oiticica oil gel, and heat-bodied China-wood oil gel.

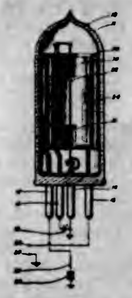
2,460,794

VACUUM TUBE GRID CONSTRUCTION

Harner Selvidge, Silver Spring, Md., assignor to the United States of America as represented by the Secretary of the Navy

Application January 15, 1945, Serial No. 572,940

2 Claims. (Cl. 250—27.5)



1. An electronic tube comprising an envelope, an anode disposed longitudinally within the said envelope, a longitudinally extending filament in spaced relation to the said anode, and a control electrode between the said anode and the said filament and substantially coextensive with the said filament, the said control electrode having at least one slot at each end thereof defining restricted paths of anode current between the said filament and the said anode.

2,460,795

METHOD FOR MAKING RUBBERY POLYMERIC ORGANO-SILOXANE COMPOSITIONS

Earl Leathen Warrick, Pittsburgh, Pa., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York

No Drawing. Application October 3, 1944, Serial No. 557,956

2 Claims. (Cl. 260—37)

1. The method which comprises mixing a liquid polymeric siloxane in which all organic radicals linked to the silicon atoms are methyl radicals and in which there is on the average between 1.75 and 2.25 methyl radicals per silicon atom and at least 40 mol per cent of the polymer units are dimethyl siloxane units with at least 1 per cent by weight of benzoyl peroxide, heating the mixture above 100° C. until it becomes a gel, milling said gel with a heat resistant filler and at least 2 per cent by weight of benzoyl peroxide based on the weight of the gel, and then heating the resulting composition above 100° C. in the substantial absence of oxygen until a coherent non-tacky rubbery product is obtained, the benzoyl peroxide employed in the process being up to a total of 8 per cent.

2,460,796

PROCESS FOR PREPARING CAROTENOID CONCENTRATES FROM PALM OIL

Eddy W. Eckey, Wyoming, Ohio, assignor to The Procter and Gamble Company, Cincinnati, Ohio, a corporation of Ohio

No Drawing. Application May 4, 1942, Serial No. 441,714

5 Claims. (Cl. 260—410.9)

1. A process of recovering from palm oil unsaponifiable carotenoid pigment concentrate substantially free of saponifiable fatty esters, and of simultaneously producing fatty esters substantially free of unsaponifiable carotenoid pigment and suitable for use in the manufacture of white soap, comprising reacting palm oil with an aliphatic monohydric alcohol having less than five carbon atoms in the presence of catalytic amounts of an alkaline alcoholysis catalyst to form monohydric alcohol esters of the fatty acids of the palm oil, which esters contain carotenoid pigment in solution, inactivating the catalyst, boiling the fatty ester solution of the carotenoid pigment, separating entrained carotenoid pigment from the vapors and refluxing the separated entrainment, and substantially completely distilling off the volatile fatty acid esters thereby separating the product subjected to distillation into a substantially carotenoid-pigment-free fatty acid ester distillate suitable for use in the production of white soap and a substantially fatty-ester-free residue of concentrated carotenoid pigment, the total time of treatment during boiling varying inversely with the temperature substantially in accordance with the schedule at temperatures below 130° C., not longer than 15 to 20 hours, at 140° C., not longer than ten hours, at 150° C., not longer than two hours.

DESIGNS

FEBRUARY 1, 1949

152,513

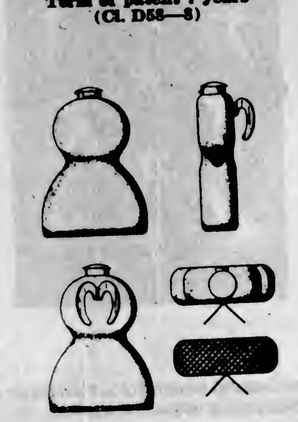
DESIGN FOR A CONTAINER FOR POWDERED SOAP OR SIMILAR ARTICLE

Frieda Barnes, Cleveland, Ohio

Application September 15, 1947, Serial No. 141,403

Term of patent 7 years

(Cl. D58—8)



The ornamental design for a container for powdered soap or similar article, substantially as shown.

152,514

DESIGN FOR A BOTTLE

Julius Braun, Chicago, Ill.

Application July 19, 1947, Serial No. 140,394

Term of patent 3½ years

(Cl. D58—8)

The ornamental design for a bottle, substantially as shown.

152,515

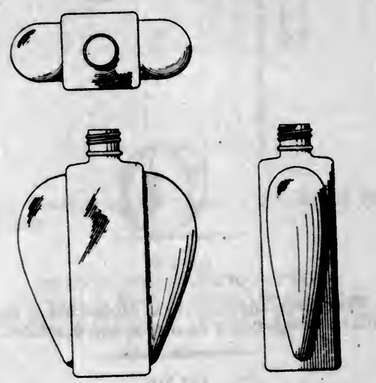
DESIGN FOR A BOTTLE

Julius Braun, Chicago, Ill.

Application July 19, 1947, Serial No. 140,396

Term of patent 3½ years

(Cl. D58—6)



The ornamental design for a bottle, substantially as shown.

152,516

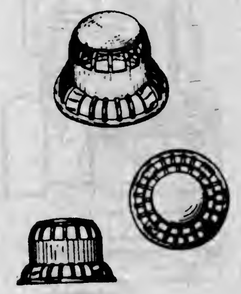
DESIGN FOR A FAN HOUSING

Ted C. Brown, Rising Sun, Ind., assignor to Brown Sales & Engineering, Inc., Rising Sun, Ind., a corporation of Indiana

Application June 3, 1947, Serial No. 139,435

Term of patent 7 years

(Cl. D26—7)



The ornamental design for a fan housing, as shown.

152,517

DESIGN FOR AN EARRING OR SIMILAR

152,519

DESIGN FOR A BLANKET OR SIMILAR

152,521

DESIGN FOR A TRAY

152,522

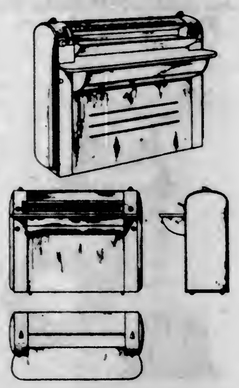
DESIGN FOR A BOX OR THE LIKE

John L. Duncan and Bryce Martin, Chicago, Ill.

152,517
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application March 25, 1947, Serial No. 137,871
Term of patent 3½ years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown and described.

152,518
DESIGN FOR A COMBINED PRINTING AND DEVELOPING MACHINE
Joe W. Coffman and Frederick O. Trump, Binghamton, N. Y., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
Application November 6, 1947, Serial No. 142,360
Term of patent 14 years
(Cl. D64—11)

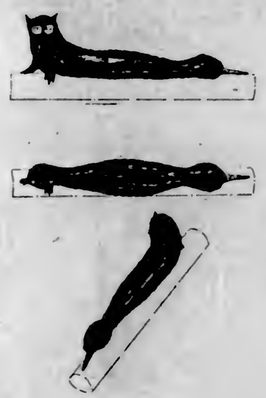


The ornamental design for a combined printing and developing machine, substantially as shown.

152,519
DESIGN FOR A BLANKET OR SIMILAR FABRIC ARTICLE
Maurice D. Cramer, Chicago, Ill.
Application January 24, 1948, Serial No. 144,049
Term of patent 7 years
(Cl. D92—2)

The ornamental design for a blanket or similar fabric article, substantially as shown.

152,520
DESIGN FOR A STATUETTE
James A. D'Arcy, Harrison, Mich.
Application November 3, 1947, Serial No. 142,272
Term of patent 14 years
(Cl. D29—23)



The ornamental design for a statuette, as shown.

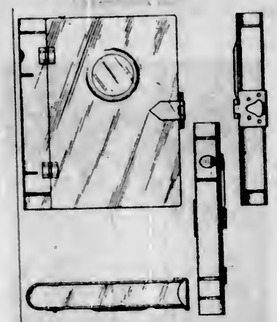
152,521
DESIGN FOR A TRAY
Naomi Mae Dean, Anwvasse, Mo.
Application May 28, 1947, Serial No. 139,231
Term of patent 14 years
(Cl. D44—10)

The ornamental design for a tray, as shown.

152,522
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Elsa Deutsch, Bat Cave, N. C.
Application September 19, 1947, Serial No. 141,490
Term of patent 3½ years
(Cl. D45—19)

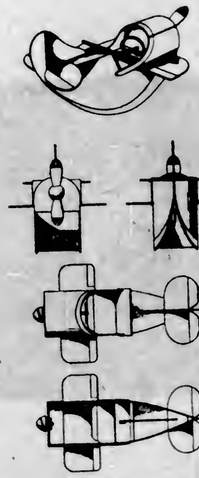
The ornamental design for a brooch or similar article, as shown.

152,523
DESIGN FOR A BOX OR THE LIKE
John L. Duncan and Bryce Martin, Chicago, Ill.
Application December 26, 1946, Serial No. 135,762
Term of patent 14 years
(Cl. D58—11)



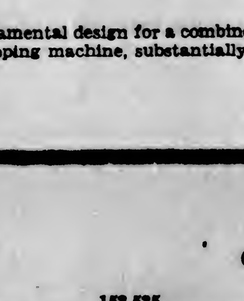
The ornamental design for a box or the like, as shown.

152,524
DESIGN FOR A ROCKING TOY
Clarence C. Flatt, Rehoboth Beach, Del.
Application February 24, 1948, Serial No. 144,709
Term of patent 3½ years
(Cl. D34—15)



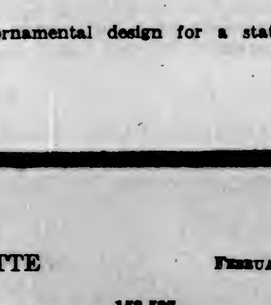
The ornamental design for a rocking toy, as shown.

152,525
DESIGN FOR A KNIFE OR SIMILAR ARTICLE
Ernest Hjorth, Jr., Cleveland, Ohio
Application November 26, 1947, Serial No. 142,966
Term of patent 14 years
(Cl. D8—2)



The ornamental design for a knife or similar article, substantially as shown.

152,527
DESIGN FOR A PERFUME BOTTLE
Jacques Kerylos, New York, N. Y., assignor to Parfums Corday, Inc., New York, N. Y., a corporation of New York
Application November 26, 1947, Serial No. 142,965
Term of patent 14 years
(Cl. D9—1)



The ornamental design for a perfume bottle, as shown.

152,529
DESIGN FOR A HOSIERY DISPLAY DEVICE
Milton M. Halpern, New York, N. Y.
Application July 11, 1947, Serial No. 140,221
Term of patent 14 years
(Cl. D6—1)

The ornamental design for a hosiery display device, substantially as shown.

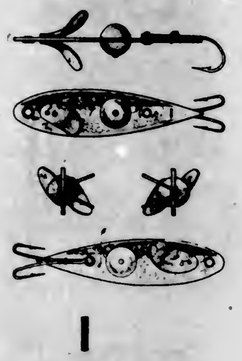
152,531
DESIGN FOR A FABRIC
Marion R. Hamre, Oceanside, N. Y.
Application July 11, 1947, Serial No. 140,221
Term of patent 14 years
(Cl. D5—1)

The ornamental design for a fabric, substantially as shown.

152,525
DESIGN FOR A KNIFE OR SIMILAR ARTICLE OF FLATWARE
Harry K. Friedman, New York, N. Y.
Application August 13, 1947, Serial No. 140,243
Term of patent 3½ years
(Cl. D54—12)

The ornamental design for a knife or similar article of flatware, substantially as shown and described.

152,526
DESIGN FOR A FISH LURE
Theodore F. Geiser, Roselle, N. J.
Application March 24, 1948, Serial No. 145,329
Term of patent 14 years
(Cl. D31—4)

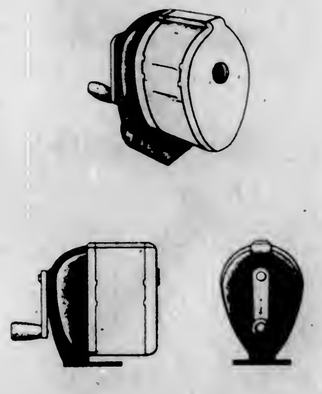


The ornamental design for a fish lure, as shown.

152,527
DESIGN FOR A PERFUME BOTTLE
Dorothy Gibson, New York, N. Y., assignor to Dorothy Gibson Perfumes Corp., New York, N. Y., a corporation of New York
Application September 3, 1947, Serial No. 141,179
Term of patent 3½ years
(Cl. D58—9)

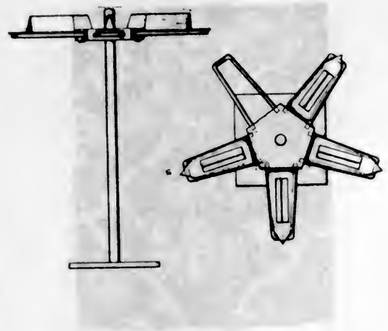
The ornamental design for a perfume bottle, as shown.

152,528
DESIGN FOR A PENCIL SHARPENER
Charles Godfrey, Philadelphia, Pa., assignor to C. Howard Hunt Pen Co., Camden, N. J., a corporation of New Jersey
Application July 29, 1947, Serial No. 140,580
Term of patent 14 years
(Cl. D74—1)



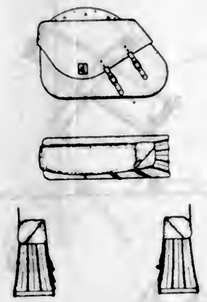
The ornamental design for a pencil sharpener, as shown.

152,529
DESIGN FOR A HOSIERY DISPLAY DEVICE
Milton M. Halpern, New York, N. Y.
Application October 21, 1947, Serial No. 142,054
Term of patent 3½ years
(Cl. D80—9)



The ornamental design for a hosiery display device, substantially as shown.

152,530
DESIGN FOR A MOTORCYCLE SADDLE BAG
John R. Hampel, Pewaukee, Wis., assignor to Milwaukee Saddlery Company, Milwaukee, Wis., a corporation of Wisconsin
Application June 25, 1947, Serial No. 139,909
Term of patent 3½ years
(Cl. D90—3)



The ornamental design for a motorcycle saddle bag, as shown.

152,531
DESIGN FOR A FABRIC
Marion R. Hamre, Oceanside, N. Y.
Application July 11, 1947, Serial No. 140,221
Term of patent 7 years
(Cl. D92—1)

The ornamental design for a fabric, as shown and described.

152,532
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Marion R. Hamre, Oceanside, N. Y., assignor to Charles Bloom Inc., New York, N. Y., a corporation of New York
Application March 24, 1948, Serial No. 145,311
Term of patent 7 years
(Cl. D92—1)

The ornamental design for a textile fabric or similar article, as shown and described.

152,533
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Marion R. Hamre, Oceanside, N. Y., assignor to

152,535
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Marion R. Hamre, Oceanside, N. Y., assignor to

152,537
DESIGN FOR A PORTABLE PICTURE SCREEN
John T. Heck, Elmhurst, and Leo J. Du Mais and Curtis O. Talbot, Chicago, Ill., assignors to Da-

152,538
DESIGN FOR A COMBINED CAP AND LATCH FOR SCREEN HOLDER
John T. Heck, Elmhurst, and Leo J. Du Mais and Curtis O. Talbot, Chicago, Ill., assignors to Da-

152,533
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Marion R. Hamre, Oceanside, N. Y., assignor to Charles Bloom Inc., New York, N. Y., a corporation of New York
Application March 24, 1948, Serial No. 145,312
Term of patent 7 years
(Cl. D92—1)

The ornamental design for a textile fabric or similar article, as shown and described.

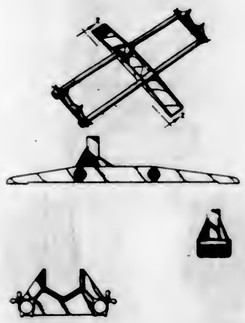
152,534
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Marion R. Hamre, Oceanside, N. Y., assignor to Charles Bloom Inc., New York, N. Y., a corporation of New York
Application March 24, 1948, Serial No. 145,313
Term of patent 7 years
(Cl. D92—1)

The ornamental design for a textile fabric or similar article, as shown and described.

152,535
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Marion R. Hamre, Oceanside, N. Y., assignor to Charles Bloom Inc., New York, N. Y., a corporation of New York
Application March 24, 1948, Serial No. 145,314
Term of patent 7 years
(Cl. D92—1)

The ornamental design for a textile fabric or similar article, as shown and described.

152,536
DESIGN FOR A PORTABLE PICTURE SCREEN BASE
John T. Heck, Elmhurst, and Leo J. Du Mais and Curtis O. Talbot, Chicago, Ill., assignors to Da-Lite Screen Company, Inc., Chicago, Ill., a corporation of Illinois
Application July 3, 1947, Serial No. 140,092
Term of patent 14 years
(Cl. D61—1)

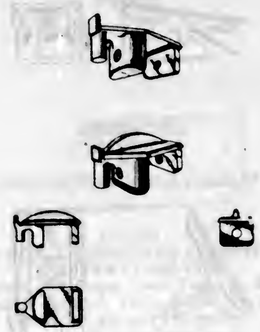


The ornamental design for a portable picture screen base, as shown.

152,537
DESIGN FOR A PORTABLE PICTURE SCREEN
John T. Heck, Elmhurst, and Leo J. Du Mais and Curtis O. Talbot, Chicago, Ill., assignors to Da-Lite Screen Company, Inc., Chicago, Ill., a corporation of Illinois
Application July 3, 1947, Serial No. 140,093
Term of patent 14 years
(Cl. D61—1)

The ornamental design for a portable picture screen, as shown.

152,538
DESIGN FOR A COMBINED CAP AND LATCH FOR SCREEN HOLDER
John T. Heck, Elmhurst, and Leo J. Du Mais and Curtis O. Talbot, Chicago, Ill., assignors to Da-Lite Screen Company, Inc., Chicago, Ill., a corporation of Illinois
Application July 3, 1947, Serial No. 140,094
Term of patent 14 years
(Cl. D61—1)



The ornamental design for a combined cap and latch for screen holder, as shown.

152,539
DESIGN FOR A POT AND PAN HANDLE
Andrew L. Henkel, Chicago, Ill.
Application January 15, 1947, Serial No. 136,159
Term of patent 7 years
(Cl. D44—26)

The ornamental design for a pot and pan handle, substantially as shown.

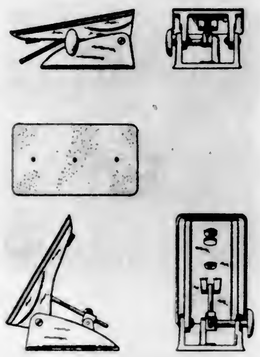
152,540
DESIGN FOR A TILTING SUPPORT FOR PHOTOGRAPHIC CAMERAS OR THE LIKE
Frederick E. Heward, Burlingame, Calif.

152,542
DESIGN FOR A FISHING LURE
Earl J. Howard, Duluth, Minn.
Application October 17, 1947, Serial No. 141,987

152,544
DESIGN FOR A TOY ANIMAL FIGURE
James L. Hvale, Chicago, Ill., assignor to Ekco Products Company, Chicago, Ill., a corporation

152,546
DESIGN FOR A BADGE
Frank S. Land, Kansas City, Mo.
Application November 24, 1947, Serial No. 142,783

152,540
DESIGN FOR A TILTING SUPPORT FOR PHOTOGRAPHIC CAMERAS OR THE LIKE
Frederick R. Heward, Burlingame, Calif.
Application May 5, 1947, Serial No. 138,816
Term of patent 3½ years
(Cl. D61—1)

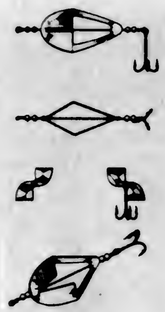


The ornamental design for a tilting support for photographic cameras or the like, as shown.

152,541
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
William W. Hobé, New York, N. Y.
Application July 24, 1948, Serial No. 147,764
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,542
DESIGN FOR A FISHING LURE
Earl J. Howard, Duluth, Minn.
Application October 17, 1947, Serial No. 141,987
Term of patent 3½ years
(Cl. D31—4)

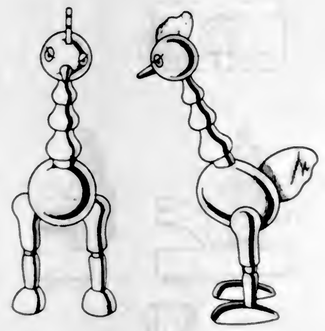


The ornamental design for a fishing lure, as shown.

152,543
DESIGN FOR A LIGHTING FIXTURE END PLATE
Joseph O. Howard, Chicago, Ill., assignor to L. J. Segil Company, Chicago, Ill., a corporation of Illinois
Application June 17, 1947, Serial No. 139,733
Term of patent 14 years
(Cl. D48—23)

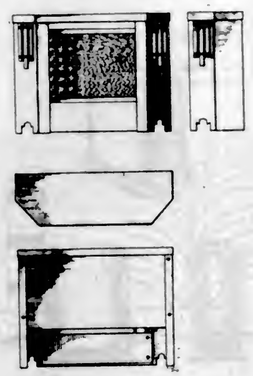
The ornamental design for a lighting fixture end plate, as shown.

152,544
DESIGN FOR A TOY ANIMAL FIGURE
James L. Hvale, Chicago, Ill., assignor to Ekco Products Company, Chicago, Ill., a corporation of Illinois
Application May 27, 1946, Serial No. 130,117
Term of patent 3½ years
(Cl. D34—2)



The ornamental design for a toy animal figure, as shown.

152,545
DESIGN FOR A RADIATOR CABINET OR THE LIKE
Joseph Israel, New York, N. Y.
Application November 20, 1946, Serial No. 134,943
Term of patent 3½ years
(Cl. D81—21)

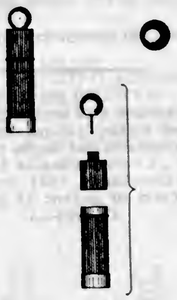


The ornamental design for a radiator cabinet or the like, as shown and described.

152,546
DESIGN FOR A BADGE
Frank S. Land, Kansas City, Mo.
Application November 24, 1947, Serial No. 142,783
Term of patent 14 years
(Cl. D29—11)

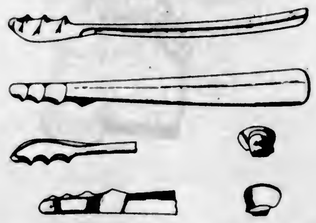
The ornamental design for a badge, as shown.

152,547
DESIGN FOR A COMBINED LIPSTICK CASE AND PERFUME VIAL
Irving M. Lang, New York, N. Y.
Application June 7, 1947, Serial No. 139,523
Term of patent 3½ years
(Cl. D86—10)



The ornamental design for a combined lipstick case and perfume vial, substantially as shown.

152,548
DESIGN FOR A SHOEHORN
Mark R. Lilly, Louisville, Ky.
Application May 28, 1947, Serial No. 139,328
Term of patent 3½ years
(Cl. D86—10)



The ornamental design for a shoe horn, as shown.

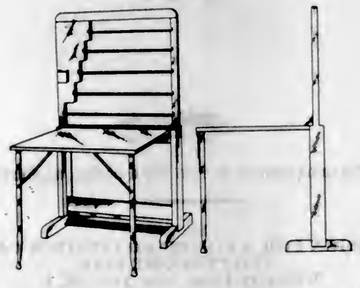
152,549

152,551

152,553
DESIGN FOR A BOTTLE OR SIMILAR

152,555
DESIGN FOR A DISPLAY CASE

152,549
DESIGN FOR A DISPLAY STAND
Charlotte McAleer Link, Philadelphia, Pa., assignor to E. J. McAleer and Co., Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application October 29, 1947, Serial No. 142,180
Term of patent 7 years
(Cl. D80—9)

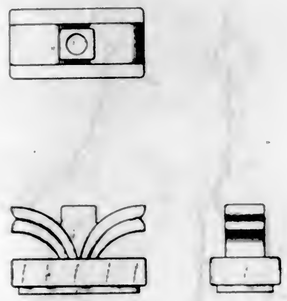


The ornamental design for a display stand, as shown.

152,550
DESIGN FOR A WASHING MACHINE
John McLeod Little, Toledo, Ohio, assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application October 28, 1947, Serial No. 142,165
Term of patent 14 years
(Cl. D49—1)

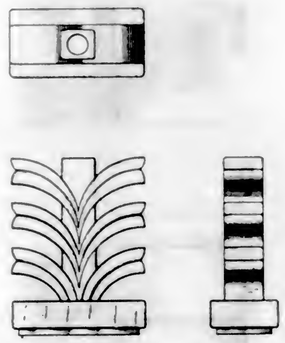
The ornamental design for a washing machine, substantially as shown and described.

152,551
DESIGN FOR A CANDLE HOLDER
William E. Mackelfresh, Jr., Chicago, Ill.
Application December 26, 1947, Serial No. 143,370
Term of patent 3½ years
(Cl. D48—2)



The ornamental design for a candle holder, as shown.

152,552
DESIGN FOR A CANDLE HOLDER
William E. Mackelfresh, Jr., Chicago, Ill.
Application December 26, 1947, Serial No. 143,371
Term of patent 3½ years
(Cl. D48—2)



The ornamental design for a candle holder, as shown.

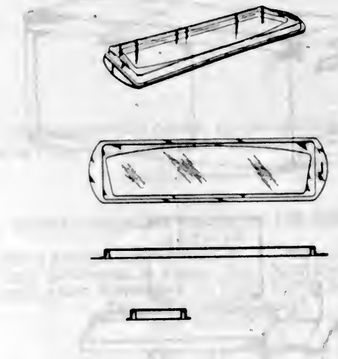
152,553
DESIGN FOR A BOTTLE OR SIMILAR CONTAINER
Malcolm A. MacLean, West Bridgewater, Mass., assignor to Albert H. Climo, North Abington, Mass.
Application November 26, 1947, Serial No. 142,808
Term of patent 14 years
(Cl. D58—6)

The ornamental design for a bottle or similar container, as shown.

152,554
DESIGN FOR A PENCIL SHARPENER
Robert A. May, Wynnewood, Pa., assignor to C. Howard Hunt Pen Co., Camden, N. J., a corporation of New Jersey
Application July 29, 1947, Serial No. 140,583
Term of patent 14 years
(Cl. D74—1)

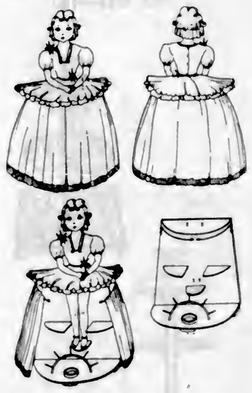
The ornamental design for a pencil sharpener, as shown.

152,555
DESIGN FOR A DISPLAY CASE
Glen E. Millard, St. Paul, Minn.
Application March 13, 1947, Serial No. 137,585
Term of patent 3½ years
(Cl. D86—5)



The ornamental design for a display case, as shown.

152,556
DESIGN FOR A SEWING ACCESSORY OR SIMILAR ARTICLE
Misao Muramatsu, Los Angeles, Calif.
Application September 12, 1947, Serial No. 141,336
Term of patent 3½ years
(Cl. D3—19)



The ornamental design for a sewing accessory or similar article, as shown.

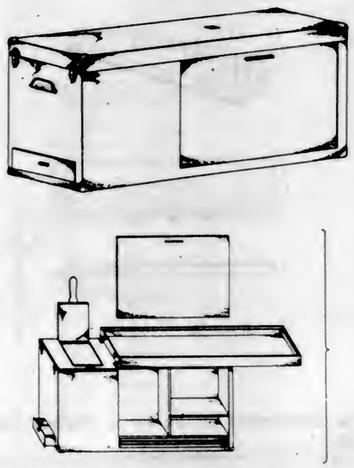
152,557
DESIGN FOR A PORTABLE PHOTOGRAPHIC LABORATORY

152,559
DESIGN FOR AN EARRING OR SIMILAR ARTICLE

152,562
DESIGN FOR AN EARRING OR SIMILAR ARTICLE

152,565
DESIGN FOR AN EARRING OR SIMILAR ARTICLE

152,557
DESIGN FOR A PORTABLE PHOTOGRAPHIC LABORATORY
Clayton M. Nielsen, Alhambra, Calif.
Application April 28, 1947, Serial No. 138,659
Term of patent 3½ years
(Cl. D61—1)



The ornamental design for a portable photographic laboratory, as shown.

152,558
DESIGN FOR A TIERED TRAY
Angelina M. Paolino, Los Angeles, Calif.
Application February 7, 1947, Serial No. 136,769
Term of patent 3½ years
(Cl. D44—10)

The ornamental design for a tiered tray, as shown.

152,559
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 15, 1948, Serial No. 149,624
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

152,560
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 15, 1948, Serial No. 149,625
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article substantially as shown.

152,561
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 15, 1948, Serial No. 149,626
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

152,562
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 15, 1948, Serial No. 149,627
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

152,563
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 15, 1948, Serial No. 149,628
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

152,564
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 18, 1948, Serial No. 149,691
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

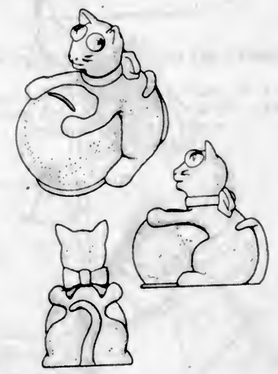
152,565
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 18, 1948, Serial No. 149,692
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

152,566
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 18, 1948, Serial No. 149,693
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

152,567
DESIGN FOR A TOY BANK
Donald D. Rupe, Des Moines, Iowa
Application November 19, 1947, Serial No. 142,621
Term of patent 3½ years
(Cl. D34—11)



The ornamental design for a toy bank, substantially as shown.

152,568
DESIGN FOR A SHOE
Jacob Sandler, New York, N. Y.

152,570
DESIGN FOR A SHOE
Jacob Sandler, New York, N. Y.

152,572
DESIGN FOR A SHOE
Jacob Sandler, New York, N. Y.

152,574
DESIGN FOR A HOLDER FOR PAPER SUNDAE DISH
Lawrence M. Turner, North Abington, Mass.

152,568
DESIGN FOR A SHOE
Jacob Sandler, New York, N. Y.
Application October 29, 1948, Serial No. 149,364
Term of patent 7 years
(Cl. D7—7)

The ornamental design for a shoe, substantially as shown and described.

152,569
DESIGN FOR A SHOE
Jacob Sandler, New York, N. Y.
Application October 29, 1948, Serial No. 149,365
Term of patent 7 years
(Cl. D7—7)

The ornamental design for a shoe, substantially as shown.

152,570
DESIGN FOR A SHOE
Jacob Sandler, New York, N. Y.
Application October 29, 1948, Serial No. 149,366
Term of patent 7 years
(Cl. D7—7)

The ornamental design for a shoe, substantially as shown and described.

152,571
DESIGN FOR A SHOE
Jacob Sandler, New York, N. Y.
Application October 29, 1948, Serial No. 149,367
Term of patent 7 years
(Cl. D7—7)

The ornamental design for a shoe, substantially as shown.

152,576—Continued

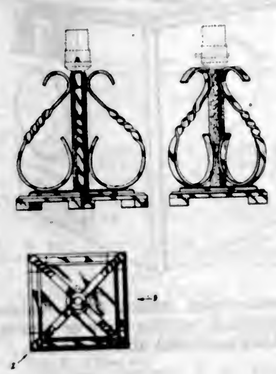
152,578
DESIGN FOR AN INTERCOMMUNICATING SYSTEM STATION UNIT
Martin Wagner, Berlin, Germany, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application October 29, 1948, Serial No. 149,370
Term of patent 7 years
(Cl. D21—1)

The ornamental design for a station unit for an intercommunicating system, as shown and described.

152,572
DESIGN FOR A SHOE
Jacob Sandler, New York, N. Y.
Application October 29, 1948, Serial No. 149,369
Term of patent 7 years
(Cl. D7—7)

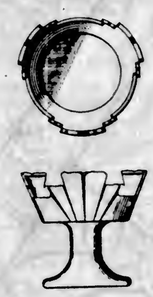
The ornamental design for a shoe, substantially as shown.

152,573
DESIGN FOR A LAMP STAND
Paul Schultz, Bally, Pa.
Application June 30, 1947, Serial No. 140,013
Term of patent 3½ years
(Cl. D48—20)



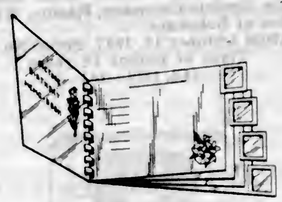
The ornamental design for a lamp stand, as shown and described.

152,574
DESIGN FOR A HOLDER FOR PAPER SUNDAE DISH
Lawrence M. Turner, North Abington, Mass.
Application October 30, 1946, Serial No. 134,385
Term of patent 14 years
(Cl. D44—15)



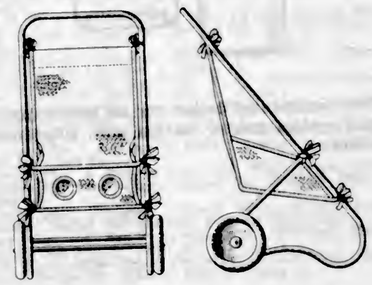
The ornamental design for a holder for paper sundae dish, substantially as shown.

152,575
DESIGN FOR A PICTURE BIRTHDAY MEMO BOOK
Annette T. Turpin, Los Angeles, Calif.
Application July 19, 1947, Serial No. 140,520
Term of patent 14 years
(Cl. D6—2)



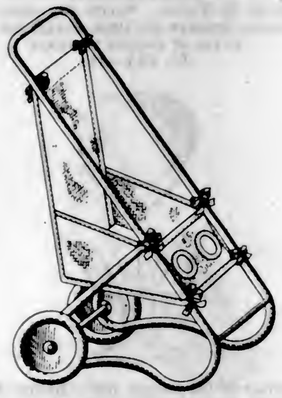
The ornamental design for a picture birthday memo book, as shown and described.

152,576
DESIGN FOR A STROLLER OR SIMILAR ARTICLE
Sadye Joy Wallace, New York, N. Y.
Application July 23, 1947, Serial No. 140,473
Term of patent 7 years
(Cl. D14—3)



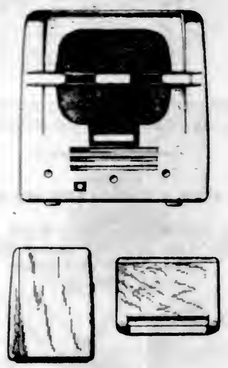
LIST OF TRADE-MARK APPLICANTS

152,576—Continued



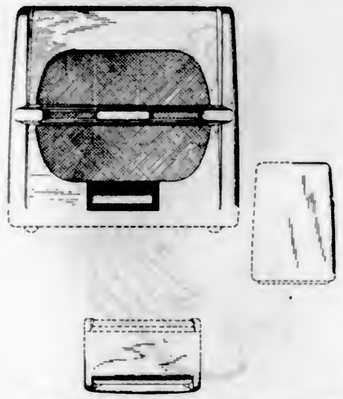
The ornamental design for a stroller or similar article, substantially as shown.

152,577
DESIGN FOR AN INTERCOMMUNICATING SYSTEM MASTER STATION UNIT
Martin Wasserman, Racine, Wis., assignor to Webster Electric Company, Racine, Wis., a corporation of Delaware
Application October 18, 1947, Serial No. 141,992
Term of patent 14 years
(Cl. D26—14)



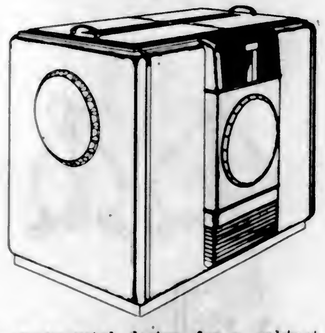
The ornamental design for an intercommunicating system master station unit, substantially as shown.

152,578
DESIGN FOR AN INTERCOMMUNICATING SYSTEM STATION UNIT
Martin Wasserman, Racine, Wis., assignor to Webster Electric Company, Racine, Wis., a corporation of Delaware
Application October 18, 1947, Serial No. 141,993
Term of patent 14 years
(Cl. D26—14)



The ornamental design for an intercommunicating system station unit, substantially as shown and described.

152,579
DESIGN FOR A CABINET FOR A BOTTLED BEVERAGE COOLING UNIT OR SIMILAR ARTICLE
Arthur C. Wesche, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application September 24, 1947, Serial No. 141,558
Term of patent 14 years
(Cl. D67—4)



The ornamental design for a cabinet for a bottled beverage cooling unit or similar article, substantially as shown and described.

CLASS 4

Cleaner, cleanser, and detergent, Sudsing. The Procter & Gamble Company. 435,529, Dec. 30, 1947. Republished Feb. 1.

Cleaner, cleanser, and detergent, Sudsing. The Procter & Gamble Company. 502,622, Oct. 5, 1948. Corrected. O. G. Feb. 1.

Cleaner, Type. The Paraffine Companies, Inc. 296,330, Aug. 2, 1932. Republished Feb. 1.

Polishes, dressings, and cleaners, Shoe. Geo. J. Kelly, Inc. 245,158, renewed Aug. 7, 1948. O. G. Feb. 1.

Shampoo, Rug., spot remover, and general purpose cleaning compound. Bailey, Prihoda & Company. 506,384, Feb. 1; Serial No. 551,681.

Spot remover. Henry B. Heller Corp. 432,644, Sept. 9, 1947. Republished Feb. 1.

Top dressing, Black. Permatex Company, Inc. 331,150, Dec. 31, 1935. Republished Feb. 1.

Wood-preservative compound, chemical cleaner, and denatured alcohol. The Paraffine Companies, Inc. 274,202, Aug. 19, 1930. Republished Feb. 1.

CLASS 5

Shellac compound, Gasket. Permatex Company, Inc. 325,086, June 11, 1935. Republished Feb. 1.

Shellac compound, Gasket. Permatex Company, Inc. 331,744, Jan. 21, 1936. Republished Feb. 1.

Swatches and tape rendered adhesive by heat and used for mending purposes. Coated fabric. Dritz-Traum Company, Inc. 414,675, June 19, 1945. Republished Feb. 1.

Swatches, Coated fabric, and tape rendered adhesive by heat. Dritz-Traum Company, Inc. 402,415, July 20, 1943. Republished Feb. 1.

CLASS 6

All-Herb preparation for reducing. Continental Products Company. 506,358, Feb. 1; Serial No. 514,184.

Bluing, Laundry. The Cobb Mfg. Co., Inc. 237,072, Jan. 3, 1928. Republished Feb. 1.

Castor oil, Soluble. A. Klipstein & Company. 255,382, renewed Apr. 23, 1949. O. G. Feb. 1.

Charcoal tablets, ear oil, cubed cigarettes, etc. Requa Manufacturing Co., Inc. 255,583, renewed Apr. 23, 1949. O. G. Feb. 1.

Chemical compound used for cleaning drains and sewers. The Watterworth Corporation. 506,368, Feb. 1; Serial No. 522,676.

Chemical solution for the treatment of fur. The Non-Mercuric Carrot Company. 393,235, Jan. 27, 1942. Republished Feb. 1.

Cologne, body powder and toilet water. Avon Products, Inc. 435,540, Dec. 30, 1947. Republished Feb. 1.

Compound for boiling off cotton piece goods, hosiery, and like articles. A. Klipstein & Company. 255,657, renewed Apr. 30, 1929. O. G. Feb. 1.

Corn oil, Soluble. A. Klipstein & Company. 255,658, renewed Apr. 30, 1949. O. G. Feb. 1.

Corn sugar, Refined. Clinton Industries, Inc. 427,488, Feb. 11, 1947. Republished Feb. 1.

Cosmetic set. Avon Products, Inc. 435,744. Jan. 6, 1948. Republished Feb. 1.

Cosmetic sets. Avon Products, Inc. 435,504, Dec. 30, 1947. Republished Feb. 1.

Disinfectant. J. W. Bullen. 128,947, Jan. 20, 1920. Republished Feb. 1.

Extracts, Tobacco, and nicotine solutions and compounds. Tobacco By-Products and Chemical Corporation. 266,166, Jan. 14, 1930. Republished Feb. 1.

Extracts, Tobacco, and nicotine solutions and compounds. Tobacco By-Products and Chemical Corporation. 266,175, Jan. 14, 1930. Republished Feb. 1.

Fish liver oils. Mead Johnson & Company. 503,231, Oct. 19, 1948. Corrected. O. G. Feb. 1.

Fluid for cigarette lighters. Walgreen Co. 248,312, Oct. 16, 1928. Republished Feb. 1.

Fungicides, Agricultural. Mallinckrodt Chemical Works. 503,467, Oct. 26, 1948. Corrected. O. G. Feb. 1.

Gas, Bottled. Bottled Gas Corporation. 506,356, Feb. 1; Serial No. 509,912.

Hair and scalp lotion, shampoo, etc. S. Pfeiffer Mfg. Co. 431,892, Aug. 12, 1947. Republished Feb. 1.

Hair tints, hair dyes and shampoo tints. Clairol, Incorporated. 506,372, Feb. 1; Serial No. 524,173.

Hair tonic. E. Schaufler. 249,390, renewed Nov. 13, 1948. O. G. Feb. 1.

Insecticide and vermin destroyer. S. Schwarz. 73,302, re-renewed Apr. 6, 1949. O. G. Feb. 1.

Laxative preparations. The Weber Medical Tea Company. 249,229, renewed Nov. 13, 1948. O. G. Feb. 1.

Liquid chemical compound to be applied to trees, etc. Madison Products Company. 506,382, Feb. 1; Serial No. 543,822.

Liquid solution for bleaching, deodorising, and disinfecting. V. B. Bartos. 365,435, Mar. 7, 1939. Republished Feb. 1.

CLASS 14

Trucks, Motor. Sterling Motor Truck Company, Inc. 506,191, Feb. 1; Serial No. 530,587, published Oct. 12,

Locks, Automobile, compartment locks, and locking door handles. Briggs & Stratton Company. 199,693, June

Medicinal preparation for the prevention of nausea. M. A. Rossiter. 506,360, Feb. 1; Serial No. 515,846.
Oil, Yarn-conditioning. Nyanza Color & Chemical Co., Inc. 255,674, renewed Apr. 30, 1949. O. G. Feb. 1.
Oils, Scalp. E. L. Whitmore. 506,374, Feb. 1; Serial No. 525,728.
Parasiticides for poultry, veterinary, and insecticide purposes. Tobacco By-Products and Chemical Corporation. 332,838, Feb. 25, 1936. Republished Feb. 1.
Pharmaceutical preparation for the relief of gastric hyperacidites. F. H. Paxton. 255,726, renewed Apr. 30, 1949. O. G. Feb. 1.
Shampoo. Elmo Sales Corporation. 506,371, Feb. 1; Serial No. 523,831.
Shampoo tint, skin lotion and powder base, etc. Rapidol Distributing Corporation. 387,538, May 20, 1941. Republished Feb. 1.
Talcum powder, baby oil, and skin cream. Avon Products, Inc. 435,479, Dec. 30, 1947. Republished Feb. 1.
Wood-preservative compound, chemical cleaner, and denatured alcohol. The Paraffine Companies, Inc. 274,202, Aug. 19, 1930. Republished Feb. 1.

CLASS 7

Cable, Wire. Sauerman Bros., Inc. 506,172, Feb. 1; Serial No. 527,140, published Oct. 19, 1948.
Cables, ropes and twines, Fibrous and textile. Plymouth Cordage Company. 506,285, Feb. 1; Serial No. 544,191, published Oct. 19, 1948.
Clothes lines. Clover Farm Stores Corporation. 506,345, Feb. 1; Serial No. 552,945, published Oct. 26, 1948.
Cord. The Plastic Wire & Cable Corporation. 441,961, Feb. 1; Serial No. 515,633, published Oct. 19, 1948.
Rope, binder twine, etc. The Hooven & Allison Company. 506,208, Feb. 1; Serial No. 532,933, published Oct. 19, 1948.
Rope, cord and twine manufactured from vegetable fibre. American Manufacturing Company. 506,385, Feb. 1; Serial No. 552,383.
Rope, Wire. Macwhyte Company. 506,331, Feb. 1; Serial No. 550,814, published Oct. 19, 1948.
Twine. The Linen Thread Co., Inc. 506,218, Feb. 1; Serial No. 534,037, published Oct. 19, 1948.

CLASS 8

Textile goods, certain wooden goods. Pi Beta Phi. 248,856, renewed Oct. 30, 1948. O. G. Feb. 1.

CLASS 9

Ammunition for toy firearms. The Kilgore Manufacturing Company. 350,166, Sept. 21, 1937. Republished Feb. 1.
Caps for toy firearms, Paper. The Kilgore Manufacturing Company. 351,244, Oct. 26, 1937. Republished Feb. 1.

CLASS 10

Guano. F. S. Royster Guano Co. 45,145, Aug. 8, 1905. Republished Feb. 1.

CLASS 12

Brick, Fire. Plibrico Jointless Firebrick Company. 293,138, Apr. 12, 1932. Republished Feb. 1.
Cement, Asbestos furnace and retort. Plibrico Jointless Firebrick Company. 340,701, Nov. 17, 1936. Republished Feb. 1.
Cement, Fire-resisting. Jointless Fire-Brick Co. 176,070, Nov. 13, 1923. Republished Feb. 1.
Cement, Fire-resisting. Plibrico Jointless Firebrick Company. 328,433, Sept. 24, 1935. Republished Feb. 1.
Construction material. Schumacher Wall Board Corporation. 256,423, May 14, 1929. Republished Feb. 1.
Door installations, Complete upward-acting. Crawford Door Company. 391,772, Nov. 25, 1941. Republished Feb. 1.
Insulating materials and pipe coverings, Thermal. Plant Rubber & Asbestos Works. 285,663, Aug. 4, 1931. Republished Feb. 1.
Pads, Sound absorbing. The Celotex Corporation. 362,812, Nov. 29, 1938. Republished Feb. 1.
Refractory material, Castable. Plibrico Jointless Firebrick Company. 354,205, Feb. 8, 1938. Republished Feb. 1.
Tile, Acoustical. The American Gypsum Company. 363,707, Jan. 3, 1939. Republished Feb. 1.

CLASS 13

Bands, stays, open seals, etc. Acme Steel Company. 247,878, Oct. 9, 1928. Republished Feb. 1.
Fasteners, Slide. David Traum Company, Incorporated. 422,034, June 25, 1946. Republished Feb. 1.
Fastenings. Continental Screw Company. 422,631, Aug. 6, 1946. Republished Feb. 1.
Staples, Machine driven. Autoclench Company, Inc. 318,534, Oct. 30, 1934. Amended. O. G. Feb. 1.
Steel traps, Nailless, shook tie fasteners, corrugated-wood joint fasteners, etc. Acme Steel Company. 209,875, Mar. 2, 1926. Republished Feb. 1.
Strapping, Iron and steel. Acme Steel Company. 331,891-2, Jan. 21, 1936. Republished Feb. 1.
Strapping, Metal. Acme Steel Company. 402,908, Aug. 24, 1943. Republished Feb. 1.
Strapping, Steel. Acme Steel Company. 363,273, Dec. 20, 1938. Republished Feb. 1.

CLASS 14

Alloy stock, Copper. P. R. Mallory & Co., Inc. 408,836, Aug. 29, 1944. Republished Feb. 1.
Alloys, Nonferrous, and unfinished or partly finished nonferrous metal castings. P. R. Mallory & Co., Inc. 403,371, Sept. 21, 1943. Republished Feb. 1.

CLASS 15

Oils and greases, Lubricating. The Bassick Manufacturing Company. 256,560, renewed May 21, 1949. O. G. Feb. 1.
Oils, Lubricating, and lubricating greases. Nourse Oil Company. 246,526, Sept. 11, 1928. Republished Feb. 1.
Oils, Motor fuel. Sunset Oil Company. 361,442, Oct. 18, 1938. Republished Feb. 1.

CLASS 16

Gums, Dry, and liquid varnishes. Permatex Company, Inc. 187,883, Aug. 12, 1924. Republished Feb. 1.
Liquid compounds used as floor oils, sealers for wooden surfaces, floor finishes, etc. J. W. Bullen. 414,306, June 5, 1945. Republished Feb. 1.

Paint oil. Brasil Oiticica S. A. 336,565-6, July 7, 1936. Republished Feb. 1.
Paint oil. Brazil Oiticica S. A. 337,961, Aug. 25, 1936. Republished Feb. 1.
Paint remover. O. Mahler. 441,943, Feb. 1; Serial No. 492,347, published Sept. 14, 1948.
Paints and paint enamels, Dry and ready-mixed. The Paraffine Companies, Inc. 291,006, Jan. 26, 1932. Republished Feb. 1.
Polishes and cleaners. Permatex Company, Inc. 340,931, Nov. 24, 1936. Republished Feb. 1.
Polishes, Automobile, and furniture polishes. Permatex Company, Inc. 307,701, Oct. 31, 1933. Republished Feb. 1.
Polishing-oil, Wax. J. W. Bullen. 129,334, Feb. 17, 1920. Republished Feb. 1.

CLASS 17

Cigars. A. Sensenbrenner Sons. 370,621, Aug. 29, 1939. Republished Feb. 1.
Tobacco, Smoking. C. P. Landau. 329,998, Nov. 19, 1935. Republished Feb. 1.
Tobacco, Smoking. P. Lorillard Company. 441,986, Feb. 1; Serial No. 525,619, published Oct. 12, 1948.

CLASS 19

Air heating, air cooling, and ventilating units for motor vehicles. Tropic-Aire, Incorporated. 363,646, Jan. 3, 1939. Republished Feb. 1.
Airplanes. Engineering and Research Corporation. 441,945, Feb. 1; Serial No. 496,018, published Oct. 5, 1948.
Airplanes. Engineering and Research Corporation. 441,973, Feb. 1; Serial No. 519,933, published Oct. 5, 1948.
Automobile seat covers. Rayco Mfg. Co. 506,311, Feb. 1; Serial No. 547,032, published Oct. 12, 1948.
Automotive equipment and accessories. U. S. Tool & Mfg. Co. 506,262, Feb. 1; Serial No. 541,361, published Oct. 26, 1948.
Axles for motor vehicles; brake assemblies, and structural parts thereof. The Timken-Detroit Axle Company. 506,200, Feb. 1; Serial No. 531,545, published Oct. 12, 1948.
Bicycles. The Westfield Manufacturing Company. 506,279-80, Feb. 1; Serial Nos. 543,551-2, published Oct. 26, 1948.
Boats, Drill, derrick boats, dynamite boats. Great Lakes Dredge & Dock Company. 255,582, Apr. 23, 1929. Republished Feb. 1.
Boats, Sail. Palmer Scott & Company, Inc. 506,184, Feb. 1; Serial No. 529,191, published Oct. 12, 1948.
Carts for babies, Folding. A. E. Peterson Mfg. Co. 506,213, Feb. 1; Serial No. 533,612, published Oct. 26, 1948.
Control devices, Brake. Budd Wheel Company. 415,487, Aug. 7, 1945. Republished Feb. 1.
Dump-wagons, wheel tractor-dump-wagon combinations, and structural parts for such products. Caterpillar Tractor Co. 506,258, Feb. 1; Serial No. 540,644, published Oct. 12, 1948.
Motor cars. Playboy Motor Car Corporation. 506,267, Feb. 1; Serial No. 542,166, published Sept. 28, 1948.
Railroad passenger cars. General Motors Corporation. 506,230, Feb. 1; Serial No. 535,697, published Oct. 12, 1948.
Trailers for automobiles, House. Palace Corporation. 506,222, Feb. 1; Serial No. 534,809, published Oct. 12, 1948.
Trailers for automobiles, House. Palace Corporation. 506,223, Feb. 1; Serial No. 534,811, published Oct. 12, 1948.

Wallets, bill-folds, key containers, etc. Pioneer Suspender Company. 506,168, Feb. 1; Serial No. 526,547, published Oct. 26, 1948.

Liquid solution for bleaching, deodorizing, and disinfecting. V. B. Bartos. 365,435, Mar. 7, 1939. Republished Feb. 1.

Trucks, Motor. Sterling Motor Truck Company, Inc. 506,191, Feb. 1; Serial No. 530,587, published Oct. 12, 1948.
Wheeled kneeling pads. J. W. Frank. 506,312, Feb. 1; Serial No. 547,108, published Oct. 12, 1948.
Windshield wiper blades and arms. Trico Products Corporation. 506,313, Feb. 1; Serial No. 547,295, published Oct. 26, 1948.

CLASS 20

Floor coverings, Prepared. The Paraffine Companies, Inc. 252,677, Feb. 12, 1929. Republished Feb. 1.

CLASS 21

Contact elements, Electrical. P. R. Mallory & Co., Inc. 413,408, Apr. 24, 1945. Republished Feb. 1.
Contacting elements, Electric. P. R. Mallory & Co., Inc. 399,945, Feb. 9, 1943. Republished Feb. 1.
Contacting elements, Electric. P. R. Mallory & Co., Inc. 408,003, July 11, 1944. Republished Feb. 1.
Electrical contacts. P. R. Mallory & Co., Inc. 426,921, Jan. 21, 1947. Republished Feb. 1.
Electrical equipment. Briggs & Stratton Co. 102,033, Jan. 26, 1915. Republished Feb. 1.
Electrical equipment. Briggs & Stratton Company. 184,010, May 13, 1924. Republished Feb. 1.
Power supply devices, Electric. P. R. Mallory & Co., Inc. 359,145, Aug. 9, 1938. Republished Feb. 1.
Power supply units, Rectifier. P. R. Mallory & Co., Inc. 405,926, Feb. 29, 1944. Republished Feb. 1.
Rectifier unit, portable electric power conversion unit, and other internal combustion engines. P. R. Mallory & Co., Inc. 397,785, Sept. 22, 1942. Republished Feb. 1.
Rectifiers, Electric-current, electric-current rectifier units, electric-current battery eliminators and asymmetric cells. Elkon Works, Inc. 218,871, Oct. 5, 1926. Republished Feb. 1.
Rectifiers, Electric-current, electroplating power supply devices, rectifier-type electroplating units. P. R. Mallory & Co., Inc. 362,617, Nov. 22, 1938. Republished Feb. 1.
Staples, Insulated. The Superior Manufacturing Company. 282,564, Apr. 21, 1931. Republished Feb. 1.
Variable inductance devices, inductive tuning devices, variable inductance tuning devices, etc. P. R. Mallory & Co., Inc. 370,327, Aug. 22, 1939. Republished Feb. 1.

CLASS 22

Fishing-rods. The Horton Manufacturing Company. 73,218, re-renewed Mar. 30, 1949. O. G. Feb. 1.
Toy pistols. The Kilgore Manufacturing Company. 179,877, Feb. 19, 1924. Republished Feb. 1.

CLASS 23

Carburetters and fuel pumps for engines. The S. U. Carburetter Company, Limited. 359,817, Aug. 30, 1938. Republished Feb. 1.
Conveyors, gravity slides, and spiral chutes. Alvey Conveyor Manufacturing Co. 431,226, July 15, 1947. Republished Feb. 1.
Journal and bearing protectors. Lewis Bolt & Nut Company. 334,705, May 12, 1936. Republished Feb. 1.
Machines for vaporizing and applying insecticidal sprays. Tobacco By-Products and Chemical Corporation. 352,421, Nov. 30, 1937. Republished Feb. 1.
Packaging machines. Transparent-Wrap Machine Corporation. 335,751, June 16, 1936. Republished Feb. 1.
Pile drivers, locomotive cranes, crawler cranes, etc. Great Lakes Dredge & Dock Company. 248,738, Oct. 30, 1928. Republished Feb. 1.
Safety razors. Rolls Razor (1927) Limited. 252,695, renewed Feb. 12, 1949. O. G. Feb. 1.
Sealers, stretchers, coil holders, etc. Acme Steel Company. 329,392, Oct. 29, 1935. Republished Feb. 1.
Sewage ejectors, bilge pumps, sump pumps, etc. The Nash Engineering Company. 238,169, Jan. 31, 1928. Republished Feb. 1.
Sprayers and spraying attachments. Hudson Manufacturing Co. 248,305, Oct. 16, 1928. Republished Feb. 1.
Stitching machines, Wire. Acme Steel Company. 387,962, June 10, 1941. Republished Feb. 1.
Ticket and coupon issuing machines, slot vending machines. General Register Corporation. 388,084, June 10, 1941. Republished Feb. 1.
Ticket-issuing machines, ticket printing and issuing machines, and ticket-punching machines and parts thereof. General Register Corporation. 283,339-40, May 26, 1931. Republished Feb. 1.

Schlatter, Carl, and Holmberg.
Anderson, John: *See*—
McAllister, Sumner H., Anderson, and Peterson.
Anderson, Mina B.: *See*—
Oliver, Henry L., and Anderson.
Andrew, John P., New Rochelle, N. Y., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Removable core lock. 2,460,615, Feb. 1.
Andrus, Orrin E., Altadena, Calif. Washer for garden hose couplings. 2,460,407, Feb. 1.
Appel, Everett H., Aurora, Ill. Agricultural loading machine. 2,460,441, Feb. 1.
Appeldoorn, William R., Detroit, Mich. Personal body air conditioning device. 2,460,269, Feb. 1.
Appleton, John F., Seattle, Wash. Grass-catching attachment for shears. 2,460,616, Feb. 1.
Armington, George E., South Euclid, assignor to The Euclid Road Machinery Co., Euclid, Ohio. Springing arrangement for tractor-trailers. 2,460,725, Feb. 1.
Arndt, John P., Jr., Euclid, assignor to The Brush Development Company, Cleveland, Ohio. Surface roughness measuring device. 2,460,726, Feb. 1.
Ashley, Donald S., Cleverdale, and W. H. Weaver, Glen Falls, N. Y.; said Weaver assignor to said Ashley. Valve. 2,460,270, Feb. 1.
Askania Regulator Company, assignee: *See*—
Glass, Paul.
Attorney General of the United States, Vested in: *See*—
Muller, Gesa W.
Wolff, Julius.
Atwood, Winfield A., Yeadon, and E. W. Boehne, Drexel Hill, Pa., assignors to General Electric Company. Arc extinguishing device. 2,460,727, Feb. 1.
Automatic Kneeler Corporation, assignee: *See*—
Bernhard, Benjamin S.
Autophon Aktiengesellschaft, assignee: *See*—
Tachumi, Otto.
Aversa, Joseph, Brooklyn, N. Y. Combination tie clasp and chambered holder. 2,460,728, Feb. 1.
Aycock, Walter F., El Centro, assignor, by mesne assignments, to Tank Fertilizer, Inc., Brawley, Calif. Trailer. 2,460,442, Feb. 1.
Ayers, Fred L., Waltham, Mass. Shoe with integral insole and backstay. 2,460,609, Feb. 1.
Babicky, Walter J., Milwaukee, Wis. Amplified accordion. 2,460,408, Feb. 1.
Baccaro, Frank P., San Francisco, Calif. Building block. 2,460,330, Feb. 1.
Baker, Edward P., New York, N. Y. Apparatus for dehydrating petroleum products in situ in tank storage. 2,460,271, Feb. 1.
Baldwin Locomotive Works, The, assignee: *See*—
Sonntag, Alfred.
Ball, Rowland E.: *See*—
Gaylord, James M., and Ball.
Balogh, Roy O., assignor to The Weatherhead Company, Cleveland, Ohio. Planetary piston fuel pump. 2,460,617, Feb. 1.
Barber-Colman Company, assignee: *See*—
Drake, Russell P.
Barnard, J. C.: *See*—
Abel, Logan F.
Bartolat, Joseph J., Fort Lewis, Wash. Carbine tool. 2,460,272, Feb. 1.
Barton, Donald E., assignor to Chicago Railway Equipment Company, Chicago, Ill. Railway brake beam structure. 2,460,670, Feb. 1.
Basford, Frederick R., F. H. S. Curd, and F. L. Rose, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited. 2-benziminasoyl-amino pyrimidines. 2,460,409, Feb. 1.
Baumann, Frederick W., Schenectady, N. Y., assignor to General Electric Company. Commutator machine control. 2,460,729, Feb. 1.
Baumgarten, Erwin: *See*—
Brouillard, Robert E., and Baumgarten.
Lecher, Hans Z., Brouillard, and Baumgarten.
Baumwoll-Spinnerei & Weberei Wettingen, assignee: *See*—
Lanz, Adolf.
Becker, Sam B.: *See*—
Johnson, Everett A., and Becker.
Begg, Thomas, Nutley, N. J., assignor to American Can Company, New York, N. Y. Producing can bodies having vented side seams. 2,460,273, Feb. 1.
Belden, Albert G., and C. G. Flygare, assignors to Norton Company, Worcester, Mass. Crankpin grinding apparatus. 2,460,731, Feb. 1.
Beldue, William J.: *See*—
Tuttle, William R., and Beldue.
Bell, David H., Overland, Mo. Cigarette container. 2,460,730, Feb. 1.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Best, Fred H., and Pierce.
Germanton, Charles E.
Klyce, Battle H., Jr.
Mallery, Paul.
Mason, Warren P.
Southworth, George C.
Wagar, Harold N.
Bendix Aviation Corporation, assignee: *See*—
Frei, Jakob R.
Trautman, Walter C.
Benedick, Joseph M., Wilmar, Calif. Positioning means. 2,460,671, Feb. 1.
Benedik, Fedor, New York, N. Y. Thimble-needle threader. 2,460,672, Feb. 1.
Benioff, Hugo, Pasadena, Calif., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Submarine signaling apparatus. 2,460,274, Feb. 1.
Benson, Ernest H., Kansas City, Mo. Barrel. 2,460,410, Feb. 1.

Benton, John M., West Palm Beach, Fla. Photographic enlarger exposure indicator. 2,460,443, Feb. 1.

Berger, Barron D.: *See*—
Martin, George B., and Berger.

Bergman, Charles P., Brooklyn, N. Y., and M. Cornell, Cleveland, Ohio, assignors to Rockwell Manufacturing Company. Predetermining dispensing system. 2,460,275, Feb. 1.

Bergstrom, Carl P., Millbury, and A. J. Herard, Jr., assignors to Crompton & Knowles Loom Works, Worcester, Mass. Automatic pick and pick loom. 2,460,319, Feb. 1.

Bering, Lynn, Hollywood, Calif. Face powder container. 2,460,444, Feb. 1.

Berliner, Henry A., Washington, D. C., assignor to Engineering and Research Corporation, Riverdale, Md. Cutting means for metal stretching dies. 2,460,483, Feb. 1.

Bernas, Robert, assignor to M. N. Yardeny, New York, N. Y. Electric motor control apparatus with automatic "z" effect. 2,460,276, Feb. 1.

Bernasconi, Eduard, assignor to Ciba Limited, Basel, Switzerland. Triazine azo dyes. 2,460,618, Feb. 1.

Bernhard, Benjamin S., New Britain, assignor, by mesne assignments, to Automatic Kneeler Corporation, Hartford, Conn. Retracting device for kneeling benches. 2,460,791, Feb. 1.

Berscheid, Irvine J. Bissett, Manitoba, Canada. Detachable bit. 2,460,673, Feb. 1.

Best, Fred H., Mountainside, and J. R. Pierce, Millburn, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electrode unit assembly. 2,460,484, Feb. 1.

Beverleigh, Elmar R., Oakland, assignor to A. W. Shaw, San Francisco, Calif. Saw-filing machine. 2,460,331, Feb. 1.

Beynon, Nathan T., Dayton, Ohio, assignor to New Wrinkle, Inc., Wilmington, Del. Flexible wrinkle coated material and producing same. 2,460,485, Feb. 1.

Bigler, Charles W., Cedar Falls, Iowa. Adjustable weight for golf club heads. 2,460,445, Feb. 1.

Bihaly, Lajos, assignor to Trubenised Limited, London, England. Shaped fabric article. 2,460,674, Feb. 1.

Blackstone & Company Limited, assignee: *See*—
Hallewell, George.

Blampain, Henri, assignor to S. Goldberg, Paris, France. Alarm clock and like apparatus. 2,460,486, Feb. 1.

Bockins, L. V., assignee, et al.: *See*—
Van Voorhis, Noble.

Boehne, Eugene W.: *See*—
Atwood, Winfield A., and Boehne.

Borg-Warner Corporation, assignee: *See*—
Koppel, Ernst R.
Roth, Jay M.

Bossart, Paul N.: *See*—
Konrad, William L., Bossart, and Leberknight.

Bourgaize, Robert G., Tacoma, Wash. Inclinometer. 2,460,675, Feb. 1.

Bowman-Manifold, Michael, Ealing, London, England, assignor to Electric and Musical Industries Ltd. Electron discharge device. 2,460,332, Feb. 1.

Bremner, John G. M., P. W. Reynolds, and A. W. C. Taylor, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited. Preparation of dehydrogenation catalysts. 2,460,333, Feb. 1.

Brenner, Robert W., Foster, and J. R. Petre, assignors to The American Laundry Machinery Company, Cincinnati, Ohio. Garment finishing device. 2,460,732, Feb. 1.

Bridges, Richard W.: *See*—
Jensen, Howard M., and Bridges.

Briggs, Robert B.: *See*—
Knauth, Walter T., and Briggs.

Briskin, Jack, assignor to Revere Camera Company, Chicago, Ill. Film splicer. 2,460,619, Feb. 1.

Bristow, Paul W., assignor to Scott & Williams, Incorporated, Laconia, N. H. Knitting machine pattern mechanism. 2,460,487, Feb. 1.

Brooks, Al R., assignee: *See*—
Kraska, Reinhold M.

Brouillard, Robert E.: *See*—
Locher, Hans Z., Brouillard, and Baumgarten.

Brouillard, Robert E., Bound Brook, N. J., and E. Baumgarten, Westerleigh, Staten Island, assignors to American Cyanamid Company, New York, N. Y. Synthesis of phthalocyanines from *m*-chlorine or *m*-bromine substituted *o*-tolunitriles. 2,460,779, Feb. 1.

Brown, Arthur A.: *See*—
Hersey, Donald S., and Brown.

Brown & Bigelow, assignee: *See*—
Gruber, Francis E.

Brown, George H., and C. N. Hoyler, Princeton, N. J., assignors to Radio Corporation of America. Treatment of synthetic fibers and apparatus therefor. 2,460,566, Feb. 1.

Brown, Robert L., assignee: *See*—
Waara, David H.

Browning, George L., Jr., Cleveland, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Aromatic mercapto-aliphatic ethers as modifiers for butadiene emulsion polymerization. 2,460,567, Feb. 1.

Brunetti, Joseph, assignor to Columbia Protektosite Company, Inc., Carlstadt, N. J. Molded plastic container having hinged cover. 2,460,488, Feb. 1.

Brush Development Company, The, assignee: *See*—
Arndt, John P., Jr.

Bruson, Herman A., Rydal, and W. D. Niederhauser, assignors, by mesne assignments, to Rohm & Haas Company, Philadelphia, Pa. Diamino compound. 2,460,733, Feb. 1.

Buck, William H.: *See*—
Musselman, Henry E., and Buck.

Buckeye Steel Castings Company, The, assignee: *See*—
Johnson, George T.

Buehner, Orwald, West New York, N. J. Unipod for optical instruments. 2,460,568, Feb. 1.

Buerger, Martin J., Lincoln, and E. Washken, Cambridge, Mass., assignors to Owens-Illinois Glass Company. Making bonded structures. 2,460,334, Feb. 1.

Burkard, David, Geneva, assignor to Kobler & Co., Zurich, Switzerland. Knot tying device. 2,460,489, Feb. 1.

Burrum, Charles W., Augusta, Ga. Brake and tension for warp beamers. 2,460,569, Feb. 1.

Buss, William J., Norristown, Pa. Air purifying device. 2,460,335, Feb. 1.

Busse, Edwin G., assignor to Chicago Railway Equipment Company, Chicago, Ill. Railway brake beam mounting. 2,460,780, Feb. 1.

Byrkit, Gordon D.: *See*—
Lincoln, Bert H., and Byrkit.

Cade, Phillip J., Sharon, assignor to Photoswitch, Incorporated, Cambridge, Mass. Electronic timing device. 2,460,277, Feb. 1.

Cadman, Ira F., assignor to The Union Switch & Signal Company, Swissvale, Pa. Remote-control system. 2,460,336, Feb. 1.

Callinan, Thomas D., Pittsfield, Mass., assignor to General Electric Company. Asbestos impregnated with tin oxide and producing. 2,460,734, Feb. 1.

Calvert, Sumter, assignor to R. T. Moloney, Chicago, Ill. Sound recorder. 2,460,411, Feb. 1.

Canfield, H. O., Co., assignee: *See*—
Riley, George A.

Cantelo, Herbert R., Writtle, England, assignor to Radio Corporation of America. Circuit for stabilising frequencies of transmitter-receiver systems. 2,460,781, Feb. 1.

Caprio, Amerigo F., Madison, and W. Horback, Newark, N. J., assignors to Celanese Corporation of America. Plasticized lower fatty acid ester of cellulose. 2,460,376, Feb. 1.

Caprio, Amerigo F., Madison, and W. Horback, Newark, N. J., assignors to Celanese Corporation of America. Filaments of plasticised lower fatty acid esters of cellulose. 2,460,377, Feb. 1.

Carborundum Company, The, assignee: *See*—
Sharpe, Donald B.

Carlstrom, Ellis F., assignor to Hamilton Watch Company, Lancaster, Pa. Floating pawl. 2,460,620, Feb. 1.

Carmichael, Edward P., La Mesa, and C. W. Radcliffe, Albany, assignors to Consolidated Vultee Aircraft Corporation, San Diego, Calif. Artificial foot. 2,460,446, Feb. 1.

Carroll, Katherine E., Prescott, Ariz. Coffee steeping bag. 2,460,735, Feb. 1.

Carter Carburator Corporation, assignee: *See*—
Szwargulski, Alex N.

Carthage Mills, Inc., assignee: *See*—
Seedorf, Ralph F.
